Mr. Weiss is a specialist in the field which this book covers. He has been in charge of numerous studies and investigations along all lines having to do with structural and other commercial timbers, and is thoroughly acquainted with the subject both historically and experimentally.

He has written the book in a clear, readable style which adds much to its value, for the subject has not been obscured by technical terms not easily understood by the average reader. While it is valuable to the professional timber engineer, it is of equal interest to the non-professional man who is seeking information on a subject which is constantly claiming more attention from users of treated woods.

Some idea of the scope of the work may be obtained from the chapter headings, some of which are as follows:

Factors which cause the deterioration of structural timbers.

The effect of the structure of the wood upon its injection with preservatives.

Preparation of timber for its preservative treatment.

Processes and preservatives used in protecting wood from decay.

The construction and operation of wood-preserving plants.

Prolonging the life of crossties, poles, posts, piling, etc., from decay and abrasion.

Prolonging the life of mine timbers, paving blocks, shingles, lumber and

... The protection of timber from fire, alkaline soils, birds, sap stain, and sand storms.

The strength and electrolysis of treated timber.

The use of substitutes for treated timber.

A very complete list and description of various wood-preserving processes is included, together with much statistical information on subjects related to the general discourse.

The book contains 312 pages, is well printed, handsomely illustrated with pictures, diagrams and charts, is strongly bound, and sells for three dollars. The work is one of the most valuable contributions that has ever been made to this important subject; and no inconsiderable part of it is based on investigations personally conducted by Mr. Weiss.

Change in Trade Reports

With the close of 1914 the publication which, up to that time was known as "Daily Consular and Trade Reports," and was issued by the Department of Commerce, Washington, D. C., ceased to exist under that name; but a new form has been substituted. The size of the publication and its general form and style of printing have not been changed; but the publication has assumed more the character of a daily newspaper. It gets information to the public more speedily. Trade news from distant countries comes by cable and is published at once. That saves from one to six weeks in getting the information to the public. Changes in foreign business conditions are rapidly taking place, and under the former slow way, opportunities might be lost by delay, which now can be turned to advantage.

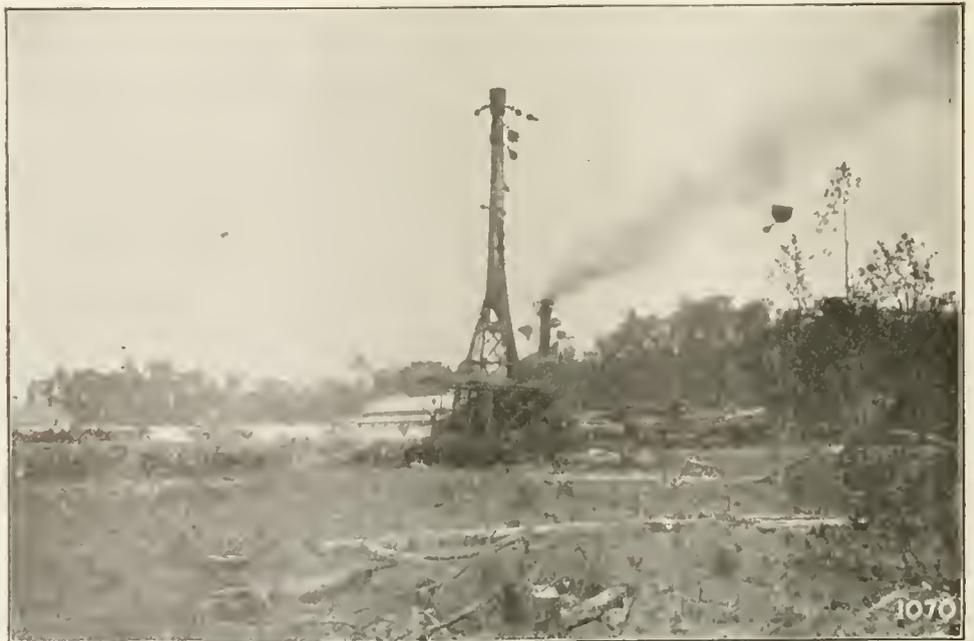

Lumber Cut and Shipped in November

The figures recently published by the National Lumber Manufacturers' Association give comparisons of cut and shipments of lumber for November, 1914, with the corresponding month in 1913. Following is the summary:

Cut November, 1913,	434,300,000 feet.
Cut November, 1914,	318,500,000 feet.
Decrease,	115,800,000 feet, or 26 6/10 per cent.
Shipments November, 1913,	458,100,000 feet.
Shipments November, 1914,	341,100,000 feet.
Decrease,	117,000,000 feet, or 25 5/10 per cent.
Shipments November, 1913,	458,100,000 feet.
Cut November, 1913,	434,300,000 feet.
Cut less than shipped,	23,800,000 feet, or 5 2/10 per cent.
Shipments November, 1914,	341,100,000 feet.
Cut November, 1914,	318,500,000 feet.
Cut less than shipped,	22,600,000 feet, or 6 6/10 per cent.

Building Operations for December

Building operations throughout the United States for the year 1914, as indicated by the reports from 68 of the principal cities, show a decrease

LIDGERWOOD SKIDDER AT WORK AT OPERATIONS OF BURTON-SWARTZ CYPRESS COMPANY AT CARBUR, FLA.

of only nine per cent as compared with those of the previous year. Up to August 1, when the European war began, the construction work was almost identical in volume with that of the first seven months of 1913. The loss occurred entirely during the last five months of the year. The cause was apparent to everyone concerned in the building trades, namely, the disarrangement of the financial market. Building operations, on account of the large units involved in this work, compared with most other industrial activities, are peculiarly sensitive to money conditions. The unfavorable comparison is therefore not an index of anything intrinsically reactionary in the building industry itself, but simply represents the insuperable obstacles in the way of activity. Thousands and tens of thousands of plans have been held back by the unresponsiveness of the banks and this accumulated work will be renewed with the general ease-ment of loans.

The official reports of building permits issued by 68 cities for the year 1914, received by the American Contractor, Chicago, total \$634,177,323, as compared with \$697,594,916 for 1913, a decrease of 9 per cent. While the generality of reports are in harmony with the prevail- ing tendency, there are some exceptions. St. Paul shows a gain of 56 per cent for the year; Salt Lake City, 38 per cent; South Bend, 39; Seattle, 36; Denver, 34; Oklahoma City's totals makes an enormous gain, on account of the new capitol building there commenced.

December naturally makes the poorest showing of the year, since by common consent new undertakings have been carried over into 1915. The December figures are \$34,310,484, as compared with \$58,661,519 for December, 1913, a decrease of 41 per cent. Twenty-one cities show gains, some of them quite notable. The table below gives details:

	December, 1914		December, 1913

Chicago Daily Gives Prominence to Statistics Favorable to Lumber

E. E. Hooper, secretary of the Lumbermen's Association of Chicago, has summarized for the *Chicago Herald* the lumber business in Chicago during 1914. He has incorporated in his report statistics which show without room for doubt that the much maligned frame house is not the cause of fire, and in fact on the other hand that fewer fires have occurred in such structures in Chicago than in other types of structures. The report follows:

A decrease of one-third in Chicago's consumption of lumber during 1914 is attributable to the brick strike, the European war and the agitation for extension of the fire limits.

Lumber conditions for the year are as follows:

	Feet.
Total lumber receipts 1914	2,209,254,000
Total lumber receipts 1913	2,804,434,000
Decrease 1914	595,180,000
Total shingle receipts 1914	491,918,000
Total shingle receipts 1913	500,392
Decrease 1914	8,474,000
Total lumber shipments 1914	1,010,531,000
Total lumber shipments 1913	954,000,000
Increase 1914	56,531,000
City consumption of lumber 1914	1,198,723,000
City consumption of lumber 1913	1,850,482,107
Decrease 1914	651,759,107

The report of the Chicago City Manual shows that there were twenty-five per cent more frame houses in Chicago than brick in 1913 and there were seven per cent less fires in frame houses than in those of other construction.

A prominent official of the fire department made a statement in 1911 that with the water mains enlarged and high water pressure, with the splendid fire department at his command, it would make no difference if the building were of wood or other material, as he could then take care of any fire. Therefore, it would seem that the city officials should take up this important matter so that fires in buildings of both wood and other construction would be greatly reduced. This would be of greater importance to the people's interest than the extension of the fire limits, driving out of the market wood as a competitor to other building material.

St. Louis Shipments in 1914

There was a falling off in shipments of lumber by rail at St. Louis last year but there was a gain in river shipments. In both river and rail receipts there was a falling off.

The Hoo-Hoo House at San Francisco

The finishing touches are being put on the Hoo-Hoo house at the San Francisco exposition. The redwood contribution, in the shape of living trees for decoration and bark for weatherboarding, has arrived and is being set in place. This organization has taken much pains to make lumbermen comfortable when they visit the exposition.

Hardwood News Notes

MISCELLANEOUS

The Krit Motor Car Company, Detroit, Mich., recently became a voluntary bankrupt.

The Birch Leaf Lumber Company has been incorporated at New York City with \$200,000.

The Curtis, Yale, Howard Company, Minneapolis, Minn., has increased its capital stock to \$200,000.

The Curtis Lumber & Millwork Company, Clinton, Iowa, has increased its capital stock to \$1,800,000.

The Cincinnati Fire Proof Door Company, Cincinnati, O., has increased its capital stock to \$30,000.

The Detroit Bathtub & Brass Manufacturing Company, Detroit, Mich., recently became an involuntary bankrupt.

A fire which started in the engine room of the George L. Lamb Furniture Company, Nappanee, Ind., burned the plant to the ground.

The Williams Lumber Company, Front Lake, Mich., has purchased the mill of the Athens Hardwood Lumber Company, Athens, and will move same to Trout Lake.

The P. C. Murphy Trunk Company, St. Louis, Mo., will be placed in the hands of a receiver upon application of stockholders, who are reported to have recently had a disagreement.

Edward Hammer of Hammer Brothers, Hillsborg, Mich., died recently.

The Cramer Furniture Company, Thomasville, N. C., has changed its name to the Thomasville Chair Company.

The Mutual Motors Companies has been incorporated at Jackson, Mich., with \$2,000,000 capital to manufacture automobiles for two independent concerns. It will occupy the former plant of the Imperial Automobile Company.

CHICAGO

J. V. Stimson, Huntingburg, Ind., with his wife and daughter, has been spending several days during the week in Chicago.

John M. Woods and W. E. Chamberlin of John M. Woods & Co., East Cambridge, Mass., were in Chicago the beginning of the week.

Charles H. Barnaby, Greencastle, Ind., was a prominent out of town visitor in this city during the past few days.

T. M. Brown of the W. P. Brown & Sons Lumber Company, Louisville, Ky., spent the first part of the week in Chicago.

E. J. Young of Brittingham & Young Company, Madison, Wis., was in the city for a few days this week.

W. E. Heyser of the W. E. Heyser Lumber Company, Cincinnati, O., visited the trade during the last few days.

W. H. Russe of Russe & Burgess, Inc., Memphis, Tenn., stopped in Chicago for a short stay recently.

Season's greetings in the form of tastily gotten up cards have come to this office from: The Hyde Lumber Company, South Bend, Ind.; Hadoutine Lumber Company, Inc., Camden, N. J.; Flanner-Steger Land & Lumber Company, Chicago, Ill.; C. H. Pearson, New York, N. Y.; Northern Forest Protective Association, Munising, Mich.; Richardson Lumber Company, Alpena, Mich.; a red leather pocket memorandum booklet from the Cherry River Boom & Lumber Company, Scranton, Pa., and a little set of blotters from Tickle, Bell & Co., Liverpool.

A good many pretty calendars have been received by HARDWOOD RECORD since the last issue, among them being one entitled "All Love Excelling," from the A. L. Dennis Salt & Lumber Company, Grand Rapids, Mich.; "Love's Ideal," S. M. Bradley, handler of lumber and railroad ties, Morehead, Ky.; "A Trout Stream," The Central Veneer Company, manufacturer of soft yellow poplar veneers, Huntington, W. Va.; "Beatrice," Nashville Hardwood Flooring Company, manufacturer of "Acorn Brand" oak and beech flooring, Nashville, Tenn.; "The Sweet June Bride," from Geo. C. Brown & Co., Proctor, Ark.; "Lower Peninsula Hard Maple," Richardson Lumber Company, Alpena, Mich.; a descriptive woods' scene from J. C. West, president The Atlas Lumber & Manufacturing Company, Cincinnati, O., and from the Herman H. Hettler Lumber Company, Chicago, Ill., the Atlas Lumber & Manufacturing Company, Parkersburg, W. Va., and Clarence Boyle, Chicago, Ill.

Charles Conro, Rhinelander, Wis., of the recently dissolved Conro Lumber Company of that place, and J. H. O'Melia of the J. H. O'Melia Lumber Company, who bought out Mr. Conro's interests and formed the new company, have been spending the past week in Chicago, stopping at the Brevort hotel.

George Burgess of Russe & Burgess, Inc., Memphis, Tenn., arrived in town the first part of this week and will be here for several days on business. Mr. Burgess states their new mill is still in operation and is giving satisfaction.

G. E. Lamb and W. B. Burke, respectively president and vice-president and general manager of the Lamb-Fish Lumber Company, Charleston, Miss., spent a few days the early part of the week in Chicago attending a directors' meeting of that company. According to these gentlemen the consensus of opinion among all of the directors was distinctly optimistic as to the outlook for the coming year. The company has decided to reopen its Charleston operations and to extend every effort toward increasing its

business. An account of the reopening is printed elsewhere in this issue.

W. H. Weller, secretary of the Hardwood Manufacturers' Association of the United States, was in Chicago last week in conference with J. H. Himmelberger, president of that organization. Mr. Weller and Mr. Himmelberger discussed plans for the coming convention.

H. C. Johnson of the Johnson Lumber Company, Kreetan, Mich., has been spending the last couple of weeks in Chicago, having returned from a six weeks' trip through the South.

Walter DeWitt, formerly of Chicago and now of Traverse City, Mich., has been in the city with his family for several days.

R. H. Downman, president of the National Lumber Manufacturers' Association, has been in the city last week closing up the selection of a secretary to take the place of J. E. Rhodes, who has been called to the secretaryship of the recently organized Southern Pine Association.

J. W. McClure and J. E. Stark of Memphis, Tenn., were in the city recently in conference with other members of the Southern Hardwood Traffic Association regarding freight rate matters.

B. F. Dulweber and Emil Thoman, Cincinnati, O., spent several days in Chicago last week.

HARDWOOD RECORD acknowledges receipt of a complete stock list issued by White Brothers, San Francisco, Cal., handlers of all kinds of hardwood products. This booklet in addition to containing a complete list of the company's wide variety of stock, contains photograph of the train load of lumber which was the first hardwood lumber shipped to the coast via the Panama Canal. It also contains description of the steamship Peter H. Crowell which carried the shipment from the southern port to the company's offices.

The Curtis Door & Sash Company, Chicago, has increased its capital stock to \$300,000.

BUFFALO

The building figures for Buffalo show a decline of 18 per cent for 1914, as compared with the previous year. The past year has been a great year for school buildings, three large high-schools having been put up the past year, costing several millions, and these buildings do not figure in the figures given. This year looks like a railroad-station year, if the lawyers and private obstructionists keep their hands off. If the work planned is carried out, it will mean an expenditure of many millions.

A visit to Buffalo's veteran retired lumberman, Maj. John S. Noyes, on New Year's Day brought out a large representation from the Buffalo Lumber Exchange. J. B. Wall and the major sang one of their old-time songs and a number of other selections were rendered by the lumbermen. Maj. Noyes was presented with a steamer rug by his visitors.

Fred M. Sullivan is running for director of the Chamber of Commerce at the annual election to be held on January 13. He is popular among a large acquaintance and will have a large support, including the unanimous votes of the lumbermen.

On December 28 J. Newton Scatcherd, son of J. N. Scatcherd, lumberman, of this city, was married at the home of the bride's parents, Ogdensburg, N. Y., to Miss Edith W. Palmer. Mr. and Mrs. Scatcherd will live at 703 Delaware avenue, Buffalo.

Taylor & Crate are doing the average amount of business in selling lumber, although they are not running their southern mills this winter. They are looking for a fair increase in business this year.

C. C. Slight is spending most of his time looking after his mill operations at Condersport and Genesee, Pa., not being in his Buffalo office more than once in a week or two.

The Buffalo Hardwood Lumber Company is beginning to receive some lumber stocks and a large amount of both incoming and outgoing stock is oak. M. M. Wall has been spending some time in the Southwest lately.

C. N. Perrin has returned from a trip to the Southwest, where he bought about 1,000,000 feet of hardwoods for Blakeslee, Perrin & Darling. The yard has sold considerable maple lately.

G. Ellas & Bro. have filed plans with the city building bureau for making an extension to the box shop, making it much more commodious. The hardwood trade is reported quiet at present.

Anthony Miller's yard found trade in hardwoods quiet early this month because of inventory taking, but a pretty good volume of business has been done recently and early improvement is looked for.

Hugh McLean has returned from a business trip to Canada.

PHILADELPHIA

J. Gibson McIlvain, Jr., of J. Gibson McIlvain & Co., has no doubt that the new year will develop a substantial prosperity. He says the only trouble at this time is that if a man buys lumber and finds he can buy it cheaper the day after, he stops buying—if the reverse were the case he would keep on buying.

F. X. Diebold, president of the Forest Lumber Company, believes in a livening up of things for the new year. He has just returned from a week's stay at the Pittsburgh office, and reports that the trade in that section feels encouraged. The mill at Konnarock, Va., is working full time.

Isaac H. Rhoades, for many years sales agent for George Craig & Sons, and George C. Craig, who for a number of years was employed at mills of latter firm in Winterburn, W. Va., have formed the firm of Isane H. Rhoades & Co., and will conduct a general wholesale lumber business. Headquarters will be in the George F. Craig office, 1301 Morris building.

Charles G. Blake, Philadelphia manager for the Babcock Lumber Company, has severed his connection with this house. He has been associated

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform. The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

with the company for about eight years, but as yet has not fully decided on future plans. He regards the outlook promising.

Jerome H. Sheip says that the Xmas cigar business was way below normal and consequently cigar boxes were less in demand. He is very sanguine, however, as to prosperous times in 1915.

Frank Rice Whiting of the Whiting Lumber Company says things are a little quiet now, but he is confident the banks are on the point of relaxing their grip, which will help business generally.

Maurice J. Dukes, vice-president of R. A. & J. J. Williams, says that his company has been busy stock taking and finds on the whole that its domestic business has not fallen so very far behind. Better times are already appreciable. The export business, however, will be very slow to improve as long as the war lasts.

The Gill Lumber Company has moved to 639 Land Title building, where it has better facilities for handling its rapidly increasing business. Benjamin Thompson, who has been handling the eastern Pennsylvania trade, will cover Philadelphia and George Fawcett takes over the Pennsylvania territory.

On January 16 Charles M. Betts & Co. will go out of business as a firm and will be succeeded by the Charles M. Betts Company. The officers are: B. Franklin Betts, president; C. Walter Betts (of the Buffalo office), vice-president; William T. Betts, secretary; Charles L. Betts, treasurer.

Samuel H. Shearer & Son are looking forward to a considerably magnified trading this year. E. S. Davison, formerly of E. B. Foss & Co., of Bay City, Mich., has been engaged as salesman to cover Pennsylvania. C. L. Barr, formerly of the Whiting Lumber Company, will take charge of Philadelphia and New York. The firm has secured a storage warehouse in Philadelphia to carry a stock of oak flooring to be distributed in Philadelphia and surrounding territory.

The three-master schooner Warren Adams, which sailed from Charleston, S. C., for Philadelphia on December 21, was wrecked by a gale on Christmas day and abandoned in a sinking condition December 27.

Fire visited the lumber yard and stables of Frank G. Justice, Glenside, Pa., on December 25, causing a loss estimated at \$80,000.

← PITTSBURGH →

The Kendall Lumber Company has moved from the House building to the eighteenth floor of the Oliver building, where it has eight fine offices on the Smithfield street front. It has secured for city salesman John Trester, Jr., who was formerly with the Babcock Lumber Company.

The E. H. Shreiner Lumber Company has added to its force, James C. Linahan, formerly secretary of the old Linahan Lumber Company, a well-

known hardwood concern in this city. Mr. Shreiner is in the East this week.

The Breiweisler Lumber Company finished up a very good year in hardwood and Manager A. G. Breiweisler is optimistic about the future of the lumber business in this territory.

The Foster Lumber Company, which makes a specialty of oak ties, last week secured an order for about 700,000 feet of stock for railroads.

The Pennsylvania Stave Company, which was located at St. Marys, Pa., has dismantled its plant and its employees are being sent to other plants which belong to this company.

The West Penn Lumber Company has added to its force, W. C. Crow, who has been of late years with the Smith Lumber Company of Cleveland, and will travel tri-state territory now.

E. E. Yohn, connected with the Pittsburgh Hardwood Door Company until that concern recently sold out, will represent H. C. Bemis of Bradford, Pa., in the Pittsburgh district this year.

The Danley & Allen Lumber Company which was organized last year now has a third partner in the person of S. Clyde Scott, who will be secretary of the concern. For the past five years Mr. Scott has been with the Willson Brothers Lumber Company.

← BOSTON →

On December 26 a disastrous fire broke out in the yard of the Pope & Cottle Company at Chelsea. A damage of \$125,000 resulted to this yard, as well as the box factory of Atwood & McMannus. The loss is said to be covered by insurance and the Pope & Cottle Company will be able to fill all orders from stock in yards of affiliated concerns.

The Massachusetts Builders' Finish Company of Cambridge filed on December 28 a petition in bankruptcy with liabilities of \$14,208, and assets of \$2,100. A number of Boston lumber dealers are among the creditors.

On account of the great decline in the demand for office furniture, the large plant of the Derby Desk Company in Somerville has laid off about seventy per cent of its men. With a very large manufactured stock, it does not anticipate resumption with a full force before summer, but will operate the factory continuously, increasing the number of hands as conditions may warrant.

On December 21 a corporate charter was granted by the state to the Massachusetts Wholesale Lumber Association, Inc. The first meeting to establish the charter membership has been called by the preliminary organizers for Wednesday, January 6 at Young's hotel, Boston. Permanent officers for the year were elected and the policies and plans of the new association considered.

◀ **BALTIMORE** ▶

According to the report issued several days ago by J. H. Nightengale, state labor commissioner of West Virginia, lumber takes the first rank in the amount of capital invested, as well as in the value of the output, the number of persons employed and the sum paid in wages. There were in 1913 not less than 200 manufactories of lumber in West Virginia, with an investment of \$13,791,695 and an output valued at \$20,720,202. Employed in these factories were 15,414 persons, who received \$8,145,844 in wages. Of the 200 employers of labor, 67 reported increases in wages ranging from 2 to 50 per cent.

Another chapter has been added to the history of the fight over switching charges at Baltimore, in which the lumber trade is vitally interested, this chapter dealing with a recent decision of the Interstate Commerce Commission at Washington, which sustained the tariffs filed by the Baltimore & Ohio and to which exceptions had been filed by a number of shippers. The rates apply to points on the Baltimore & Ohio railroad in Baltimore and between Baltimore and adjacent territory. The charge is made to hold good with regard to intrastate as well as interstate business. The tariffs filed fix a uniform charge of \$5 per car for this service on the line, and of \$1 per car for yard switching, which is the rate that has been allowed by the Public Service Commission of Maryland. In some cases the new rate is higher than the one previously charged, and in other cases it is lower. Those who will be made to pay the higher rate objected.

The new managing committee of the Baltimore Lumber Exchange held its first monthly meeting January 4 at the rooms on East Fayette street. Only routine business was disposed of.

Col. E. D. Cole, dealer in lumber and builders' supplies, who has been in business at Fredericksburg, Va., for forty-three years, retired on January 4, having sold the stock and good will to E. L. Jones, who has been connected with him for the past eleven years.

At the instance of the Union Trust and Deposit Company of Baltimore and others, trustees, Sheriff Scott of Garrett county has seized the property of Col. John T. McGraw of Grafton, W. Va., located in Garrett county, Maryland. Colonel McGraw is the Democratic national committeeman for West Virginia, and was the Wilson leader of that state. At one time he had extensive dealings in timber and coal lands, and was reputed to be a millionaire.

Levinson & Zenitz, furniture manufacturers on North Gay street, have leased the factory operated for years by D. Wilfson & Sons, at Howard and Stockholm streets, for a term of years, with the privilege of buying the place. The factory building is 80 x 150 feet, and well adapted to the business of the lessees, who planned some time ago to erect a large building on the site now occupied by them, but seem to have abandoned the idea.

E. C. Williamson, Columbus representative of Richard P. Baer & Co., paid a visit to headquarters at Baltimore during the holidays. On his way back he stopped at Franklin, W. Va., to confer with the firm's buyer there.

George F. Sloan, in his time one of the best known lumbermen in the city, died December 24 of heart trouble at a local hospital. He had been ill for some months. Mr. Sloan was the senior member of the wholesale and milling firm of George F. Sloan & Bro. until more than two years ago, when the concern passed into the hands of trustees. A native of Baltimore, he was named after his father, the late George F. Sloan, who was one of the founders of the old firm of Burns & Sloan, in its day one of the principal firms here. Mr. Burns died a very rich man and the firm was afterward changed to George F. Sloan & Bro., with Fisher Sloan as the other partner. Since the failure of the firm, George F. Sloan has lived in retirement, Fisher Sloan having formed the Sloan Lumber Company to carry on the wholesale business. The operation of the mill was discontinued.

◀ **COLUMBUS** ▶

Arrangements have been made for the annual conference of secretaries of builders' exchanges, which will take place at the Virginia hotel, Columbus, January 25 and 26 in conjunction with the annual meetings of the Ohio State Association of Builders' Exchanges and the National Association of Builders' Exchanges. The meeting was at first scheduled at Dayton earlier in the month but was changed to Columbus because of the other two meetings.

The report of the Columbus fire department for the year 1914 shows that the fire loss during the year was \$176,917.49, which is \$87,438 less than the fire loss of the previous year.

The Buckeye Builders' Supply Company of Toledo has been incorporated with a capital of \$10,000 to handle building supplies by F. C. Munz, C. L. Munz, J. D. Munz and F. P. Rennison.

L. L. Hay has opened an office to handle lumber and shingles in a wholesale manner in room 59 Ruggery building. He has had considerable experience in the lumber business.

Papers have been filed with the secretary of state increasing the capital of the Mansfield Lumber Company of Mansfield from \$25,000 to \$100,000.

The question of building a ship canal connecting the Ohio river with Lake Erie is again up and the movement is receiving considerable support. It is proposed to build the canal connecting Pittsburgh and Cleveland. Burd Patterson is secretary of the commission organized to agitate the building of the canal.

R. W. Horton of the W. M. Ritter Lumber Company said that trade during the latter part of December was quiet, which was expected under

Indiana's Original Giant

This photograph was made while the tree was being cut for our mill.

It stood in Putnam County, Ind., and was a genuine FORKED-LEAF WHITE OAK—beyond question the finest white oak that ever grew.

Your customers were delighted with that quiet beauty, that rich, even color and figure that for all time have given to goods made from Indiana oak an Individuality.

You can please them again. How? Simply by buying a parcel of almost anything in lumber or sawed veneers from our yards. You can select from a full assortment. We positively carry no southern stock and can prove it.

And remember, we have built up our business by giving

Just a little better quality than you expect

Band Mill, Mill Creek, W. Va.

Circular Mills, Todd, W. Va.

the circumstances. He is looking for a much better run of orders after the completion of the semi-annual inventories. Prices are ruling steady at the levels which have prevailed for some time.

J. A. Ford of the Imperial Lumber Company reports a better feeling in the hardwood trade generally.

The Ohio Public Utilities Commission in a recent finding has ruled contrary to the Interstate Commerce Commission with reference to the status of "lap lines." It holds that railroad companies operated by industrial concerns only, when having a separate charter, can share in the freight revenue of joint shipments.

According to the report of the Columbus building inspector for the year 1914, there were 2,736 permits issued for structures estimated to cost \$6,885,065, as compared with 2,654 permits and a valuation of \$5,508,408 in 1913. In December, 1914, there were 86 permits issued for structures estimated to cost \$1,005,200, as compared with 139 permits and a valuation of \$322,550 in December, 1913.

TOLEDO

Harry X. Williams, proprietor of the Williams chair factory, died at his home in Toledo as the result of pneumonia. He was aged sixty-eight years. Mr. Williams has been in business in Toledo since 1867. He came here from Lebanon, O., and the body was taken there for burial.

The building work begun in Toledo in 1914 represented \$99,000 greater outlay than for the previous year. The building permits issued for the year just closed amounted to \$6,085,182 while those for the year 1913 amounted to but \$5,986,079. There were 2,758 permits issued during 1914, which is 363 more than in 1913.

The Ohio workmen's compensation law was held valid in the supreme court at Washington, Tuesday, when a decision was handed down sustaining the decision of the supreme court of Ohio in favor of Harry O. Blagg against the Jeffrey Manufacturing Company of Columbus.

The Gotshall Manufacturing Company reports business quiet. President Gotshall says that railroads are not placing any orders for new equipment yet but he is expecting a good spring business.

The Booth Lumber Company is busy with its annual inventory. The plant is running at about half capacity. President Booth reports column business slow. The concern has recently added the making of automobile bumpers to its regular line and new machinery is now being added for this department. Mr. Booth reports many orders on the books and a live business. He anticipates a good column business in the spring.

The Skinner Buggy Company reports a light demand, but indications of a good business later in the season. The demand for farm wagons it is expected will be heavy, and a large buggy manufacturer is anticipating a large run on buggies this spring.

INDIANAPOLIS

The Greer-Houghton Lumber Company has filed notice of dissolution with the Indiana secretary of state.

The Houghton Lumber Company has increased its capital stock from \$5,000 to \$25,000.

Lum Howell and Chester Rollins have opened a sawmill at Kokomo and will handle second-growth timber. Howard county has been without a sawmill since 1890.

With an authorized capitalization of \$9,000, the Ford Lumber Company has been organized and incorporated at Princeton by A. Dale Ford, Nellie A. Ford and E. A. Ford.

Andrew J. Schu, who had been identified with the hardwood lumber and timber trade many years, died at his home in Evansville recently at the age of seventy-nine.

Building permits issued by the city last year aggregated \$7,933,552 as compared with \$9,361,973 in 1913. There was an increase last year in the number of permits issued.

The Big Four railroad shops at Beech Grove, which were closed several weeks, have resumed operations with a full force. It is announced the plant will work full time during 1915.

The Burnet-Lewis Lumber Company has brought suit for receiver against the Sun Realty Company which has been engaged in building houses and selling them on the partial payment plan.

Bogus checks, signed with the name of the Interior Hardwood Company of this city, by M. A. Thorpe, treasurer, are being circulated in Florida and other southern states. The checks are drawn on the National City bank of this city with which the hardwood company has no account.

MEMPHIS

T. H. Sampson of New Orleans, has been in Memphis during the past few days looking over the situation with a view to erecting a plant for the treatment of gum lumber. He says that he can take a white sap log and, by a chemical process, make it as rich in color as seasoned red gum. Mr. Sampson proposes to begin operations here on a somewhat limited scale. His initial plant is to cost about \$5,000, but it will be enlarged from time to time if the treatment which he proposes to use is as successful as he anticipates. Mr. Sampson was a special guest of the Lumbermen's Club of Memphis some weeks ago, at which time he went into full explanation of his process and what it would accomplish. He also exhibited samples treated by his process and these were regarded as remarkably good.

The Louisville & Nashville on January 1 increased the hours of work at its shops at New Decatur, Ala. These shops for quite a while have been operating four days a week and eight hours per day, making a total of thirty-two hours per week. The present schedule calls for six days a week of eight hours each, a total of forty-eight hours per week. These shops employ about 2,500 men when operating at full capacity and the resumption of operations on the increased scale is regarded as an exceptionally favorable development.

T. J. Turner is building his third handle factory at Marked Tree, Ark. He has been very unfortunate heretofore, having lost his two other plants by fire. His friends are congratulating him on being able to put up the third plant as he had no insurance on either of those previously burned. The new plant, however, will be fully insured.

The Southern Engine and Boiler Works at Jackson, Tenn., have secured an order involving about \$250,000 and have already resumed operations at full capacity. The management states that this order is large enough to keep the plant in operation on full time for quite a while. It also calls attention to the fact that there is more sawmill, railroad and general business offering than has been the case for some time and it is inclined to anticipate the ability on its part to keep its machinery fully employed.

— < NASHVILLE > —

Richard N. Chestnutt, Sr., formerly of Nashville, died at his home at Montgomery, Ala., after an illness extending over six weeks. He had been in failing health for several years. Mr. Chestnutt was for many years connected with the hardwood industry. He was a native of Mississippi, and removed to Murfreesboro, Tenn., when a young man, where he was associated for many years with the firm of W. B. Earthman & Co., who were at that time among the largest lumber operators in this section. Later he was in the lumber business in Nashville, and about eight years ago removed to Montgomery. He was a man of quiet and unassuming disposition, but intensely loyal to his friends. Mr. Chestnutt is survived by his widow, one daughter and two sons. Omar and R. N. Chestnutt, Jr., are the sons, both of whom have been associated with their father in the lumber business. The burial was at Murfreesboro, Tenn.

Richard Norvell, who has been for a number of years connected with the firm of Norvell & Wallace of Nashville, has been admitted as a junior partner in the firm. He is a son of the senior member and a popular and capable young lumberman.

President Henderson Baker of the Nashville Lumbermen's Club in talking for the outlook for 1915, said that the indications at the office of his firm are that business is improving materially. Mr. Baker said that his firm had received several nice orders and that the attitude of the lumbermen is that of hopefulness of better demand, and gradually increasing trade.

Building permits at Nashville for 1914 amounted to \$1,971,401 against \$1,666,602 for 1913. Building operations fell off after the outbreak of war, though for several months increase was shown.

George N. Welch, a prominent lumber manufacturer, who has been elected a member of the Tennessee Railroad Commission, has assumed the duties of his position.

— < LOUISVILLE > —

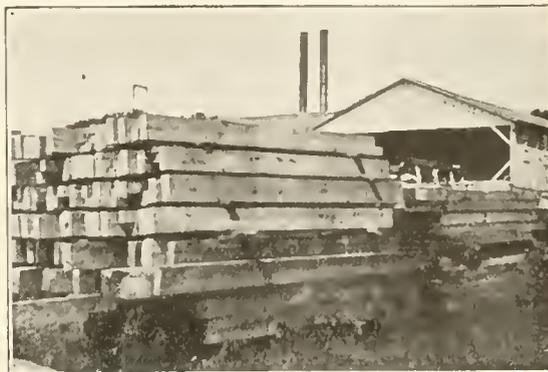

Traffic matters have held the center of the stage in Louisville during the past few weeks, the advance in rates from the South having everybody worried. H. E. Snyder of the Louisville Veneer Mills was sent to Chicago December 28 to attend a conference of those interested in the advance, representing the Louisville Hardwood Club. A meeting of the lumbermen was held January 4 for the purpose of studying the case and going over the evidence to be presented. The Louisville hearing is scheduled for January 19 and will be handled by Luther M. Walter of Chicago and John R. Walker of Washington.

An examiner of the Interstate Commerce Commission will be in Louisville January 23 to take evidence in the complaint of the C. C. Mengel & Bro. Company against a number of eastern roads, the basis of the complaint being that cedar log rates are higher than those on lumber of this or any other variety. The log rates are class rates, and those on lumber are commodity rates, the inconsistency apparently having been overlooked by the traffic men. Reparation on a shipment is asked by the company.

Members of the Louisville Hardwood Club who attended the final meeting of the year, held on December 29, agreed that prospects for 1915 were much better than conditions immediately preceding had been. It was generally believed that the volume of business handled in the current year will be from twenty-five to thirty per cent greater than last year, and that prices would be correspondingly improved.

Green Garrett of Winchester, Ky., who not only is a well-known lumber manufacturer, but also is a member of the state railroad commission, is of the opinion that the rate advances granted the eastern roads will help business in general and that of lumber manufacturers in particular. "The effect will be immediate, in my opinion," he said. "The eastern railroads have been entitled to an increase in freight rates for a long time, and the first effect will be to settle a question which has been hanging fire for some time, and settling it in a way that will give the railroads a feeling of confidence. They are entitled to increased earnings, and will spend the greater part of it for improvements. The railroads will undoubtedly anticipate their increased earnings due to higher rates. That means that they will immediately go into the markets and buy liberally to replace their worn-out equipment, to make extensions, to buy new cars, rails and

DRIER DEPARTMENT

The A. H. Andrews Co.
115-117 S. Wabash Avenue
CHICAGO, ILLINOIS

cross-ties, to build sidings and put up new buildings. One of the chief causes of dull business in many quarters has been the retrenching policy of the railroads, who have not been in the market for any more than their most urgent needs. The railroads buy an immense amount of material in Kentucky, not only coal and cross-ties, but lumber for bridges, culverts, buildings and cars, and I believe an immediate stimulation of the lumber business is due from the transportation companies."

An interesting feature of the trade situation is the way in which white oak is pulling away from red. The former is selling better than its companion material, and prices are also improved. This is the first time for quite a while that plain oak has been moving in this way, though of course the dullness of lumber has resulted in a wide variation in prices between quartered red and quartered white.

Prospects are that the furniture shows will develop good business. This is the opinion of F. B. Lane, Grand Rapids representative of the C. C. Mengel & Bro. Company, the local mahogany concern. Mr. Lane was home for the holidays, and conferred with the officers of the company regarding prospects. He said that the manufacturers have light stocks of lumber on hand, but that some of them are taking advantage of the reduced quotations to stock up for some time to come at present prices.

One of the leading concerns of Louisville, which has been operating its southern mills, closed them January 1. The same policy is being followed by other houses, and in view of the practical cessation of operations in Memphis and other leading manufacturing centers, it is evident that the disparity between production and consumption has disappeared, and that, if anything, consumption is running considerably ahead. From now on, with this in mind, it is reasonable to look for stronger market conditions.

Louisville will be well represented, as usual, at the annual convention of the Indiana Hardwood Lumbermen's Association, which will be held in Indianapolis, January 20.

Col. C. C. Mengel, president of the Mengel Box Company, which operates several big hardwood mills in addition to its box factories, has expressed himself as believing that the railroads should be permitted to advance rates on lumber as well as other commodities. He believes that until they get prosperous, the lumbermen can't be prosperous, and that for the good of the country the lumber interests ought to be willing to accept the advances.

—< KNOXVILLE —>

On December 30 C. F. Maples and Miss Laura Stephens were married at Fountain City, Tenn. Mrs. Maples is well known in Knoxville and Mr. Maples is president of the C. F. Maples Lumber Company, Knoxville, which company recently purchased the old plant and equipment of the Knoxville Saw Mill Company. He is well known in Knoxville, having been connected with the lumber business for the past ten or fifteen years.

H. E. Kopeke of Kimball & Kopeke is back from a trip East.

J. M. Logan, president of J. M. Logan Lumber Company, has just returned from Cincinnati. He reports business at the company's Cincinnati branch quiet at present, but orders are coming in fairly well.

Several of the lumbermen are planning to attend the Hardwood Manufacturers' Association's annual convention in Cincinnati the latter part of this month.

—< BRISTOL —>

The Ilce Manufacturing Company has about completed its plant at Johnson City, Tenn., and is purchasing logs with a view to resuming operation at once. The company's plant was destroyed by fire some weeks ago.

It is probable that an important development will soon be undertaken near Manchester, Ky., where Edwin Gearhart of Pittsburgh, and several associates have purchased an area of over 20,000 acres of hardwood timber. No definite announcement of plans has been made.

J. P. Moorman, who has been identified with the lumber industry at Houston, Texas, is a visitor in the city. He reports business in that state very dull, but prospects for improvement in the early spring.

The United States Spruce Lumber Company is cutting hardwoods at its band mills at Marion, Va., and Fairwood, Va., both of which are running full time.

A number of the Bristol lumbermen who operate small mills in this section are simply resting on their oars, as it were, waiting for business to improve. They expect things to pick up materially within the next few weeks.

—< ARKANSAS —>

According to T. E. Morrison, president of the Arkansas Tie and Timber Association, who has recently made an extended tour of the state, the timber business is at a standstill. Mr. Morrison attributes this condition largely to the adverse legislation of the state and to the railroads. He predicts that conditions will not right themselves properly unless some remedial action is taken by the incoming legislature, which convenes on January 11. He thinks that the present inactivity of the timber industry is due chiefly to the fact that the railroads have been deprived of legitimate profits, and their incomes have been so reduced that they cannot afford to repair and reconstruct their rolling stock and road beds. He also states that there are hundreds of men over the state, formerly employed by the woodworking establishments, who are now out of work.

J. C. Clary, commissioner of the Bureau of Labor Statistics of Arkansas, has just completed and filed his biennial report, in which some fifty pages are devoted to the lumber and timber industry. The report shows

that there are 1,561 woodworking plants in Arkansas, of which number 1,162 are saw and planing mills.

The report also shows that there are 75,000,000,000 feet of standing timber in Arkansas, and that the annual cut is 2,111,300,900 feet. Of the annual cut 1,246,572,000 is worked into finished products within the borders of the state, while the remainder is shipped out as raw material.

Hardwoods are given considerable prominence in the report. Cypress is now being cut more than any other wood in the state, according to the report, and Arkansas ranks first in the annual output of red gum, or satin walnut. Oak has an annual cut of 358,566,000 feet; red gum 200,935,000; cypress 33,012,000; cottonwood 54,507,000; hickory 45,133,000; elm 13,036,000; tupelo 6,084,000; sycamore 5,466,000; yellow poplar 4,484,000; basswood 603,000; walnut 544,000; cherry 332,000; birch 138,000; and beech 78,000.

A report from Norfolk, Ark., is to the effect that the tie market at that place reopened on January 1, after several weeks of closing down. The news was welcomed by hundreds of tiemakers who were thrown out of employment when the tie market was closed.

Articles of incorporation were recently filed with the secretary of state by the Diamond Hoop Company of Proctor, Ark., showing an authorized capital of \$10,000. David L. Watson is president of the new company.

Three hundred employes of wagon concerns in Fort Smith were reemployed on December 26. This re-awakening of the industry at Fort Smith was occasioned by the letting of large contracts from the French government, according to report.

In spite of the general depression of conditions over the country since the outbreak of the European war, the H. D. Williams and Pekin cooperage plants at Leslie, Ark., have continued to operate without loss of time, save for holidays and a few breakdowns.

That the year 1914 showed less loss from fires in forests than any other year for the past decade is the tenor of a report recently sent out from the Ozark national forest reserve in this state. The yearly loss from forest fire damages to property heretofore has been placed at \$25,000,000, while the losses of lives have averaged about 70 people per year. This great loss is being gradually reduced as the efficiency of the protection is advancing.

The Ozark national forest, which is one of the two big forest reserves in Arkansas, furnishes timber for the making of many million staves yearly, as well as timber and lumber for other purposes, only the ripe timber being sold, so as to give way for the oncoming crops. Under the arrangement of the Forestry Bureau, twenty-five per cent of the amount for which timber from these forests is sold reverts back to the territory of the reserve, to be used for road and school building. Much improvement from this source is being seen already in Arkansas, though the reserves have been in operation only four or five years.

B. W. Benton was recently appointed receiver for the Big Bayou Lumber Company by Chancellor J. M. Elliott of Pine Bluff. The appointment of a receiver was made upon the application of Henry Kruse and R. E. Drake, former president and secretary, respectively, of the company. The company has surrendered its charter. The assets are placed at \$30,000, and the necessity for a receiver is attributed to the dull lumber market occasioned by the European war.

The time for filing exceptions to the report of Special Master Judge J. G. Wallace in the Iron Mountain and Cotton Belt Railroad rate refund cases has been extended to January 11, 1915. The special master's report was filed in the office of the United States district court clerk on December 2, 1914, and under the chancery rules the exceptions should have been filed within twenty days, but upon application of the railroads and some of the shippers Judge Trieber extended the time for twenty days.

< MILWAUKEE >

Joel W. Bingham, for many years engaged in the lumber business at Ashland and New London, Wis., and lately connected with various important business enterprises in Milwaukee, passed away recently at his home at the age of sixty-nine years. He was a thirty-third degree Mason. Mr. Bingham is survived by a widow and two daughters.

Fire of unknown origin in the sheds of the Pine Lumber Company, Milwaukee, recently destroyed two structures and 500,000 feet of lumber, causing a loss of \$25,000, covered by insurance.

The Superior Manufacturing Company of Superior, Wis., recently sustained a loss of \$10,000 when its dry kiln was destroyed by fire. This was the second time this year that the kiln was burned.

Hans Jacob Anderson, president and principal owner of the Anderson Lumber Company, operating a large woodworking plant, recently dropped dead while walking on the street near his home in Hudson, Wis. Death was caused by heart failure.

Michael Dalton, president of the Dalton, Lowrie, Wheeler Lumber Company of Superior, Wis., recently died at the home of his brother in Fond du Lac, after an illness of several months. Mr. Dalton was prominent in Superior business circles.

Logging in Brown County, Wisconsin, at a standstill for many years, will be resumed as the result of the purchase of 160 acres of timberland near Pittsfield, Wis., by A. Nicholai of Marshfield. Logging will start at once and mill machinery is on the field to be installed in a new sawmill which will be erected.

The Racine Carriage Company has been incorporated at Racine, Wis., with a capital stock of \$25,000, representing the merger of the Racine-Sattley Company and the co-partnership of the Richardson-Kennedy Com-

pany. Officers have been elected as follows: President, W. H. Richardson; vice-president, J. O. Kennedy; secretary-treasurer, J. C. Lund. The plant formerly occupied by the Racine Carriage & Wagon Company has been leased.

Forty Pottawottomie Indians recently arrived in Crandon, Wis., from Star Lake, Wis., and have been placed by the government agent on the cut-over lands recently vacated by the Keith & Hiles Lumber Company. Until homes can be built, the Indians will reside in the lumber camps of the company.

The Northern Furniture Company of Sheboygan, Wis., has received an order for 2,000 pieces of special furniture to be installed in "The Inside Inn," one of the large hotels to be opened for the Panama exposition at San Francisco in 1915.

The Wachsmuth Lumber Company has closed its sawmill at Bayfield, Wis., after a successful season. More than 20,000,000 feet of lumber was cut since the opening of the plant on April 15.

The Mosinee Land, Log & Timber Company of Mosinee, Wis., has placed its sawmill in operation. The company is bringing in a large supply of logs from its camps.

The Foster-Lattimer Lumber Company of Mellen, Wis., is erecting a new dry kiln in connection with its planing mill and flooring plant. The new kiln is being built under the direction of Howard F. Weiss, director of the government Forest Products Laboratory at Madison, Wis., and is designed to dry lumber direct from the saw for use in the flooring plant and planing mill.

Announcement has been made that the Wisconsin & Northern railroad will erect the thirty miles of road to complete the route from Craudon to Shawano, Wis., some time next spring. The road will open up some of the finest hardwood timber in the state.

Wisconsin lumber and logging concerns are now in the midst of their logging operations and assurances are given that the logging output will be much larger than had been anticipated several months ago. Rice Lake companies will cut and ship about 30,000,000 feet to Rice Lake to be sawed, it is said. Eau Claire concerns will ship to that city about 35,000,000 feet of logs and the Bekkedal Lumber Company of Coudray will cut about 8,000,000 feet. The R. Connor Company of Marshfield, with mills at Strafford and Laona will cut its usual amount of timber. The Blissell Wheeler Company of Marshfield will cut about 3,000,000 feet and the Upham Lumber Company of the same city will cut and saw its usual amount. The Roddis Lumber & Veneer Company, also of Marshfield, will cut from 3,000,000 to 5,000,000 feet, its usual supply.

Several Wisconsin lumber concerns have contributed liberally to the erection and furnishing of the Wisconsin building at the Panama exposition at San Francisco, according to Daniel E. Bowen, secretary of the Wisconsin Exposition Commission, recently banquetted in Milwaukee. The I. Stephenson Co., Trustees of Marinette donated all the hardwood flooring; the Underwood Veneer Company of Wausau furnished all the veneer paneling for the building and the Mason-Donaldson Lumber Company of Rhinelander recently shipped a carload of fine birch lumber to be used in the interior work of the structure.

The John Schroeder Lumber Company of Milwaukee has placed three logging camps in operation on Stockton Island, near its mill at Ashland. About 300 men are being employed in the camps.

The Wisconsin Veneer Company of Rhinelander, Wis., recently reorganized with an increased capital stock, has placed its plant in operation. About 100 men are now being employed, although the working force is to be increased later.

The large sawmill at Neopit, owned by the Menominee Indians, is now operating on day and night shifts and is probably one of the few mills in northern Wisconsin employing a night crew.

It is said that plans have been completed by the J. S. Stearns Lumber Company for operating its sawmill at Washburn full blast next season. It is rumored that the company has made heavy purchases of timberland in Minnesota.

The Rice Lake Lumber Company of Rice Lake has completed the work of laying 1,600 feet of new siding at its sawmill. This will give the company much additional space for the unloading and piling of logs at the mill.

W. B. Clubine, manager of the Hines Lumber Company's interests at Park Falls, Wis., has announced that the company will employ about 250 men in the woods near Park Falls this winter. The Hines sawmill has been closed after a successful season.

The Greenwood Heading & Lumber Company of Greenwood, Wis., has disposed of its holdings to Anson J. Campbell and Chester C. Campbell of Park Falls, Wis., who will conduct the business under the name of the Greenwood Lumber & Supply Company.

It is understood that the special committee of the Wisconsin legislature, appointed to investigate the proposed forest reserve, will recommend: That reforestation be continued in Wisconsin; that at present the area of the forest reserve be not extended; that all land within the reservation that is good for agricultural purposes be opened to actual settlers; that reforestation be only upon non-agricultural land. The committee will recommend about the usual appropriation, but that instead of its being made to the forestry board, it will be made to a new commission to be called the State Conservation Commission, to be appointed by the governor and to be composed of one member with a thorough knowledge of propagation, etc., of fish and game, one a technically trained forester, and the third a technically trained engineer.

< DETROIT >

The Porterfield Ellis Lumber Company, operating two camps near Parli, Mich., is employing 150 men and will cut this season about 8,000,000 feet of mixed timber. The company is carrying on one of the largest logging operations in Michigan and if the war had not brought about a depression in the lumber market four camps would have been in operation. Most of the timber cut this season will be shipped to northern Wisconsin mills.

Members of the Saginaw Valley Lumbermen's Association at an informal meeting with Lawton T. Hemans, chairman of the Michigan Railroad Commission, protested against the recent changes in the freight tariff. The changes in several cases, the lumbermen say, have been hardships upon the lumber industry. A relief committee has been appointed to recommend changes to the railroad commission.

At a recent dinner of the Grand Rapids Lumbermen's Association a general feeling of optimism pervaded. There has been an increased movement in the dry stock in Grand Rapids yards and it is the consensus of opinion that an increase in demand will soon be noticeable.

For the first time in the history of Alpena there have been sold at auction the holdings of a lumber company. The "loose property" of the once prominent Churchill Lumber Company has been sold under the mallet. Time was when the Churchill company controlled the greater part of all timberlands adjacent to the city of Alpena.

One of the last pieces of timber standing in Mason county, the home of the Stearns interest and long famous as a lumber manufacturing center, has been sold to the Ludington Basket Company by James Foley. The timber has been standing since the first lumbering operations were started in Mason and adjacent counties.

The Stearns Salt & Lumber Company has started the erection of a new dry kiln at its plant at Ludington and when it is finished will be the seventh kiln at the plant. It will materially expedite the handling of lumber. The new kiln is the latest design. Like the other kilns, it has a capacity of 15,000 feet of lumber. In addition to this improvement the company has installed a new flooring manufacturing machine. It is a high power machine and is equipped with a polisher. Its installation will mean a greater capacity for output at the Stearns plant.

The Copper Country Commercial Club, an organization formed in the interests of Michigan's copper country at large, is in negotiation with the American Thread Company regarding the establishment of a spool factory in the copper country. The company desired a tract of white birch and the club has located a tract of 90,000 acres of such timber.

Richardson & Avery have established a new lumber town on the Soo railroad near Sault Ste. Marie through the removal of the mill recently purchased from the Forest Lumber Company at Tower, Mich. The new town has been named Raco. The company has timber enough to insure operations for twenty-five years. The mill is almost completely assembled at the new site and enough logs have been cut to operate as soon as sleighing permits their being hauled from the woods. The stock consists mainly of hardwood and hemlock. A stave mill will be operated in connection with the sawmill. The mill will be under the active management of Charles McGinnis.

The Eau Claire Basket Company is now receiving a season's supply of logs at its factory at Eau Claire. If sleighing continues good enough logs for the season will soon be on hand.

Ader & Gray and D. B. Gray & Co., two upper peninsula associate logging firms, have filed petitions in bankruptcy at Marquette. Poor business conditions in the lumber market are given as the reason for the failures. The companies have been operating in the upper peninsula of Michigan for thirteen years.

The W. J. Brinen Lumber Company has been formed at Muskegon and has taken over the mill property and stock of the W. J. Brinen Company, a co-partnership concern operated formerly by the late W. J. Brinen and his son, W. J. Brinen, who is interested in the newly-formed company. Other stockholders are William Monroe, George M. Gottshall and John H. Morse, mayor of Muskegon.

Benjamin Robbins of the Robbins Table Company of Owosso, discussing the past year's business, says, "Our business in 1914 was just fair. It was started off well but was not good the latter part of the year. However, we look forward to an improvement in 1915."

Frank Woodward of the Woodward Furniture Company and of the Owosso Casket Company, regarding the year just ended said that his trade in 1914 was better than in 1913, and prospects are bright for 1915. The casket business averages about the same every year. Competition was very keen last year.

After many weeks of idleness the Schneider & Brown sawmill at Marquette has resumed operations with a crew of thirty men. The mill was closed early in the slump in the lumber market. The day crew will be kept at work indefinitely, says Mr. Schneider, and whether a night crew will be employed later depends upon business conditions.

The Knapp & Scott sawmill at Bay City is now operating both day and night shifts, giving employment to thirty-five additional men. The company has a supply of logs and considerable trouble has been experienced in allowing steam to go down at night during the severe weather, so a decision to operate both night and day was reached.

Extensive lumbering operations, considering the program being generally followed, are being carried on at Hubbard Lake, near Alpena, by the Western Cedar Lumber Company. Other firms are also working in the vicinity.

ARPIN HARDWOOD LUMBER COMPANY
Grand Rapids, Wis. ATLANTA, WIS.
Saw mills and planing mill at Atlanta, Wisconsin.

The Kelly Chair Company's factory which was removed from Grand Rapids to Hancock, in the upper peninsula, is now ready to begin operations at that place. The company has already manufactured samples at the Hancock plant for exhibition at the Grand Rapids and Chicago shows. The factory is well equipped and is so constructed that its capacity may be increased at any time the demand warrants it.

The Essey Manufacturing Company of Owosso is one of the few companies to report 1914 a satisfactory year. C. F. Rigley, president of the company, says 1914 was a good year and he does not see why 1915 will not be equally good.

The Menominee River Boom Company, composed of northern Michigan and Wisconsin mill owners, delivered from points north of Menominee and Marinette to the mills at the mouth of the Menominee river 10,771,201,956 feet of logs in the period since it began operations in 1868, according to statistics just compiled by the company. The total estimated value of these logs is given at \$100,000,000. During the year 1914 there were 22,734,190 feet of logs delivered by the company. In 1889, which was its biggest year, the company delivered 642,000,000 feet of logs. In 1888 the average log was 192 feet, and in 1914 was 39 feet. Many logs are now being shipped to Menominee and Marquette by rail, taking the work formerly performed by the company.

The Hardwood Market

< CHICAGO >

The Chicago factory trade is at a standstill on account of the furniture exhibits which opened in this town on January 4. It will not be known until these exhibits are well under way just what can be expected during the spring of 1915, but up to date the apparent expressions have been much more optimistic than otherwise, and the furniture men frankly state that if these shows turn out at all favorably, they will be in the market for their entire stocks of lumber.

It is generally admitted that factory stocks are shot to pieces, and at the same time the yard people have not kept their stocks up to a point which could be considered even approaching normal.

It is really best to refrain from any predictions regarding possible developments until after the shows are over, or at least until they have been going on long enough so that it will be possible to form an intelligent opinion.

< BUFFALO >

The year 1915 has hardly begun to show activity for the hardwood dealers, but they feel that it is going to do so soon and that January will show a pretty fair improvement over December. The feeling is now as optimistic as can be expected with so much of uncertainty in the general business situation. The past year wound up in a much less satisfactory way than it started in, owing to the unexpected developments abroad, but the holding off on the part of buyers, which has for some time been so pronounced, seems likely to result in fair purchases before long to replenish stocks.

Hardwood prices are not so firm as desired, owing to the keen competition that has prevailed for some time but it is believed that they have reached the bottom and will soon make a better showing. The opportunity has seemed favorable for wholesalers themselves to buy, and stocks are now coming into yards on a larger scale than for some weeks. Oak and maple have been selling in the lead, as usual, but for all hardwoods the demand has not been at all active for some weeks.

< PHILADELPHIA >

A concerted expression as to a positive trade aggression marks the opening of the new year. The average sales manager curtails his purchases near the end of the fiscal year in order to make a good showing, in consequence of which the stock pile which naturally is low will necessitate a vigorous activity to build it up in January, but after the first month of the new year it is believed spontaneously normal conditions will begin. It is a matter of surprise in these perilous times that not in the last decade has there prevailed such an universal spirit of confidence and optimism at the beginning of a new year. The confirmed pessimist of a few months ago has emerged from his chrysalis of gloom into a veritable winged state of hopefulness and courage.

The decline of business activity of late has given the merchant ample time to figure out the potentialities of the near future for trading, and he is reasonably convinced that the foreign trade will be rushed to this country in spite of the abnormal freight rates and that this in turn will reflect favorably on the lumber interests. Although the railroads are persistently close mouthed as to their immediate or future intentions, the quiet feelers reaching out from the purchasing department are encouraging, and the supposition is that orders may appear on the boards at most any moment. The hardwood trade for the last fortnight has been practically at a standstill, but this condition is not unusual.

The Tegge Lumber Co.

High Grade
Northern and Southern
Hardwoods and Mahogany

Specialties

OAK, MAPLE, CYPRESS, POPLAR

Milwaukee, Wisconsin

< PITTSBURGH >

The general situation here is so much improved, especially in an industrial way, that hardwood men believe business cannot be withheld much longer. Already some nice requisitions are coming out from the railroads. The manufacturing trade has not taken hold as yet, but is expected to come into the market at any time. Prices are beginning to stiffen. Yards show pretty low stocks on inventory, and retailers who are optimistic are putting in their inquiries for hardwood. Some retailers are inclined to wait on business developments as they believe that if business gets better they can well afford to pay higher prices for lumber. Stocks of hardwoods are not large and many good mills have been down on account of lack of water.

< BOSTON >

The hardwood business in this district is quiet. The normal decrease in buying at this season is not more noticeable than in previous years. In fact, it is apparent that many users are now obliged by lowered stocks to buy continuously instead of being able to stop purchases completely for a considerable time at this period, which has heretofore been a policy with a great many concerns. The practice maintained for a number of months of postponing buying to the last limit awaiting price concessions is now having an effect of strengthening prices. The use of the better grades has been so nearly parallel to production that the closing of the mills has found many with a very small percentage of their stock in these grades, and in consequence the values of good lumber are holding practically unchanged. From a similar cause the offering of the lower grades has been quite insistent, but increased call by the railroads which use a great deal of the low grade, and buying for immediate wants by other industries certain to take place in the near future, the mills holding this class of stock show a great disinclination to make any further cuts in prices. While the familiar reasons which deter dealers from trying to stimulate buying by lowering quotations have a very strong influence, the forthcoming raise in freight rates to the East makes it necessary to hold all transactions to a reasonably firm basis. Specialties in widths, grades, etc., which are normally selected in general manufacturing or shipping are growing more difficult to obtain and are in good demand and value.

< BALTIMORE >

The new year is not sufficiently advanced to show its effect upon the hardwood trade. For the present pronounced quiet prevails and the situation is not appreciably different from that which has existed for weeks past. Members of the trade are still too much engrossed with details incidental to the close of the year to give much attention to the soliciting of orders, though the more hopeful feeling which began to manifest itself about the beginning of December is still in evidence and has perhaps taken on a more decided tone. This feeling, of course, is based upon expectations and not upon recent developments. The end of a year is not a time for a positive improvement to show itself, the trade being largely in abeyance. But the forecasts of members of the trade are none the less almost uniformly favorable, being inspired by the belief that the improvement which has already taken place in the situation will become more pronounced before long and that while the holiday period may have interrupted the revival temporarily, it has not permanently checked recovery.

No very positive quickening in the demand from furniture manufacturers is expected until after the exhibition in New York, which will give them a clearer idea of probable requirements and the trend of the trade. Much in the way of an augmented inquiry is hoped from the railroads as a result of the freight rate decision. If the railroads do enter the market for hardwoods to any extent, the trade will be greatly benefited and a general stimulus will be given to it.

As for the foreign business, it shows no material changes. Hope for a considerable gain in the foreign demand is necessarily associated with the restoration of peace, and this aspect of the situation presents some encouragement. For the time being, of course, all of the belligerents deny that they want peace, but it seems likely that the conflict will not last again as long as it has continued, and with the cessation of hostilities imperative needs will assert themselves. Prices are still more or less unsettled, but the mills are in no hurry to resume operations and stocks are held down to moderate proportions.

< COLUMBUS >

The market for hardwoods in Columbus and central Ohio during the past fortnight has been rather quiet. That condition is to be expected because of the holiday season and the taking of the usual yearly inventories. The tone of the market remains good, however, and future prospects are said to be better.

Dealers are not buying a great deal, but this condition is expected to change as soon as stock taking is finished. It has been ascertained that stocks are very low and that it will be necessary for dealers to replenish their supply before much retail business can be done. The cold weather has stopped practically all outside construction work and consequently the demand is not so marked.

Factories making implements, vehicles and furniture are the best customers among the manufacturers. The feeling in manufacturing circles is growing better and a better feeling in the lumber business is anticipated as a consequence. Stocks in the hands of factories are small and the

SEATTLE, WASH. 1009 White Building

same is true of retailers' stocks. Yardmen have been loath to increase their stocks before the taking of inventories.

Prices generally are steady, although there is some cutting where stocks have accumulated. The cutting does not amount to a demoralization in the market, however. Dry stocks in the hands of mill owners are not large. Shipments are coming out promptly all along the line. Collections are still bad.

Both quartered and plain-sawed oak is rather firm and the volume of business is all that might be expected at this time of the year. There is a good demand for chestnut, especially sound wormy. Ash and basswood are rather quiet. Poplar stocks are in fair demand and prices are steady. Other hardwoods are unchanged.

◀ CINCINNATI ▶

There is a better tone to the hardwood situation, many dealers reporting better business than for many weeks. There is a more substantial ring to the inquiries that are coming in, indicating early buying.

Steady curtailment goes on at manufacturing points and this has been a big help to hardwood conditions during the depression, and although demand is much improved, it is hoped that mills will hold up just a little longer, when it is confidently believed they can go to cutting full tilt and with confidence. Right now there is a tendency toward better prices, wholesalers realizing that when a steady call for hardwood comes it does not take very long to take up surplus dry stocks, and while this condition is confidently looked for it is safer to hold down production just a little longer and be on the safe side.

There is little improvement in No. 1 common poplar, but some good sales have been reported in firsts and seconds, and the low grades are again in active demand. Firsts and seconds plain oak are also in good request. The lower grades while improved are a little slow. Improvement in call for quartered oak has been steady and much confidence is expressed in the near future demand. Ash right now is among the best sellers, thicker than inch being in excellent demand. This is true also of maple, both hard and soft West Virginia stock. Improvement in gum is not so noticeable, although sap gum is in much better request than red; low grades, however, sell readily. Common and better chestnut is slow, but sound wormy is fairly active.

◀ TOLEDO ▶

The hardwood situation remains practically unchanged. The movement at this time is very slow, as most of the concerns are busy taking inventories. Dealers are not anxious just now to risk very much cash in investments, although wholesalers are pointing to the slight raise already made in the yellow pine market and declaring that all lumber is bound to follow this lead and increases will hold. Most of the local yards are fairly well stocked, although many lines are broken and there is bound to be considerable buying. Lumber dealers and building men generally are predicting a big year as soon as the weather becomes settled. Prices here have held well despite the slow trade. Factory buying is about normal and it is believed that the railroads will soon begin to place orders which will help out the situation materially.

◀ INDIANAPOLIS ▶

Hardwood men in this vicinity report that the new year has started out quietly. There has been an increase in inquiries, but not much actual business has resulted. It is thought, however, that these inquiries will lead up to some very substantial orders before long.

There has been no recent change in prices. Hardwood men, in fact, will be satisfied if they can keep prices at their present figure. There is no indication, however, of a decline. It is thought that a few weeks of good business will result in the prices advancing.

Furniture factories are inquiring, but are not doing much buying, most of them seemingly being in the humor to hold off until after the furniture shows.

There was a little flurry of buying in December, but this has passed away, leaving the market quiet but hopeful.

◀ MEMPHIS ▶

The trade is facing the new year with confidence. The belief has prevailed for some time that there would be a good volume of business as soon as the new year began. Before the close of the old year there were enough inquiries to suggest a decided increase in a very short time and members of the trade here are of the opinion that this will begin to materialize by the middle of the current month, if not sooner. Representatives of hardwood firms here who have recently been on the road bring back much more encouraging reports, and these have not been without their influence in creating a belief in general improvement. It is suggested by these gentlemen that stocks in the hands of consumers are quite small and that distributors have also been buying from hand to mouth. There is no doubt in the minds of hardwood lumber interests here that general business conditions are improving and that they anticipate that this will result in increased buying on the part of both consumers and distributors. It is also anticipated that prices will be somewhat higher as soon as business gets well under way. This view is based in part on the expected increase in demand and in part on the decreased offerings. As a general

rule hardwood lumber stocks in the South are smaller than when the war broke out in Europe and in some instances they have become quite broken. This is only another way of saying that shipments have been heavier than production. In fact, the position of the market, from a technical standpoint, is considered quite favorable to an advance. There has been no regret expressed on the part of any member of the hardwood trade regarding the passing of 1914. That year brought a great deal of trouble to the lumber people who are all glad to see it behind them. They are facing the new year with renewed hope and courage and with the determination to contest successfully with unfavorable conditions growing out of the war in Europe with its resultant depression in almost every channel of trade.

There has been no material change during the past two weeks in the position of the various items here. There has been a rather insistent demand for plain oak in both red and white and a moderate movement in quartered oak has likewise been noted. There is a continued good demand for the lower grades of cottonwood and gum. Sap gum sells at a very satisfactory rate, while red gum in the higher grades is attracting increasing attention. Ash is offering in only a moderate way and the market thereon is quite firm. Most of the improvement expected in market conditions is looked for in domestic channels. The situation abroad does not look particularly attractive for the double reason that there is no very large demand from that source and that ocean freight rates are so high as to be almost prohibitive. In fact, the majority of those who have heretofore been catering almost exclusively to the foreign markets have turned their attention to the domestic ones and are striving to make up in the latter for the business they have lost in the former.

The increased inquiries and the growing belief in more favorable market conditions will probably lead to some increase in the output of hardwood lumber in this territory within the next few weeks. The tendency toward resumption has already developed sufficiently to make itself felt to a certain extent and further developments along this line are anticipated by those who are looking for a broader market. So far as the local situation is concerned, however, there has been practically no change in the output during the past fortnight. Plans along that line have been held up until after the beginning of the new year and this is not sufficiently advanced for these to be fully completed. More definite information along this line will doubtless be available within the next fortnight.

— < NASHVILLE > —

Lumber firms of this city start the new year with confidence that the gradual improvement that has been experienced in other business will extend to the lumber industry. Nashville firms report some nice orders for the start of the year, and are optimistic as to the future. It is estimated that production of hardwood lumber in this territory has been curtailed forty per cent or more, and with the resumption of normal trade there should at once be something doing in prices. Manufacturers believe that the demand is bound to come. Stocks of most small concerns have been almost cleaned up, and the volume of lumber is in strong hands, which causes confidence as to the future. There is little disposition to make great concessions in prices to land business.

— < KNOXVILLE > —

There has been very little change for the better in this section. No one expects to see a large demand for lumber until after inventory taking is over. For the past year business with the planing mills has been fairly good; in fact, some of them show an increase over last year's volume, but with the sawmill men and wholesalers business does not compare very favorably with 1913.

The furniture and mantel factories report their business considerable off as compared with former years. A small improvement has been noted in inquiries, and it is the general opinion that business will begin to pick up within the next month. There is one thing certain: In case there is anything like a normal demand for hardwoods for the next three or four months, there surely will be a scarcity; stocks now are broken and the small millman has not been operating for four months, and most of the larger mills have either been shut down entirely or running just enough to maintain their organizations.

There seems to be a fair demand for ash, quartered oak, basswood and low-grade poplar, and the stocks of all these woods are very low. Plain oak in some grades is not moving very briskly, but there is a very good demand for some grades and thicknesses. Chestnut remains about the same, but the supply of all grades is low.

Collections are rather slow. From reports of the banks there appears to be money enough, but some are still taking advantage of the situation and asking for renewal and extensions very regularly.

— < LOUISVILLE > —

The dawn of a new year has found the hardwood interests of this section feeling much more optimistic regarding prospects. And, as it happened, instead of bare opinions and predictions, they have had something more substantial upon which to base their sentiment. Trade has really been improving, in spite of the fact that the inventory season is on, and heavy business would be difficult to account for. There has been a good deal of mixed car business, indicating that consumers are running their plants and need the material for current consumption, while it is reported

Possibly there is no good reason why YOU were not among these beneficiaries. If it is a matter of eligibility, and you feel that your plant does not at present comply with all requirements, confer with us anyway. Let us see if it cannot be brought up to an acceptable standard at no greater cost than will be justified by the prospective saving on insurance rates.

U. S. Epperson & Company

Attorney and Manager

1101 R. A. LONG BLDG.

KANSAS CITY

from a number of big markets that consumers are anxious to contract for lumber for delivery during 1915, and are endeavoring to get their requirements covered at 1914 prices. Some of this business is being accepted, but lumbermen as a rule are chary of taking on contracts of this kind, in the face of what appears to be the beginning of a strong upward movement. Every indication points to bigger volume and better prices, and those who have lumber, especially dry stocks, ready to ship, are inclined to hold out for increases, which consumers are gradually acceding to.

← BRISTOL →

Bristol lumbermen report a better tone to trade and brighter prospects for spring business. They feel that the freight rate advance granted the eastern railroads will be a factor in restoring former business conditions. While not a large volume of business is being done by the lumbermen of this section, the yard stocks are low and if there is any appreciable improvement many of the mills will resume operation before spring. The most of the mills closed September or October, although a number of large band mills have been running regularly. Some of the lumbermen report that they have lost some business lately on account of low stocks on their yards.

← ST. LOUIS →

The hardwood trade is quite dull following the holiday season. As inventorying has not been fully completed dealers do not as yet know exactly what their requirements will be, and few orders are coming, although inquiries are numerous. The outlook is promising and points to increased sales and prices within the next few weeks. Local distributors have fairly good stocks on hand, ample for current needs, and they are getting ready to start out for new business. There is a slight improvement in the demand for cypress. Most of the country yards are very low in stocks and are expected shortly to come into the market for their spring requirements.

← MILWAUKEE →

One of the most hopeful signs in the Milwaukee situation is the fact that a great deal of important building has been held over until spring, making it practically certain that there will be plenty of activity and business within the near future. Figures prepared by W. D. Harper, building inspector, show that during the month of December there were 132 permits issued for buildings to cost \$393,410, as compared with 176 permits and an investment of \$867,468 during the corresponding period a year ago. The total building investment for the year just closed amounted to only \$9,882,085, as against \$13,590,084 during 1913. Building Inspector Harper says that plans have been completed for many large building projects, but that the depression in many lines of business resulted in the work being laid over until spring.

Lumber companies and many of the large lumber consuming concerns are completing their inventories, and it is expected that business will soon take on more activity. The inventories have shown many manufacturers that their lumber stocks are low, and this is expected to be another incentive to buying. Wholesalers are confident that business will begin to show a little more life soon after January 15. They say that retail yards about the state are not stocked up heavily in hardwoods and that the average retailer will have to begin placing his orders soon for stocks if he expects to be ready for the spring building season. Dealers have been ordering very carefully during the past few months, but it is believed that buying will be carried on a little more freely from now on. The fact that more inquiries are being received from various sources is a most hopeful sign. While actual orders are still coming in rather slowly, improvement is confidently looked for before the close of the present month.

Prices seem to be holding their own. It is generally understood that stocks at most of the northern mills are light and that any surplus will be wiped out just as soon as business shows improvement. The scattering holders of large stocks are not inclined to give any concessions, in view of a better business ahead and the certainty that stocks at the mills are light. News from various sections of the northern Wisconsin lumber country indicate that lumber concerns are showing a little more confidence and that plans are being made to increase the log output over the point decided upon some months ago.

← DETROIT →

A fair number of inquiries, some of them resulting in sales, are reported in the Detroit market. Dealers generally are of the opinion that the many forecasts of good times and increased business will assume some concrete form before long, although they, of course, do not expect this until after inventories have been completed. Inventories are expected to show stocks at the retail yards and manufacturing plants to be well below normal as compared with other years.

The center of attraction at present is the furniture show. Dealers receiving reports from Grand Rapids say many buyers are being attracted to that market and outside manufacturers who have placed exhibits are in a very optimistic frame of mind. Some announce business in 1914 was not so bad as it was generally painted. Prices have not varied for several weeks, but there is an expectation that they will advance. With from sixty to ninety days, Detroit dealers say, the hardwood market would be back well toward normal in price.

The Largest Hardwood Sawmill in the World Is Again In Operation

During our few months' shut down we have maintained our usual prompt and efficient service on shipments of

Oak, Gum, Elm & Ash

from the 20,000,000 feet of stock we had in yard at time we stopped sawing.

Our stock is now rapidly assuming normal proportions and we shall welcome inquiries for immediate shipment.

Hardwood Consumers' Requirements for 1915

The business depression of the past year has compelled the woodworker to economize wherever possible. He has tried to save money by looking for the cheapest raw material that would meet his requirements. As a result, changes in kinds, grades and dimensions of hardwoods used for 1915 will be more marked and widespread than ever.

The most effective sales corps is the one which has most complete knowledge of customers' needs—a mediocre salesman with this information can make a better showing than the class A man who hasn't it.

A \$40,000 investment in collecting and compiling just this information proves to us that no company can afford to individually maintain such a service on a thoroughly effective basis. We offer you the opportunity of protecting your selling investment by providing it for you—all filed for quick reference and instant use.

It is now being corrected throughout for 1915 changes and will be ready for use in revised form in a couple of weeks.

Don't overlook this chance of making the work of your sales department more effective at very little cost.

WRITE FOR PARTICULARS

Hardwood Record, Chicago, Ill.

The revised information is of course most effective while fresh

THIS BIG LOG

Eight feet in diameter, was snaked 800 feet up a 30 per cent grade, over rough ground, with a 1 1/8-inch Yellow Strand Powersteel cable that had been in constant use for over six months. This same cable yarded over 7 1/2 million feet of lumber without breaking. It was still serviceable at the end of the season.

Yellow Strand Powersteel

is made especially to withstand the tremendous strains and the wear and tear of logging. It is strong, elastic, flexible, economical.

Try Yellow Strand Powersteel yourself and you'll soon find out that "A Yellow Strand In Your Rope Means Yellow Gold In Your Pocket." Order direct or through any of our agents.

FREE our illustrated monthly magazine—**THE YELLOW STRAND**—free for one year to all rope users. Write for it.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

ST. FRANCIS BASIN OAK

THE GALLOWAY-PEASE KIND

† It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

† Killn dries without checking. No honey-combing, and minimum shrinkage.

† Total absence of injurious insects insures sturdy, clean growth.

† Our band mills cut oak only—hence filer and sawyer get best possible results.

CHICAGO

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Lumbermen's Credit Assn., Established 1878

608 So. Dearborn St. CHICAGO 55 John St. NEW YORK CITY
Mention This Paper

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

22nd and Throop Sts. CHICAGO, ILL.

Hardwood Record's

strongest circulation is in the region where things are made of wood—WISCONSIN, MICHIGAN, ILLINOIS, INDIANA, OHIO, PENNSYLVANIA, NEW YORK and the East. **It's the BEST sales medium for hardwood lumber.**

NASHVILLE

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

Plenty of Walnut, Mr. Manufacturer!

The hundred or more furniture manufacturers who are making walnut goods, and who are already demonstrating to their complete satisfaction the fact that the trade and the public favor furniture of this material, may rest assured that the supply will be ample for all the demands which may be made upon it. The production of 50,000,000 board feet a year which is proven by U. S. Government statistics, is steady, consistent and reliable; and consumers of both lumber and veneers will be able to get any amount which may be required for their trade. The lumber shown below is dry and ready to ship, and is backed up by facilities for increasing the supply as the demand requires.

Review and Outlook

General Market Conditions

THE FURNITURE SHOWS were concluded at the end of last week and resulted in mixed expressions on the part of manufacturers there represented as to business prospects indicated by purchases at the exhibits. There were many who were extremely pessimistic on account of lax orders, but there were many others who were either satisfied that the business they actually placed on their books, considering the present status of business as a whole, was as much as could be expected, or left the shows with a genuine feeling of entire satisfaction with the situation. Generally speaking, there seems to be an almost unanimous belief that the shows this year were fully up to shows of a year ago in all respects, which, in view of what the country has been passing through and of the condition of extreme turmoil which now marks the commerce and industry of the entire world, surely should be accepted as indicative of a pretty healthy basic state in the country. Undue weight should not be given to the expressions of the more pessimistic furniture manufacturers, as even under normal conditions certain lines do not take so favorably as others and there are bound to be some manufacturers who leave the shows even during bumper years feeling more or less disgruntled with the outcome. Of course, the optimistic expressions of those who actually did realize handsome sales cannot be taken as a criterion of all the exhibitors' experiences, but it is altogether safe to say that the average amount of business done this year was probably more than had been anticipated. Furniture manufacturers did not expect that they were going to experience excessive sales, as there is no reason why the sales of furniture should experience an instant and drastic revival any more than the sales of any other commodities. Furniture dealers have to contend with the result of the general condition of the country as their sales are made to the average person who experiences the average effect of the present upset conditions. Hence, the retailer's sales could not reasonably be expected to improve with a jump. As a consequence, he in turn was more or less conservative in his buying, although in the main the tendency of the buyer was to analyze the styles and offerings as closely as possible seemingly in anticipation of the necessity for placing orders within the next few months.

It is gratifying to record that a great number of sales which were actually placed on books were of unusually large proportions as the retailers have let their stocks run down to a point where it is absolutely necessary for them to stock up in large quantities in order to have a full line to offer the public.

Thus as a result of the sales some furniture manufacturers are planning to operate on full time, others are going ahead on a conservative but satisfactory basis, while still others continue to be in

a pessimistic frame of mind and not inclined to consider any expenditure of money for any purpose.

The significant fact remains, however, that the scarcity of orders from this class of woodworking institutions has not been exactly because they have not been doing business or because they could not use the lumber, but because they were simply desirous of withholding purchases in anticipation of the results of the sales in order that their purchases might be made intelligently and with due regard to the popularity of certain lines and the quantity of lumber necessary to meet the public demand for certain styles of manufactured articles. Now that the issue is settled along definite lines, the purchasers will know where they are at, so to speak, and even though a number of them might not have been altogether satisfied with the amount of business transacted, these same people will unquestionably be in the market for at least moderate amounts of stock, while many others whose lines were most favorably received will unquestionably be large purchasers.

The furniture shows have been the most important feature during the past two weeks, though this period has developed a real interest among the yard men in an early stocking up to meet the demand of building people, whose business will unquestionably be actively resumed in the next two or three months. Yard stocks have been pretty badly broken up and little or no effort has been made during the past few months to keep the lists up to anything approaching normal. However, the fact remains there is a certain amount of building construction which positively must be carried on in order to take care of actual demands for housing of families and business enterprises, commercial or industrial. This demand is constant and while it cannot be filled during periods of depression, this partial check during such times resulting in insufficient housing facilities, must be made up when more favorable conditions present themselves in order to take care of actual demands. Reasoning along this line, the fact that the money situation looks better and that both labor and material are considerably cheaper now than they have been for some time, it is altogether reasonable to expect that the early spring months will see quite a marked activity in building construction. The yard man who stocks up now in anticipation of this active call for lumber, taking advantage of present low prices to realize good profit on his stock when values are stronger, will play a wise game.

There has been a very satisfactory number of requests for bids on railroad material during the past couple of weeks, in keeping with the mere active call from this quarter for some time past. It is regrettable that the railroads are still able to place a great many orders at figures that are not in keeping with the actual worth of stock sold, but it is most decidedly a fact that the comparative level

of values is gradually rising to a point where those concerns which refuse to release stocks at less than actual worth can successfully bid.

As indicated by the sales at the furniture shows, there is going to be about the same quantity of oak in demand for this purpose during the coming season as in the past. Breaking away from the highly polished oak furniture has done a great deal to make this wood more desirable, but it is nevertheless a fact that the active effort to increase the market for other domestic and foreign cabinet woods has had a noticeable effect upon the call for oak. As indicated by the result of the shows, American walnut is going to be one of the most active woods during the coming six months. Many new lines in walnut were shown and seemingly took very well with the buyers. This has seemingly opened up a new avenue of sale for the gum people as gum makes an excellent imitation of walnut furniture in cheaper lines. Also, there seems to be an increasing amount of gum offered finished in its own color in the cheaper exhibits, and as a general thing these had fairly satisfactory sales. There seemingly is no particular change in the attitude of buyers toward northern woods as these woods have established a permanent place for themselves, both in furniture in the natural state and in imitation of other woods.

The Cover Picture

THE TAP LINE RAILROAD has become an important aid to the lumber business. The Interstate Commerce Commission has had before it for a long time the problem of assigning the tap line its proper place in the country's carrying business; and it has been decided that when such a railroad carries freight on equal terms for all applicants, it becomes a common carrier and is entitled, under certain conditions, to pro rata pay when it performs part of the service on a long haul. Many such railroads are feeders of sawmills, hauling the logs to the mills and hauling the lumber away. Mills which are not located on or near trunk lines must have some such arrangement or they cannot carry on business. The cover picture illustrating this issue of HARDWOOD RECORD conveys a good idea of such a road engaged in the work for which it was built.

The transportation of sawlogs has gotten away from the rivers, to a large extent. Formerly most large operations depended upon rivers or other floatable streams to take the logs from forest to market. In many instances no other method was thought of. The river's current was a cheap means of transportation when all went well; but there were uncertainties which called for serious consideration. Unless the stream were one of considerable size, it would carry logs in time of flood only, and sometimes floods were far apart. The stranding of logs along the banks and upon bars and islands, delayed the logs on their downward journey by months and sometimes years. Loss of time was not the only loss. Decay was liable to attack the sapwood of logs of certain kinds. Large drives of yellow poplar logs sometimes left the dumps near the sources of rivers with sapwood fresh and bright, but when they arrived many months later at their destinations, the sap was stained or soft or wholly gone. That caused a heavy loss, for the "poplar saps" were not in evidence when such logs were converted into lumber. What was true of yellow poplar was, in a measure, true of all other woods which floated to market down long and rugged water courses.

The gradual decline of log driving on streams has been due to two chief causes: Timber contiguous to such water courses has been largely logged out; while the steam road has been found more satisfactory and often cheaper in the long run. One or two days after the tree is felled in the woods the logs may be unloaded from the cars at the mills, fifty or a hundred miles away. By converting them into lumber immediately, the boards are bright and fresh and they grade high.

Steam log roads are not confined to any particular region. They are found wherever logging operations of large size are carried on. The massive California redwood, the giant Douglas fir of Washington, the yellow pine of the South, the spruce of West Virginia, maple and white pine of Michigan, all go to the mills upon the tracks of logging roads. The mule team and the yoke of oxen have not wholly

lost their places in the woods, but they are now usually engaged in "swamping out" the logs and delivering them at the skidways ready for the steam trucks. But even the mules and oxen are not secure of their jobs as swampers along the tote roads, for the steam skidders, with their miles of cables, are increasing their activities in the vicinity of the logging camps.

Trade Opportunities

TRADE TENDENCIES which lead toward the United States increase. The commerce reports which are published daily at Washington, D. C., by the Department of Commerce, containing information concerning business matters in all parts of the world, have long followed the custom of giving more or less space to a list of "foreign trade opportunities." It is significant that the lists of such opportunities have greatly increased of late. Such increase is apparent not only in number, but also in geographical range. Formerly a page or less of the daily report was sufficient to take care of all inquiries from foreign countries. Recently that space has been more than doubled; and some of the inquiries now come from remote or obscure parts of the world, which formerly were never heard from in that way.

The cause of this should be sought in the profound breaking up of former markets and lines of trade. Purchasers who formerly were supplied from Europe and who never looked elsewhere, cannot now make their purchases there, and they are turning to the United States. Consuls in many parts of the world are forwarding these inquiries to this country and they are classified and published from day to day.

They include numerous articles that are wanted in foreign markets. Among those called for in the latest list, which is a fair sample of other lists from day to day, were: Army supplies, glass, brass rods, copper shells, print paper, drugs, railway ties, cylinder saws, dress cloth, cotton goods, electrical supplies, sugar machinery, hosiery, creosote, copper, vitriol, beans, rubber goods, flour, general hardware, chemical products, shoes, spuce and cedar oil, and machine tools. The list might be extended almost indefinitely.

The importance of such lists lies in the fact that they show the extent and tendency of trade changes going on. What other nations are losing, this country is gaining. The opportunity is at hand, and if Americans grasp it, as undoubtedly they will, the world's markets will open to our products as they never did in the past.

Fashions in Furniture

NO WOOD-USING INDUSTRY is more susceptible to the influences of changes of fashion than is the manufacture of furniture. It quickly responds to tendencies before they have any perceptible effect on other industries. The annual furniture shows afford means of studying changes, both while coming and going. The makers try out new ideas, and if they meet popular approval, the fashion is established, and runs its course. This holds true for finish of woods as well as in the designs of the articles; while certain woods come in, hold their place for a time, and go out when they have run their course, and have had their day.

The January furniture shows in Grand Rapids and Chicago told the same story. Circassian walnut, which has not yet taken its departure appears to be slated for that journey. Perhaps it is not fair to attribute that to fashion, since it is due to cutting off of supplies on account of war. The tendency seems to point to the revival of black walnut, partly as a substitute for the imported wood, and partly on its own account. Black walnut was coming back before the high-class wood from Turkey and Russia was stopped by hostilities. The bright colors in oak appear to be giving way to duller finishes; but the wood itself, to judge by the showing it makes at the expositions, is in no danger of losing any ground. Gum is still at the height of fashion and popularity in this country, notwithstanding certain of the foreign markets are said to have lost some interest in it. Those markets, however, have lost interest because of war's excitement; and doubtless gum will assume its former place abroad as soon as the soldiers finish their jobs and return home.

Mahogany suffers or profits little from freaks of fashion. It holds its place in furniture as gold maintains a place in jewelry, though styles change. Just now the influence of early period furniture is strong, and the pendulum is still swinging in that direction. This affects all furniture woods more or less, but the fine woods most. Those who follow fashions are usually somewhat critical in their choice of material, and this holds with furniture no less than with other things. For that reason, such woods as oak, gum, mahogany, birch, and walnut are just now brought into prominence both in new designs and in the reproduction of period furniture.

Flagrant Waste for Everybody

CITING AS AN ILLUSTRATION the fact that a single plow manufacturer must make over 2,000 types of plows to meet the individual whims of farmers, the Midwest Implement and Vehicle Dealers' Association in convention at Omaha, Neb., recently took definite steps toward eliminating waste by the standardization of machinery, tools and all types of farm equipment. That the many sizes and kinds of different farm implements tend to increase the cost of articles and make the carrying of repairs for the different patterns of machines burdensome for both dealer and manufacturer goes without saying. Going back even further than mere repair work, it could very easily be demonstrated that there is a tremendous waste in materials resulting from lack of standardization of sizes and types in all classes of farm equipment. In the plow business alone it can easily be seen that with 2,000 types being made by one manufacturer, the waste in all kinds of raw materials going into plow manufacture must be excessive.

HARDWOOD RECORD is not in position to know the minimum number of styles which would be capable of meeting all reasonable requirements of plow users, but it is altogether safe to say that this excessive number is entirely unreasonable. Say, for example, that 100 different plows would cover the really necessary styles meeting the demands of necessity in different sections and under different conditions. This would mean on the face of it that each part could be manufactured in quantities just twenty times greater than the quantity now made up in building the 2,000 styles. It would mean a much more comprehensive standardization of purchase of raw material by plow manufacturers, of patterns used for castings and of all parts which might tend to vary with the different styles. No man of ordinary intelligence will believe that 2,000 different plows are absolutely necessary to successfully carry on the farming industry of this country. Considering that this number is excessive and that an equally over-balanced proportion of styles of other articles used by farmers are manufactured and carried in stock, it can readily be seen that there is a tremendous possibility in standardizing this class of manufactured article so as to make the purchase of raw material as simple and economical as possible.

Treated Wood in Factory Construction

THE RECENT CONVENTION of wood preservers in Chicago devoted considerable space on its program to the subject of treated timbers for factory construction. The matter was somewhat new. It has been the custom to confine discussion and experimentation to timbers used in out-of-doors work, such as paving, fence posts, telegraph poles, piling, cross ties and bridges. It is commonly assumed that wood intended for use under shelter needs no preservative treatment.

The terms "under roof," and "in dry situations" are quite different in their meaning. It has been shown that in factories of certain kinds the timbers remain as damp as if no roof sheltered them. The situation in which the factory is placed, or the nature of work done in it, often makes protection against dampness impossible, while the warm temperature maintained causes the fungus to grow the year round, while in timbers out of doors, it does not grow during cold weather.

Statistics give abundant proof of this fact. Textile mills, most of which are operated by waterpower, are peculiarly liable to injury by decay of floors, beams, ceilings, and roofs. In certain parts of such mills the humidity is always high, and conditions that induce

decay are at their worst. Investigations by insurance companies have brought out volumes of data on that subject.

The suggested remedy consists in treating with preservatives the timbers used in factory construction. Supplementary suggestions call for a little more care in the selection of woods for use where conditions favor decay. Some woods resist attacks from decay many fold better than others, when no preservative treatment has been given, and there are differences even when preservatives are used.

Manufacturers of building materials other than wood are taking advantage in every way possible of the reported instances where factory timbers have failed because of decay. These cases are used in arguments in favor of substitutes. Cement and steel are wood's chief rivals in factory construction, and their advocates slumber not nor sleep in the campaign to push these substitutes wherever there is an opening. The advocates of wood can best meet this situation by nullifying the arguments against wood. That can be done by rendering it immune to decay as far as possible. It is a new field, and a large one, for the use of treated timbers.

Longleaf Pine Suitable for Kraft Papers

THAT LONGLEAF PINE treated by the sulphate process and properly handled will give excellent kraft pulps and papers, especially the very tough, lightweight brown wrapping papers, is the conclusion reached by the Department of Agriculture after a series of tests to determine the wood's possibilities as a source of pulp. This conclusion is of significance at this time, because war has cut off the German supply to this country. The high specific gravity of the wood and the resultant high yield of pulp per cord, according to a recently issued bulletin, give longleaf pine an advantage possessed by few other commercially important woods suitable for pulp making.

This new use for longleaf pine furnishes a means of utilizing the waste in slabs, edgings, and trimmings from southern mills. Tops and defective logs left in the woods and small logs which at present are converted into lumber with little or no profit would furnish a supply of raw material for pulp making even greater than that derived from the mill waste.

The tests were made at the Forest Products Laboratory and were of two kinds, those to determine the effect of varying the cooking conditions in the sulphate process, and semi-commercial tests carried on by both the sulphate and the soda process. The sulphate process was found to be superior to the soda, at least so far as longleaf pine is concerned. In the former process the pulp can be very much undercooked and still produce a fair quality of paper, while a soda pulp must be comparatively well cooked before a good paper can be made from it. The best sulphate kraft pulps were obtained with a total duration of cooking of only 3.5 hours, against 6 hours for the best soda pulp.

Sulphate kraft pulps of fairly good strength and toughness can be obtained from longleaf pine with yields as high as 61 per cent or 2,170 pounds of absolutely dry pulp per 100 solid cubic feet of wood. For the production of high grades of kraft wrappings the yield of pulp could be approximately 51 per cent, or 1,800 pounds of absolutely dry pulp equal to 2,000 pounds air-dry pulp per 100 cubic feet of solid wood. The yield per cord would be somewhat less than the weights given since an ordinary 4x4x8 foot stacked cord may contain from 75 to 100 cubic feet of solid wood.

The rather indifferent attitude displayed by the lumber trade toward the Forest Products Laboratory since the opening of that institution has indicated that the lumber trade is still governed more or less by the old-fashioned belief that the scientist, or as he is sometimes called, the theorist, cannot teach the practical man anything. Business is getting more and more in sympathy with scientific procedure, the result of scientific investigation. There is no reason worthy of consideration why the lumber trade should not be equally benefited by such investigations of the problems confronting that industry as in any other line of business. Lumbermen have rather held back because they have not seen the practical problems worked out themselves. It should require but very few such instances as the above of the practical value of the laboratory to convince the trade that it would be profitable to them to call upon it for assistance more frequently than in the past.

C. L. HARRISON, PRESIDENT.

J. W. McCLURE, FIRST VICE-PRESIDENT.

H. B. WEISS, SECOND VICE-PRESIDENT.

Gum Manufacturers' Annual

The Gum Lumber Manufacturers' Association held its first annual meeting at the Hotel Gayoso, Memphis, on Saturday, January 16. The present condition of business and the desire on the part of everybody to find out how things are going with their neighbors undoubtedly had something to do with producing the exceptionally large attendance which marked the meeting.

The features of the sessions were comprehensive addresses by F. R. Gadd, vice-president of the Wisconsin Lumber Company, Chicago, and H. D. Tiemann of the Forest Products Laboratory, Madison, Wis., the subjects being respectively "Sawmill Cost Accounting" and "Kiln Drying of Lumber."

President C. L. Harrison had no formal or written report, but greeted the session with a short talk in which he laid stress on the potential progress which has been made by the association, explaining this phrase as meaning the accomplishment of initial efforts toward giving to gum a more savory reputation among architects, builders and house owners. He laid particular stress on the cumulative value of the advertising which the association has been carrying on.

In the absence of Treasurer S. M. Nickey, Secretary Pritchard read a summary of receipts and disbursements which showed a satisfactory balance on hand.

Secretary Pritchard then read his own annual report, which follows:

Report of Secretary

To be exact, the Gum Lumber Manufacturers' Association is one year and two months old. This first year of its history has been full of storm. There was first a period of marked business depression, then a near-financial panic, and lastly the most horrible and destructive war in the history of the world. Any one of these happenings would be trouble enough to encounter in the first year of the history of a new organization, but I am pleased to report that we have withstood all of them and on January 1, 1915, financially, we were even with the world, and the things accomplished for gum under such trying conditions were truly remarkable.

Through Crosby-Chicago, our advertising agents, we have maintained a publicity campaign, which has educated the layman—the ultimate consumer—to an appreciation of the beauty and adaptability of gum as a fine cabinet wood until now it is one of the most popular woods on the list. We have also kept before the architects, contractors and builders, furniture manufacturers, and door and interior trim manufacturers, instructive and attractive advertising copy, and we have letters from these various sources stating that red gum is now recognized as a leading cabinet wood. It is universally liked on account of its beauty, attractiveness, and splendid workable qualities, and in all cases where proper care is given, satisfactory results are always obtained. Further proof that

public interest has been aroused is evidenced by the following summarized list of inquiries for information:

Architects, 167; banks, 2; brokers, 15; cabinet makers, 6; churches, 5; contractors and engineers, and construction companies, 48; colleges and manual training schools, 56; fixture and showcase companies, 6; finishing, 7; furniture manufacturers, 48; kiln-drying, 8; millwork manufacturers and retail dealers, 50; music cabinets, 2; miscellaneous, 40; prospective builders, 588; total, 1,048.

This, of course, by no means represents all whom we have interested in taking up the use of red gum. It is difficult to put on paper all the tangible results to be accredited to our work of exploitation. All advertisers know that results are cumulative. Each new building finished with gum trim and furniture becomes an advertisement for gum, and as a result others will be so finished and we may never hear of them direct.

We curtailed our advertising somewhat during the latter part of the year, but this was on account of a conservative policy not to overdraw our advertising account, and not because of any lack of faith or enthusiasm in the work we are doing. The wisdom of this action is recognized by all, and it is a very comfortable feeling, under existing business conditions, to know that our assets January 1st exceeded our liabilities somewhat. We have, however, kept before the public, and during the time in which our advertising schedule was cut down, we had printed 25,000 copies of our booklet entitled, "Red Gum Facts," and these booklets are being given a wide and discriminative distribution. They can also be used to good advantage in promoting new uses for gum, which work will be vigorously kept up.

While much of the work of our association cannot be tabulated, yet there is direct benefit derived by the members. Our monthly bulletin contains information of value, which is compiled with great care. During the year many inquiries for lumber have been received, and in turn we have passed them without discrimination to the membership. These inquiries have included all grades of gum, both in lumber and veneer. Twelve foreign countries have been represented, which indicates how well known our association has become. Many of these inquiries are from concerns which we have interested in taking up the use of gum, and our members have thus had the first opportunity to develop the business. We find there have been 258 of these inquiries; 127 of them stated the amount of lumber wanted, which totals 19,964,500 feet. It is safe to estimate that had amounts been specified in all of them, the total would reach between 35,000,000 and 40,000,000 feet. These inquiries also lead to the conclusion that the trade now recognizes the fact that the members of this association afford the best and most reliable source of supply, for the reason that they have made a careful study of the best methods of caring for gum lumber.

The lumber is sent to the market in good condition and gives satisfaction. Too much stress cannot be put on this subject, for it has been a great factor in breaking down the unwarranted prejudice which existed against gum on account of the careless manner in which it was formerly marketed.

We have compiled a statement of gum stocks on hand December 1st, 1914, which is attached hereto. Thirty-five members responded to our request for stock sheets of gum, and our records show that the firms report-

ing manufacture about 79 per cent of all the gum produced by our membership. It is estimated that a normal stock of gum lumber at this time would be about 50 per cent of the total annual production. On this assumption there would be 109,000,000 feet in the hands of our membership, but on the above basis the reports received indicate that there is on hand 93,500,000 feet. The membership of this association manufactures approximately one-third of all the gum produced in the United States, and with the figures furnished in this report a fair analysis of the entire situation may be had.

This association was organized with thirty-two charter members; nineteen new members have been added. We have lost eleven members, which leaves a total membership of forty. Under the conditions which have prevailed, we consider this a creditable showing; however, there is a host of manufacturers who have not yet united with the association who should do so at once, and lend their support to the loyal members who have so faithfully stood by the cause of gum.

No gum manufacturer should hesitate to give his support to the Gum Lumber Manufacturers' Association. It is not just that the expense of the association be borne by a few faithful ones, and we are confidently counting on a big increase in membership.

After referring to the coming meeting of the Forest Products Federation, which will take place at Chicago on February 24-25, President Harrison called upon C. C. Parlin, heading the Division of Commercial Research maintained by the Curtis Publishing Company of Philadelphia. This division was inaugurated for the purpose of studying merchandising problems confronting advertisers and prospective advertisers in the Curtis publications, the idea being to so direct advertising campaigns as to realize the fullest possible benefits for such people. According to Mr. Parlin, all merchandising is essentially the same. He cited as an illustrative example the automobile industry, which while started under abnormal conditions under which the manufacturer could put out any kind of an article and could be assured of a sale simply because the demand could not be supplied, has in recent years been adjusted by the balancing up of supply and demand on the basis of strictly modern merchandising. He compared the merchandising of lumber under present conditions with the merchandising of other commodities, maintaining that under conditions of oversupply the consumer is able to select his goods more closely to suit himself and his pocketbook, whereas when demand is ahead of supply the opposite is true. He maintained that the specific trouble with gum is that the people themselves have not been given sufficient knowledge regarding this wood, and while the architects and contractors might favor it, it is against their business policy to recommend a wood against the choice of the customer. He stated that the customer who is sold a commodity against his wishes is too critical and hence the architect will not take chances in pushing gum where his customer is not familiar with its qualities, even though he himself might favor the wood.

Mr. Parlin made the recommendation that, for the purpose of realizing sufficient funds to advertise to the customer, the individual assessment be raised to twenty-five cents per 1,000 feet cut, the object being to continue advertising to the architects but at the same time get up attractive literature to reach the consumers. The result would be to maintain the lumber cut as an asset as it must be cut the same during hard times as under normal circumstances.

President Harrison said that Mr. Parlin's views are in accord with those of the advertising committee.

The meeting then adjourned for a luncheon tendered the visitors in the convention hall by the Memphis Lumbermen's Club.

AFTERNOON SESSION

The afternoon session opened with a report of the committee appointed to make recommendations as to changes in the constitution covering membership and dues. The recommendations follow.

Report of Committee on Recommendations

The following recommendations of the committee appointed at the semi-annual meeting to consider changes in the constitution regarding membership were voted on at the annual meeting, January 16, as provided for in article ten of the constitution and by-laws:

ARTICLE III

Section 1: Any person, firm or corporation engaged in the manufacture of gum lumber, gum veneers, and non-operating owners of gum stumpage shall be eligible to membership in this association, and entitled to one vote.

Section 2: Initiation fee shall be \$25.00, on payment of which the board of directors shall issue a membership certificate.

Section 3: The dues shall be assessed annually by a committee on assessments for the period of the calendar year, with a minimum of

\$50.00 per annum, and shall be paid in twelve monthly installments based as follows:

Class A: Manufacturers of gum lumber shall be assessed at a rate of not to exceed 15c per 1,000 feet, log scale.

Class B: Manufacturers of sawed and sliced gum veneers shall be assessed at the rate of \$100.00 per annum.

Class C: Manufacturers of rotary gum veneers shall be assessed at the rate of \$50.00 per annum, provided, however, if assessment is paid in Class B, same will cover Class C.

Class D: Non-operating owners of gum stumpage shall be assessed at the rate of \$1.00 per million feet on their estimated gum stumpage holdings.

Manufacturers in Class A, who may also be operating in Class B or C are subject to assessment only in Class A, but may at their option become a member of the other classes.

Section 4: If, in the opinion of the treasurer and secretary, acting jointly, sufficient funds are in the treasury, it will be in the power of said treasurer and secretary to pass one or more monthly assessments.

Section 5: When an assessment is made it shall be considered binding on all who are members at the time such assessment is levied. Any member failing to pay same or any installment thereof within thirty days after it is due, will be subject to suspension.

Section 6: Any member who has paid his assessment in full for the calendar year may withdraw from this association by giving thirty days' notice in writing, and surrendering his membership certificate; but membership in this association shall not be transferable.

Section 7: Any member may be expelled for cause by a majority vote of the board of directors.

A paper was read by H. D. Tiemann, dealing with the principles of drying lumber. Mr. Tiemann is in charge of timber physics at the Forest Products Laboratory at Madison, Wis. He was the designer of an experimental dry kiln in operation at the laboratory, where tests are made to determine the results obtained by submitting lumber to various degrees of heat and moisture during stated periods. The principles on which the kiln works, and some of the results obtained, were discussed in the paper. He explained briefly the structure of wood and the problems which must be solved in seasoning it.

The point most prominently brought out was that all woods are not alike in structure, but that numerous differences exist and some of the differences are great. Therefore, a successful process of drying one wood cannot be accepted as a guide in drying others. If certain woods possess peculiarities, such peculiarities must be carefully studied. Failure to do so is nearly certain to lead to disappointment.

It is usually not difficult to expel the free water from wood. Such water is that contained in the hollow cells and vessels, much as liquid may be contained in a bottle. When heat is applied to the wood, the free water is speedily driven off; but it is a different matter to get rid of the water absorbed and hidden away in the fibers of the wood in the cell walls themselves. It takes a lot of heat to drive that water out, and in doing so, the wood may be injured. Most warping, shrinking and swelling, which plague the man who is using a kiln, are due to this water. Some of it is so stubborn about letting go that no practical dry kiln is able to force it all out.

Mr. Tiemann's paper explains why it is desirable that the surface of lumber should be kept moist in the kiln until the heat has penetrated to the interior of the boards. That prevents caschardening or checking near the surface by hindering the too rapid drying.

The effects of steaming wood as a preliminary step in drying it are discussed in considerable detail. Subjecting wood to the action of superheated steam heats the lumber, in the presence of moisture, sufficiently to boil some of the free water out of the cells; but it is not every wood that will stand the process.

Various methods of drying lumber under pressures other than atmospheric have been tried, such as alternate steaming and vacuum. Wood may be placed in a closed cylinder and after a partial vacuum is drawn, superheated steam may be introduced; or heat may be applied directly to the partial vacuum.

Unless carried on to such a degree as to break down the cell walls and injure the wood, ordinary steaming below twenty or thirty pounds pressure produces no change in the structure of the wood observable under the microscope. Chemical changes in the wood substance are no doubt brought about, but it is not known what effect such changes have on drying the wood.

Soaking for a long time before drying has been practiced. While

this may be beneficial for certain purposes, no particularly beneficial results from the drying standpoint are gained thereby.

F. R. Gadd, vice-president of the Wisconsin Lumber Company, Chicago, read a most instructive paper on Cost of Production, which is reproduced in full on another page of this issue.

A telegram was read from the headquarters of the Hardwood Manufacturers' Association extending a cordial invitation to all members to attend the convention of that organization at Cincinnati, January 28-29.

John W. McClure, chairman of the assessment committee, appealed to all members to render every assistance to getting new members toward the end that money may be raised without increasing the individual assessment. He said that while he has not reports on all cuts up to date on which to base assessments, he estimated that reports from twenty members, which include several of the larger operators, show a cut of 75,000,000 feet, which he estimates at from thirty-five to forty per cent off from last year. He said that the assessment of ten cents per 1,000 feet on this basis won't be money enough for running expenses without increasing the membership. He maintained that Mr. Parlin's recommendation that assessment be increased to twenty-five cents per 1,000 feet is impossible as the by-laws state the maximum assessment shall be fifteen cents.

President Harrison maintained that the real object of the association can be accomplished only when the membership represents the

entire trade. He said that it is not so important to raise dues as that all get together and work on increasing the membership.

Secretary Pritchard then read some statistics showing the amount of lumber on hand at members' mills. President Harrison said that with the 2,500,000 feet of box boards on hand it is deplorable that manufacturers are offering this desirable stock at the low figures at which sales are reported as made on different occasions.

F. B. Robertson, chairman of the nominating committee reported that his committee recommended the following officers for the new year:

PRESIDENT, C. L. Harrison.
FIRST VICE-PRESIDENT, John W. McClure.
SECOND VICE-PRESIDENT, H. B. Weiss.
TREASURER, S. M. Nickey.
DIRECTORS for a two year period: W. B. Burke, R. M. Carrier, M. B. Cooper, W. E. DeLaney.

The secretary was instructed to cast a ballot electing these officers for the coming year.

The meeting closed with short talks by several prominent men who had not participated in the active program. F. R. Gadd pleaded for immediate attention to the compilation of reports of cuts in order that the advertising committee might know how much funds it would have available in order to start the advertising as quickly as possible.

The meeting then adjourned.

Problems in Southern New England

The Lumber Manufacturers' Association of Southern New England met in Hartford, Conn., December 7. One of the most important questions considered was with reference to the demand and specifications of the New Haven Railroad for crossties. The rumor had been afloat that the railroad was not going to buy any more local ties, but would substitute crossotod southern pine instead. A committee of the association took the matter up with President Elliott, who advised in part as follows:

"In the year ended June 30, 1914, 2,060,485 ties were laid on the New Haven's lines, compared with 1,814,190 in 1913, and 1,493,786 in 1912. Of those laid last year about 1,800,000 were bought in New England. The increased number of ties laid in the past fourteen months has brought back the road more nearly to a normal basis, so that its purchase of ties next year will naturally show some decline of both native and foreign ties. But even allowing for this and for the increase to be made in the number of yellow pino ties, there will be purchased as before a large number of ties in New England, the number probably reaching over 1,600,000."

It appeared from data supplied by the members of the association that there are already enough ties cut and stacked in the tie yards and along the right-of-way to fill the requisition for the year ending June 30. As the present policy of the road is to keep its surplus stock as low as possible, it was evident to all the members of the association that further production of ties will glut the local market.

Another matter of concern is a proposed change in tie specifications which the New Haven road plans to put into effect July 1, 1915. The present specifications admit local ties of white, yellow, rock and red oak, chestnut and cedar. First class or No. 1 ties when flatted or hewed must be 7" thick with a 7" to 12" face; when squared, 7" thick with a 9" face. Second class or No. 2 ties, flatted or hewed, 6" thick with a 6" to 12" face; squared, 6" thick with an 8" face. Third class, flatted or hewed, 6" thick with a 5" to 12" face; squared, 6" thick with a 7" face. All ties are to be 8' in length with ends sawed square: face measurements to be taken within 6" of rail seat. The present scale of prices is:

First class or No. 1 ties.....70 cents each
Second class or No. 2 ties.....55 cents each
Third class or No. 3 ties.....35 cents each

The proposed specifications exclude red oak from first class or

No. 1 ties and state that ties of red oak or timbers other than white, yellow and rock oak, chestnut and cedar, having dimensions required for No. 1 ties, will be paid for as No. 2 ties; those having dimensions required for No. 2 ties will be paid for as No. 3 ties; while those having dimensions for No. 3 ties will not be accepted. In other words, red oak ties must be of first or second class dimensions, but will be paid for at second or third class rates, as the case may be.

The directors of the association objected to this change. They are willing that red oak be excluded from the first class, but wish the specifications for the second and third class ties of this wood to be the same as for the other woods. The railroad company has taken this suggestion under advisement and may adopt it.

In other respects the proposed specifications are in effect unchanged, except that the first class or No. 1 ties must be cut one from a section. "No halved, quartered, or split ties will be accepted." There is a difference of opinion as to the merits of this specification. The obvious purpose of it is to assure as large a proportion of heartwood as possible, which is a very desirable consideration when ties are used without preservative treatment. It is also claimed by the railroad officials that such a tie withstands wear better and does not check or split as ties cut from quarters or halves. Their explanation is that when a single tie is cut from a stick it is from young and thrifty timber which is harder, stronger and tougher, and does not rail-cut so easily as timber cut from large, old and softer-wooded trees.

The company officials also claim that slabbed or hewn pole ties give better service and longer life in track than squared ties of the same quality and class do. On the other hand, there are several objections to pole ties. One that applies to both slabbed and hewn ties is the lack of uniformity in size which increases the difficulty of replacement, particularly in rock ballast. Other objections to hewed ties are the unequal bearing afforded tie plates and rails, and the unnecessary waste of valuable material. The objection to sawed square ties should entirely disappear if the ties are treated with preservatives.

In the tie specifications of the New Haven road, as is the case with most other roads, the following clause occurs: "Ties must be of live timber." Bulletin No. 50 of the U. S. Forest Service comments on this requirement as follows: "In most forests there is

more or less dead timber. Some trees are blown over, others are killed by root diseases, others by borers girdling the trees under the bark, and a still larger number by fire. In many of these trees the wood of the trunk is perfectly sound and remains so for many years. There is absolutely no reason why such dead timber should not be used for ties, . . . provided always that the dead timber is sound. The mere fact that timber is dead should not cause it to be discriminated against for tie purposes. A rigid examination would show that all heartwood of trees is *dead* wood, in the sense that it is no longer alive. Defective timber can be shut out by providing that 'timber which is decayed or doty, affected with red-heart, split, brashy, heart or ring-shaken, very knotty, or full of worm holes, shall be rigidly excluded.'

"A modified specification would, therefore, read, 'All ties should be made from sound, straight timber, which must be free from decay, doty, red-heart, heart or ring-shakes, worm holes or beetle holes, and excessive knots, and which must not be brashy.'" As there is considerable blight-killed chestnut available for tie timber in southern New England, a strict interpretation of the specifications would exclude it, although within limits it is known to be fully as good as green timber.

The following figures show in round numbers the number of ties laid in track annually and the average prices paid by the New Haven road since 1905:

Year.	Number of ties.	Price.
1905	1,600,000	\$.039
1906	1,439,000	.3986
1907	1,072,000	.4404
1908	1,801,000	.51
1909	1,815,000	.53
1910	1,586,000	.57
1911	1,570,000	.58
1912	1,494,000	.57
1913	1,814,000	.619
1914	2,060,000	.6226

The decided increase in average price during the last few years is due to the purchase of creosoted yellow pine ties which cost over one dollar each.

The New Haven railroad has been severely criticized on the ground that its ties were in poor condition. This is the case in spite of the fact that much more than ever before is being expended in the maintenance of the track, and the number of tie renewals is greater than ever before. The normal annual renewal is 350 per mile, but for the year ending June 30, 1914, the number was 459 per mile.

According to President Elliott, "experience on the New Haven's lines has shown that oak ties produced in New England last about four years in rock ballast, the chestnut ties from five to seven years." It is hardly probable that these figures apply to white and rock oak, which elsewhere has a good reputation as tie timber. The red oak, however, does not give good service and will rot out or break in about four years. It is quite common for the upper or exposed portion to split away from the part in the ballast, probably due to the unequal shrinkage of the two parts.

The use of S-shaped steel clamps to prevent checking and splitting is now a common practice in this country, but not on the New Haven road. These devices are driven into the ends of ties and timbers so as to cross incipient checks and prevent their widening. In place of the regular S-hook, which costs from two to three cents, according to size, another of crimped iron has been devised and is known as a "crinkle iron." Thin straps of iron with one tapered edge are run between intermeshing ends and crimped, after which they may be cut off any length desired. The cost of such irons is from one-half to one cent each. The judicious use of these devices should save the New Haven road much loss from the splitting and checking of ties.

At a meeting of the directors of the manufacturers' association, the question was raised as to the quality of ties that common oak makes when treated. In this connection, it may be stated that 85 per cent of the ties treated by the Baltimore & Ohio Railroad are of such wood. Of 31,141,000 ties reported treated in 1911 by all railroads, 9,433,000 were of oak, presumably common oak (as the

oaks of the red or black group are often termed). That red oak will stand up under heavy traffic is evidenced by the following statement made in 1913 by J. H. Waterman, superintendent of timber preservation, C. B. & Q. R. R.: "In 1900, 550 red oak ties were treated with zinc chloride (Burnett process) and laid in a track on our Black Hill line on 3 per cent grade and 12 degree curve. For nearly five years we have been running the Mallet engines over that line. One hundred per cent of those 550 red oak ties treated with the Burnett process gave us twelve years' life. At the end of that time, the track was inspected and 18 ties removed on account of decay. At the end of twenty years, I expect to find 50 per cent of them still in service."

The traffic on the main lines of the New Haven is very heavy and the car tonnage is increasing. The 100-pound rails are being replaced by 107-pound. It is important that the ties be of the best quality and afford a long life not only to keep down the expense of renewal but also to prevent disturbing the road bed and to assure safety to traffic. The expense of renewing ties is materially increased if stone ballast is used, and particularly for inside tracks. According to President Elliott, "the cost of replacing ties in stone ballast is about 50 per cent greater than in gravel and about 75 per cent greater than in dirt or cinders. For the inside tracks on a four-track, stone-ballasted line the expense is even higher. The life of a tie has become, therefore, a most important factor,"

"It is because of this that the company has decided to include in its purchases this year 100,000 longleaf yellow pine ties for use on its main lines so as to see if they will last any longer than ties now used and thus save expense." It is estimated that these creosoted pine ties will last from twelve to fifteen years. If they do, the increased cost will be more than justified.

It is the New Haven's avowed policy to buy, so far as it can, materials of all kinds within its own territory if prices and quality are satisfactory. The lumber manufacturers of southern New England have been supplying the demand for ties and car timber and have made purchases of timber with a view of disposing of it to the railroad company. They naturally dislike to see their business or any portion of it transferred to other parts of the country.

The problem could be easily solved by the railroad company installing a timber-treating plant in southern New England and treating local timber. In this way it could use all of the common oaks now under ban, and also maple, birch, beech, hemlock, elm, and various other woods for which there is now no satisfactory market. This would not only satisfy the lumbermen but would also afford the railroad better and cheaper ties. There are now nineteen railroads operating twenty-six timber-treating plants in the United States. The total capacity of these plants is over 33,000,000 ties annually. Now that the New Haven road is beginning to recognize the advantages of treated material the logical step would be the construction and operation of a plant or the contracting for sufficient treated local material to warrant the undertaking by an outside firm. This would seem to be a good business move at least worthy of careful investigation.

S. J. R.

The Timbers of the Philippines

An attractive exhibit of the resources of the Philippine islands has been prepared for the San Francisco exposition. Forest resources will furnish an important feature. Two booklets, explanatory of the wealth of the forests, have been issued by the insular Bureau of Forestry. One treats of export timbers, the other of the extent and character of the woodlands. They were prepared by W. F. Sherfese, acting director of the Philippine Bureau of Forestry, and formerly connected with the United States Forest Service. The information contained in the booklets is in condensed form, but as a means of ready reference it is valuable. The woods are classified on the basis of suitability for various purposes, and physical properties are given in considerable detail.

The best way to cut frozen timber is to thaw it out before cutting. This also applies to the working of frosty lumber.

The Lumbermen's Round Table

The Public and Woods

Lack of information on the part of the public about woods is so general a condition that the task of eliminating it, and disseminating at least a little general knowledge of the subject, seems almost hopeless. The best method, though the one which involves time, is through the schools, especially those with manual training departments. But lumbermen ought to endeavor to get the ward schools, which have no manual training work, to teach children something about woods, just as a matter of common knowledge that everybody should have. The hardwood man, or the retail yard man, for that matter, who has an opportunity to talk to school-children about woods should take advantage of it.

Pick up a newspaper and turn to the real estate section, especially on Sunday. Note the number of houses that are "finished in mahogany." The number is far greater than would be revealed by an examination of the buildings themselves. In fact, it has become such a regular thing in the real estate line to claim that a house is finished in whatever woods the stain suggests, rather than the material actually used, that a great many people think that every red stain covers mahogany. A prominent lumberman who recently leased a handsome home was told by the enthusiastic salesman that the finish was mahogany, though the lumberman saw at once that it was birch. He was kind enough not to "show up" the real estate "expert," however, and as a matter of fact rented the house in spite of the misstatement regarding the wood.

Infrequently one sees an advertisement that suggests that people in the real estate business are trying to get away from the habit of talking about woods in terms of the stains used, and substituting their real names. In an announcement regarding a \$5,000 residence that appeared recently, it was explained that poplar had been used for enameling work, though a much cheaper wood, which was named, could have been bought for \$15 a thousand feet cheaper. This is one of the few ads the writer has seen which evidences a desire to put the public "next" to wood values.

How About the Architects

In spite of the amount of wood advertising appearing in the architectural journals—and the space used to exploit gum and walnut and maple and cypress and a few others is larger than the person who has not been following these things realizes—the architects themselves do not appear to know it all yet. In fact, some of them have not even waked up to the fact that a "Made in the United States" movement is on, and that domestic woods, other things being equal, ought to be encouraged. (Mahogany, by the way, is "made" here in large quantities, so that as far as the purpose of the movement is concerned the use of this wood is all right.) But the writer has in mind a certain large building which the designers specify is to be finished in an imported wood. In fact, the name of the country of its origin is part of the descriptive title of the material. "Imported" is the thing the owners, or the architect, want to have said about the interior trim, apparently. Now, as a matter of fact, war conditions make it impossible to deliver this particular material, and a domestic wood which resembles it generically, and is superior to it in all respects, will probably be used in its place. Just between us, the architect is not expected to know the difference, and when the building is finished he will proudly show it off to his professional friends as an evidence of the fine results to be secured through the use of this "imported" material, made in the United States!

There is nothing so "easy" as ignorance that doesn't want to be enlightened; and, incidentally, this situation throws some light on the proposition of what those who are trying to educate the public are up against.

Try the Road Yourself

Hardwood manufacturers who are inclined to wonder whether their salesmen are doing all that could be done to develop business

ought, as a matter of policy, to get out on the road with them and see what conditions actually are. That is the best way to find out whether sales are smaller than they should be; and, besides, it's a good thing for the lumberman himself to come directly in touch with consumers now and then. Not only does the presence of the man whose card bears the words, "general manager," or "president" or "vice-president" make it much easier to obtain an audience with the real buyer at the factory, but the lumberman is given a splendid opportunity to form personal connections that will help him later on, and to acquire inside information about the characteristics of the consuming plant which will enable him to take care of orders to better advantage.

And it's a safe bet that the lumberman who tried to take the place of his road men at present would come home feeling much greater sympathy for the boys who have to sell his stock, and with fuller understanding of the troubles and difficulties with which they are forced to contend.

One Phase of Contracting

"Contract business is mighty nice," said the sales manager of a lumber concern which handles a good deal of trade of that sort, "when the market remains steady or firms up a trifle. The reduction in selling expense and the fact that the volume is assured give the contract a lot of standing with us. On the other hand, however, if conditions become favorable to the buyer, through a weakening of the market, the danger is that he will not only quit specifying on his contract, but will not give the contractor a chance to figure on the lumber which he buys in the open market. In a case of that kind, having the contract is really a big disadvantage to the lumberman, because it practically kills the opportunity to handle the customer's business. I am inclined to believe that it would be good policy, when the market slumps, to go to the customer and release him voluntarily. One hates to do that, because the chance is always present that the lumber contracted for will be taken; but after so many experiences where it isn't taken, and where other stock is bought on the outside, I think we might as well accept the heads-you-win-tails-I-lose arrangement, and permit cancellations when prices go off, for the sake of keeping our position of advantage with reference to the customer's business."

Keeping the Stock Together

In sawing up high-priced woods, it is good policy to follow the example of the veneer manufacturer and keep all the equal-grade boards of each log together. It may seem to work a disadvantage in the trouble which will be required, but it will furnish a big talking-point and be a real argument in using with the consumer. One of the biggest weaknesses of goods made with solid furniture is the variation which is noted in the character of the material. There are frequently differences of color, texture and figure which mark the article as a poorly manufactured piece of goods, irrespective of its design and the way it is finished up.

A prominent walnut manufacturer, who cuts up the wood on a number of mills placed at various strategic points over the country, said recently that he follows the plan of keeping the boards out of each log together when the customer desires that this be done. In other words, if the consumer indicates that he wants to buy the product of certain logs which he himself may have seen, he is given an opportunity to do so. It would seem that the plan would be worth adopting for general use, even though the boards would have to be separated as to grade.

Osage orange wood is a source of dye and can be used to supplement the imported fustic wood, as a permanent yellow for textiles.

News print paper has been made by the Forest Service Laboratory from twenty-four different woods, and a number compare favorably with standard spruce pulp paper.

Cost of Production

Editor's Note

The following paper was read before the Gum Lumber Manufacturers' Association in session at Hotel Gayoso, Memphis, Tenn., January 16, by Frank R. Gadd of the Wisconsin Lumber Company, Chicago.

This appears to be a very popular subject just at this time, and I trust I will be pardoned if I repeat some of the good things said in the numerous papers that have been written of late. The more I can repeat the easier it makes it for me.

The importance of a good system of cost keeping can scarcely be over-estimated, and you will no doubt agree with me that it is one that cannot be dealt with thoroughly in a paper of this kind which must, of course, be limited in its scope by the consideration of time and some consideration for those who are compelled to listen.

It should be understood in the beginning that cost keeping is not a fad. Executives and operating men in all lines of business are becoming more and more interested in finding out quickly and accurately whether the result of any period of work has been profit or loss, and why.

The old fashioned way of casting up accounts at the end of the year is a thing of the past, or almost so, and accounts are now closed monthly, weekly, and in some lines of business daily. For the manufacture of lumber a monthly accounting system seems most practical. In a general way, we all think we know what it costs to get our logs out, haul them to the mill, to manufacture the logs into lumber and load the lumber on the cars; but unless some system of cost keeping is used we often find such figures pure guesswork, and sooner or later are confronted with a condition which is, to say the least, embarrassing.

Many manufacturers depend on their balance sheets to determine the cost and their competitors to fix prices. So long as they keep clear of bankruptcy they can keep their accounts as they please, or neglect to keep any, and are accountable to no one. It is, however, reasonable to suppose that one would wish to operate one's plant profitably and honestly; therefore a good system of accounts is a necessity.

Each locality has its own problems to figure out, but certain fixed rules are available for the guidance of all. "The elementary principles of cost accounting are simple; but clear insight and care are necessary to put every item of cost where it belongs." What is required in the final analysis are figures that show results accurately obtained. The efficiency of a cost statement depends very largely upon the schedule of accounts which lies behind it. If labor, material and expense are properly distributed by departments the final results should be fairly accurate.

Distribution of Costs

First, a few words about distributions. Very few hardwood operations can afford the luxury of a timekeeper. This puts it up to the foreman to keep the time. I have a card that the foreman fills out and turns into the office daily showing the man's name, occupation, hours worked and account numbers to which the labor is to be charged. To get this each foreman is furnished with a schedule of the accounts covering the work of his department, which enables him to make an accurate labor distribution. These cards as received are entered on a payroll record. Against this on the first day of each month, or on day employment begins, a charge is made for rent, doctor, or other fixed charges, advances

made during the month of scrip for trading purposes where commissary is operated, or of cash, are entered as made. At the end of the month, or payroll period, this book is footed, deductions made and employes paid the balance due. The distribution of labor among the different units of the operation is obtained at the same time.

Materials and supplies are purchased on requisition made by a storekeeper and approved by the superintendent. All materials received are checked in by storekeeper and entered on a material received book. As invoices are received the receipt of material is checked from this book, prices and extensions are verified and invoices passed to office for payment, thus reducing to a minimum the chance for error.

Payments as made are charged to a stores account. This account is subdivided for the storekeeper into a long list of sub-accounts covering all the different classes and kinds of material common to a sawmill operation. These sub-accounts are carried on cards, a separate card being used for each account. As invoices are passed the storekeeper charges the amount to the proper sub-account. Materials are issued only on requisition made by foreman or storekeeper. These requisitions, as filled, are priced, extended and entered as a credit on these cards. At the end of the month the issues are totaled up and distribution made. These cards are balanced up at the same time and the total must agree with the controlling stores account in the office. On all miscellaneous materials a sufficient amount shall be added to cover freight, handling charges and shrinkage.

Fixed charges, or overhead, such as depreciation, taxes, insurance, general expense, etc., are ascertained, and as a rule distributed under special instructions. It is one thing to determine what are fixed charges and quite another to arrange for their equitable distribution. The aim is to have each unit of product bear its due and proper proportion of the total.

Depreciation is an impairment of the value of an asset by reason of wear or tear, accident, time, or similar cause and provides for the constantly diminishing life of different portions of the plant a reserve to reproduce the plant. Depreciation on a sawmill operation should be figured on the entire investment, exclusive of timber holdings; the charge depending entirely upon the value of the plant and the amount of timber behind it, but, obviously, it must be large enough to have taken care of the investment by the time the operation is finished. Depreciation should be charged direct to departments instead of leaving it in the general overhead.

Insurance may comprise fire, boiler, liability and fidelity insurance, all of which must be charged direct to departments affected. Liability insurance is a direct charge on labor.

Taxes on timber holdings should be charged to land and timber account; on lumber stocks to your trading account, and on plant to mill and its different departments.

General expense comprises all expense that cannot be charged direct, such as traveling expenses, telegraph and telephone, stationery, postage and other office expense, insurance, depreciation and taxes on office buildings, etc.

Each department must take up all of the cost of repairs and maintenance that can be specifically charged to it. Ordinary

FRANK R. GADD, CHICAGO, ILL.

expenditures for repairs and maintenance are intended to maintain the plant in a condition of efficiency, and do not generally increase the original value of the plant or add to the term of its established life. In other words, ordinary repairs and renewals are for the purpose of keeping the plant in an operating condition and as such cannot be capitalized or considered as an offset to depreciation.

In the distribution of operating accounts, where one account is affected by the distribution of another, the charge should be made on a fixed money basis rather than on a percentage. For instance, a separate cost is made for water and steam. It takes steam to pump water and it takes water to make steam. If you get a water cost first it is obviously necessary that a fixed charge be made for steam used and vice versa.

Machine shops, blacksmith shops, etc., are treated as separate institutions and must carry all of the expense of their departments. A system of shop orders provides for direct charges on different jobs, but there is a certain amount of superintendence, labor and material which can only be distributed over the whole on basis of direct shop labor charged during the month.

Logging Costs

Having provided a basis for correctly distributing labor, material and expenses, we are now ready to proceed with our cost work. I am speaking now of an average southern hardwood operation without planing mill, dry kiln, or other attachment.

First and most important is the logging cost. This is most difficult to obtain, but most necessary to have. Logs are cut at irregular periods, depending largely on physical conditions and may be banked on log spurs, on a common carrier, or team hauled direct to the mill. For each of these banking grounds a separate cost should be made. The schedule of accounts covering the average logging operation, are as follows:

(1) LOG CAMP: To this account charge all expense of operating log camps, including a proportion of the original cost of construction, and the operation of a company boarding house.

(2) TIMBER CUTTING: Timber cutting and team hauling should constitute one job; otherwise it becomes necessary to scale logs at stump for timber cutters and again at banking grounds for the team haulers, making possible the differences which always arise between different scales. This account is provided, however, for use where timber cutting is a separate operation, and covers all expense of falling tree and sawing into log lengths.

(3) TEAM HAULING: This account covers cost of loading on wagons and hauling to banking grounds, including barn expense. Where timber cutting and team hauling are one job charge all expense to this account.

(4) LOGS PURCHASED: Charge to this account cost of logs purchased.

(5) LOADING AND SKIDDING: This account covers cost of loading and skidding logs for shipment to mill. Where skidder is used in banking logs which are not immediately loaded separate account should be kept of such expense.

(6) LOG SPURS: As it would, obviously, be unfair to charge into a monthly cost the entire expense of constructing log spurs such expense, as incurred, should be deferred and only a proportion charged to the monthly cost which will retire the entire cost, with the exception of the rails, by the time the timber adjacent to this track has been removed. This proportionate charge should also cover cost of taking up track and delivering material to new location. Rails having a salvage value are carried in a separate account and depreciation thereon charged to a monthly cost. Where rails are replaced the difference between the depreciated value and the scrap value should be charged to this account. Repairs and maintenance of these tracks is a charge to the monthly cost.

(7) LOGGING RAILROAD OPERATIONS: This represents the expense of logging railroad delivering logs to mill, or to a common carrier, including depreciation, boiler insurance, repairs and maintenance of engines, cars, etc.

(8) FREIGHT: This should cover freight charges made by a common carrier for hauling logs over its own line.

(9) GENERAL EXPENSE: This covers all charges of a general nature that cannot be charged direct to any of the above accounts. I am going into considerable detail in explaining the manner in which I arrive at my log cost, as this is the foundation for all other costs.

The first statement to be prepared is one showing all the charges to the above accounts for the month, and which is really an analysis of the logging expense by departments. This I call "Cost of Logging," although the statement does not give the final cost of logs put through the mill. In order that you may follow me better I have had a photograph made of the statement on which the figures shown are artificial and used for illustrative purposes only.

We assume, to start with, that 800,000 feet of logs were cut and team hauled during the month by company teams, of which 500,000

feet were banked on log spur No. 1, 250,000 feet on rails of common carrier and 50,000 feet were hauled direct to the mill. First, we have the expense of the log camp. This is a company operation and is a proper charge to these logs. The total expense is \$60 or an average of $7\frac{1}{2}$ ¢ per M feet on the 800,000 feet. Figuring the number of feet put out on the different banking grounds at $7\frac{1}{2}$ ¢ per M feet, we are at a charge of \$37.50 against the 500,000 feet banked on log spur No. 1, \$18.75 against the 250,000 feet banked on common carrier, and \$3.75 against the 50,000 feet banked at the mill.

Next is timber cutting. I have assumed that timber cutting and team hauling is all one job, so have shown no expense under this caption, but have included same with the team hauling. As I have stated, the account is provided for where timber cutting and team hauling are separate jobs.

The next item is team hauling by company. Working on the same theory of 800,000 feet of logs banked, we arrive at an average cost of \$3.50, which is distributed over the different banking grounds in the same manner as we distributed the expense of the log camp.

We now assume that in addition to this 800,000 feet of logs banked by company teams there were 200,000 feet more banked by contractors, of which 100,000 feet were put out on spur No. 1, 50,000 feet on common carrier and 50,000 feet hauled direct to mill at an average cost of \$3.25 per M feet. This expense is distributed on the 200,000 feet of logs put out.

Now we foot up the statement and find that 1,000,000 feet of logs have been cut and team hauled during the month, of which 600,000 feet were banked on log spur at a cost of \$2,112.50, or \$3.52 per M feet, 300,000 feet on common carrier at a cost of \$1,056.25, or \$3.52, and 100,000 feet at mill at a cost of \$341.25, or \$3.41. You will note I show an average cost of \$3.51, but that is not the proper cost to use, as you have an actual cost through the distributions above referred to.

The remaining items do not apply to the cost of logs banked, but cover the expense of loading and delivering logs to the mill, and are simply assembled here for use in the final cost.

We will assume that during the month there was loaded and hauled to the mill 1,500,000 feet of logs, of which 1,200,000 feet were loaded on spur No. 1 and 300,000 feet on common carrier. The first item of loading and skidding is figured on 1,500,000 feet, as it is assumed that these logs were loaded by company equipment. The second item of log spurs, however, is figured on only 1,200,000 feet, as only that amount of logs came over the spur. Logging railroad operation, freight and general expense are figured on the 1,500,000 feet. In explanation of the freight charge, it is assumed that the logs coming off of spur have been hauled by company equipment to junction point and from there hauled to mill by common carrier, and as necessarily follows, the logs loaded on common carrier, while loaded by company equipment, are hauled to mill by the common carrier.

The next statement (No. 2) is one to which is carried forward the distributions previously arrived at and on which the expense for the month is added to any existing inventories. First we have

(1) TIMBER CUTTING: This item is provided for use where timber cutting is a separate operation.

(2) BANKED ON LOG SPUR No. 1: We assume that there has been banked on the spur during previous months 3,000,000 feet of logs at an average cost of \$3.50 per M feet, which are still on hand. Starting with this we bring over and add to same the 600,000 feet banked during the current month at \$3.52 per M feet, and get total available logs of 3,600,000 feet at an average cost of \$3.50+ per M feet. As I have said, there was loaded and hauled away from the spur during the month 1,200,000 feet. This amount of logs is here deducted at this average price of \$3.50+ per M feet and carried forward to another account I shall call "Hauled to Mill by Railroad." After making this deduction we find that there remains banked on the spur 2,400,000 feet at an average cost of \$3.50+, which is the inventory value of these logs, and which is the starting point for the next month's calculations. If there is more than one log spur, number same and figure each separately as this one is figured.

(3) BANKED ON COMMON CARRIER: Here an inventory was carried over of 1,000,000 feet at \$3.50, to which is added the 300,000 feet banked and the 300,000 feet hauled away are deducted and the cost worked out in the same manner as on logs banked on spur.

(4) BANKED AT MILL: An inventory was carried over here of 50,000

feet at \$2.50 to which is added the 100,000 feet stacked, and in none of these logs have been used they all remain on hand at the close of the month. Of course, as fast as these different lumber products are loaded up a shortage or overage may develop which would be taken care of through cost adjustment account, which I will explain further on.

(5) **HAILED TO MILL BY RAILROAD:** To this account I turned forward the cost of all the logs I have just referred to that were hauled and landed away from the different landing grounds, and to this I have added the expense of loading and skidding, by means of loading and operation tracks and general expense, giving a total cost for the 1,000,000 feet hauled and hauled to the mill of \$2.16—per M feet. This is the cost of logs exclusive of stumpage, as charged into lumber cost.

(6) **INVENTORY:** The last item in the sheet is the log inventory, which is a recapitulation of the balances in the various accounts. This completes the cost of logging, and we are now ready to go about with the lumber cost.

Total Log Cost

The schedule of accounts used in connection with a lumber cost comprises:

(1) **STUMPAGE:** This represents stumpage on own timber, and when should be charged into cost at a value that will exhaust the timber investment, plus taxes, interest and all other carrying charges within a given period. A great many lumbermen take up stumpage at the price they paid for the timber. This creates a false showing. Stumpage should be taken up at the price it would cost to replace it were it to be exhausted today. The original cost of stumpage will double in less than ten years, as interest must be figured on a compounded basis to be accurate.

(2) **TOTAL LOGS ABOVE STUMPAGE:** This is the cost of logs as calculated on the previous statement and here brought into the lumber cost.

(3) **TOTAL LOG COST:** This represents the total cost of logs used, including stumpage, and figures \$1.65 per M feet board measure, the difference between this and \$9.23 for measure representing the overrun.

Figuring Manufacturing Accounts

The manufacturing accounts are:

(1) **SAWMILL:** This covers cost of getting logs into the mill, sawing and delivering to slip or dock, including repairs and maintenance, tools and supplies, depreciation, fire insurance and taxes and all other charges excepting for steam and saws.

(2) **SLIP EXPENSE:** This covers cost of sorting and grading green lumber, including loading of trams, buggies, cars, etc., at sorting shed, also repairs and maintenance, tools and supplies.

(3) **STEAM:** This covers expense of operating boilers and engines, including boiler insurance and other charges. The proceeds from sale of ashes will be a credit to this account.

(4) **LODGING YARD:** This covers teaming from yard to yard and stacking, including repairs and maintenance of trams, railroads, buggies and lumber pile foundations. This account is not charged with any expense attached to loading and shipping.

(5) **FIRE AND WATCH:** This covers fire and watch service, including wages of employees attending fire drills, repairs of hose houses and maintenance of equipment such as hose, automatic sprays, water barrels, etc.

(6) **SAWS:** This covers all expense of slip room, including depreciation on saws.

(7) **GENERAL EXPENSE:**

(8) **TOTAL MANUFACTURE:** This represents the total manufacturing expense.

Administration Expense

Next we have the administration expense. This covers salaries and expense of operating executives above superintendence. This would include expense of general office located away from mill, or a proportion of same where more than one mill is operated.

TOTAL LUMBER COST

This completes the items chargeable to lumber cost, and the statement can now be footed up and the total of \$12.84 is obtained.

This cost statement is so prepared that the monthly cost can be compared with the cost for the previous month and for the year. To the cost for the year should be added idle expense, deferred charges and cost adjustment items that have accumulated and which have not been taken up direct in any monthly cost in order that the yearly cost may be complete and include every item which should be included in the final cost of product.

At the top of this sheet is shown some statistical information that I find extremely valuable. The overrun on logs and product per hour of operation is something every operator should know.

Idle Expense

As you probably know by this time these cost sheets are made up so that the monthly costs may be uniform and comparative, and any cost is only useful for purposes of comparison with past performances. Therefore, in case of a mill shutting down for a period of more than one week all expense after the first week should be charged to idle expense and so shown on cost sheets

as a charge against the yearly operation into the end of the year when it is distributed direct to the operating account against which same would ordinarily be charged.

DEFERRED CHARGES

It is oftentimes necessary to defer certain charges and pro-rate them over the year, or in some cases a term of years. For instance, a heavy expenditure may be incurred at one time for repairs and maintenance. It would be unfair to charge all this into the cost for that month, so a portion of the expense is deferred and taken up on succeeding months.

COST ADJUSTMENT

Charge to this account any adjustments that properly belong to any previous month's cost of current year. If the adjustment belongs to prior year's operation, charge direct to credit and loss account. In no case charge to current month's cost expense what should have gone into some previous month. Special effort should be made to get all items of the month's expense onto the books before closing.

INTEREST

There is little excuse for charging interest on plant and working capital to cost. One goes into business to make money and by charging up interest to cost one is simply anticipating profits which are purely speculative. Of course, where outside salesmen are employed and it is thought desirable that they should know what it is costing to produce your lumber then interest should be added. Certainly there is no justification for including interest in inventories, and in fact, the rules specifically prohibit it.

I will now show you a few exhibits that we prepare in connection with the cost sheets which are for the information of the operating departments. These show the labor and material cost in detail and put it right up to those directly in charge in such shape that they can tell instantly the result of their work for the month.

SAWMILL

While it may not be germane to the subject before us, I would like to say a few words regarding selling and trading accounts.

The cost statement stops after the lumber is placed in the pile and does not cover paid operation. We have arrived at an average cost of producing lumber; in doing this stumpage has been charged at the market value of the different kinds of timber, and the cut and haul figured at an average cost, as all kinds and sizes of logs have been hauled at one price; but there is no doubt but that there is a considerable difference in sawing costs between the various woods. It would be practically impossible, however, to distribute this average cost of the total production upon the different kinds of wood, as no basis could be arrived at except by making specific runs of a week or a month on each kind of wood, and then that might change immediately, depending on the size and quality of the logs, and also for the reason that a much cheaper cost could be made on continuous runs of one kind of timber than could be made where every log coming through the mill was of a different wood. Where all kinds, sizes and qualities of logs are going through the mill daily, as happens in the average southern hardwood mill, I contend this is impossible.

It is possible, however, to adjust the average cost of the total products to the extent of the differential in the stumpage value. For instance, the average cost of manufacture is \$8.50 and cut and haul \$5.50, making a total of \$9.00. To this the stumpage on gum of \$2.00 could be added, making the cost of gum lumber produced \$11.00, or the stumpage on oak of \$4.00 added, making the cost of oak lumber produced \$13.00, and so on. Separate stock accounts should be kept for each wood, of which should be added its proportion of insurance, taxes, and other inventory carrying charges. As the lumber is shipped out it should be transferred to a waiting account at a value based on the percentage of grades cut that will equal the logrun cost at the mill, retaining the market differentials between each grade, varying with its proper proportion of the burden. This account should also be charged with the loading and shipping expense, including necessary repiling or regrading in yard. Everyone knows about what it costs him to sell lumber—it may be \$10 one year and \$12 the next, but over a period of years an average will be struck so that for each 1,000 feet of

lumber shipped out a charge should also be made against this trading account of the average selling expense. This should include: Salaries, traveling expenses, telegraph and telephone, postage, advertising, association dues, discounts and allowances, commissions, and all other charges.

If these entries have all been correctly made, you will then have an accurate cost of the lumber shipped, and by applying your selling price can readily ascertain whether or not you have made any money.

In conclusion I would like to suggest to the members of the

association the advisability of taking up the question of cost accounting, with a view of standardizing our forms and accounts. A system can no doubt be devised that will be so flexible that it will meet the requirements of all southern hardwood manufacturers.

All signs point to prosperity in the near future and you naturally want to make the most of it when it arrives. The best way of doing so is to consider now such matters as this and while we can give the matter proper time and attention make permanent plans for the future.

Gum Veneer Association Started

The Commercial Rotary Gum Association was formally organized at the Chisca Hotel, Memphis, Tenn., January 12, by the election of the following officers: President, R. L. Jurden, Penrod Walnut and Veneer Company, Kansas City and Helena, Ark.; secretary-treasurer, R. C. Stimson, Stimson Veneer and Lumber Company, Memphis; vice-president, H. M. McCracken, Kentucky Veneer Works, Louisville. These gentlemen, together with the following directors, compose the governing board of this association: T. J. Morris, Anderson-Tully Company, Memphis; E. J. Hoke, Parma Manufacturing Company, Parma, Mo.; G. W. Sparks, Des Arc Veneer and Lumber Company, Des Arc, Ark., and W. F. Morris, Paducah Box and Basket Company, Paducah, Ky.

In addition to the election of the foregoing officers, the association appointed the following standing committees, the names of the chairman of each being given herewith: Membership, C. T. Jarrel, B. C. Jarrel & Co.; inspection rules, R. L. Jurden; constitution and by-laws, H. M. McCracken.

There were representatives of fifteen firms present at this first meeting, and all of these became charter members of the new organization. It is planned to increase the membership materially throughout Kentucky, Missouri, Arkansas, Louisiana, Mississippi, Alabama and Tennessee. The membership committee is expected to prove an exceptionally active one but the question of eligibility will play an important part in this matter as it is the purpose of the association to admit to the organization only those who are engaged in the manufacture of built-up stock used in the manufacture of doors, panels, furniture, cabinets and other products, as distinguished from those who are engaged in the manufacture of veneers used in the making of box shooks.

As a matter of fact, the term "commercial," as applied to veneers, is an entirely new one but it has been used advisedly by the backers of this organization. It would seem from statements of the newly elected officers that the manufacturers of built-up stock have had very little voice in the control of the veneer organizations with which they have been identified. They have therefore decided that it would be best for them to launch one of their own, separate and distinct from any of those already in existence. The officers were very positive in their statement that there would be no affiliation with any other organization and that the purpose of the association would be the furthering of the interests of manufacturers of built-up stock in every way possible.

Further details of organization will be completed at the next meeting which will be held at the Hotel Chisca, Memphis, the second Tuesday in February. It is the plan of this new organization to hold meetings at Memphis the second Tuesday in every month. Memphis has been chosen because of its central location. At the next meeting the committee on constitution and by-laws will submit its report and the question of inspection rules and other matters of equal importance will come up at that time.

Those present at the initial meeting were:

W. Brown Morgan, Morgan Veneer Company, Pine Bluff.
R. C. Stimson, Stimson Veneer and Lumber Company, Memphis.
T. J. Morris, Anderson-Tully Company, Memphis.
D. E. Kline, Louisville Veneer Mills, Louisville.

C. T. Jarrell, B. C. Jarrell & Co., Humboldt, Tenn.
F. M. Roell, Jackson Veneer and Box Company, Jackson, Miss.
S. M. Busch, Southwestern Veneer Company, Cotton Plant, Ark.
M. J. Hoeck, Forrest City Veneer Company, Forrest City, Ark.
A. H. Wilkinson, Helena Veneer Company, Helena, Ark.
J. Strand, Stewart Veneer Company, Stewart, Ala.
R. L. Jurden, Penrod Walnut and Veneer Company, Kansas City and Helena.
H. M. McCracken, Kentucky Veneer Works, Louisville.
E. J. Hoke, Parma Manufacturing Company, Parma, Mo.
G. W. Sparks, Des Arc Veneer and Lumber Company, Des Arc, Ark.
W. F. Morris, Paducah Box and Basket Company, Paducah, Ky.

November Wood Exports

The exports of forest products from the United States during November, 1914, and their comparison with the corresponding month of 1913 are shown in the following figures from the government's monthly report:

	1913	1914
Hewed and Sawed Timber		
France	\$ 36,858
Germany	2,696
Italy	63,869
Holland	25,805
United Kingdom	158,191	\$ 20,513
Other Europe	16,920
Canada	45,664	4,183
Central America	4,570
Mexico	2,530	6,243
Argentina	23,300
Other countries	5,221
Total	\$385,624	\$30,939
Lumber, Joists, and Scantlings		
Belgium	\$ 85,837
France	114,114	\$ 11
Germany	129,282
Italy	76,901	6,652
Holland	102,271
United Kingdom	802,141	469,636
Other Europe	67,960	25,842
Canada	834,906	322,844
Central America	148,423	60,840
Mexico	105,190	46,327
Cuba	209,877	118,203
Other West Indies	69,592	24,364
Argentina	421,038	43,411
Brazil	59,959	5,907
Other South America	219,735	65,736
China	7,154
British Oceania	397,934	13,983
Philippines	4,430	6,197
Africa	64,550	19,190
Other countries	30,682	27,477
Total lumber	\$3,944,822	\$1,558,337
Furniture (total)	\$ 667,978	\$ 198,442

There were 400 fires this year on the national forests of Utah, southern Idaho, western Wyoming, and Nevada, or fifteen more than in the most disastrous season of 1910. Yet the cost of extinguishing them was only one-third and the damage only one-thirtieth of that of the earlier year. The difference is due to better organization now, and to more roads, trails, and telephones.

L. W. CROW, President.

F. J. PIKE, Vice-President.

E. E. HOOPER, Secretary.

Annual of Chicago Association

Annual Chicago Association

About three hundred members and guests of the Lumbermen's Association of Chicago sat down at the forty-sixth annual banquet at the Hamilton Club, on Monday evening, January 25. There was no evidence of the worries of hard times on the countenances of the lumbermen present nor did the business depression which marked the past year in any way mar the thorough enjoyment.

President L. W. Crow called the business meeting to order at eight-fifteen with a few well chosen words covering his aspirations and accomplishments during the year past. He said:

When I was elected president of your association a year ago, I had large ideas as to what I could and would do for its betterment and enlargement. Now that the year is at its close, I check back on myself and see what has been done in the fulfillment of these ideas and I must confess that I have not accomplished as much as I would like to do for the association. This association—yours and mine—is and should be a power for good for every one of its members and I had hoped to bring you all in closer touch with each other. The best laid plans, however, oft go astray.

The brick strike in the spring, lasting nearly three months, paralyzed business during its continuance and no sooner was the strike settled than the European war was thrust upon us. The result was that the individuals making up the membership of our divisions were so tied up in their operations that association work in some of our divisions has been at a standstill. I sincerely hope that during the coming year they will be able to accomplish a good deal more than they did in the year gone by.

Our committees have faithfully performed whatever work has been assigned to them. In this connection I desire to thank Geo. J. Pope and his committee for the work they have done, making possible the new Lumber Exchange building, our new quarters which we will move into the first of April. It is with a feeling of pride that I speak of it as the finest meeting place of any association in the country. We will, as you know, take over the cafe and club features of the Lumbermen's Club, in addition to our regular working quarters and I hope that those of our members whom we see only occasionally at meetings like this, will not only feel it their duty but their privilege as well to drop in often and get acquainted.

I feel that I would neglect my duty if I did not mention our old friend—John Clancy, who has been a very faithful member, devoting this year a large percentage of his time day and night, on the fire limits extension committee. Those who have not been associated with him cannot begin to know the amount of work he has accomplished.

I should like to impress upon all of you who have not been identified with the association work, that others have been working hard for your interests as well as their own. I shall not go into detail as to what we have accomplished in the past year, as the reports of the secretary and chairmen of the different committees and divisions will follow.

I have enjoyed more than I can tell you in words the work I have been called upon to do and have taken great pleasure in meeting so many of you in the different committee work. I do not believe that in any organization, you can meet a more faithful lot of men than those engaged in the lumber business in Chicago.

I wish to thank the directors who have been particularly prompt and regular in attending all meetings when called and I also wish to thank our genial secretary, E. E. Hooper, for his hearty support and earnest work during the past year.

To my successor whom the new directors will elect in a few days, I bespeak your hearty cooperation and support.

Secretary's Report

Secretary E. E. Hooper reported on the year's results to the lumber trade during 1914 as follows:

I have the honor to submit herewith my annual report for the past year, it being the forty-sixth anniversary of this association.

The total receipts of lumber, etc., at Chicago during the year 1914 aggregated, according to the best data obtainable, 2,219,698,000 feet of lumber, 498,159,000 shingles by rail and lake and by lake 416,000 lath and 156,157 railroad ties. Of the figures given 155,187,000 feet of lumber and timber were reported from the United States custom house as lake receipts, leaving 2,064,511,000 feet of lumber and 498,159 shingles to represent receipts by rail. The total volume of receipts shows a decrease in lumber of 584,578 feet for the year 1914 and in shingles 10,637.

Following is an analysis of the disposition of lumber and shingles at Chicago for 1914 and 1913 for comparison:

LUMBER		1914	1913
Inventory at beginning of year.....		282,734,053	283,811,160
Receipts during year.....		2,219,698,000	2,804,276,000
Total stocks	2,502,432,053		3,088,037,160
Inventory at close of year.....	287,021,723		282,734,056
Total consumption	2,215,410,330		2,805,303,107
Shipments	1,020,576,000		954,821,000
City consumption	1,194,834,330		1,850,482,107
Total consumption	2,215,410,330		2,805,303,107
Decrease in consumption.....			589,892,777
Shipments show an increase of.....			65,755,000
City consumption shows decrease of.....			655,647,877
SHINGLES		1914	1913
Inventory at beginning of year.....		55,045,250	60,684,500
Receipts during year.....		497,059,000	507,796,000
Sales and shipments.....		495,571,250	513,435,250
Stocks on hand at close of year.....		56,632,750	55,045,250

About seventy per cent of this large volume of receipts is estimated to represent yellow pine, hardwood and Pacific coast lumber.

This year has been one of considerable discouragement, as the city sales show a decrease of about thirty-six per cent under last year's contributable to the following reasons: First, the brick strike largely curtailed our sales for about five months at the beginning of the year; second, the European war changed financial conditions as to building loans, increased interest rates, etc.; third, the agitation of the extension of the fire limits has retarded building by the poorer classes, who will be unable to comply with such unjust legislation, enforcing construction with higher priced building material.

MEMBERSHIP	
Enrollment Jan. 1, 1914.....	194
Resigned	18
	176
New members	34
Enrollment Jan. 25, 1915.....	210

We lost by death during the year the following members: John Bader, John Bader Lumber Company; A. J. Shutts, Messinger Hardwood Lumber Company; James G. C. Brooks, Oconto Company and Bay De Noquet Company; W. P. Bowring, C. H. Worcester & Co.; Geo. Thamer, Empire Lumber Company.

The board of directors has held eleven meetings during the year, always well attended. The association has held four general meetings and an outing at Ravinia Park, besides participating in the Forest Products Exposition.

I desire to thank the lumber press for the many courtesies extended the association and to acknowledge the kindness and consideration accorded me by the officers and members during my term of office.

Treasurer George J. Pope delivered his report showing the financial affairs of the association to be in good shape.

Arbitration and Inspection Committees

F. J. Heitman, Chairman of the Arbitration Committee said that four matters have come up during the past year, one a question involving a large sum of money which if it had gone to court would have cost five thousand to ten thousand dollars. The expense of handling this case was but one thousand dollars and the time taken was but one week. According to the special charter a decision of this committee is binding on the parties and is that of a lower court.

George J. Pope, chairman of the Inspection Committee was next to report. He said that the Inspection Bureau is on a self-sustaining basis and has been during 1914. During 1914, four hundred and forty-two reports were issued, 115 more than 1913. There were no reinspections and the average cost per report was five dollars. He requested that all applications for inspection be made in writing with full details. He suggested the new board of directors should consider the inadvisability of allowing non-residents the privilege of the bureau.

Should Utilize Association Advantages

President Crow called on E. L. Thorton, chairman of Div. A. Mr. Thorton said that more actual good for the Chicago Lumber trade has been accomplished in 1914 than in any past year, proving the efficacy of association work, but that the only weakness in the Chicago trade as a whole comes from the fact that the full advantages offered by solid organization are not embraced. He maintained that the time for sub rosa association work has gone by and that the associations offer facilities and standards which if taken advantage of by all equally will result in raising the standard of business procedure of the whole trade and make it more modernly efficient.

George J. Pope, chairman of the Building Committee gave the final report on the Lumbermen's Building project, saying the building will be ready by May 1.

Valuable Traffic Work

A. Fletcher Marsh, Chairman of the Traffic Committee suggested, as a means of cooperative working that all members interested in traffic matters meet with the new traffic committee at lunch once a week in the new building and discuss traffic problems. He said that the chief aim and accomplishment of his committee was to get the shipper and carrier closer together. Other accomplishments were installation of checking system on railroads showing location of shipments; increase in car load (one firm increased tonnage per car 8½ per cent increasing railroads revenue 5 per cent without increased cost to consumer); institution of weekly statement of lumber receipts on different roads to other roads resulting in keener competition and better service; combating opposition of yellow pine mills to reconsignment, this opposition being aimed at the wholesaler through revealing identity of final customer and enabling mill to solicit the business direct.

Credit Bureau Recommended

George A. Miller, of the Credit Committee offered a resolution calling for the acceptance by the association and reference to the Board of Directors of a plan outlined by him for the establishment of a modernly efficient credit bureau. Favorable action was taken.

President Crow called on the chairmen of the various divisions but only a few responded. A. H. Schoen, of Div. B, said his division

has voted to donate to Div. A funds to assist in fighting extension of fire limits.

Other chairmen who spoke were F. L. Johnson, of Div. F and George Rinn, of Div. G.

Report of Nominating Committee

Secretary Hooper presented the findings of the Nominating Committee as recommending the election of the following Directors, members of Arbitration Committee and members of the Committee on Appeals for 1915:

Board of Directors: Division "A"—Herman H. Hettler; Division "B"—A. H. Schoen; Division "C"—A. H. Ruth; Division "D"—George J. Pope; Division "E"—John C. Spry; Division "F"—F. L. Johnson, Jr.; Division "G"—R. R. Slayton; Division "H"—Louis Carson.

Committee on Arbitration: V. F. Mashek, Wm. C. Schreiber, Charles Westcott, F. J. Pike, Murdock MacLeod, Geo. P. Rinn.

Committee on Appeals: M. F. Rittenhouse, F. H. Deacon, Frank B. Stone, M. S. Porter, Geo. Flannery, John Olsen, Jr.

On motion a unanimous ballot was cast by the secretary for their election.

Julius Seidel Talks

President Crow called on Julius Seidel, of St. Louis who maintained his reputation as a fluent and entertaining speaker. Mr. Seidel was in a happy mood and got off some mighty clever stories. He also talked in a serious vein on the lumberman's backwardness in developing the merchandising instinct in its finer points. He said that the substitute material men have broadened their markets by effecting the acceptance of building regulations favorable to their materials and that this has been done without opposition from the lumbermen. He maintained that the time has come to check this unfair but mighty advantage and to force substitute materials on an even basis of competition with lumber.

The meeting was concluded with some excellent cabaret entertainment arranged for by the Entertainment Committee.

Annual Meeting of American Forestry Association

The American Forestry Association held its thirty-fourth annual meeting in the Woolworth building, New York City, on January 11.

Dr. H. S. Drinker, president, welcomed the attendants and in his address covered the work of the association during the past year.

Henry S. Graves, chief forester of the United States, outlined the problems facing the Forest Service and the great variety of work performed by that body. He said that due to consistent efforts on the part of the advocates of forestry there is less inclination to abolish the Forest Service and the national forestry system than formerly. He stated that the fight for the forestry system is more difficult in the states and asked the support of the American Forestry Association in a campaign for state as well as national forests.

C. R. Pettis, in charge of the public forests in New York state, outlined in an interesting paper forestry work in New York.

Dean Hugh P. Baker of the New York State College of Forestry outlined in his talk the urgent necessity for more general education of the public in matters of forestry.

After short talks by William B. Howland, president of "The Independent," and John O. LaGore, editor of the National Geographic Magazine, George W. Ostrand, Glens Falls, N. Y., outlined the revision of the New York state constitution which would affect the cut of lumber on state lands.

E. A. Sterling presided at the afternoon session. Professor H. H. Chapman of the Yale Forest School opened the session with a paper on "What the American Forestry Association Can Do to Aid the Forestry Legislation." Other speakers were R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, Prof. Samuel H. Spring of the forestry department of Cornell University and George W. Ostrand, Glens Falls. The annual banquet took place at the Hotel McAlpine in the evening.

The annual meeting of the North Carolina Forestry Association was held at Raleigh, N. C., January 13. Prominent speakers were former Judge R. W. Winston, of Raleigh; State Entomologist Dr. Joseph H. Pratt; Gov. Craig J. A. Holmes, State Forester; Hugh MacRae, president of the association; A. E. Schubert, Nathan O'Berry, W. A. Graham, John Riis and J. G. Peters.

Pertinent Legal Findings

Rights of Non-Resident Corporations

The scope of the power of a state to prescribe conditions limiting the right of a lumber company organized under the laws of one state to do business in another was involved in a decision which was lately handed down by the United States supreme court (*Sioux Remedy Company vs. Cope*, 35 supreme court reporter 57). The gist of the decision is that, although a state may prescribe limitations upon the right of a non-resident company to carry on business which is wholly executed within the state, as where a contract is made in a given state for the delivery of a quantity of lumber there, no valid restrictions can be placed on the right of such a company to accept an order at its home office for delivery at the shipping point or the destination, since that constitutes an interstate commercial transaction over which Congress has exclusive jurisdiction. In the cases cited, suit for the purchase price of goods sold under an interstate transaction was defended on the ground that plaintiff, a foreign corporation, had no right to sue, because it had not complied with the requirement concerning the appointment of a resident agent fixed by the law of the state. The supreme court of South Dakota upheld this defense, but, on plaintiff's appeal, the United States supreme court reversed the decision, holding that plaintiff not only had the right to do interstate business in South Dakota, but, as an incident of it, could sue there to recover the amount due it under the transaction.

Unsafe Appliances—Excessive Damages

An employer who negligently furnishes a defective appliance for opening a clogged chute (in this case a jointed pole) is responsible for injury to an employe resulting in consequence of such defect, if the employe was in the exercise of ordinary care for his own safety. But \$6,500 is excessive recovery for injury to an employe, consisting in loss of an eye, and the recovery is properly reduced to \$3,500, where it appears that he was able to earn as much money after the accident as before, although he sustained a nervous shock and expended \$300 for medical attendance. (Maine supreme judicial court, *Dudley vs. R. P. Hazzard Company*, 92 Atlantic Reporter 517.)

Liability for Contractor's Negligence

When a lumber company awards a contract to a builder for the construction of a building (in this case a lumber dry kiln), it is liable for injuries to third persons caused by a defect in the plan of work (here a wall of the kiln fell, killing workman because of weakness of the foundation in a particular under control of the lumber company). But where a contractor is left free as to the details of performance of his contract, employing his own men and being responsible to the company merely for the completion of the structure called for by the contract, the company cannot be held responsible for injury to third person resulting from negligence of the contractor in a matter under his control. (North Carolina supreme court, *Embler vs. Gloucester Lumber Company*, 83 Southeastern Reporter 740.)

Liability for Fall of Timber

The mere fact that an employe was injured while assisting in carrying a heavy timber, through a co-employe permitting his end to drop without warning does not establish negligence imputable to the employer so as to entitle the injured worker to recover damages. The employe has the burden of establishing some affirmative act of carelessness. The fall may have been unavoidable in the exercise of ordinary care. (Kansas City court of appeals, *Neth vs. Delano*, 171 Southwestern Reporter 1.)

Rights Under Bills of Lading

To concerns which buy lumber in earload lots by taking assignments of bills of lading covering shipments already made, a decision handed down recently by the Kansas supreme court will prove of interest. In this case (*Harold vs. A. T. & S. F. Ry. Co.*, 144 Pacific reporter 823), it is held that, although, as between a shipper and the railway company, the recitals of a bill of lading are not conclusive against the facts as to the date when the shipment was received or the quantity of freight delivered for transportation, an innocent trans-

feree of the bill of lading in the usual course of business has certain rights which would not be open to the shipper. Thus where plaintiff took an assignment of a bill of lading, which showed a shipment from a certain point on a certain date, whereas in fact the shipment was made at another time and place, he was declared to be entitled to recover damages for delay in delivery of the shipment over the time that would have been required under the bill of lading as drawn. After citing a case where a railway company has been held responsible to a transferee of a bill of lading for the value of a shipment called for by the bill of lading but never actually shipped, the supreme court said:

“Nor is there any difference in the legal consequences flowing from the issuance of a bill of lading without the receipt of the goods at any time and one issued before the goods are received provided a loss falls upon the transferee in the usual course of business as a direct consequence of the misstatement.”

Acceptance of Lumber Shipments

The Nebraska supreme court has just been called upon to determine whether the act of one who contracted for the purchase of lumber in attempting to dispose of a shipment, after giving notice to the seller that it was rejected for failure to come up to specifications, amounted to an acceptance and a waiver of such rejection. The decision was announced in the case of *Columbia River Door Company vs. H. F. Cady Lumber Company*, 149 northwestern reporter 798. The suit was brought to recover the price of a carload of lumber sold by plaintiff to defendant and shipped to a third person, and was defended on the ground that the shipment had been rejected. Judgment was awarded in favor of defendant on the ground that, although defendant did attempt to dispose of the lumber, this was done under instructions from plaintiff to “use to the best advantage.” As supporting the decision, the Nebraska supreme court cites the following authorities:

In *Schwartz v. Church of Holy Cross*, 60 Minn. 183, 62 N. W. 266, plaintiff sought to recover for the value of certain altars which had been ordered constructed and placed in the church. It was held that the use of some of the altars, after defendant's refusal to accept them, because they were not manufactured according to specifications, did not amount to an acceptance, and a judgment for the defendant was affirmed. * * * In *Creighton v. Pacific Coast Lumber Company*, 12 Man. (Can.) 546, it was said: “A purchaser of goods ordered to be sent by the railway does not lose his right of rejecting the goods by unloading them from the cars on arrival and teaming them to his own premises, if he finds them to be inferior to what he had ordered and so notifies the vendor within a reasonable time.” In *Armstrong v. Columbia Wagon Company*, 6 Pennewill 274, 66 Atl. 366 (Del.), we find the following language: “In an action for the price of a carload of lumber, it was not material whether defendant knew that it came from plaintiff or not before unloading the lumber, as he had the right to unload and inspect it for the purpose of determining the quality and quantity.”

Breach of Contract to Sell Lumber

In a suit to recover damages for claimed breach of a contract to sell a quantity of lumber (*Gourley vs. American Hardwood Lumber Company*, 170 Southwestern Reporter 339), the St. Louis court of appeals recently announced the following rules of law as being applicable to such cases:

1. Only such damages are recoverable as were within the contemplation of the parties at the time the contract was entered into. Therefore, when one breaks a contract to deliver lumber, he is not liable for special damages accruing to the buyer through his inability to use the lumber for some special purpose not disclosed to the seller when the contract was entered into.

2. In case of such a breach, the buyer must reduce his damages as much as can be reasonably done, by purchasing the required lumber elsewhere. He need not purchase in the nearest market, geographically speaking, if there is no market at the contract place of delivery for the particular lumber to be bought, but he must buy in that which is the most available, considering price, delivery, etc.

3. When a buyer rejects a lumber shipment as not conforming to that shipped, he is entitled to recover for all reasonable expenses incurred in connection with it, including freight paid, unloading charges, and the cost of cross-piling at seller's request, to protect the lumber.

Wood Preservers' Annual

The eleventh annual convention of the American Wood Preservers' Association was held January 19, 20, and 21 in the Congress Hotel, Chicago, and was concluded with a visit as a body to the Field Museum of Natural History, Chicago, and to the Forest Products Laboratory, Madison, Wis. A banquet on Wednesday evening was the leading social event of the meeting.

The election of officers on Thursday afternoon resulted in the choice of J. H. Waterman, of the C. B. & Q. Railroad, as president. He resides at Galesburg, Ill. H. S. Loud, of New York, who is associated with the U. S. Wood Preserving Company, was chosen first vice-president; Lowry Smith of Brainerd, Minn., superintendent of the Northern Pacific Railroad's tie plants, second vice-president; and F. D. Beal, Portland, Ore., superintendent of the St. Helens Creosoting Company, third vice-president. F. C. Angier was unanimously reelected secretary-treasurer.

Three cities were voted on as the place for the next annual meeting of the association, St. Louis, New York and Chicago. The choice fell on Chicago. Invitations came also from Columbus, Cincinnati, Charleston, S. C., and San Francisco.

The attendance exceeded two hundred and was representative of all portions of the United States.

A committee of six, to advise with and assist the president, was elected. Two members will go out and two others will be elected each year. This committee, therefore, becomes a body in perpetuity. It was ordered, as an unwritten law, that the retiring president shall be one of the committee. The election resulted as follows: G. E. Rex, E. A. Sterling, John Foley, C. M. Taylor, J. B. Card, and J. M. Davidson.

The following papers relating to treating timbers, or to their use after treatment, were placed before the meeting:

Air Seasoning of Crossties, by A. H. Noyes.

Sill Ties, by F. J. Angier.

A Method for Finding the Annual Charges for Ties, by Harrington Emerson and T. T. Bowen:

The Mechanical Life of Ties as Affected by Ballast, by E. Stimson.

Additional Facts on Treated Ties, by J. H. Waterman.

History of Treated Wood Block Pavement in the United States, by the committee on wood block paving.

Treated Timber for Factory Construction, by F. J. Hoxie.

Laboratory Analysis of Creosoted Wood Paving Blocks, by Frank W. Herrington.

The Bleeding and Swelling of Paving Blocks, by Clyde H. Teesdale.

Destruction of Timber by Marine Borers, by E. S. Christian.

Economical Use of Steam in Connection With Wood Preservation Plants, by A. M. Lockett.

Temperature Changes in Wood Under Treatment, by George M. Hunt.

A Specification for a Coal Tar Creosote Solution, by Hermann von Schrenk and Alfred L. Kammerer.

The Comparative Toxicity of Coal Tar Creosote and Creosote Distillates and of Individual Constituents for the Marine Wood Borer, *Nyctelia*, by L. F. Shackell.

USE OF WOOD PAVING BLOCKS

The paper which gave the history of paving with wooden blocks in the United States confined its statistics to blocks which had been treated with preservatives. Figures were given by which the increasing use of this material in the United States was shown. The earliest date included in the report was 1898, approximately sixteen years ago. During the time that has elapsed since, a large number of cities and towns in all parts of the United States have laid treated paving blocks on their streets. Minneapolis is credited with the largest superficial area of treated wood pavement, its total exceeding a million square yards or about one-eighth of all such pavement laid in the United States in the past sixteen years, as shown by this report. The total for the whole country is placed at approximately 8,455,000 square yards.

The figures do not show how much of this pavement is made of the several woods listed. It is evident, however, that longleaf and shortleaf yellow pine of the South lead all others. Tamarack holds a rather important place, and black gum is in much demand. Western larch, western red cedar, and Douglas fir meet considerable demand,

while Norway pine is frequently laid, and hemlock less frequently. Black gum is the only hardwood on the list.

CONSTRUCTION TIMBERS

The paper by Mr. Hoxie laid particular stress on the necessity of treating timber used in factory construction to guard it against decay. Little was said on the subject of the kinds of timber to be selected, since, no matter whether hardwood or softwood, it should be protected from decay as carefully as possible. There is always danger of attack by dry rot. This insidious enemy of structural timbers may be carried into a building on decaying wood and by that manner be communicated to sound timbers. An instance was cited where a building constructed of oak and pine had remained free from dry rot for twenty-five years only to fall a victim at last after contact with decaying timber brought into the factory.

The builder should exercise the greatest care in selecting timber for factory construction and use such as is not liable to fall an easy victim to decay; but as an extra precaution the use of treatment is recommended.

TIMBER DRYING BY STEAM

The paper by George M. Hunt, "Temperature Changes in Wood Under Treatment," contains interesting data showing what takes place when wood is submitted to steam under pressure until the heat penetrates, and a partial vacuum is then pulled. The water in the wood is heated, under pressure, to a temperature considerably above that of boiling water under ordinary circumstances; and when a partial vacuum follows quickly, the sudden release of pressure causes the water in the wood to boil violently, and the steam escapes from the pores so rapidly that the moisture content of the wood is lowered, perhaps as much as twelve or fifteen per cent in a few minutes. This happens in case of green wood only. If seasoned wood is submitted to this treatment it may actually absorb moisture from the steam, and contain more water at the close of the steaming than at the beginning.

In submitting timber of large size to this steam treatment there is danger that the rapid drying will produce checks sufficiently serious to injure the wood.

THE MECHANICAL LIFE OF TIES

Mr. Stimson's paper discussed the wear of ties in contact with the ballast in the track. It is well known that rails cut ties badly, particularly if the ties are soft and the traffic heavy. The deterioration of ties on account of the grinding action of the ballast on the bottom and sides of the tie is not so generally known. It is said that in some instances when ties are of very durable wood they will wear out before decay seriously affects them. Those in the track of the original Panama railroad have been frequently cited as such an example.

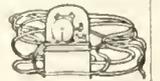

Mr. Stimson shows that the tool used for tamping the ballast and forcing it under the tie causes much injury to the wood by bruising it and chipping off splinters from the corners of the timber. When broken stone ballast is employed, the sharp edges and corners of the individual pieces wear the wood rapidly under the pounding effect of passing trains. Much of the cutting of ties by the rails is due to action of sand and grit from the ballast. It inserts itself between the tie and the rail.

The paper by Clyde H. Teesdale of the Forest Products Laboratory at Madison, on "The Bleeding and Swelling of Paving Blocks," led to one of the most heated discussions of the entire meeting, due to differences of opinion among members as to different preservatives and methods of applying them.

The discussion which followed the reading of a paper "A Method of Finding the Annual Charges for Ties," by Harrington Emerson and T. T. Brown, led to a statement by a member of the convention that, taking the whole United States in consideration, the annual cost of ties is four times the annual cost of rails. It thus appears that the country's railroads depend more upon forests than on iron mines.

The Furniture Expositions

The Grand Rapids furniture show is now just about winding up, and it may be said for the edification of lumbermen that if the results in the way of business were not immensely good, they were far from bad. As a matter of fact, business was slightly below normal, but it was not at the lowest possible ebb by any means. It was well up to January a year ago, which is doing pretty well in the midst of what is generally termed a real business depression. "Fair to middling," was about the verdict given of the show by leaders in the furniture trade.

One good indication was that the number of visitors was just about as large as usual. The fact that the buyers were on hand, taking interest in the new stuff, and preparing to stock up with anything which looked good, was one of the most encouraging features of the whole situation. The automobiles of the Grand Rapids factories were kept busy taking visitors from the hotels to the show-rooms at the plants, and most of the manufacturers wore a smile which, though it may have been largely force of habit during the show season, at least seemed to suggest moderate satisfaction with what had been transpiring.

Mahogany continues to be the big leader in the Grand Rapids field, and is being used in Period goods just as in everything else which has been offered. Oak is of course next, though a rather poor second. The way in which oak seems to be falling down in the high-class cabinet field seems to the onlooker to be very suggestive to manufacturers of that wood. Are they content to allow it to be pushed aside by anything else which comes along? Wonderful effects may be had in oak, and are being obtained, but it is certainly not being given the place which belongs to it. Mission Colonial furniture is still wanted by a large number of buyers, and this is keeping oak in the limelight, but it is not being used to any great extent outside of this field. Fortunately, golden oak seems to be about gone, as a high-class furniture proposition. This finish undoubtedly did more to unpopularize oak than anything else in the world.

"What the furniture trade needs more than anything else," said a prominent manufacturer to the writer, "is another high-class cabinet wood to work along with mahogany. We are making seventy-five per cent of our output in mahogany, and we think the percentage is too large for the good of the business. It is beginning to look as though the wood which will be the leader along with mahogany is American walnut."

And this opinion seemed to be borne out by the facts. American walnut was really the big feature of the show—that is, the most important new development. The biggest houses in the trade were displaying their walnut goods right up front, so that the visitor could not help seeing them. Made up in the Period styles, walnut furniture is wonderfully beautiful. It is really exquisite stuff, and the manufacturers who are featuring it are getting enthusiastic over it, especially as the buyers have taken to it remarkably well, considering that their real first introduction to it was given a year ago.

A big manufacturer, who happens to be featuring enameled goods this year, said to the writer: "We have made about a dozen walnut patterns this time, or about sixty numbers; and we have sold a world of it, although we have not pushed it so hard as we have done enameled goods, naturally."

The designs which walnut has been featured in particularly are Queen Anne and William and Mary, and it looks great in both. With the loud pedal being placed on Periods in the retail furniture trade, it looks as though the retailers ought to have no trouble "getting away" with the walnut game, especially as the leaders in the field, like Berkey & Gay, whose famous Knowlworth line is made up of walnut exclusively—about 575 numbers in all—is being advertised to the consumer through the popular magazines.

The walnut men who visited Grand Rapids found furniture manufacturers keenly interested in the wood, and many who have not been using it have about decided to get into the band-wagon. This applies particularly to chair manufacturers, who see in the big run on walnut

by the ease-goods houses a good opportunity for them. The fact that the chair people can use the lower grades of walnut, while the ease-goods manufacturers have been insisting for the most part on firsts and seconds, though No. 1 common would serve the purpose in a majority of instances, gives the former a chance to get in under unusually favorable conditions.

The matter of the supply of black walnut was also on the tip of many tongues, and anybody who had any information to offer was listened to carefully. That is, the walnut consumers are anxious to know whether, in view of the evident big movement of the furniture, they are going to be able to get all that they require.

"I am convinced," said one furniture man, who has been absorbing a lot of information on the subject, "that there is plenty of the wood. Government statistics show that the production is about 50,000,000 feet a year, and inasmuch as a lot of this goes into veneers, that certainly seems to be ample for the requirements. And though under normal conditions the export trade gets a good deal of walnut, it would seem natural that domestic business would get the call from the walnut men, as it is certainly easier to handle than foreign business. The method of walnut production, that is, from small and scattered pieces of timber instead of large forests, is really insurance of a steady production, it seems to me, because if it were all grown in a small section, it would be comparatively easy to cut it out in a short time."

The matter of production, however, is one which is bothering a good many prospective consumers, and walnut manufacturers may well lay considerable stress on their ability to furnish the material not only now, with the demand just starting, but for years to come.

Walnut was finished for the most part at Grand Rapids a deep, rich brown, which was rubbed dull. Some manufacturers finished a little lighter than others, but most of them preferred the rather dark treatment. One manufacturer, who is noted for his inconsistency, or, perhaps, as his admirers would say, his originality, has finished his American walnut very light, bringing out all of the contrasts in the way of grain and figure that he could, and making his line very different from that which will be characteristic. Then he has finished his gum furniture with the brown stains which are provided for walnut, and is offering the latter as "satin walnut." Thus it appears that gum, the universal substitute, is going to get the backwater from the walnut demand also, in the form of cheaper furniture which can be offered under a similar name.

As suggested above, enameled furniture is getting a strong play in the Grand Rapids market. The Sligh Furniture Company, one of the leading houses, is putting out as much of this kind of goods as anything else; in fact a visit to its ware-rooms leaves one with the impression that it has more enameled furniture to offer than mahogany, even. Certainly they are playing it up as strongly as possible, having built an extra story to their factory for the work of putting on this finish, which requires very careful and elaborate treatment. This and other companies appear to believe that enamel, instead of being merely an occasional fill-in, can be made a real staple. It also shows the striving to get away from the effects which have been most popular during recent years, and to introduce a new note into the furniture business.

The woods which appear to have been featured for enameling purposes are basswood and birch. The latter seems to be fairly high-priced for the work, but many of the Grand Rapids people seem to think that there is nothing like it for this character of work. Poplar manufacturers might disagree with them. In fact, though the writer heard little of poplar in connection with enameled furniture, it would seem that this is the wood that is really made for this class of work; and inasmuch as poplar deserves a little stimulation at this time, and could stand a little increase in the demand without any injury to anybody, it might pay the poplar manufacturers to investigate the trend toward enameled furniture.

Circassian walnut was shown to a considerable extent at Grand Rapids, but the general impression seems to be that it is on the

wane. Whether this is the result of increased prices, due to the war, or is a permanent condition, it is hard to say; certainly, however, few houses seemed to be featuring it as strongly as heretofore, and in fact that Sligh Furniture Company, which for years was regarded as the champion of Circassian, appears to have displaced it in favor of enameled furniture.

CHICAGO FURNITURE EXPOSITION

The Chicago Furniture Exposition, at 1319 South Michigan avenue, has been open to buyers for some time. The manufacturers displayed full lines, and the exhibit as a whole was fully up to those of former years. Old lines still hold their places, but new ones come in to comply with changing tastes and fashions. Perhaps there has never been a time when there was more call for reproductions of early period furniture than there is at present. Fads come and go in furniture as in most other things where fashions are concerned; and many new things which possess no real merit come and go, and after that they are seen no more; but when the designs are such as appeal to educated tastes, they return to popular favor from time to time. At present the displays are rich with furniture reproduced from some of the highest classes of past periods.

To some extent certain woods respond to fashions. They come in and go out. There are other woods, however, which are "the same yesterday, today, and forever." Oak and mahogany may be put in that class. Designs may change, finishes may vary, but the woods never go out of use. The furniture display shows a tendency to restrict the use of highly colored and highly polished oak; but what is lost there is made up in plain and unostentatious finish.

Red gum not only holds its place in the furniture factory and in popular esteem, but it gains steadily. The furniture maker is learning more about gum. It can be worked without much shrinking and swelling, and the public appreciates its figure and general appearance.

The usual mahogany lines are being shown. It is known that imports of mahogany have declined on account of the war, but no scarcity has yet been felt by the furniture makers. The sawmill output of mahogany lumber in the United States is about 30,000,000 feet, board measure, and about half of that quantity is cut into veneer.

The most noticeable change in the furniture lines seems to be taking place in the use of walnut, both American and Circassian. The latter is bound to become extremely scarce and expensive, because absolutely nothing is being exported from the area where it grows, which is in the region of the Caspian sea. It is safe to say that when present stock has been used there will be no more until the close of the war. The Chicago exhibit showed no scarcity of this wood, but the manufacturers were a unit in saying that they expect a decline in the amount used with a corresponding increase in price.

In some instances Italian walnut is already being substituted for Circassian. Both are cut from the same species, but the countries of origin are different, and the Italian-grown wood does not rank with Circassian in beauty; besides, there is not much of it.

Black walnut holds a much more prominent place in the present furniture exhibit than it held last year. The wood has come back; not yet in all furniture lines, but in tables, desks and certain other articles. Some of the finishes given it are beautiful. The old users of this walnut, forty years ago, never thought of finishing it in other than in black, which is the wood's natural color when trees are fully mature; but some manufacturers now show articles of black walnut furniture which suggests brown or brownish yellow more than black. In fact, the wood might almost pass for Circassian. No such range of finish was ever before attempted, and no one formerly suspected that black walnut was capable of it.

This will render easy the transition from Circassian to black walnut in furniture making. The demand for the former may be partly met by the latter; but the sentiment in favor of black walnut is growing, independently of scarcity in supplies of Circassian walnut. The annual use of Circassian in this country heretofore has fallen somewhat under 2,000,000 feet a year, board measure, but by cutting the wood in thin veneers it has made a conspicuous showing.

Some of the furniture manufacturers now sell finely-finished pieces of black walnut at the same price as Circassian, while in other

instances the Circassian brings about ten per cent more.

The furniture show in Chicago was fairly well attended. While the number of buyers was somewhat less than formerly, they bought liberally, and the result is considered satisfactory, considering general business conditions.

Baltimore Exports for 1914

The figures of exports from Baltimore for the year 1914 are available, and they show strikingly the effect produced by the great war upon the lumber movement to foreign countries. None of the latter were exempt from the contraction that has taken place, the year being practically divided into two periods, during one of which a fair volume of business was done, while the other includes the five months of the war when the shipments slumped until they amounted to only a small part of what may be called a normal movement. In this connection it is to be said that the shrinkage in exports began a year before the war, the second half of 1913 having already shown a marked decline in the forwardings, as compared with the first half. This falling off continued in 1914, being doubtless attributable to a considerable congestion which had taken place in the course of time. The effects of this congestion manifested themselves in a very indifferent demand and in a narrowing of prices, which touched figures that made a large part of the export trade unprofitable. During the war, of course, no improvement was to be expected, especially since the seizures of vessels by Great Britain resulted in a diversion of shipments to certain ports and an accumulation of stocks there that have not yet been worked off. The trend of the export business is impressively shown in the following table, which gives the foreign movements in periods of six months, the first line of figures standing for the shipments in the first half and the second line for those of the last six months of 1914 as compared with the previous year. Here are the totals:

	1914		1913	
	Quantity	Value	Quantity	Value
Logs, Hickory	347,000 ft.	\$ 11,763	981,000 ft.	\$ 31,549

Interesting Traffic Developments

Cypress operations in Louisiana are said to be suffering from unjust and undue discrimination on the part of carriers who are alleged to be violating their tariffs with respect to milling-in-transit arrangements. The case was laid before the Interstate Commerce Commission last week and is brought by the Chicago Lumber and Coal Company against Morgan's Louisiana & Texas Railroad and Steamship Company, Louisiana Western Railway, Iberia & Vermilion Railway and the Lake Charles & Northern Railroad. It is claimed that full carload ratings are applied into the dressing point and full rates applied out, as well. The railways refuse any refund on the ground that the lumber was not dressed in total. The cypress manufacturers declare that this interpretation of the tariff was not justified. The principal mills involved are those at Garden City, Patterson and New Iberia.

The complaint has been filed by Stearns & Culver Lumber Company of Milton, Fla., against the Chicago, Milwaukee & St. Paul, et al., charging unreasonable rates on sawmills machinery from Beloit, Wis., to Milton. Reparation is asked.

The West Lumber Company of St. Louis has filed a complaint against the Frisco asking \$1,900 reparation for alleged overcharges.

The American Land, Timber and Stave Company of Chicago, has filed a claim against the Frisco, charging discriminatory rates on staves and heading from Missouri and Arkansas points. Reparation is asked.

An interesting point is involved in a complaint filed last week by Baker, Wakefield Cypress Company of Plattenville, La., versus the Texas & Pacific Railway. Routing a car destined to Huntington, W. Va., was asked by telephone. The carrier's agent advised a routing which was placed on the bill of lading by the shipper. After the car had moved it was discovered that the cheapest route had not been specified. A rate of thirty-four cents was collected when another route taking a twenty-six cent rate was available. The cypress company claims that it is the duty of the carrier to advise the cheapest route on inquiry, just as it is the duty of the carrier to route the shipment by the cheapest way if submitted without routing instructions.

An effort is being made by the Union Lumber Company of Milvid, Tex., to secure an order from the commission making it necessary for the Gulf, Colorado & Santa Fe to furnish switching service at the plant of the lumber company. For a number of months this service has been refused and has been done by the lumber company, which now claims \$5,000 reparation for service which, it is claimed, should have been performed by the carrier.

A situation, thought to be without precedent, is set forth in a complaint filed last week by S. T. Aleus & Co. of New Orleans against the Illinois Central. For many years this company has been shipping box material to Durham, N. C., at a twenty-six-cent rate. Recently, the Illinois Central issued a new tariff. The rate to Durham was dropped entirely. Inquiry made by the Aleus company brought out the statement from the carrier's agent that the rate was unchanged but had been inadvertently dropped. After twenty-seven cars had been moved, the Illinois Central presented bills for an increase of eight cents in the rate. The Aleus company points out that the twenty-six-cent rate remains unchanged on the Louisville & Nashville and the New Orleans & Northeastern, and holds that it cannot be required to pay the additional eight cents.

The East St. Louis Walnut Company lost its case last week against the St. Louis, Iron Mountain & Southern, the Missouri, Kansas & Texas, the Missouri Pacific, the Frisco and the St. Louis & Southwestern. The commission handed down a decision sustaining the

present rates on rough walnut logs from points on various lines in Missouri and Arkansas to East St. Louis.

A fourth section order was asked last week providing the further suspension of proposed increases on lumber on the Chicago, Burlington & Quincy, the Chicago Great Western and the Chicago & Northwestern. The rate is suspended from January 15 to April 15.

A complaint has been filed by the Advance Lumber Company versus the Atlanta, Birmingham & Atlantic Railway Company. Demurrage was unjustly assessed on cars from Alabama to Indiana and Illinois points, it is alleged.

A brief has been filed by the defendants in the case of the Nebraska Bridge Supply and Lumber Company against the Nashville, Chattanooga & St. Louis railroad and the Alabama & Great Southern. It is denied that the lumber company has any right to reparation and the carriers state that the reductions asked for the transporting of cedar logs, poles and piling would result in tremendous losses.

Briefs have been filed in the question of lumber rates from Helena and other points in Arkansas to Omaha and other destinations. The carriers take exception to Witness Knapp's testimony which indicates, they say, that the increase proposed is from sixteen to twenty-three cents. Absolutely no record of the sixteen-cent rate ever having been in force can be found, the carriers state. The request for the vacation of the suspension order is renewed.

An Illinois Central brief submitted last week contends that the proposed rate of twenty-six and one-half cents to Omaha from lumber producing points in Mississippi is unreasonable. The fact that the railroad probably will lose the traffic altogether, as is contended by the lumbermen, is not a legal reason why a reasonable rate should not be allowed. The lumber interests state that western woods will replace southern woods in Omaha if the increased rate is allowed.

Replying to the brief recently submitted by the Himmelberger-Harrison Lumber Company of Morehouse, Mo., the Frisco claims that the lumber company's own evidence makes it clear that lumber rates should not be disturbed in their territory. The whole structure of rates from mill points in Missouri and Arkansas is involved, it is said. As a considerable portion of the company's lines is supported almost entirely by lumber tonnage, any decrease in rates would work a great hardship, it is declared. Neither do present rates place the lumber company at any commercial disadvantage, it is stated.

A complaint has been submitted by the Major Stave Company of Ashtown, Ark., against the Memphis Dallas & Gulf Railway Company. It is contended that the rates on staves and headings to Galveston are unjust and in violation of the law. A rate of thirteen and three-fourths cents from Ashtown and Arkadelphia, Ark., to Houston, Tex., was asked. A fifteen-cent rate is requested to Texas City and to Galveston. A minimum of 40,000 pounds is to apply. All charges which have been made during the past two years, in excess of the rates named, should be reduced, it is declared.

Reparation has been granted in the case of the Torrey Cedar Company versus the Chicago & Northwestern. One forty-five foot car was ordered for loading poles. Two cars were furnished. The carrier must charge the rate that would have applied had the forty-five foot car been available, it was ruled.

In the matter of the rates on lumber and other forest products from points in Arkansas and other states to points in Iowa, Minnesota and other states the petition for revision of the previous findings with respect to divisions was considered. The petition was denied

with the exception of the reapportionment of the rate to Des Moines. The first supplemental report and order was modified to that extent.

A portion of the decision reads:

"Our general finding made a reduction in the divisions of the St. Louis Southwestern Railway of one cent below what had been its original proportion. As to the Des Moines rate, the original division of the St. Louis Southwestern Railway would be reduced one and three-fourths cents. In other words, the division of the St. Louis Southwestern Railway of the Des Moines rate would be three-fourths cent less than allowed that company out of the through rates to the territory as a whole. This we believe to be a proper adjustment. We therefore find that the rate to Des Moines should divide seventeen and one-fourth cents to the St. Louis Southwestern Railway Company and seven and three-fourths cents to the Wabash Railroad Company and that our first supplemental report and order herein should be so modified."

Endorsements for the ship purchase bill have been piling into the offices of senators and representatives from lumber districts during the past two weeks. The support of congressmen is urged in the interest of the industry which is unable to export its product, despite the increasing demand in Europe. Export mills throughout the country are said to be receiving excellent offers from dealers abroad but when there is not enough shipping to handle cotton, which is paying many times the normal shipping rate, there is little chance for low-grade freight.

Lumber hearings have been arranged as follows by the Interstate Commerce Commission:

January 26, Minneapolis, Examiner Gerry; Christenson-Imes Lumber Company versus Northern Pacific Railway Company.

February 1, Minneapolis, Examiner Burnside; rates on logs, Stuttgart and other stations in Arkansas to Memphis.

February 6, argument in Washington; Major Stave Company versus M. D. and G.

February 11, argument in Washington; Eastern Oregon Lumber Producers' Association versus C. B. and Q.

Overcharge was allowed in the case of the Valley Planing Mill Company versus the St. Louis, Iron Mountain & Southern, in a decision handed down last week by the commission. The fourth section application made by the company in connection with the case, which provides for the continuance of lower rates on yellow pine from Hot Springs to Alexandria, Va., was denied.

A rate of twenty-two and a half cents on oak between Rock, W. Va., and Hagerstown, Md., was found to be excessive in the amount that it exceeds fourteen cents in a decision in the case of the Ellis & Myers Lumber Company versus the Virginia Railway Company.

May Brothers, Nickey & Sons Company and the Ryan-Stimson Lumber Company lost their case against the Frisco in which unreasonable charges on logs from points in Mississippi and Arkansas to Memphis were alleged. The commission dismissed the case claiming the allegation had not been proven.

Lumber and other commodities are discriminated against in the reconsignment rules of the Louisville & Nashville, it is declared in a brief filed in the case of the Powell-Myer Lumber Company versus the Louisville & Nashville. In addition to the discrimination in favor of certain classes of shippers and shipments excessive charges are made for the service actually rendered, it is charged.

The Atha Tool Company of Newark, N. J., has lost in an effort to obtain cheaper rates on lumber from Tennessee points to Newark. The commission sustains present rates to Newark. Limited relief from the long and short haul clause was granted.

Forest Products Federation

Plans for the mass meeting of the Forest Products Federation in Chicago February 24-25 are rapidly assuming definite form. By that time the officers and committees of the federation will have compiled full and reliable information upon the conditions which tend to reduce the use of lumber or encourage the use of other materials. Despite the popular notion to the contrary, there is still plenty of timber available for all necessary requirements. Since wood is the best and most widely used material for all-around building purposes, it is very desirable that the consumers of wood should be informed as to sources of supply and methods of handling the product so as to get best results. Lumbermen do not advocate the use of wood in places or for purposes for which it is not suited, but they do justly maintain that the field for the legitimate uses of wood is big enough to consume the annual lumber output if properly cultivated. Under modern conditions, however, the manufacturers of every commodity find it necessary to promote the uses of their products, and lumbermen are no exception to this rule of business. More complete use of timber is possible only as markets are developed, and the aim of the federation is to promote the use of wood for all purposes to which it is best adapted.

The essentially new feature of the present movement is that it includes all branches of the lumber industry. The manufacturers wish to co-operate with the distributors, and the wholesalers and retailers need the assistance of the manufacturers. By such co-operation people who use wood can be educated to buy more intelligently and to get more satisfactory service under varied conditions. In giving publicity and information regarding the best uses of lumber, the federation plans to promote wood on its general merits, leaving details as to kind and character to the various lumber associations concerned.

The coming mass meeting is receiving the hearty support of the timber trade and forest interests, and in preparation for the meeting the executive committee has arranged for five committee reports on

important problems. The subjects and personnel of the committees are as follows:

COMMITTEE 1—BUILDING CODES. The compilation of building codes in representative cities and evidence as to discrimination against lumber. Chairman, J. V. O'Brien, secretary, Cleveland Board of Lumber Dealers, Cleveland, O.; Ernest H. Burgess, H. H. Hettler Lumber Company, Chicago; W. W. Knight, vice-president, National Wholesale Lumber Dealers' Association, Indianapolis, Ind.

COMMITTEE 2—FIRE LOSSES: Compilation of losses to frame buildings compared with other types of structure; extent to which fires are due to carelessness and character of contents instead of kind of structure; and comparison of the ease of fighting fires in the various types of buildings. Chairman, C. F. Wiebe, secretary, Edward Hines Lumber Company, Chicago; Geo. W. Laehring, secretary, Lumbermen's Credit Association, Milwaukee; W. W. Schnupner, National Wholesale Lumber Dealers' Association, New York, N. Y.

COMMITTEE 3—COMPARATIVE PRICES OF BUILDING MATERIALS: Tabulation of prices on various building materials and on completed structures; checked by actual bids on specified structures; and a comparison of mill construction versus concrete, steel or brick for factory buildings. Chairman, Adolph Pfund, secretary, Wisconsin Retail Lumber Dealers' Association, Milwaukee; Henry Boeckeler, Boeckeler Lumber Company, St. Louis, Mo.; F. S. Underhill, Wistar, Underhill & Nixon, Philadelphia, Pa.

COMMITTEE 4—SHINGLES: Compilation of shingle ordinances; status of fire retardant paints and processes and the use of substitute roofing material. Chairman, F. A. Hoffeins, president, Transfer Lumber & Shingle Company, North Tonawanda, N. Y.; John McMaster, Seattle, Wash.; James Costello, Liberty, Mo.; Geo. E. Watson, secretary, Southern Cypress Manufacturers' Association, New Orleans, La.; G. A. Thompson, secretary, Welles-Thompson Lumber Company, Minneapolis, Minn.

COMMITTEE 5—PROMOTION: The general methods for promoting structural material; cost and character of effective advertising and publicity; expositions and shows, and comparative merits of individual or association effort. Chairman, W. A. Gilchrist, Chicago, Ill.; A. T. Gerrans, superintendent, John L. Roper Lumber Company, New Berne, N. C.; M. B. Nelson, Long-Bell Lumber Company, Kansas City, Mo.

In addition to authoritative reports upon the foregoing topics assured by the membership of the committees selected, the Chicago mass meeting on February 24-25 will be addressed by well-known speakers upon subjects of related interests.

C. H. KRAMER, RICHMOND, IND.,
PRESIDENT

WALTER CRIM, SALEM, IND., FIRST VICE-
PRESIDENT

DANIEL WERTZ, EVANSVILLE, IND., SECOND
VICE-PRESIDENT

Indiana Hardwood Annual

Probably no prominent group of lumbermen in the country is more closely linked with bonds of friendship and goodfellowship than are those manufacturers who now operate in the Hoosier state and those who started their lumber careers cutting Indiana's famous timber. Once a year the departed sons and those who remain in the old state gather at Indianapolis for the annual handshaking. This event occurred again on Wednesday, January 29, at the Hotel Severin, this being the sixteenth annual meeting. It was marked by good fellowship and optimism among seventy-five or eighty members who attended. The members of the association were so anxious to visit in the hotel lobby that the business session did not start until about three o'clock in the afternoon.

President C. H. Kramer of Richmond called the meeting to order and delivered his annual address which is reproduced in part as follows:

President's Address

Indications from many angles point to a betterment in many lines; we hope for a realization of same. Many banking institutions over the country are reporting favorably, they are holding up well and are coming from under the industrial and financial crisis which has been existing for months past, very favorably and with much credit, although they have been very harshly criticized for the tightening of the purse string. The great centers are gradually working from under the financial burdens, the rural districts have never been more prosperous. The Almighty for several years has given us an abundance of crops, and has largely favored us in a great many other ways. Through it all may we be thankful, and go into the new year with more vim and vigor and endeavor to bring success and prosperity to our fellowmen—have business patriotism, talk business—don't boost war.

We look back at the opening of the past few years, and we remember similar conditions as to a betterment in the lumber and allied interests, the outlook being that we would get back into normal activities, but much to our regret the looked-for prosperity did not come. We hardly feel that these conditions will be ruling during the coming year; some of us are dissenters and pessimists, passing out quinine pills, but many are of the belief that we are at and in the beginning of a hearty and distinct trade revival. Many of you are experiencing an increase in demand, an increase in orders and some a slight increase in price.

I dare say many of you have experienced some contract breaking by your customers when they could buy the same stock your contract called for at a less price. They seemed to disregard any trade ethics whatever, and cancelled with you or required you to lessen your contract price. The same sort of customers also attempt to take discounts at very extended periods. I am quite sure you have some designating mark of remembrance for such. If you must lower your prices in order to move your stock, to protect quality and for financial returns, do so by giving your tried and true customers the benefit. They will appreciate the cir-

cumstance and understand the necessity of your doing so; selecting strange and untried customers in order to gain this end, may be committing business suicide.

With a good many of us the marketing of our product for some time past has seemingly been not how much profit we could obtain above costs, but how much can we dispose of at any price, regardless of the loss in the transaction, the goal seeming to be to get the orders at any cost. This system is one of the most hazardous to the lumber interests. Quite true, some of our stock cannot be held too long, owing to depreciating tendencies, and when the market is off or the prices a little on the downward trend, many begin to cut and there seems to be no end. The trouble largely is not so great an over-production as it is lessened demand. This applies to other commodities as well as to lumber. By this, stocks accumulate at the manufacturing end, and then the old policy of price cutting suggests itself. If we must liquidate, let us do so in a way, as far as possible, to the best advantage of the lumber interests. We hope that the consuming field of every nature using our products may get into their normal state and remain so indefinitely.

Although the general trade conditions have been all but good, we were given another burden to carry in the granting of the five per cent increase in the rate to the common carriers. In the Central Freight Association territory this increase no doubt will be granted to them in the trunk line territory, and as well in all the southern section. I am firmly of the opinion that the lumber and timber rates were, prior to the increase, in a very large per cent greater than they should have been, as in comparison with many other commodities, and, were lumber and timber taken on a correct basis, risk in loss or damage, etc., there would be a lessening in the rates in a large number of cases. I am very much of the belief the former rates netted the carriers a handsome profit.

There is no legitimate business but that should have, and is entitled to, a just and equitable return on its investment, but the returns should be derived on an equitable basis from all those who must buy the privilege. The rate problem is a complex riddle, a regular labyrinth. It was said before the five per cent increase came along, "What the ordinary shipper doesn't know would fill a volume, and what a traffic man is supposed to know about them would fill a whole row of books," and this was only too true. With this five per cent increase we have the added burden of fractions, which only deepens the entanglement. We hope that some day not far distant the Interstate Commerce Commission, with the railroad authorities, may work out some system of rate making that the ordinary shipper may have reasonable assurance of his correctness in figuring rates. As it is now we are very much at the mercy of the agents' correctness, and two agents with the best intentions will often give widely different readings of the same tariffs. Let us hope for a satisfactory solution.

To the trade press we hope that our association will continue its methods along the plan that we can command your spirit of kindness, and were it not for your spirit of fairness in the use of printers' ink, we and the lumber game would not have the measure of success that we now enjoy. We most heartily welcome you and wish you a full measure of success.

F. T. Trefz, field secretary of the Chamber of Commerce of the United States, delivered the first regular address. According to Mr. Trefz, a logical sequence of events has led up to the present business depression, which course of circumstances he endeavored to trace. The speaker grouped the three great forces behind the industrial United States as agriculture, labor and commerce. He stated that up to the administration of President Pierce the population of cities was but six per cent of the total population of the country, and that the sudden release of an immense number of men at the close of the Civil war made necessary the industrial development of the United States. He brought the increase in our wealth to a comprehensible figure in stating that it has been increasing at the rate of \$250,000 an hour.

The inefficiency of our law makers, which has come in for so universal complaint of recent years, is the logical result of the necessity for the use of the brains in the country in the up-building of the industrial and commercial structure. As a result we have very few business men in the state or national legislatures, and also on account of the lack of interest exhibited by the business man in anything but the development of his own business, the law makers have not been shown the business view-point, hence the vast amount of legislature inimical to the best interests of our business development.

Mr. Trefz traced the national development which has led up to the present trusts, which are being kept back in every way possible by the government. He maintained that modern business must necessarily be big and that while abroad big interests have the backing of the national government, in this country they are directly opposed by the government. The development which Mr. Trefz most specifically emphasized is the fact that the present war has resulted in the realization on the part of the government officials that the wise counsel of the practical business man is absolutely necessary in shaping the policies of national administration along lines which will result in the country's advancement. He said that Congress is more willing to listen to business men and business men more willing to listen to national officials than at any time in the last twenty years.

Mr. Trefz landed the lack of yellow journalism in the handling of the position of the United States regarding the present war, by the press of the country. He said that they have been conservative and cool-minded in their treatment of this subject, and of the business situation, and that this attitude has greatly tended to keep the public mind free from undue excitement.

Discussion of Compensation Laws

Frank M. Smith of Indianapolis, secretary of the Indiana Association of Manufacturers and Commerce, gave a complete description of the application of the workingmen's compensation laws. He traced the developments of these laws since 1910 when the first one was put into effect, stating that twenty-four states have since then enacted state compensation acts. According to Mr. Smith, they are still all in the experimental stage, but public demand makes it imperative that such laws be passed. According to Mr. Smith there is danger of an unjust application of the laws if the laborers are treated too liberally, as there will be an inclination to get the maximum benefits and live in approximate idleness at the expense of the employer, unless the laws are wisely drawn.

Secretary Richardson of Indianapolis reported a net gain of ten members during the year, making a total membership of 121.

Reports of Committees

The president on motion appointed as nominating committee, F. H. Galbraith of Indianapolis, Van B. Perrine, Fort Wayne, and C. H. Barnaby, Greencastle, Ind.

Treasurer James Buckley of Brookville, reported a balance on hand of \$514.89.

W. H. Guthrie of Indianapolis, reporting for the forestry committee, reviewed the work done along these lines in Indiana. He said that trees are being furnished to citizens who will pay the freight, and that in the state there is a surprising amount of enthusiasm on this question.

On motion of J. V. Stimson of Huntingburg, resolutions of regret were expressed on the death of members during the past year, these being W. A. Bennett of Cincinnati, Fred A. Diggins of Cadillac,

W. P. Brown of Indianapolis and Bedna Young of Evansville.

Resolutions were adopted opposing state senate bill 23 aimed at the consolidation of the state board of forestry, state geologist, state entomologist, oil and gas inspectors and state veterinary, the reason for the objection being that this would take away their representatives from the Indiana Hardwood Lumbermen's Association and from the Retail Lumber Dealers' Association.

C. H. Barnaby, reporting for the inspection rules committee, said there has been no changes in hardwood inspection rules during the past year.

W. W. Knight of Indianapolis, chairman of the committee on trade conditions, presented the following report:

This committee has had no meeting and the chairman submits the following remarks, with due apologies to anyone who has a contrary opinion. Trade conditions since our last meeting a year ago were moderately good for some people, and everything pointed to a reasonable amount of business in the fall while crops were growing and until the terrible calamity of war struck Europe. Since that time there has been little or no business to speak of in the lumber trade and our President, to the contrary notwithstanding, is wrong when he says this is due to a state of mind or a "psychological condition."

I think I am safe in saying that from forty to sixty per cent of the normal volume of business does not indicate a high degree of prosperity, but we are told that business conditions are good. And, if we belong to the "truly faithful," no doubt we will believe what we are told and pay our bills accordingly. But on the other hand it is only fair to say that with the international balance of trade in our favor to a large extent and the enormous volume of orders for food products and war supplies which are coming from Europe we must at last feel some benefit from these more or less favorable conditions.

More than all that, the recent allowance by the Interstate Commerce Commission of a five per cent increase granted to the railroads lying between the Ohio and Mississippi rivers and the Canadian borders is bound to have a very beneficial effect. When the orders which the railroads must place for materials of all kinds are spread round the country to the steel mills, to the lumbermen, and to various others catering to this trade, and the money begins to circulate, we are all going to feel the benefits, and the writer's fondest hope is that this movement may be speeded in the coming.

After that J. V. Stimson moved that the committee be appointed to bring about the enactment of a law compensating citizens for fighting fires along the highways.

The nominating committee reported, recommending the election of the following officers for the ensuing year:

PRESIDENT—C. H. Kramer, Richmond.

FIRST VICE PRESIDENT—Walter Crim, Salem.

SECOND VICE PRESIDENT—Daniel Wertz, Evansville.

SECRETARY—Edgar Richardson, Indianapolis.

TREASURER—James Buckley, Brookville.

DIRECTORS—C. H. Barnaby, Greencastle; George Palmer, Sheridan; W. A. Guthrie, Indianapolis; J. V. Stimson, Huntingburg; Samuel Burkholder, Crawfordsville; Claude Malcy, Evansville; Frank Galbraith, Sunman; Haynes Egbert, Goshen; W. W. Knight, Indianapolis; Frank R. Shepard, Indianapolis; Frank Reynolds, Rushville; Van B. Perrine, Fort Wayne.

E. V. Babcock of Pittsburgh, president of the National Hardwood Lumber Association, addressed the convention briefly, pointing out the magnitude of the lumber business and comparing it with similar large industries of the country.

Adjournment followed.

Banquet

As usual, the chief feature of the meeting was the banquet which took place in the main dining room in the evening. The dinner was a thoroughly enjoyed affair as these dinners are altogether apt to be. Among those who spoke were Frank F. Fish, Chicago, secretary of the National Hardwood Lumber Association; Douglas Malloch, Chicago; J. Heatherington, Toronto, Ont.; H. C. Searce, Mooresville, Ind., secretary of the Retail Lumber Dealers' Association of Indiana; F. S. Underhill, Philadelphia; W. A. Guthrie, Indianapolis.

The attractive badges which the members wore were donated by E. C. Atkins & Co., Inc., of Indianapolis.

HARDWOOD RECORD has received a special wire dated Washington, D. C., January 22, stating that the proposed increased rate for interstate shipments of lumber from Chattanooga and Nashville, Tenn., was found to be justified in a decision handed down by the Interstate Commerce Commission on that date.

Present Testimony at Memphis

The railroads consumed all of the four days allotted for the hearing at Memphis, Jan. 13-16, inclusive, before Special Examiner Watkins of the Interstate Commerce Commission, in the case involving proposed advances of eighteen to forty per cent on cottonwood, oak and gum from points in the Mississippi valley states to Ohio river crossings. Forty-seven roads were represented by twenty-six attorneys, freight traffic managers and rate experts, while the Southern Hardwood Traffic Association and other contesting organizations were represented by about twenty attorneys, their traffic managers and a number of individual lumbermen.

Joe Hattendorf, general freight agent of the Illinois Central, was the star witness for the carriers. He occupied the stand for nearly two days and, in addition to giving a vast amount of verbal testimony, filed about twenty exhibits. His arguments in favor of the higher rates, which have been suspended by the commission pending this hearing, may be briefly summarized as follows:

FIRST.—That the railroads are seeking to increase the rates on lumber in compliance with recent rulings by the Interstate Commerce Commission directing the carriers to adjust their rates to Ohio river crossings.

SECOND.—That the proposed increased rates are not so high as lumber rates in other timber-producing sections of the country.

THIRD.—That the proposed increased rates are no higher than lumber rates in other timber-producing sections which have already been sustained as reasonable by the Interstate Commerce Commission.

He also laid much stress on the "pet argument" of the carriers that the rates established on lumber some years ago were for the purpose of fostering this infant industry in the southern states and that, since the lumber business had grown to a point where it could stand on its own merits, the carriers were entitled to share in the prosperity which the lumber people were enjoying. He also said that there had been a decided increase in the cost of railroad operation and that this was another reason for increased revenue. He attempted to show that most of the standing timber in the southern states was owned by a small group of lumber interests and he likewise emphasized the fact that cottonwood and gum, under the present loading system, with particular reference to weights, were rather undesirable traffic for the carriers, especially at prevailing rates.

Mr. Hattendorf, under cross examination, declared that the Illinois Central had no idea whatever of withdrawing the present increased rates and further that his company did not intend to make any reductions. He admitted that about one-half of the lumber tonnage handled by his road moved through Ohio river crossings. Luther Walter, attorney for the lumber interests, asked Mr. Hattendorf if he could furnish a report showing the lumber tonnage on his line to Ohio river crossings. Attorney Rixey, for the Illinois Central, and attorneys for various other lines, strenuously objected to the compilation of such a vast amount of data but Examiner Watkins said he saw no reason why such reports should not be prepared if they did not involve too much work.

Charles Barham, general freight agent of the Nashville, Chattanooga & St. Louis, said that the proposed rates on lumber originating on that road and passing through Ohio river crossings were fair and just. He compared these rates with those made by the Chesapeake & Ohio and Norfolk & Western and said that, while the former were somewhat higher than the latter, this condition was justified by the better financial condition of the two other roads as compared with the Nashville, Chattanooga & St. Louis. He also thought that the density of traffic handled by these two roads as compared with the Nashville, Chattanooga & St. Louis entitled the latter to some consideration. He was quite emphatic in the declaration that his road could not stand any reduction on class or commodity freight handled over its lines because expenses had increased while net revenues had decreased.

D. M. Goodwyn, general freight agent of the Louisville & Nashville, filed a number of exhibits. He also reiterated what Mr. Hattendorf had said about rates on hardwood from southern points being cheaper than those from other timber producing sections, and de-

clared that the proposed advance in rates would increase the revenues of his road about \$25,000. He asserted that, owing to the conditions following the outbreak of the war in Europe, the Louisville & Nashville was not making a reasonable profit on its investment.

Perhaps the most novel testimony was that of W. K. Vandiver, St. Louis, assistant general freight agent, for the Mobile & Ohio. He declared that the Yazoo & Mississippi Valley and Illinois Central had made the lowest rates in the Mississippi valley to be found anywhere in the United States and that his road had had to follow to meet this competition. He pleaded also the necessity of increased revenues.

J. D. Watson, assistant freight traffic manager of the St. Louis & Southwestern Railway, declared Saturday morning, the last day of the hearing at Memphis, that prices for hardwood lumber produced in southwestern states had advanced materially since the west side carriers established a low freight rate to foster the infant industry and that rates on lumber had not been increased in the meantime. He said that southern hardwoods could not be sold to advantage in the earlier stages of the industry because of the prejudice against them and that the carriers put in the lower rates in order to help them find a market therefor. He did not believe it was right, however, that the product, which the roads had helped so materially to increase, should fail to give the carriers increased compensation in the form of higher rates. Mr. Watson did not complete his testimony Saturday but it was resumed in Louisville Tuesday.

Special Examiner Watkins and attorneys representing both the railroads and lumber interests left Memphis Saturday evening for Birmingham. Pine interests were given an opportunity Monday to present their testimony there against the proposed advances from southern points to Ohio river crossings.

J. H. Townshend, general manager of the Southern Hardwood Traffic Association, left Memphis Monday evening for Louisville where the railroads on Tuesday begin the final lap in their testimony.

Lumber interests will have their inning in St. Louis next week and they will be there in full force. J. H. Townshend, general manager of the Southern Hardwood Traffic Association, J. R. Walker and Luther M. Walter, attorneys for the same organization, and representatives of the various bodies co-operating with this association, and a number of traffic experts and individual lumbermen will be present. The real struggle, so far as the lumber interests are concerned, will begin at St. Louis. Memphis will send the following delegation to that city with such additions as may be found desirable: James E. Starke, James E. Starke & Co., Geo. D. Burgess, Russe & Burgess, Inc., Jno. W. McClure, president of the Southern Hardwood Traffic Association, T. E. Sledge, traffic manager for May Brothers, Geo. Land, traffic manager for the Lamb-Fish Lumber Company, and W. B. Burke, vice-president and general manager of that company.

The Southern Hardwood Traffic Association and all the lumber organizations which are co-operating with that body have made unusual preparations for this fight which is regarded as the most far-reaching ever undertaken by them. Lumber interests here believe that these organizations will give a good account of themselves and very little uneasiness is felt regarding the outcome.

It is reported that there is a big market in Hawaii for box shooks for packing canned pineapple and pineapple juice.

During the past two years forest officers have killed nearly 9,000 predatory animals, more than three-fourths of which were coyotes.

The arboretum established at Washington in Rock Creek park, through co-operation between the Forest Service and the District of Columbia, now contains 1,200 trees, comprising ninety-two different species.

GEO. D. BURGESS, MEMPHIS, PRESIDENT.

W. J. ECKMAN, CINCINNATI, FIRST VICE-PRESIDENT

R. S. HUDDLESTON, NEW ORLEANS, SECOND VICE-PRESIDENT

National Exporters' Annual

The annual meeting of the National Lumber Exporters' Association was called to order at the Hotel Gayoso at 10 a. m., January 21, by President Fred Arn of Chattanooga. About fifty members were present, including all of the officers and directors. The association held a brief session in the morning. Following adjournment the members went in a body to the Memphis Country Club where they were entertained at luncheon. Early in the afternoon they were driven through the two big parks in Memphis and to other points of interest. A brief session was held at the Tennessee Club later in the afternoon and in the evening delegates were being entertained at dinner at the handsome home of this club.

President Arn, in his address, was quite optimistic regarding the outlook. He asserted that everything for which the lumbermen and the business and financial interests of the country now are working appears to be coming to a consummation. He thought that there would be a marked increase in the price of all grades of lumber in the near future because of the enforced curtailment of output on the part of mills, both North and South. He said that this had already made itself felt in the domestic trade and he regarded an advance as inevitable as a direct result of the laws of supply and demand. He declared that, while there had been some decrease in the demand itself, this had been less than the decrease in output, with the result that stocks had decreased. He predicted that there would be a gradual resumption of domestic consumption of lumber during spring for the reason that far seeing men would take advantage of present conditions to make purchases for everything needed in construction lines.

He did not believe that conditions could long remain depressed. He asserted that a reaction was due one way or the other and that, in his opinion, it would be for the better. In fact, he went so far as to say that "the low ebb of financial depression had been passed" and predicted that "some time this year would see the beginning of the high tide of prosperity."

Concerning the export situation, in its various phases, President Arn had the following to say:

As for the European markets, where millions of dollars in lumber business has dwindled to an almost imperceptible figure by reason of destruction of organized ocean traffic, the best only can be hoped for. It is an assured fact that not until the outbreak of war did Americans understand what possessing a merchant marine means to a nation. Now that it is so forcibly thrust to their attention, it is hardly to be doubted that the ship purchase bill will soon become a factor in international commerce.

For the passage of this bill, the National Lumber Exporters' Association is willing and ready to exert every effort possible. Its passage will mean millions to the exporters of the United States and will also mean the

ultimate consideration of the United States as a merchant power in the great international trade which prior to the war was claimed largely by Germany.

The interneg of hundreds of large German, French and English marine carriers meant the destruction of organized ocean traffic and, as a result, lumbermen were among the heaviest losers. Even at the present time there is a good market in Europe for lumber by reason of the fact that all importation from Russia and Austria has been precluded and this market naturally turns to America for its supply.

But the prohibitive ocean rates have cut deep inroads into the possibilities of supplying this demand. It is now necessary for the United States to supply the carriers for this vast amount of commerce that is waiting ships and when this is made possible, millions will be brought to the coffers of the American business industries and the subsequent era of prosperity that will ensue will be the greatest the country has ever experienced.

The most important action taken by the National Lumber Exporters' Association came during the last day, when resolutions were adopted, copies of which are to be sent to President Wilson and to both senators and representatives in Congress, seeking the establishment of an adequate merchant marine by ship subsidy or any other form of national legislation that would accomplish this purpose. This was recognized by all members of the association as the most pressing question at this time and there was an unusual amount of discussion thereof. The association also charged that there had been discrimination shown against lumber shipments by certain steamship lines and it entered a protest against this condition. It was declared that the present situation amounted to a practical embargo on American products and the association, through its resolutions, prayed for as early relief as could be afforded. The resolutions follow:

"WHEREAS, The present situation is such that an almost total embargo exists on the exportation of American products and of lumber in particular, by reason of lack of available ocean tonnage; and,

"WHEREAS, This emergency is so great and conditions most critical; therefore, be it

"Resolved, That we favor any legislation that will make available all possible ocean tonnage at the earliest possible moment, even though such legislation be of a temporary character, and be it further

"Resolved, That to provide permanent relief to the American foreign trade we favor such legislation—whether by providing ship subsidies or otherwise—as will result in an adequate and permanent American merchant marine and such amendments to our present shipping laws as will remove such restrictions as prevent successful operation of American-owned vessels."

Besides adopting these resolutions, the association discussed at some length the attitude of Secretary Redfield, of the Department of Commerce, toward foreign steamship interests as outlined in his address at St. Louis last week, and heartily approved what he had to say.

The election of officers resulted as follows: Geo. D. Burgess, Russe & Burgess, Memphis, president; W. J. Eckman, Cincinnati, first vice-president; R. S. Huddleston, New Orleans, second vice-president; J. McD. Price, secretary; John L. Alcock, Baltimore, treasurer. Directors: Fred Arn, Chattanooga; G. A. Farber, London, Eng.; Chester F. Korn, Cincinnati, and Frank F. Fee, Dermott, Ark.

July 15 was set apart as lumber exporters' day at the Panama Pacific exposition, San Francisco. There is always a mid-summer meeting of the board of directors and, while it was not definitely decided, it is probable that this will be held at San Francisco on the day indicated. In addition to other subjects to be discussed at that time will be the selection of the place for the next regular annual of the association.

The report of the treasurer showed the association to be in good financial condition while that of Secretary Price showed a tendency toward increase in membership.

An executive session was held at the Hotel Gayoso late yesterday, after which the association adjourned.

The Banquet

The banquet at the Tennessee Club tendered by the local lumbermen was entirely informal but thoroughly enjoyable. W. H. Russe acted as toastmaster and was quite happy in the introduction of the various gentlemen called on for brief talks. C. P. J. Mooney, managing editor of the Memphis Commercial Appeal, was the principal speaker. He referred to the invasion of the lumbermen from the North about 1890 and said that their coming marked an epoch in the life of this city because they had proven good citizens and had stood for everything tending to advance honor, intelligence, good business and prosperity. Dealing with the situation growing out of the war in Europe, Mr. Mooney declared that the United States, without a merchant marine and with eighty-five per cent of its vast exports carried in foreign bottoms, was the most helpless country on the globe. He asserted that the United States must have a merchant marine and that, if it could not be obtained through subsidies or other means under present laws, then the laws ought to be changed so that the establishment of this great need would be an accomplished fact. He thought this the biggest question before Congress and that the people throughout the country ought to be awakened to the need for this merchant marine. He urged every exporter and every lumberman present to take this subject up with their representatives and senators in Congress and said that it would be a good idea for them to get very close to those in the ordinary walks of life in order that an overwhelming sentiment might be created in favor of a government-owned or government-controlled or government-sanctioned merchant marine. He was loudly applauded because of his vigorous remarks on this subject, the most important to be handled at this meeting of the National Lumber Exporters' Association.

J. L. Alcock of Baltimore said that the National Lumber Exporters' Association was launched in his town just fifteen years ago and that ever since the members had worked in perfect harmony, had protected their interests in every way possible and had succeeded in establishing a high standard of fair dealing in both this country and Europe. He was not certain as to the best method of procedure in the creation of a merchant marine but he declared that the realization of one would be a long step in the direction of progress and prosperity for the people of the United States.

President Arn said that the association had a wonderful record of accomplishments back of it and that, while the situation at present had some discouraging features, this body of men was looking to the future which, he felt sure, had some good things in store for them. He also declared that this organization, although small in numbers, had always done what it had undertaken and that its members were not quitters but were steadfast in their purpose once they had tackled any problem. He expressed the thanks of the association for the entertainment accorded them here, saying that Memphis never did anything by halves.

S. B. Anderson, president of the Anderson-Tully Company, said

that facilities for the shipment of our commodities were a most important factor and that the lumbermen and other exporters had found out that there was something needed besides making goods and efficiency in salesmanship. He thought that nothing should be left undone which would tend toward the establishment of a merchant marine and declared emphatically that lumber interests and others should hammer away on the proposition and not allow themselves to forget it for a moment. He also said that the subject should be taken up with our senators and representatives and that only such men should be sent to Congress as were broad enough to look at a proposition on its merits instead of from a political viewpoint. He did not believe it possible to establish a merchant marine in time now to accomplish much before the end of the European war but he urged that everything possible should be done to prevent the possibility of a repetition of the present paralysis in the event another war should come.

R. J. Darnell, Max Sondheimer, H. B. Anderson, T. R. Winfield, president of the Business Men's Club, all of Memphis, and Frank F. Fee, Dermott, Ark., Chester F. Korn, Cincinnati, and Geo. M. Spiegle, Philadelphia, were all called upon and responded in humorous vein.

Just before disbanding, Mr. Russe urged that the members of the National Lumber Exporters' Association seriously consider the question of making Memphis the permanent place for the annual meetings of this body. He argued that this would mean larger attendance and would be in the interest of the organization.

Decision in Southern Rate Case

In the matter of the investigation and suspension of advances in rates by carriers for the transportation of hardwood and other kinds of lumber and articles manufactured therefrom, from points in Arkansas, Louisiana, and other points to Memphis, St. Louis, Mo., and other points of destination, the Interstate Commerce Commission handed down its decision as follows:

The proposed increased rates north bound on hardwood and articles taking the same rates from the Southwest to various points of destination are found to be just and reasonable, with the following exceptions: (1) Rates which exceed the present rates on yellow pine lumber for the same hauls; (2) Rates from Group A which includes Cairo, Ill., and points from which the same rates apply, to Missouri River points and points taking the same rates or rates basing thereon, in so far as they exceed the present rates by more than two cents; and (3) Rates from certain points in southeastern Arkansas which would be affected by a proposed change in the present groups of origin to St. Louis, Mo., East St. Louis, Cairo, and Thebes, Ills., and Memphis, Tenn., and points taking the same rates or basing thereon, in so far as they exceed the present rates by more than two cents.

United States Woods in Glasgow

Glasgow, Scotland, has long been an important market for American woods. In addition to what is used there locally, it is a distributing point for a wide trade. The manufacture of American wood into tea boxes for the Chinese trade has been a feature of the Glasgow business for many years. A report of American timber exports to that city, during the year 1914, was recently published by Edmiston & Mitchells, timber merchants, of the Scotch metropolis. It was not a good export year for American woods. The summary at the close of December shows little demand for oak logs, but a fairly steady sale throughout the year for one-inch oak boards, though the demand for quartered oak has been disappointing. Wagon stock sold better toward the close of the year than earlier. Yellow poplar logs were a drug on the market, while there was sale for poplar lumber, but more for lower grades than for choice stock from eighteen to twenty-four inches wide. The business in sap gum (which in Scotland is called hazel pine) was fair, while the red heartwood (called satin walnut) was sold in small parcels only. Black walnut logs of medium quality sold for eighty cents to one dollar a cubic foot; and toward the close of the year the call became brisk for thick planks suitable for gunstocks. Wide cottonwood boards, of prime quality were in demand until late in the year when the decline in the furniture manufacturing business lessened the demand. Contracts have been entered into for delivery of ash logs next spring at prices ranging from sixty-two to sixty-eight cents a cubic foot.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 850—Wants Market for Truck Poles

Hazleton, Ind., January 5.—Editor HARDWOOD RECORD: I expect to make a carload of truck poles if I can sell them at Chicago or at any place within equal shipping distance of Hazleton. The dimensions would be 3x3, 3x6x13 feet long. The writer formerly sold them to a Chicago firm which is now out of business, and would like to get in touch with other firms that would be in position to purchase this class of stock.

HARDWOOD RECORD has advised the above inquirer the names of a few Chicago concerns which might be interested in his product. Others interested, either in Chicago or in the specified territory, can have the information upon request.—EDITOR.

B 851—Wants to Buy Plain Oak Tie Siding and Cottonwood

Louisville, Ky., January 8.—Editor HARDWOOD RECORD: We want to buy one or two carloads of dry 4 4 1s and 2s plain oak all eight feet long, and would thank you if you could put us in touch with any concern that may have this material. Request delivered price on a Louisville rate. Also want some 5/4 1s and 2s cottonwood six to twelve inches wide.

Anyone desiring the name of this correspondent can have same upon application to HARDWOOD RECORD office.—EDITOR.

B 852—Wants to Sell Clear Birch Strips

Detroit, Mich., January 21.—Editor HARDWOOD RECORD: We would like to find a market for 4 1/4, 1 1/2" to 2" clear birch strips, 8 to 16' long. We have several piles of this stock and are likely to add more from time to time, and for this reason would like to get in touch with manufacturers who might be interested in this material.

Kindly place this in your columns and advise us of your answers.

Anyone interested in this class of stock can have the address on inquiry by writing HARDWOOD RECORD.—EDITOR.

Clubs and Associations

Program Hardwood Manufacturers' Convention

The program for the thirteenth annual convention of the Hardwood Manufacturers' Association of the United States, which is to be held at Hotel Sinton, Cincinnati, O., January 28 and 29, has been completed. Preparing the program this year, Secretary Weller has been fortunate in securing a combination of subjects of more than usual interest to lumbermen.

Secretary Weller announces that it is the wish of President Himmelberger that the meeting this year is made a general conference of lumbermen, and to this end an urgent invitation is extended to all interested in hardwood lumber to be present.

The program is as follows:

THURSDAY, JANUARY 28, 11 A. M.

Convention called to order by President J. H. Himmelberger.
Welcome for city of Cincinnati by the Honorable Frederick S. Spiegle, mayor of Cincinnati.

Welcome for lumbermen and Cincinnati by Alex. Schmidt, President Lumbermen's Club of Cincinnati.

Response on behalf of the association by W. B. Townsend, president of the Little River Lumber Company, Townsend, Tenn.

Annual address of the president, J. H. Himmelberger of Cape Girardeau, Mo.

Report of the treasurer.

Report of the secretary, W. H. Weller of Cincinnati, Ohio.

Appointment of committee on officers' report.

Appointment of committee on resolutions.

Appointment of committee on nomination.

Recess for luncheon.

THURSDAY AFTERNOON SESSION

Address—"Inter-Insurance," by Chas. F. Simonson of Chicago, manager of the National Lumber Manufacturers' Inter-Insurance Exchange.

Address—"Present Day Forest Problems," by H. S. Graves of Washington, D. C., chief of the Forestry Department.

Address—"Efficiency and Costs," by L. V. Estes, Chicago, president of L. V. Estes, Inc.

THURSDAY EVENING

Smoker and vaudeville entertainment at 8 o'clock in banquet hall on ninth floor as a compliment of the Hardwood Manufacturers' Association to its guests.

FRIDAY, JANUARY 29, 11 A. M.

Report of committee on officers' reports.

Address—"Federal Reserve Law," by the Honorable Robt. J. Bulkley, Washington, D. C., Congressman twenty-third district of Ohio, and member of the House committee on banking and currency.

Address—"Some Troubles of the Lumber Industry," by R. S. Kellogg Chicago, secretary of the National Lumber Manufacturers' Association.

Address—"The Dependable Package," by F. C. Gifford, secretary of the National Association of Box Manufacturers, Chicago, Ill.

Vote on adoption of new constitution.

Report of committee on resolutions.

Report of committee on nominations.

Election of officers and executive board.

Election of state vice-presidents and directors.

Adjournment.

At Mr. Weller's request the details of the smoker will be handled by the entertainment committee of the Lumbermen's Club, and a large reception committee made up of prominent members of the club will also assist Mr. Weller in looking after the large number of guests, which is expected to reach fully 800.

The Lumbermen's Club of Cincinnati will establish headquarters adjoining the registration room where they will have on tap all kinds of entertainments for the visitors.

President J. H. Himmelberger addressed a very forceful open letter to the lumber trade on the first page of the bulletin, which letter deals mainly with the necessity for close cohesion in the ranks of lumbermen in anticipation of the fact that, with the cessation of the war, the American continent will be forced to supply the entire world with tremendous quantities of raw material, and that now is the time to prepare for it. The letter follows:

Cape Girardeau, Mo., January 20.—To Hardwood Lumbermen: We have just entered upon a new year; a year we all earnestly hope will inaugurate that period of increased business we have been so eagerly looking forward to.

But just what does 1915 hold in store for us?

The new year is ushered in by unusual circumstances that makes it unique—different from any in the recollection of the oldest lumbermen. The European war is the great, uncertain element. That unchristian catastrophe descended upon mankind just at a time when we were pushing our head out of the hole of commercial and financial depression.

As far as lumber is concerned it struck the industry quick and hard. It shut off our export outlet for surplus stock, and threw back on to the domestic market millions of feet of lumber that was pushed for sale.

We have recovered from the first shock, and the business is in a way readjusted on the new basis.

But just as the war was a shock and a costly setback, the peace that is to follow will swing the pendulum the other way. Europe will buy our lumber for reconstruction; she must buy from us. We should be ready for this demand.

How do you look at the future?

Have you given every angle of the situation full consideration?

To my mind lumbermen must mobilize for action. They must come together into a harmonious unit for consideration of these highly important problems.

As president of the Hardwood Manufacturers' Association of the United States, I therefore extend you a personal invitation to attend our annual meeting, to be held at Hotel Sinton, Cincinnati, January 28 and 29. Let us all come together and talk it over. Our sessions are open to non-members as well as to members, and we will welcome your participation.

To my mind this meeting offers an exceptional opportunity for hardwood lumbermen—an opportunity they cannot afford to miss.

Looking forward to a personal greeting at Cincinnati, I am

Very truly yours,

JOHN H. HIMMELBERGER, president.

R. S. Kellogg Receives Appreciative Letter from Members of His Former Association

At a meeting of the officers, chairmen of committees, bureau of grades and directors of the Northern Hemlock and Hardwood Manufacturers' Association held at Green Bay, January 7, the following letter was written to R. S. Kellogg in answer to his letter of resignation:

Dear Mr. Kellogg: It is with great regret that we acknowledge receipt of your resignation as secretary of this association. Knowing as we do that this action on your part is solely on account of your being called upon to accept a similar position with the National Lumber Manufacturers' Association, with which we are affiliated, we feel that in accepting your resignation we are not depriving ourselves entirely of your services.

Every member of our association realizes and appreciates the good work you, as our secretary, have put forward in behalf of the northern lumber manufacturers. The results indicate that you have not spared yourself in the energy, ability and enthusiastic effort with which you have carried on the business of your office, and we know that the same earnest effort will characterize and make successful your conduct of your new position.

In accepting your resignation, we express the sentiment of every member of our association in wishing you continued success in your new position, and in assuring you of our co-operation in whatever you may undertake for the benefit of the lumber industry.

Wholesalers Hold Annual

The Philadelphia Wholesale Lumber Dealers' Association held its annual meeting and banquet at the Union League, January 14. Following the banquet the meeting was called to order by President Ralph Souder, and routine business transacted. The following officers were elected to serve for 1915: William T. Betts, president; J. Randall Williams, Jr., vice-president; Thomas B. Hammer, secretary and treasurer. New directors, Charles Atherton and John W. Coles. J. Randall Williams, Jr., was re-elected. Forty-three members and guests were present.

Monthly Meeting Philadelphia Exchange

The Philadelphia Lumbermen's Exchange held its regular monthly meeting January 7, President William H. Fritz in the chair. At this meeting an invitation was received from the American Forestry Association to send delegates to the annual meeting to be held in the Woolworth building, New York, January 11. J. Randall Williams, Jr., Frederick S. Underhill and Robert C. Lippincott, of the advisory board representing the

exchange, were requested to attend in behalf of the exchange. After routine business was transacted Charles M. Chesnut, chairman of the committee appointed to represent the exchange at the annual meeting of the National Rivers and Harbors Congress, held in Washington, D. C., December 9, 10 and 11, read an elaborate report on the work accomplished and in contemplation by this body. Interesting and emphatic speeches were made by numerous senators and merchants on the subject in question and various points of interest were discussed.

Great Importance of National Chamber of Commerce Shown in Program of Meeting

At this crucial time, when business is facing a situation unique in the world's history, commercial leaders are looking forward to the meeting of the Chamber of Commerce of the United States, in Washington, D. C., beginning February 3, as the greatest and most significant gathering of business men during the year. There are already indications of a record-breaking attendance.

What President Wilson will have to say when he addresses the convention will be awaited with particular expectancy, as it is anticipated his speech will definitely outline the general attitude of the present administration toward business after the passage of the tariff and business regulatory legislation. His speech will mark one of the few occasions when the President has taken an opportunity to go direct to the business men of the country, and it is generally supposed he will take this opportunity for a vigorous discussion of the commercial crisis which the United States is now facing. Undoubtedly, there will be a strong exposition of the legislation enacted during his administration, with possibly a definite outline of what the President has in mind for the future.

The foreign trade situation will be dealt with at length by both the Secretary of State and the Secretary of Commerce. With the present agitation and encouragement at zenith for American business men to seek new fields, Mr. Bryan and Mr. Redfield will have messages of unusual import. There will be brought out the vital question of the attitude of the administration in backing up American investors in foreign countries in case of difficulties. Secretary Redfield will deal with the general development of the foreign trade and his presentation will be ably supported by Dr. Edward E. Pratt, Chief of the Bureau of Foreign and Domestic Commerce, and other prominent speakers on different phases of the subject, such as Latin-American and Oriental commerce.

Discussion of the relation of the federal reserve act to trade expansion will be lead by Samuel McRoberts, vice-president of the National City Bank of New York. Following this will come a report of the foreign trade committee of the Chamber of Commerce of the United States, in favor of permitting a greater degree of combination for development of foreign trade.

The biggest question affecting business before the present session of Congress—an American merchant marine—will be dealt with by Secretary McAdoo. He will voice the administration sentiment and another speaker will be heard on the other side. Supplementary to the discussion will be the report of the Chamber of Commerce committee on merchant marine.

Interest will center on new business legislation. Charles H. Hamlin, governor of the Federal Reserve Board, will give additional interpretation to the new reserve system and its relation to commercial development. Joseph E. Davies, Commissioner of Corporations, who has an excellent idea of the scope and possibilities of the Federal Trade Commission, will explain the act which will soon become so vital a part of the nation's business.

Inasmuch as the Chamber of Commerce of the United States stands in somewhat the same relation to the chambers of commerce throughout the land that the federal government does to the states, the message of President Fahy representing the organization will have decidedly more than passing interest, in these war times, for the assembled officials and delegates who will come from all parts of the country to learn his views.

In announcing the program Elliot H. Goodwin, the general secretary, said there would be reports of important committees, dealing with the maintenance of resale prices and with uniform food and drug regulations. According to Mr. Goodwin, there will be special consideration of methods of upbuilding commercial organizations.

The meeting will begin on the morning of Wednesday, February 3, and will last through Thursday and Friday. All sessions will be held at the New Willard hotel. President Wilson will speak at the dinner Thursday evening.

Memphis Club Installs Officers

One of the most enjoyable meetings in the history of the Lumbermen's Club of Memphis was that held at the Hotel Gayoso, Friday evening, January 15. Most of the members of the club were present and, in addition thereto, there were a number of guests, including Edgar Watkins, special examiner of the Interstate Commerce Commission, J. R. Walker and Luther Walter, attorneys for the Southern Hardwood Traffic Association, a number of railroad men and a great many of the delegates to the annual of the Gum Lumber Manufacturers' Association held here January 16. A splendid dinner was served. The regular routine business of the club was transacted and the newly elected officers and directors were installed. The president and secretary-treasurer submitted their

annual reports. Immediately after President-elect Kadel was inducted into office he read the appointment of standing committees for the current year.

President Kadel, in assuming the chair, said that he was not going to make a long speech. He declared that he and the other officers of the club would hold themselves in readiness to do the bidding of the organization.

H. B. Anderson, secretary of the Anderson-Tully Company and W. R. Brown of the Eddy B. Brown Lumber Company, were elected to active membership.

Announcement was made that an invitation has been received for every member of the club to attend the annual of the Hardwood Manufacturers' Association of the United States to be held at Cincinnati January 28 and 29.

It was decided at this meeting to extend an invitation to the National Hardwood Lumber Association to hold its next annual in Memphis. Max Sondheimer said he thought it alright to extend the invitation but that there was no chance of getting it as long as Memphis was dry.

Secretary-treasurer Kadel, in his report, showed that the club had paid every obligation during the past year out of the funds in the hands of that organization, that it did not owe a dollar, and that it had a small cash balance on hand.

President Allen said in his annual report that he was overcome by the responsibilities of this position when he assumed the presidency of the club but assured every member that no one need have such fears because of the ready manner in which everyone belonging to that body aided the president and all of the other officers in the discharge of their duties. President Allen was particularly emphatic in his appreciation of the splendid services rendered by Secretary Kadel during the past year and expressed pleasure that the club had recognized his ability by elevating him to the highest office in its gift. He detailed the splendid manner in which all of the standing committees had handled the work entrusted to them during the year and congratulated the club upon having such excellent material from which to select its standing committeemen. He showed that there has been a net gain of five members during the year, twenty-one having been elected, one having been removed by death and fifteen by resignation or suspension. He further showed that the total membership was 160, there being 143 active, 14 associate and 3 honorary. As to the accomplishments of the year, he referred to the completion and furnishing of the rooms in the Business Men's Club occupied by the Lumbermen's Club of Memphis as permanent headquarters. He said that this had involved an expenditure of more than \$1,000 but that it had, like all other obligations, been paid from the treasury without the necessity of any assistance whatever during the year. He also said that it was his personal ambition, on becoming president, to see the establishment of a surplus fund for entertaining conventions and other bodies and he hoped that it would be possible to witness the accomplishment of this in the future.

President Allen recommended that there be a change in the constitution, exempting the president of the club from the payment of dues during his term of office, and providing for the payment of a small compensation to the secretary. He also recommended that Robert's Rules of Order be adopted as the official guide of the organization in its parliamentary procedure. He said that he had been requested to make recommendations covering changes in connection with the election of the president of the club but that he was not in position to handle the matter intelligently and preferred that it should be taken up later after it had been given more mature consideration.

President Allen referred to the very serious depression which had overtaken the lumber industry during the past few months. He said that the members had fought a good fight and he expressed the hope that the members would soon recover from the ill effects they had suffered.

President Allen was profuse in his thanks to the officers and directors who had so ably cooperated with him during the past year and he also expressed his warm gratitude to the members of the organization for their uniform and unflinching courtesy as well as their assistance on every possible occasion.

On the conclusion of President Allen's address and the surrendering of the chair to his successor, President Kadel appointed a committee of five consisting of J. W. Dickson, J. D. Allen, C. R. Tustin, C. C. Lattner and L. W. Ford to go over these recommendations and make report to the club.

Edgar Watkins made a brief talk which was very much enjoyed. He exploded the idea that the man who had a position with the United States government had an easy thing. He declared that his employer demanded longer hours and paid less for the work than any other in existence. He said that he was anxious to get away from rate matters because they occupied the biggest part of his time. He discovered the fact that there were a number of railroad men and lumbermen present who had given him a great deal of trouble in the past few days and said that if he had any malice in his heart he would get even with them by talking for two and a half hours. He referred to J. R. Walker as exhibit number one and Luther Walter, who he said had a tap line from his home in Chicago to one of the big breweries there, as exhibit number two. He said he occasionally asked questions during hearings in rate cases and it occurred to him to ask several questions just now. One which seemed to trouble him a great deal at first was why the Lumbermen's Club of Memphis

coupled its law and insurance committee but declared that, after seeing the lawyers of the club employed, he supposed that the insurance was against burglary. He commended the club very heartily for its action in appropriating \$500 for the relief of the Belgians. In conclusion, he thought that every member of the club had a great deal to be thankful for and that one of the chief things of all was that a man of such commanding ability was at the head of the nation.

J. R. Walker said that he did not want to talk about rates and that he had not yet descended to the plane where he was willing to tell a Ford joke and sit down. He related the circumstances of the Arkansas lawyer who met a member of the same profession from New England at one of the meetings of the American Bar Association. He said that later this New England lawyer wrote his friend in the Rackensack state and set forth that he was an honest lawyer and also a Republican and wished to practice his profession there. The Arkansas man urged him to come ahead, declaring that, if he was honest, he would have no competition, and that, if he was a Republican, the game laws would probably protect him.

C. L. Harrison, president of the Gum Lumber Manufacturers' Association, declared that he was inspired by the presence of such a large body of representative lumbermen. He said that the Lumbermen's Club of Memphis and the Southern Hardwood Traffic Association were the most successful organizations of their kind in existence. He very highly praised the spirit of cooperation shown by the members of these organizations and said that it was an inspiration to the Gum Lumber Manufacturers' Association to push forward with all possible vigor in its efforts to carry out its work of boosting red gum, which, he said, had now ceased to be "America's finest hardwood and had become America's finest cabinet wood," with no one to say "Nay" to this slogan. He thanked the Lumbermen's Club on behalf of the association for the invitation to be present and for the spirit of good fellowship shown, and concluded by asking every member of the club to attend the annual of the Gum Lumber Manufacturers' Association on the morrow.

Luther M. Walter declared that he owed much to the lumbermen in various ways and particularly in gratitude and friendly feeling. He said that there was nothing new in rate cases but advances and that these latter were without end. He explained the attitude of the Interstate Commerce Commission in its relations to both carriers and shippers and said that it had no interest beyond weighing every possible consideration and doing justice to both. He said everything in regard to rate matters was turned over to seven men, mostly human (except when we lose), and that both the railroads and the shippers were disposed to criticize this body. He declared that rate subjects had to be taken up from many angles and that the cards must all be on the table subject to the application of such rules as are recognized in transportation. He thought that both the railroads and shippers should abide by the decisions of the commission. He declared that pressure was being brought to bear on this body from some source and that this was done at the instigation of somebody who had a vast amount of money to spend. He thought this effort to exert outside influence on the commission was the most serious problem confronting the shippers in this country. He referred to the father who gave his sons packages of switches with the request that they break them and used this as an illustration of the necessity for cooperation and unity of action on the part of shippers throughout the country. He declared that as long as the lumbermen had their clubs and organizations and all of them pulled together they would be able to secure their just deserts.

Brief talks were made by James Boyd, New Orleans, E. H. Desebaugh and Bolling Arthur Johnson, both of Chicago.

Substitute Material Men Behind S-A-F-E

Secretary J. E. Rhodes, who has just resigned from the National Lumber Manufacturers' Association, sent out before his resignation a letter received by him which attempted to explain the purpose of the so-called Society Advocating Fire Elimination, which was organized some time ago at Cleveland. The letter pleaded for the support of Mr. Rhodes and then gave a list of membership behind it purporting to substantiate its claims that the association is bona fide and made up of the best people. The following list will give pretty conclusive evidence as to who are advocating those laws which make fat pocketbooks for brick, cement and other patent material manufacturers, but which do not accomplish the end reported to be desired, namely, the elimination of fire:

MEMBERS OF THE S-A-F-E

Farr Brick Company, Cuyaboga Builders' Supply Company, Cuyahoga Brick & Shale Company, Barkwill Brick Company, Hydraulic Press Brick Company, Quisser-Bliss Company, Ohio Clay Company, Kelly Island Lime & Transport Company, Cleveland Stone Company, E. F. Hauserman Company, Sandusky Portland Cement Company, Ludowici Celadon Company, Raoster & Thesmacher Company, Lakewood Masons' Supply Company, Cleveland Builders' Supply Company, Camp Conduit Company, Cleveland Brick Sales Company, Robert L. Beck, Lake Erie Builders' Supply Com-

pany, Donley Bros. Company, Geist Cement Products Company, United States Gypsum Company, Van Dorn Iron Works Company, Cleveland Macadam Company, National Plasterboard Company, Ohio Quarries Company, C. O. Bartlett-Snow Company, all of Cleveland; Berger Manufacturing Company, Canton, O.; Belden Brick Company, Canton, O.; Keystone Clay Products Company, Greensburgh, Pa.; The Carbon Brick Company, Pittsburgh, Pa.; Fallston-Fire Clay Company, Pittsburgh, Pa.; Everhard Company, Massillon, O.; Robinson Clay-Products Company, Akron, O.; Postwick Steel Lath Company, Niles, O.; Garry Iron & Steel Company, Niles, O.; Wadsworth Brick & Tile Company, Wadsworth, O.; Wellington Machine Company, Wellington, O.; Claycraft Brick Company, Columbus, O.; American Cement Plaster Company, Columbus, O.; Pyrano Process Company, Columbus, O.; Iron Clay Brick Company, Columbus, O.; Beaver Clay Manufacturing Company, New Galilee, Pa.; American Gypsum Company, Port Clinton, O.; Crescent Portland Cement Company, Wampum, Pa.; General Fireproofing Company, Youngstown, O.; Toronto Fire Clay Company, Toronto, O.; Northwestern Expanded Metal Company, Chicago, Ill.; Hinde Brick & Tile Company, Sandusky, O.; Alliance Clay Products Company, Alliance, O.; Reynolds Asphalt Shingle Company, Grand Rapids, Mich.; Excelsior Fire Clay Company, Lisbon, O.; Colonial Pressed Brick Company, Mogadore, O.; Lehigh Portland Cement Company, Allentown, Pa.; Newton Brick Company, Albany, N. Y.; G. B. Mentz Company, Walkkill, N. Y.; France Stone Company, Toledo, O.

National Hardwood Lumber Association Sets Date for Next Annual Convention

The board of managers of the National Hardwood Lumber Association held its regular semi-annual meeting at the executive headquarters, Chicago, on Tuesday, January 19. Among matters coming before the board for discussion was the selection of the time and place for holding the eighteenth annual convention. Requests for consideration had been received from a number of large hardwood markets of the country and all of them were given due consideration. However, by a unanimous vote Chicago was selected and the time fixed for Thursday and Friday, June 10-11. The hotel at which the convention headquarters will be located will be announced at a later date.

Authoritative Information on Canadian Competition

H. D. Langille of Portland, Ore., one of the foremost lumbermen of the Northwest, has a remarkable article in the *American Forestry Magazine* for February on Canadian Competition in the Lumber Industry. Unusually well informed regarding trade conditions, Mr. Langille is particularly well fitted to write a sound, practical article on this topic, and he discusses the situation in a forceful manner. His article, which was prepared after extensive inquiry and investigation, is a most valuable contribution to lumber trade literature and is one which every lumberman and timberland owner should not only read but should keep on file for reference. The facts and figures compiled by Mr. Langille are to be had in no other form without painstaking investigation. This article is another in the series regarding lumber conditions which *American Forestry Magazine* has recently been printing.

Stave Dealers Plan Campaign Against Substitutes

Members of the National Tight Barrel Stave Manufacturers' Association decided on a policy at the recent convention at the Hotel Gayoso, Memphis, whereby a campaign of scientific co-operation between the stave makers, members of the Tight Cooperage Association and users of tight barrels will be launched. In connection with this co-operation a campaign of education in favor of wooden barrels will be carried on, aiming at showing the advantages in using them in preference to steel containers.

With the Trade

Henry S. Holden Goes With Chicago Firm

Henry S. Holden, who for twenty years has been operating in Grand Rapids, Mich., in the veneer business under the style of the Henry S. Holden Veneer Company, closed out his business a few weeks ago and is now located with the Hardwood Mills Lumber Company, Monadnock building, Chicago, as manager of the veneer department.

Mr. Holden, whose photograph is shown herewith, is one of the oldest veneer men in the trade and has an unusually wide acquaintance all over the country. He has made a marked success in the veneer business in the past and his acquisition by the Hardwood Mills Lumber Company is a step which cannot but be distinctly profitable to that organization.

Richey, Halsted & Quick Open Detroit Office

HARDWOOD RECORD is in receipt of an announcement from Richey, Halsted & Quick of Cincinnati that owing to the desire to provide for the greater convenience of customers and for more prompt handling of the increasing business, the company will open a branch office on February 1 in suite 1252 David Whitney building, Detroit. Mr. Halsted will main-

HENRY S. HOLDEN, HARDWOOD MILLS LUMBER COMPANY, CHICAGO

MILL AND GENERAL LAYOUT OF THE HIGHLAND LUMBER COMPANY, SETH, W. VA.

tain his headquarters at Detroit and at that point can be immediately reached by customers in Michigan and northern Ohio.

W. T. Culver Has Varied Interests

W. T. Culver, general manager of the Stearns Salt and Lumber Company, Ludington, Mich., and vice-president of the Michigan Hardwood Manufacturers' Association, has recently taken a mild whirl at the political game. He has announced himself as a candidate for the office of regent of the University of Michigan. By training and inclination Mr. Culver is peculiarly fitted for the office, and having a wide personal and business acquaintance throughout the state, his chance for election is mighty good.

Lewis Doster Joins Atkins' Ranks

Lewis Doster, formerly secretary of the Hardwood Manufacturers' Association of the United States, has accepted the position of assistant general sales manager of E. C. Atkins & Co., Inc., saw manufacturers of Indianapolis, Ind. Mr. Doster has been connected with lumber manufacturing since the beginning of his business career, and accepted the position of secretary of the Hardwood Manufacturers' Association six or seven years ago, and continued in that capacity up to two years ago when he resigned the secretaryship and has since been handling various enterprises directly connected with the lumber field, keeping him in constant touch with the lumber manufacturers.

As a consequence of this and his identity with the Hardwood Manufacturers' Association, he occupies a strikingly strong position in the handling of the Atkins' products. In addition to having an intimate and wide acquaintance he has a close knowledge of the workings of the business.

Mr. Doster's headquarters will be with the main office in Indianapolis, but he will naturally spend most of his time among the mills throughout the United States.

N. A. Gladding, general sales manager of the Atkins company, is indeed fortunate in securing the services of a man who is so uniquely qualified to carry on this work. HARDWOOD RECORD wishes Mr. Doster every success in his new field of endeavor.

C. M. Crawford Dies

On Sunday, January 10, C. M. Crawford, vice-president and treasurer of the Yellow Poplar Lumber Company, Coal Grove, O., died after a long illness. Hard work and insufficient rest brought on a state of ill health which he had been fighting for a long time. Mr. Crawford was just about to start for Battle Creek, Mich., when a period of reaction set in, which he did not recover from.

Mr. Crawford had been president of the company, prior to his position at the time of his death, for seven years. He was born at New Castle,

Pa., and when he died was fifty-five years of age. His first step in the lumber business took place at New Castle, where he was associated with his father in the retail end of the trade. In 1899 he located at Coal Grove, accepting the position of general manager of the Yellow Poplar Lumber Company. F. C. Fisher was president at that time, but at his death eight years ago Mr. Crawford was installed in his place. Mr. Crawford's son, W. A. Crawford, is now secretary of the company.

Mr. Crawford was one of the best-known and most popular large hardwood manufacturers in the South. He had been connected with the Hardwood Manufacturers' Association as treasurer since the organization of that body twelve years ago. He also took prominent part in all affairs of this association, in fact was considered a leading figure in that work as well as other efforts pertaining to the hardwood business.

Mr. Crawford leaves a widow and three children and a sister in Pittsburgh. The funeral was held at Coal Grove and interment was made at New Castle, Pa.

The Highland Lumber Company

The Highland Lumber Company, Inc., of Scranton and Philadelphia, Pa., was organized in 1913 to acquire timber and timberland, to manufacture lumber and other wood products, and to develop the other natural resources on its properties. The company owns in fee 21,000 acres of choice hardwood timberland and owns the timber on 9,000 additional acres, in Highland and Bath counties, Virginia. It has also contracted for all the timber on 31,800 acres in Boone county, West Virginia, and has a long-time lease on one of the largest and most modern and efficient saw-mills in West Virginia, located at Seth, Boone county, and is successfully operating this mill, producing an average of 70,000 feet of lumber per day. Photograph of the mill and general layout of the whole operation at Seth is shown on this page.

The Highland Lumber Company is preparing to erect two large mills on its Virginia lands and to construct a standard gauge railroad connecting these mills and properties with the Chesapeake & Ohio railroad. The mills on the Virginia and West Virginia properties manufacture white oak, red oak, poplar, chestnut, pine, hemlock, ash, walnut and miscellaneous woods, the bulk of the timber being white oak.

The company has a capital stock of \$1,000,000, the officers being: W. L. Connell, president; J. K. Griffith, vice-president; George Houck, second vice-president and general manager; C. Paul Hagenlocher, third vice-president; T. J. Foster, treasurer, David Cottle, secretary.

The company's operations are ideally located both as to timber and transportation. It has recently purchased from the Lackawanna Coal & Lumber Company its entire logging equipment with which it will operate the lumber business formerly operated by the Lackawanna Coal & Lumber Company in Boone county, West Virginia. It has leased from the Lackawanna company its double band sawmill and entire property con-

W. T. CULVER, LUDINGTON, MICH.

THE LATE C. M. CRAWFORD, COAL GROVE, OHIO

ected with the Seth operation. Arrangements have been made to bring the logs to the mill over the Laurel Creek railroad, which is owned by the Lackawanna Coal & Lumber Company. This road connects at Seth with the Coal river branch of the Chesapeake & Ohio railroad, thus affording excellent shipping facilities for sawed lumber and other products of the mill.

The standing timber on the company's 30,000 acres in Highland and Bath counties, Virginia, has been conservatively estimated to average 10,000 feet board measure to the acre, eighty-five per cent of which is oak, white pine and poplar. The two mills which the company will erect on its Virginia properties will each have a capacity of 75,000 feet of sawed lumber a day and will be modern in every respect, being patterned after the Seth plant. The extreme southern end of the company's timber is fourteen miles from the main line of the Chesapeake & Ohio railroad at Milboro, Va., and the Highland company will construct a standard gauge railroad twenty miles in length, beginning at a connection with the Chesapeake & Ohio and extending north to the lower end of the property and thence through the valley of the Cow Pasture river to the vicinity of Williamsville.

The Men Who Sell Stearns Lumber

On this page is shown a group photograph of the six men who are responsible for the remarkable volume of business done by the Stearns Salt and Lumber Company, Ludington, Mich., during the past year. As stated in a recent issue of *HARDWOOD RECORD*, the business of this company has kept up in remarkable shape, and in fact the payroll was increased during 1914.

The picture was taken in front of the home office at Ludington while the boys were in for a conference on plans for the new year. The camera did not record anything that resembled worry as showing on their faces, which is quite natural, as they just closed a good year and are looking forward to excellent business during 1915.

The men are, from left to right: E. P. Grignon, H. L. Randall, W. H. Morse, J. D. Rounds, J. E. Dewey, A. W. Wasey, H. W. Bates, and B. I. Warner.

Later Report on Camden Fire

As a result of a more thorough investigation it has been ascertained that the recent disastrous fire which visited C. B. Coles & Sons Company, Camden, N. J., was confined to mill and portion of the yard lying between the Delaware river and Front street. The total insurance carried on the mill and wharf, etc., is \$77,350 and on lumber in the new yard \$20,000, a total of \$97,350. In addition to the old line companies the following insurance companies are interested with amounts of their risks: Lumber Mutual Insurance Company, Boston, \$7,000; Pennsylvania Lumbermen's Mutual Insurance Company, Philadelphia, \$9,000; Lumbermen's Mutual Insurance Company, Mansfield, Ohio, \$8,000; Indiana Lumbermen's Mutual Insurance Company, Indianapolis, Ind., \$6,500; Central Manufacturers' Mutual Insurance Company, Van Wert, Ohio, \$6,500; Lumber Insurance Company, New York, \$8,000; Toledo Fire Marine Insurance Company, \$2,500; Lumber Underwriters, New York, \$6,000; Mill Owners' Mutual Insurance Company, Iowa, \$4,500; Pennsylvania Millers' Insurance Company, \$4,500; Grain Dealers' Mutual Insurance Company, Indianapolis, Ind., \$4,500. The losses are said to be practically those of insurance. The Charles Este Company states that it has not arrived at any settlement as yet as to insurance, but has always made it a rule to carry insurance full up to stock.

Montgomery Lounge Company Gives Banquet to Employees

The Montgomery Lounge Company, Montgomery, Pa., has just advised *HARDWOOD RECORD* that during the early part of the month it tendered the regular annual banquet to all salesmen and factory employees, at the Houston hotel, Montgomery. The employees, in a formal expression of their sentiments, promised to make 1915 the banner year in production in the history of the company.

An orchestra composed of some of the factory employees furnished a fine line of selections which helped to liven the occasion.

F. M. Cutsinger to Absorb Interests of the Late Bedna Young

HARDWOOD RECORD has been advised by F. M. Cutsinger of Evansville, Ind., that owing to the death of Bedna Young of the firm of Young & Cutsinger, hardwood manufacturers of Evansville, the business will be succeeded by F. M. Cutsinger and will be conducted along similar lines as heretofore. Young & Cutsinger have made a country-wide reputation

for the excellence of their quartered oak, on the manufacture of which they have concentrated their attention for years. It is expected that Mr. Cutsinger will continue this policy.

George H. Foster Dead

George H. Foster, prominent as lumber manufacturer and for years connected with the Wisconsin trade, died at his home in Oshkosh, January 8. Mr. Foster was fifty-two years old at the time of his death. He was a member of the police and fire board of Oshkosh and was prominently connected in other ways with the local civic affairs. Mr. Foster had been unconscious for the greater part of the week preceding his death and had been in bed for two weeks. He is survived by a widow and son, Carlton.

John Oelhafen Company Incorporated

The John Oelhafen Company of Tomahawk, Wis., has filed articles of incorporation with the Register of Deeds at Merrill, Wis. The capital stock of the company is set at \$100,000 to do a general real estate and mercantile business and operate its own saw and other woodworking mills. The incorporators are John Oelhafen, Andrew Oelhafen and Edward E. Seim.

Employee Awarded \$3,000 Verdict

In the case of George Smith vs. the Sagola Lumber Company, Iron Mountain, Mich., the jury, after nine hours debate, handed in a verdict allowing Smith \$3,000 as compensation for the loss of one of his legs below the knee by being run over on the logging railroad operated by the Sagola Lumber Company.

Milne, Hall & Johns Company, Inc., Starter

HARDWOOD RECORD was advised on January 15 that the Milne, Hall & Jones Company, Inc., has been incorporated in the state of New York. The personnel of the company consists of A. N. Milne, president, P. M. Hall, secretary-treasurer, W. E. Johns, vice-president and general manager. The offices of the company will be in Cincinnati, O., and New York City. For the present the company will handle wholesale southern hardwoods, cypress, white pine and will specialize in oak and ash.

Messrs. Milne and Hall are connected with the present Milne Lumber & Manufacturing Company, Grand Central Terminal building, New York City, and W. E. Johns was formerly of the Johns, Mowbray, Nelson Company of Cincinnati.

The general business of the company will be transacted from the Cincinnati office—that is all the buying and selling—the financial end only being taken care of at the

New York City office, which will be in the Grand Central Terminal building. The company opened offices at 805-806 Gerke building, Cincinnati, on January 18, and the firm is already doing a fair share of business.

The Milne Lumber & Manufacturing Company in New York City is in no way affected by this new incorporation, the two companies being entirely separate.

A Remarkable Car of Cherry

Cherry has been so extensively manufactured in the past that any quantity of this stock in exceptional sizes and of exceptional quality is rarely seen now, as the best of the timber has been sawed and marketed long ago.

HARDWOOD RECORD has recently learned, however, that a car of this stock has been brought to the attention of a few large buyers, and had the actual figures not been available it would have been difficult to believe that the description of the stock was correct.

The lumber is estimated to fill about a good sized car and is made up of 5/4 1s and 2s cherry, seventy per cent 1s, and averages 14 1/2 inches wide. This lumber has been in possession of the man who now owns it for several years and is the accumulation of selections of stock received during the last seven or eight seasons. It has been on sticks for four and a half years and as a consequence is of exceptional dryness, which makes it even more unusual.

HARDWOOD RECORD is not running this notice as an advertisement for the man who owns this stock, but simply because the lumber presents such unusual qualities that *HARDWOOD RECORD* considers the trade might be interested in knowing that this kind of cherry still does exist, even though in small quantities. John Halfpenny, Commercial Trust building, Philadelphia, is the fortunate possessor of this lumber. It might be added that he has not requested this notice.

GROUP OF THE STEARNS SALT & LUMBER COMPANY SALESMEN

Receiver Asked for Hamilton H. Salmon & Co.

A petition in bankruptcy has been filed in Brooklyn against Hamilton H. Salmon & Co., wholesale hardwoods, 88 Wall street, New York City. The petition is signed by three large down-town banks with claims of \$37,517, \$5,237, and \$4,115. The concern conducted a branch office and yard at Buffalo. Besides the lumber department, the company imported Chinese and Japanese straw braid and dealt in potash. The business was started in 1881.

German Lumberman War Victim

HARDWOOD RECORD is in receipt of a letter from Richard Koeller, selling agent for American hardwoods, located at Hamburg, Germany. The letter is dated December 30 and tells of the death of Fritz Hahn on December 19. Mr. Hahn was connected with this firm and responded to the call of the colors as first-lieutenant, being later promoted to the rank of captain. He was a partner of the firm of Richard Koeller & Co., Duesseldorf, Germany. He was thirty-eight years old and is survived by his wife and two children.

The death of Mr. Hahn will in no way interfere with the business at Duesseldorf, which will henceforth be carried on as a branch of the Hamburg concern under the new style of Richard Koeller.

Lawrence & Wiggin Partnership Dissolved

Lawrence & Wiggin, 70 Kilby street, Boston, Mass., announce under date January 18 that the partnership heretofore existing between Frank W. Lawrence and Harry H. Wiggin, both of Boston, doing business under the firm name of Lawrence & Wiggin, has been mutually dissolved, Mr. Lawrence retiring from the firm.

Mr. Wiggin assumes all the obligations of the firm and all outstanding accounts. He will continue the business personally under the firm name as heretofore.

Pertinent Information

Advances on Yellow Pine for February

The yellow pine trade will be interested in the notice that on February 3, 1915, on ten days' notice by the railroads, advances will go into effect increasing the rate on lumber from the South to Chicago territory one-half cent. Effective on this date the railroads operating in Central Freight Association territory, which is embraced in the line between Buffalo and Pittsburgh, and from the Ohio river north to the Canadian boundary, have agreed to advance rate on lumber by any amount equal to five per cent of the rate factor within the Central Freight Association territory. Thus yellow pine rates either east or west of the river will be increased from 24 or 26 cents to 24.5 or 26.5 cents, this half cent advance being five per cent of the rate from Cairo or Thebes to the Chicago territory. Similar advances will apply to other points in the above mentioned territory.

Rates to points east of the Buffalo-Pittsburgh territory, that is to Trunk Line territory, will be similarly advanced on March 1. All of the above rates will go into effect with but ten days' notice to the public in place of the usual thirty days' notice.

Also on shipments moving from the South through Evansville, Thebes or St. Louis on combination rates, the Chicago & Eastern Illinois now has in effect and probably will have until February 3, the old rate of 10 and 8 cents to Chicago territory while other lines have in effect the advanced rate of 10.5 and 8.5 cents.

Hickory Inquiries from Denmark

An unusual number of inquiries for hickory logs recently reached England from Denmark, but the holders of this wood became suspicious that it would be sent to Germany from Denmark, and the matter was referred to the British Board of Trade. The answer was that the English holders of hickory must be certain that the wood is not intended for Germany; otherwise, it must not be exported. This proves again that hickory is entitled to its name, "the indispensable wood." It is native of America only, and even when planted in other countries it has never grown successfully. No intimation is given as to what particular war use it may be wanted for; but it is the best handle wood in the world.

Molding Exports to England

Picture frames are said to be in demand in England on account of cessation of supplies from the continent. Molding imports into the United Kingdom exceed \$1,000,000 annually, of which only \$40,000 worth comes from the United States.

Fruit Shipped in Sawdust

California vineyardists shipped Red Emperor grapes for the Christmas trade to the value of \$400,000. They were packed in kiln-dried redwood sawdust and the experiment was wholly successful. The packing was tried after being recommended by the United States Department of Agriculture, which had carried out experiments in sawdust packing. It is said that next season California pears will be packed in the same manner. The shipments of grapes were made in wooden drums, about 200,000 of which went to New York alone, some being disposed of in that city, and others distributed to surrounding markets. The drums and packing cost about eighty-five cents a drum f. o. b. California, leaving the vineyardists \$1.40. These grapes have practically driven the Almeria grapes of Spain out of the American market.

The Gunstock Question in England

The London *Timber Trades Journal* says that large supplies of American walnut have been in demand of late for providing stocks for the very large number of rifles that are being turned out by the small arm manufacturers, and it has been suggested that a trial should be given to several colonial woods, which are said to be equally fitted for the purpose and besides can be obtained at a much lower price than the American-grown wood. It was formerly thought that English, French, or Italian walnuts were the only woods that could be used; but with a partial exhaustion of these supplies the American variety was brought into use. That, too, at any rate in the good grades, is becoming scarce and expensive, and it appears to be a favorable opportunity for the authorities to test some of these fine woods which the colonies are desirous of supplying.

Hardwood News Notes

← MISCELLANEOUS →

The Starr Carriage Company, Huntingburg, Ind., has filed a notice of dissolution.

The Phelps & Lydon Company, Rochester, N. Y., has become an involuntary bankrupt.

The Laurel River Logging Company, Asheville, N. C., has been placed in receivers' hands.

The Full More Motor Truck Company has been incorporated at Augusta, Me., with \$500,000.

At Auburn, N. Y., the Wegman Piano Company is in the hands of James M. Knapp, receiver.

The Meyers Stave Corporation has been started at Salem, Va., with \$15,000 capital stock.

The Straube Piano Company has been incorporated at Hammond, Ind., with \$150,000 capital.

The Deer Island Lumber Company, Charleston, S. C., is reported to be an involuntary bankrupt.

At Mansfield, O., the Mansfield Lumber Company has increased its capital stock to \$100,000.

The Eagle Sash & Door Company has started business at Brooklyn, N. Y., with \$6,000 capital.

The Joseph Dick Manufacturing Company, Canton, O., has increased its capital stock to \$300,000.

The Laurel Lumber Company, a \$500,000 incorporated concern, has been incorporated at Laurel, Del.

The Hoover Chair Company has been incorporated at Thomasville, N. C., with capital stock of \$25,000.

The Federal Sash & Door Company has been incorporated at Kansas City, Mo., with \$100,000 capital.

The National Packing Box Factory has been incorporated at Brooklyn, N. Y., with \$100,000 capital stock.

The Dan River Lumber Company was recently incorporated at Walnut Cove, N. C., with \$25,000 capital stock.

At Proctor, Ark., the Diamond Hoop Company has been incorporated and will operate with \$10,000 capital stock.

The Haron Implement Company has started business at Bad Axe, Mich. This is an incorporated concern with \$120,000.

The Massillon Chair & Desk Company has been incorporated at Massillon, O., with an authorized capital stock of \$300,000.

At Jackson, Miss., the Jackson Veneer & Box Company has been incorporated under the same name with \$10,000 capital stock.

The Ark Oak Flooring Company has started business at Pine Bluff, Ark. This is an incorporated concern with a capitalization of \$50,000.

The Cherokee Timber Company, a \$300,000 corporation which will operate in the lumber business, has been organized at New York City.

The Piedmont Hardwood Manufacturing Company is the style of a recently incorporated Greenville, N. C., concern with a capital stock of \$5,000.

The George Eidman Implement Company, Belleville, Ill., was sold out to the Seibert-Huerter Implement Company, a newly incorporated implement concern.

A large part of the plant of the Precious Woods Handling Company at Bayonne, N. J., was recently destroyed by fire, resulting in a loss of \$150,000.

The Shawnee Manufacturing Company has been incorporated at Indianapolis, Ind., with \$20,000 capital stock. It will manufacture agricultural implements.

Edward R. Simpson, prominently identified with the lumber trade of Milwaukee in years gone by, died at his home in Milwaukee on Tuesday, January 12.

A factory has been opened up at Cotter, Ark., for the purpose of manufacturing dimension stock and also for manufacturing novelties, knock-down furniture, porch swings, chairs and mission furniture for direct sale to the consuming trade.

George Donald, pioneer sash and door manufacturer of Milwaukee, Wis., died Sunday, January 10, after an illness of more than a year. He was secretary of the Rockwell Manufacturing Company and president of the Wisconsin Lumber & Supply Company.

◀ CHICAGO ▶

E. D. Beals, president of the Hardwood Products Company, Neenah, Wis., was in the city about ten days ago on a business trip.

Edward A. Hamer of the Worcester Lumber Company, Chassell, Mich., spent a few days in Chicago last week.

H. F. Below of the Below Lumber Company, Stanley, Wis., passed through Chicago about a week ago on his way East on a business trip.

The following prominent manufacturers of walnut lumber were in Chicago last week in conference at the Annex: R. L. Jurden of the Penrod Walnut & Veneer Company, Kansas City, Mo., Ray Pickrel, Pickrel Walnut Company, St. Louis, Mo., Haines Egbert, Sanders & Egbert Company, Goshen, Ind., Alex Schmidt, Theodor Francke Erben, Cincinnati, O., George W. Hartzell, Piqua, O., and H. A. McCowen, H. A. McCowen & Co., Louisville, Ky. They decided to keep on with the advertising which has done so much to make black walnut the best moving hardwood today.

C. H. Barnaby of Greencastle, Ind., was in Chicago for a few days last week on business connected with his personal affairs and also in connection with the National Hardwood Lumber Association.

C. A. Goodman of the Sawyer-Goodman Company, Marinette, Wis., spent several days of the past week in Chicago.

E. V. Babeock of Pittsburgh, Pa., was in Chicago last week in attendance at a meeting of the board of managers of the National Hardwood Lumber Association.

The Higginson Veneer Company has been incorporated at Rockford, Ill., with \$10,000 capital stock. The company will maintain Rockford and Chicago offices.

G. C. Robson, sales manager of the Heineman Lumber Company, Merrill, Wis., spent a few days last week in Chicago.

J. E. Raudabaugh of the Celina Hardwood Manufacturing Company, Celina, O., passed through Chicago on January 18 on the way to Wisconsin.

H. A. Batchelor of the Tennessee Oak Flooring Company, Nashville, Tenn., was in Chicago a week ago attending a conference of oak flooring manufacturers.

Earl Palmer of New Houlika, La., was in the city the early part of last week.

Walter E. Kelley of Detroit, Mich., spent the greater part of last week with the local lumbermen.

C. B. Allen, manager of the veneer department of the Anderson-Tully Company, Memphis, Tenn., has been spending the last couple of weeks in this part of the country.

R. Robert Lockwood of the Memphis Hardwood Flooring Company, Memphis, Tenn., was another prominent southern flooring manufacturer who was in Chicago attending the same function.

J. W. Dickson, Memphis, Tenn., left Memphis for Chicago following the meeting of the Gum Lumber Manufacturers' Association. He was accompanied by Chas. B. Dudley of the Dudley Lumber Company.

E. B. Brown, Buffalo, N. Y., passed through Chicago January 15 on his way to Memphis, where he is establishing his family for the winter. Mr. Brown recently established an office at Memphis and will conduct his business from that point during the next few months.

HARDWOOD RECORD is in receipt of information that the American Lumber & Manufacturing Company, Pittsburgh, Pa., has appointed J. H. McCrery, formerly of Pittsburgh, as traffic manager and manager of railway sales to succeed C. A. Droz, who recently resigned to go with the Aberdeen Lumber Company of Pittsburgh in the same capacity.

HARDWOOD RECORD acknowledges receipt of the regular issue of the official bulletin of the National Hardwood Lumber Association for January. The bulletin contains reference to the conference between the executive committee of the National Hardwood Lumber Association and committee of the Federation of Furniture and Fixture Manufacturers which took place on Tuesday, January 5, at the association's headquarters. Statement of inspection work contained in the bulletin shows a total of 7,573,814 feet for the month ending December 31, 1914.

◀ NEW YORK ▶

W. D. Magovern, hardwood flooring specialist, announces that Simon Herrstadt is no longer associated with his business.

The local lumber trade is taking a keen interest in the opposition to the new shipping regulations in New York harbor. The new regulations carry an extra charge of twelve cents per ton for putting stuff over the stringpiece when the work is done by the carrier. Heretofore this was considered necessary to complete delivery, so that the new rule amounts to an increase to the freight rate. The greater part of freight consigned to New York must be lightered, and all receivers of freight here are opposed to the new rule. The rule was ordered suspended by the

Interstate Commerce Commission and an investigation into its reasonableness will be held. The New York Lumber Trade Association and the National Wholesale Lumber Dealers' Association filed separate protests.

Sam E. Barr, who handles the "Chief Brand" oak flooring, made by the Kerry & Hansen Flooring Company, Grayling, Mich., reports good demand for hardwood flooring generally. He looks for a good year.

Alex. Norton, heavy hardwood specialist, makes no complaint on last year's trade, and reports a good inquiry at this time.

F. A. Kirby, sales manager of the Cherry River Boom & Lumber Company, Scranton, Pa., visited the local branch of the company during the fortnight.

John D. Mershon, of Saginaw, was in New York recently in company with Harry J. Strong, who took up the management of the New York office of the John D. Mershon Lumber Company.

W. D. Mershon has entered the wholesale trade on his own account. He will handle maple flooring, basswood moldings, white pine and fir, with office 1 Madison avenue.

The Milne, Hall & Johns Company has been incorporated at Hornell, N. Y., by Archibald L. Milne, Percy M. Hall and A. R. Palmer. Mr. Milne has been in the local wholesale hardwood trade for several years.

◀ BUFFALO ▶

A good many of the hardwood yards will be represented at Rochester on January 28 and 29 at the state convention of retailers. When conventions are held either in Rochester or Buffalo, they are sure of a good attendance, as the lumber interests of this section are strong.

The election of Fred M. Sullivan as director of the Chamber of Commerce again gives that body a representative of the hardwood trade on its list of officials. A strong canvass was made in his behalf by the lumbermen.

Angus McLean was a visitor at the Hugh McLean Lumber Company's office a few days ago and reported that good progress is being made in the erection of a pulp mill by the Bathurst Lumber Company, Bathurst, N. B.

The Yeager Lumber Company reports that hardwood trade has picked up to quite an extent over last month. The chief woods selling have included maple, oak and ash.

G. Elias & Bro. find the hardwood trade somewhat better than last month. An addition is being made to the box plant, and new equipment is now being installed there.

Blakeslee, Perrin & Darling state that business is on a steady basis and improvement is looked for in the near future. Maple, thick oak, and ash are the principal woods in demand.

The Standard Hardwood Lumber Company reports a better inquiry for hardwoods and there is now freer selling than last month. Low prices in the general lumber market seem to be encouraging new business.

The National Lumber Company states that there is an increased demand for hardwood flooring over last month. The yard has lately been receiving stocks of oak flooring.

Miller, Strum & Miller are having a fair run of trade this month, with business improving locally. It is expected that trade will show up well in this territory in the spring.

A. A. Mason reports that business has been pretty satisfactory with him lately. In fact December was so good that January will need to be quite large to make a showing in contrast with it. Sales have been of practically all sorts of hardwoods.

W. L. Sykes, president of the Emporium Lumber Company, Utica, has gone to California for a winter vacation, certain members of his family having preceded him.

◀ PHILADELPHIA ▶

A. S. Megauhn, eastern representative of the Oregon Lumber Company, Baker City, Ore., has just returned from an extended trip to the Pacific coast where he visited all the plants of the company, which are situated in some of the largest timber and lumber fields of that locality. Mr. Megauhn called at a number of other lumber camps on his way home. He says that the western people are enthusiastic over the outlook and are laying their lines accordingly.

The Birch Leaf Lumber Company is a late addition to the roster of the Philadelphia lumber manufacturing industries. It was incorporated under Delaware laws, January 1, with a capital of \$200,000. Its officers are: Robert W. Schofield, president; R. P. Bush, vice-president; John H. Schofield, treasurer and general manager; Frank E. Schofield, secretary. The company has secured about 10,000 acres of timberland, mostly white pine, near Birch Leaf, Va., and will control the outlet of from 20,000 to 25,000 acres of excellent timber. It will erect a band mill as soon as railroad equipment is in shape. The Schofields connected with the concern are of Schofield Bros., Philadelphia, who also own and control the Saltkeatchle Lumber Company, Schofield, S. C., and the Honaker Lumber Company, Honaker, Va. R. P. Bush, with the Schofields, is interested in a planing mill in Royersford, Pa. Robert W. Schofield, pronounces the outlook encouraging, as things are commencing to swing around to normal.

The Huganir Lumber Company, 508 Pennsylvania building, is another infant enrollment in the lumber industry, but as is not always the case experienced lumbermen will be at the helm. A charter was obtained under Delaware laws, January 8. The company is capitalized at \$50,000, and

George H. Haganir, formerly with Schofield Bros., is president; J. Frederick Martin, secretary "Pennsylvania Lumbermen," (Eastern Pennsylvania Retailers), vice-president; James P. Strong, formerly with the Central Pennsylvania Lumber Company, Williamsport, Pa., secretary and treasurer. A general wholesale lumber business will be carried on.

Frederick S. Underhill of Wistar, Underhill & Nixon, regarding the business situation, says that a decided improvement in trading began in December and signs are potent for a live business in the near future.

J. H. Haines, for many years with the Philadelphia office of the Babcock Lumber Company, has been made manager of this branch, succeeding Charles G. Blake, who resigned January 1. The many friends of Mr. Haines will be sorry to learn that he is at present confined to his home with a slight attack of pneumonia.

John J. Rumbarger, formerly with William Whitmer & Sons, Inc., has associated himself with the Babcock house, and will look after the hardwood end in the eastern field, with headquarters at Philadelphia office. Mr. Rumbarger announces that the Hoo-Hoo concatenation which was declared for February will be postponed until March 13.

Charles E. Paxton of the Paxton Lumber Company, Bristol, Tenn., and Lee Jack, representing the Arthur Brooks Lumber Company, Weston, W. Va., were among the recent visitors to the local trade.

Jacob L. Rumbarger, the veteran lumberman and original manufacturer of quartered oak, is about to celebrate his seventy-ninth birthday, hale and hearty. A jolly family party will do him honor on the occasion and still wish him many more happy returns of the day.

← PITTSBURGH →

H. E. Ast of the Mutual Lumber Company, which has a big trade with the automobile and manufacturing concerns, reports that 1914 was the best year the company has ever had and that the manufacturing prospects at present are very fine. This company had added to its force, M. W. Aitkins, who will have headquarters at 1524 Park building. Manager Pettiot reports a nice increase in mill and factory inquiries.

F. C. Jones, vice-president and general manager of the Nicola Building Company, one of the largest buyers of lumber in this section, died of heart trouble recently at his home in Oakmont, an East End suburb.

The Pennsylvania Lines West have announced that they will spend \$500,000 before May 1, 1915, in doubling their yard capacity and otherwise improving their facilities at Midland, Pa. It is predicted that other big railroad jobs soon to be undertaken mean that Pittsburgh will be a big lumber distributing center to the railroads the coming year.

The Western Lumber Company did more business the first twelve days of this month than during the entire month of December. It has a splendid line-up of the first-class manufacturing trade in Pittsburgh and President W. W. Willson, Jr., is very hopeful for this year.

The Ricks-McCreight Lumber Company reports a big increase in inquiries but does not look for great boom in lumber selling before March 1. Mr. Ricks of this company, who makes his headquarters in Cleveland, does not think that buyers are going to hurry up their purchases.

The Fair Oaks Box Company is building a large addition to its plant at Fair Oaks, Pa., twenty miles below Pittsburgh, on the Ohio river.

The merger of four big manufacturing concerns in the Pittsburgh district into the Kennedy-Stroh Corporation with a capital of \$2,500,000, means that this concern will be a big buyer in hardwood lumber. The four concerns merging were the Kennedy Manufacturing & Engineering Company, the Stroh Steel Hardening Process Company, the Best Manufacturing Company and the Lawrence Steel Castings Company.

J. N. Woollett, president of the Aberdeen Lumber Company, reports some improvement in the situation although there is nothing similar to a boom in sight yet. Mr. Woollett is making his usual annual trip to the gum and cottonwood mills of the Southwest and has a splendid line of stock ready for shipment.

Edward B. W. Püschner has been elected president of the E. T. Lippert Saw Company of Millvale, a north side suburb, to take the place of the late president, E. T. Lippert, who was founder and president. Mr. Püschner has been with the company for twenty-nine years and for the past eight years has been manager. It was largely due to his aggressive business policy that the company's big success resulted.

← BOSTON →

At New Haven, Conn., the Cherryfield Lumber Company has been incorporated by C. L. Lynch of Springfield, Mass., Samuel C. Morehouse of New Haven and Ralph H. Clark of Derby, Conn., with capital of \$275,000.

On January 15 a meeting of the management of the Geo. W. Gale Lumber Company was held at Boston and a definite outline of a plan to carry the company on in the present conditions was adopted for submission to the creditors. It is hoped by unanimous acceptance of the details of the plan to straighten out the affairs of the concern.

At the meeting of the Massachusetts Wholesale Lumber Association, Inc., held at Youngs hotel, Boston, January 6, the following officers were elected: Henry B. Fiske, president; Frank Schumaker, vice-president; E. C. Hammond, treasurer; Arthur M. Moore, secretary; board of directors, the first three named officers and William E. Litchfield, William Bacon, Martin A. Brown, Dean K. James, Henry B. Clark, F. G. Newton, Walstein R. Chester and Morris A. Hall. The delegates elected to the

Massachusetts State Board of Trade were H. W. Blanchard, Charles S. Wentworth and W. R. Chester. A number of new members were admitted and it is expected that the organization will rapidly expand and become thoroughly representative of this branch of the trade in Massachusetts.

← BALTIMORE →

It is estimated that perhaps one-third of the entire ocean tonnage employed before the war has been destroyed or requisitioned for the uses of the various countries at war, a great shortage being created. The heavy grain movement and the large shipments of various other relatively well paying commodities have given the lines still in operation a volume of business which enables them to make their choice, selecting what is most remunerative and discriminating against the other traffic. It is felt that the rates will go still higher between now and next June, and that the steamship lines want to be in a position to take advantage of the rise by refusing contracts to fill up their ships at comparatively low rates.

A number of Baltimoreans attended the annual meeting of the National Lumber Exporters' Association, held in Memphis, Tenn., January 21 and 22. The war has given rise to a number of problems that were given careful consideration, inasmuch as they affect the business of the exporters to a vital degree. The seizure of shipments and their diversion, as well as the matter of claims against the powers making the seizures, the want of facilities for taking care of shipments, the advance in ocean freight rates and other business claimed close attention.

David T. Carter & Co., wholesale hardwood men, have removed from the Calvert building to the ground floor of the Law building. The new location affords more room and is free from some of the drawbacks that attached to the old one. Mr. Carter states that the number of orders is increasing and that buyers show more interest in the offerings.

Information has been received here from Lynchburg, Va., to the effect that the Virginia & West Virginia Coal Company has brought suit in the United States court there against P. A. Doel and others over the right and title to 146,109¼ acres of timber and coal lands, mostly along the Big Sandy river in Buchanan county, Virginia. The proceeding involves the right of the General Assembly of Virginia to repeal a law which was in force at the time the coal company acquired whatever rights it may have in the tract. It appears that titles had become badly involved in the county, and the General Assembly of 1912 enacted a law making it legal for persons to produce certified copies of originals of the deeds, where these had been lost or destroyed in the records, in an effort to establish clear title. The General Assembly of 1914 repealed this act, and the authority to do this is questioned in the suit. It is understood that if the case goes against the people now on the lands, and who have been living on them for generations, other proceedings of a similar nature will be instituted involving additional tracts.

← INDIANAPOLIS →

Finley P. Mount of this city has been appointed receiver by the United States court here for the M. Rumely Company and Rumely Products Company. The receiver was appointed to conserve the assets pending a reorganization.

The complaint of the Indiana Veneer and Lumber Company, Indianapolis, that it had been overcharged on shipments from Haynes and McGehee, Ark., to Indianapolis by the St. Louis & Iron Mountain, the Southern and the Vandalia railroads was heard by Royal T. McKeena, an examiner for the Interstate Commerce Commission, in this city January 15. It was alleged the rate from Haynes should have been nineteen cents and from McGehee twenty cents instead of twenty cents and twenty-three cents, respectively, which were charged.

← COLUMBUS →

Robert T. Johnson, president of the Kuntz-Johnson Lumber Company of Dayton, recently celebrated the seventieth anniversary of his birth as well as the thirty-second anniversary of the founding of the company. About 150 of his business associates enjoyed a banquet on the second floor of the plant of the company.

The Ohio Utilities Commission has granted a re-hearing in the tap line case of the Lake Shore & Michigan Southern Railroad and the Lorain & Southern. In the first decision the commission held that an industrial road, if chartered separately from the industrial concern owning it can share in freight revenues on joint shipments.

The Carpenter Contractor and Builders' Mutual Association of Cleveland has been chartered under the laws of Ohio without any capital stock but for the mutual benefit of its members.

The Copperstore Floor Company of Toledo, Ohio, has been incorporated with a capital of \$10,000 to manufacture flooring, by A. A. Bennett, L. E. Merry, W. L. Ashley, Henry Grolle and James Rasley.

The capital stock of the Marysville Lumber Company of Marysville, O., has been reduced from \$20,000 to \$10,000.

The Canton Material Company of Canton, O., has been incorporated with a capital of \$10,000 to deal in building materials, by R. F. Harloch, W. S. Shertzer, J. C. Steiner, Joseph Hunter, Jr., and H. C. Pontius.

The Rusher & Cook Lumber Company of Lima, O., has been incorporated

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform.
The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

with a capital of \$20,000, by F. P. Rusber, R. W. Rusher, C. M. Cable, E. W. Cook and F. W. Cook.

At the annual meeting of the Columbus Builders' & Traders' Exchange the following officers were elected for the coming year: President, H. E. Kunzman; first vice-president, J. E. McNally; second vice-president, Leonard Mulby; directors, Adam Pitts, Stephen Stephanton, W. T. Whitacre, W. P. Stevenson and J. W. Davis.

R. W. Horton of the W. M. Ritter Lumber Company says trade in hardwoods has been rather active since the semi-annual inventories were completed the first of the year. Prices are fairly steady and future prospects appear to be brighter. Building is about equally divided between yardmen and factories.

MEMPHIS

The following well-known lumbermen and mill supply men have been elected directors of banks in Memphis for the ensuing year: First National—W. R. Barksdale, W. R. Barksdale & Co.; Mercantile National—C. L. Wheeler, J. W. Wheeler & Co., Memphis and Madison, Ark.; James E. Starke, James E. Starke & Co.; Central State National—George R. James, James & Graham Wagon Company; City National—R. E. Bodine, Memphis Sash & Door Company; H. H. Crosby, Riechman-Crosby Company; Geo. O. Friedel, Geo. O. Friedel Lumber & Manufacturing Company; J. T. Willingham, Memphis Coffin Company; Commercial Trust & Savings Bank—R. G. Morrow, president Memphis Furniture Company; William Pritchard, J. W. Wheeler & Co.; W. C. Dewey, Chapman-Dewey Company; State Savings Bank—T. R. Winfield, president Cole Manufacturing Company.

The Griffin-Logan Lumber Company, Meridian, Miss., has been granted a charter under the laws of that state. The capital stock is \$10,000. G. A. Griffin, W. W. and M. F. Logan are the principal stockholders. The latter is manager. The firm states that it has secured yarding space sufficient to take care of at least 1,000,000 feet of hardwood lumber. It is the intention of this firm later to branch out in the handling of yellow pine, but nothing along this line will be done for the present. This firm is successor to the Logan Lumber Company.

H. W. Greene, former bookkeeper for Geo. C. Brown & Co., Proctor, Ark., has been promoted to the position of office manager and assistant to Secretary-Treasurer H. B. Weiss. Mr. Greene came South some years ago from Providence, R. I. He was connected with the L. H. Gage Lumber Company, at Earle, Ark., before becoming associated with Geo. C. Brown & Co.

Lumbermen here will take an active part in the "Dinner of Optimism" which will be given by the Business Men's Club January 23. The Lumbermen's Club of Memphis is affiliated with the Business Men's Club and the former usually backs the latter in any undertaking which is considered for the good of Memphis. An attractive program has been arranged for this

occasion, including talks by a number of prominent business and professional men. William C. Redfield, secretary of the Department of Commerce, will be the honor guest and the principal speaker of the occasion. The prime purpose of the dinner is to bring together a number of men who will talk in favor of optimism instead of the depression which has been so much discussed since the outbreak of the European war. It is estimated that there will be between 400 and 500 in attendance. Competition for plates is already very keen.

The Southwestern Veneer Company has resumed operations at its plant at Cotton Plant, Ark., for the manufacture of veneers, after having been closed down for several months. This means employment for a number of men who have been idle for some time.

W. Brown Morgan, president and general manager of the Morgan Veneer Company, Pine Bluff, Ark., has been in Memphis during the past few days. He was one of the organizers of the Commercial Rotary Gum Association and he also attended the meeting of the Southern Hardwood Traffic Association and the Gum Lumber Manufacturers' Association.

C. L. Wheeler of J. W. Wheeler & Co. of Madison, Ark., was in Memphis this week. He says that his firm has a large supply of timber and that it is operating on very full time. He reports that the business outlook is somewhat better.

The Builders' Exchange will elect officers February 2 for the ensuing year. James Alexander will be the candidate for president on one ticket and Walter Hughes on the other. The Builders' Exchange is affiliated with the National Association of Builders' Exchanges, and is taking quite an active interest in everything pertaining to the building trade, not only in this city and section, but throughout the country.

NASHVILLE

The big furniture plant of the Standard Furniture Company in East Nashville, which has been closed down for some time, has resumed operations. This plant is owned by the Davidson, Hicks & Greene Company, one of the big hardwood concerns of this territory, and it is a matter of much gratification to see business showing a tone that warrants resumption. The plant employs about 200 men.

The Nashville, Chattanooga & St. Louis Railway is preparing to make an addition for building box cars to its shops here. The new department will give employment to several hundred men. It is said that the management of the company feels confident that business before the end of the year will show such improvement as to require additional equipment, and hence the steps to expand its local plant.

Evidence was heard by Special Examiner Edgar Watkins of the Interstate Commerce Commission in the case of Maley & Wertz of Evansville and the

Nashville Lumbermen's Club against the Louisville & Nashville. The lumber shippers seek to be relieved of the burdensome requirements of the railroads as to daily reports of tonnage of lumber handled under shipping in transit regulations. A number of the Nashville dealers were witnesses.

Jack Milne and others are reported to be planning a new chair factory at Cleveland, Tenn.

J. H. and Otway Yates and Albert Ethridge are having a heading plant installed at Springville, in Henry county.

The Tennessee Railroad Commission has refused to grant a rehearing to the Nashville Lumbermen's Club on the complaint as to local rates granted on lumber to junction points on the system.

← BRISTOL →

J. B. Sells of Johnson City, Tenn., and M. F. Miller of Piney Flats, Tenn., have purchased a tract of hardwood timber in Washington county, Tennessee, and are preparing to install a mill and begin the development of the property as early as possible.

A number of the planing mills in this section are busy and report orders to keep the plants running until spring. The Bristol Door and Lumber Company and the Sells Manufacturing Company are operating full time. The Standard Veneer Corporation at Johnson City is operating with one-half force.

The Dan River Lumber Company is preparing to erect a new plant at Walnut Cove, N. C., for the manufacture of windows, doors, etc. The company is headed by D. L. Donnell and has a capital stock of \$25,000.

E. L. Warren, a local wholesaler, has just returned from a trip in Kentucky and Virginia and he reports improvement in business over December. He says that the volume is much larger, although it is still comparatively small.

← LOUISVILLE →

The Interstate Commerce Commission hearing on the lumber rate advances from the South occupied most of last week in Louisville, following the Memphis hearing the week previous. A number of witnesses, in addition to the Louisville hardwood men, representing the Louisville Hardwood Club, were heard. The general line of the testimony was that the business simply cannot stand an increase of the amount which has been proposed; that lumber prices at present are on such a basis that no profits are being realized; that competition is being experienced from substitutes, Japanese oak and other sources which threaten the prosperity of the industry, and that competition is also already sharp and keen, preventing an excessive margin of profit. The railroads sought to show that they have been carrying lumber at rates that did not produce a profit on the investment, and that as to gum, the differential rate originally put into effect was made for the purpose of encouraging the gum business, and that the experimental stage has now been passed, so that gum can pay its way like other woods. The lumbermen and other visitors, including J. H. Townshend, manager of the Southern Hardwood Traffic Association at Memphis; John R. Walker of the Lumbermen's Bureau at Washington, and Luther M. Walter of Chicago, were entertained January 19 at dinner by the Louisville Hardwood Club. John Churchill of the Churchill-Hilton Lumber Company, was chairman of the entertainment committee in charge of this feature.

A contract including some hardwoods as well as yellow pine was given by the Standard Sanitary Mfg. Company's Louisville plant to the Boyd-Mehler Lumber Company of Louisville, for crating material which the concern will use during the present year. The contract amounts to about 3,000,000 feet, it is said, and there was considerable competition for it.

Lumbermen were much interested in the announcement that a modification of the decision of the Kentucky court of appeals on the subject of the workmen's compensation law is expected, by means of which a constitutional law can be drawn and presented to the legislature next winter. It had been thought that the subject would have to lie over until a constitutional amendment could be adopted, which would make the effective date of a compensation law about 1920. However, the majority of the court decided that it was not impossible to draw a constitutional law, and the modified opinion is intended to state just how this is to be done. In this connection it is worth noting that rates for insurance under compensation would have been much higher than most of the local concerns had anticipated. A large veneer concern in Louisville reported that its rate went up something like 400 per cent. It had made arrangements for stock company insurance, preferring this to the state insurance fund, so that the company was not at all displeased when it found that the law was to be knocked out and the status quo retained.

The Mengel Box Company has "started something" with a moving picture show at its Mengelwood, Tenn., sawmill. The company decided that some form of legitimate recreation was needed by its men, and that a picture show filled the bill most exactly. A theater was constructed next door to its general store, and arrangements were made with a film exchange in Memphis to supply a "program" consisting of the Mutual pictures. The theater is open three evenings a week, with a change of program each time, and plays to crowded houses. In fact, the demand for the entertainment was such that a gallery was recently constructed for the exclusive use of negroes. W. M. Kerrick, purchasing agent at Louisville, has been buying the supplies for the theater, and provided a Powers 6-A machine. The company has its own electric light plant at Mengelwood, and consequently has been able to furnish current without

any trouble. Mr. Kerrick said that while a small admission fee is charged, the object is not to make money, but to benefit the men, and this object is being realized.

The Kentucky Wagon Manufacturing Company of Louisville, is operating its plant more actively as the result of the war orders which it has received. It will deliver 12,000 portable kitchens, or kitchens on wheels, to the allied armies in France. It has let a subcontract to the Embry Box Company of Louisville, for feed-boxes, tool-boxes, cutting boards, etc., besides one to a local iron-working concern for much of the metal work. The order amounts to several hundred thousand dollars, and will use up a lot of material. The plant had not been operating full time for quite a while previous to the placing of the war order.

T. M. Brown of the W. P. Brown & Sons Lumber Company attended a meeting of the directors of the National Hardwood Lumber Association in Chicago January 19, afterwards going down with the other directors to the annual of the Indiana Lumbermen's Association at Indianapolis the next day.

< MILWAUKEE >

The George Spratt chair factory at Sheboygan, Wis., has been purchased by Thomas McNeill, secretary and treasurer of the Sheboygan Chair Company. The consideration has not been announced, but the value of the plant, together with stock on hand, was placed at \$100,000 at a recent inventory. The Spratt plant will be under the management of Mr. McNeill's son, Harry. Mr. Spratt, who has been engaged in the chair manufacturing business at Sheboygan for the past forty-three years, will now retire from business.

F. H. Westlake, for six years general manager of the Milwaukee Chair Company, has left for Bedford, O., where he has accepted a position as sales manager of the B. L. Marble Chair Company, manufacturer of high-grade office furniture. He has also acquired an interest in the concern.

Thomas J. Neacy, president and general manager of the Filer & Stowell Company of Milwaukee, manufacturer of sawmill equipment and engines, observed his sixty-seventh birthday anniversary on January 17. Mr. Neacy has been connected with the Filer & Stowell concern for forty-three years.

The Sheboygan Fruit Box Company of Sheboygan, Wis., has received an order for 2,250,000 white basswood kite sticks. The plant has until August 1 to complete the order. The buyers are large manufacturers of kites and other toys.

The A. H. Stange Lumber Company of Merrill, Wis., has placed its sawmill in operation.

The Heddles Lumber Company of Madison, Wis., has made several changes at its yards in southern Wisconsin. Lawrence Hutson, manager of the yards at Stoughton, Wis., has been transferred to Edgerton, Wis., succeeding A. E. Skinner, who will now be located in the company's general offices at Madison. Chris. Larson, manager at McFarland, Wis., has been transferred to Stoughton and has been succeeded by Henry Larson, his brother.

The Ahnapee Veneer & Seating Company of Algoma, Wis., recently made the first payment to its employes on a profit-sharing plan which it started about a year ago. The cash paid amounted to about one month's wages for each man and totaled about \$4,000. The same plan was put in force at the company's plant at Birchwood.

The Curtis & Yale Company of Wausau has placed its plant in operation on an eight-hour shift. The Brooks & Ross Lumber Company has started sawing operations with a full crew.

The sawmill of the Hatten Lumber Company at New London, Wis., is again in operation with a day and night crew.

A. W. Highfield of the Webster Chair Company of Superior, Wis., has left for England to close a contract to furnish all the chairs needed by a Great Britain wholesale furniture house, which had formerly been distributing the output of three Austrian factories.

The Henry A. Salzer Lumber Company of LaCrosse, Wis., which has been out of business about ten years, has filed articles of dissolution. This company should not be confused with the Salzer Lumber Company of Minneapolis. Five other Wisconsin lumber concerns, all of Superior, have filed articles of dissolution, among them: Cook County Lumber Company, Beaver Bay Lumber Company, North Shore Lumber Company and the Lake County Lumber Company.

The Foster-Latimer Lumber Company of Mellen, Wis., has placed an unusually modern train at the disposal of its lumber camp employes near Mellen. The outfit comprises a kitchen car, equipped with all the latest devices, two sleepers, fitted out with steel double-deck beds, and two diners, furnished with individual tables for seating four people each. The entire train is steam heated, gasolene lighted and furnished with the latest equipment.

< DETROIT >

One noticeable feature of the mid-winter furniture show at Grand Rapids, Mich., was the prominence given exhibits of rustic furniture, and judging from the effect obtained by the exhibits the possibilities of rustic furniture may be said to be almost unlimited. One of the foremost exhibits at the mid-winter show was that of the Old Hickory Chair Company, of Martinsville, Ind. It attracted wide comment and was one of the beauty spots of the show. The company's space was filled with old hickory furniture, the company being the pioneer manufacturer in that line. Beginning with the manufacture of chairs, which were crudely built, the rustic furniture industry has progressed, as shown by the

VANBEN ZOOM-STANSON LUMBER COMPANY
Manufacturers of Southern Hardwoods
Quartered Oak a Specialty
MEMPHIS TENN.

exhibit of the Old Hickory company, until now there is a finished product attractive and yet not robbed of the rustic air.

Probably foremost among the table exhibits at the Grand Rapids show was that of the St. Johns Table Company of Cadillac, Mich., which is rated as the largest table manufacturing plant in the world. The exhibit created wide interest and was one of the main centers of attraction in the show.

The feeling of holding off was evident at the Grand Rapids show among some of the smaller buyers. The general tone of the exhibit, however, as reflected in orders, was normal with one or two exceptions in abnormal sales.

R. J. Clark, manager of the Peninsula Bark & Lumber Company, of Sault Ste Marie, has been appointed general manager of the Consolidated Lumber Company of Moulstique. He will assume immediate direction of the Consolidated company's business and will also continue as head of the Peninsula company. The Consolidated company's mills and extensive timber holdings are located in the upper peninsula.

The Falcon Manufacturing Company of Big Rapids reports business good. The company lately received an order for 1,000 kitchen cabinets and is now busy on them. The company is lumbering near Howard City and has about twenty-five men at work at a portable sawmill manufacturing hardwood lumber for use at Big Rapids.

T. J. Brace, manufacturer of wood specialties at Wacousta, announces that he will shortly remove his plant to Eaton Rapids.

The Leroy Piano & Organ Company, a new industry at Cheboygan, has elected the following officers for 1915: President, H. E. LeRoy; vice-president, Henry Stephens; treasurer, John C. Kittenhouse, and secretary, William B. Seemark. The company reports orders enough to insure operation for six months. The factory will be moved into better quarters in February.

Napoleon Robare of Ishpeming has about fifty men at work logging an 800-acre tract of timber near Channing. Charles Doane of Witch Lake, who has also been lumbering for several weeks in the vicinity of Channing, has considerable timber on skids ready to haul.

Joseph Bellair of Baraga has commenced the lumbering of 300,000 feet of hardwood logs for mines in the copper country. They will be hauled to the Mineral Range railroad and distributed at various mines along the route.

The Grand Rapids Cooperage Company of Grand Rapids has decreased its capital stock from \$50,000 to \$10,000.

William J. Streng, president of the Palmer Manufacturing Company and the Grand Furniture & Upholstering Company, both of Detroit, died in a hospital at Flint following a short illness. He was forty-six years of age and had been a lifelong resident of Detroit. He was prominent as a Shriner. Funeral services were held at Detroit.

The Dollar Bay Lumber Company of Dollar Bay recently made its first shipment by rail since navigation closed. Members of the firm are inclined to view the lumber situation with optimism.

The Anketell Lumber & Coal Company of Cass City has been purchased by the Cass City Lumber and Coal Company. Henry Schiedel, manager of the Anketell company, will remain as manager.

The Ypsilanti Reed Furniture Company of Ionia, Mich., was recently confronted with the problem of obtaining reed material to continue the manufacture of its furniture or suspend operations. All reed had hitherto been obtained in Europe and it was impossible to get a supply through agents, it being necessary to obtain it in Germany. President Fred Green, after the situation became evident, made a trip to Europe, visiting England, Holland and Germany. He obtained a supply of reeds and the plant will continue to operate. President Green has just returned to Ionia. Business at the company's plant is good and has been for some time.

Henry S. Jordan, one of the foremost furniture manufacturers in Michigan, died at his home at Grand Rapids after a lingering illness. He was seventy-two years old. When he retired in 1913 he was president of the Michigan Chair Company of Grand Rapids, which he organized shortly after forming the Grand Ledge Chair Company, which operates a plant at Grand Ledge. He was buried at Grand Rapids. A widow and one daughter survive.

George E. Williams of the Williams Brothers Company, manufacturer of last blocks at Cadillac, believes that during the next few months business will be considerably better than it was last year. He says that the period of dullness has now extended over a year and there is hope of a change. Business was better during the last half of 1914 than during the first half of the year and for this reason he is not inclined to point to the European war as the complete reason for slack business.

A recent census of the state labor department shows that the mills and manufacturing plants at Bay City are operating all the way from half time to normal. The box factories are fairly active, but veneer and flooring manufactories are being operated at half time and slightly better.

The Bennett Lumber Company has installed a complete equipment of machinery for the manufacture of wood specialties at Hart. The company recently received an inquiry for a million wood splints to be used on the battlefields of Europe.

The Owosso Carriage & Sleigh Company of Owosso is getting its affairs in condition for voluntary liquidation. C. H. Sapp, general manager, says it will take a year to wind up the company's affairs. The growth of the automobile industry has lessened the demand for the com-

pany's products. Another line of industry is being sought but nothing has been settled on as yet.

The International Mill & Timber Company has recently been formed at Bay City to engage in the manufacture of ready-cut houses. Its officers are: President, R. S. Richardson of the Richardson Lumber Company; vice-president, W. D. Young, Jr., son of W. D. Young, flooring manufacturer; treasurer and general manager, C. M. Ambrose. The company is the third engaged in the manufacture of ready-cut houses at Bay City. Others are the North American Construction Company and the Lewis Manufacturing Company.

The Hardwood Market

< CHICAGO >

There has hardly been time since the first of the year for the more favorable trend of trade which has been confidently predicted by the majority of lumbermen and woodworkers in this section to materialize. However, while this movement has not set in on a general basis, there are reported sales of increasing volume, which apparently are gradually increasing in number, thus affording ample reason for the belief that marked improvement will characterize the condition of business during the next two or three months.

While the furniture shows have not been altogether satisfying, they have not, at least, been discouraging and quite a number of the manufacturers exhibiting at Chicago expressed themselves as being very well pleased with the situation as a whole. It is true that some manufacturers were genuinely disappointed in the results of sales of their products, but considering the general trend of business and the fact that it is impossible for any line to revive instantly and to the fullest capacity, the outcome of the sales has been quite all that could have been expected.

One significant fact is that a great many of the sales that were actually consummated were of quite unusual proportions, because as a general thing the furniture dealers have, in common with dealers in other commodities, let their stocks run down to a point where they had very little left and hence have been compelled to take on large amounts of new furniture in order to successfully meet the urgent demand of the consuming public.

The yard trade is showing a distinct tendency to look more favorably upon purchases in anticipation of marked improvement in the building situation during the early spring months. A great deal of building work has been planned which absolutely must be consummated in the near future, and with the financial situation on a better basis this work will undoubtedly be continued at as early date as possible. The result will be an active call for lumber going into construction work, which call is being

anticipated to a considerable extent by the yard trade, which is looking around for the purpose of filling out its stocks.

Locally there is hardly any perceptible change in the status of different woods represented on the markets. The gum situation seems to show a little better, at least there have been some excellent orders for gum placed in Chicago during the last two weeks. One concern which says that January has been a bumper month as far as orders are concerned in contrast with several months of extremely quiet business, also says that a great deal of this business has been in gum and at slightly better prices.

The oak situation is in fair shape, and more or less difficulty seems to be experienced by local buyers in placing orders of large volume, or for any extended period of time at prevailing figures. It has been pretty generally recognized that the next month or six weeks will see a gradual stiffening up in hardwood values in practically all lines.

< NEW YORK >

The improvement which is generally reported throughout the country is showing itself in the lumber trade of New York. Current report is that demand for spring trade is quite lively, the volume being satisfactory though distributed over a number of orders. The wholesale trade is now experiencing some real business, and all are confident that the spring season will open the door to a good year's business. The yards and factories are all low stocked and are sure to be in the market for much needed material. Price concessions are still to be heard of. Conservative houses are not meeting this competition now, being content to do less business at favorable prices. Hardwood flooring is in good demand and prices are due to go higher within sixty days. Gum is also coming in for a share of demand with some betterment in prices.

< BUFFALO >

There is a more general report of improvement at the hardwood yards than for some time. Business is by no means on a large scale, but it shows up favorably as compared with last month, and there is a feeling that it is going to continue to improve for a while. Prices have been so low that a change for the better seems very probable, especially in view of the fact that industrial activity is getting larger, while the amount of stock shows no tendency to increase any, with many mills closed.

A variety of woods have been moving lately and if business holds up in future as well as it has been doing of late there will be a stronger market. The amount of business going around is certainly on the increase, so that the severe competition should soon give way to a better situation. Plain oak, maple, white and brown ash, chestnut and birch are mentioned among the woods that are now being called for in a little larger quantity.

The lumber-transit question, which is of so much importance to the local hardwood trade, has again been up for consideration before the Interstate Commerce Commission, and Buffalo has been represented by the same hardwood representatives who attended the first hearing. They were M. M. Wall, acting as chairman, with A. W. Kreinheder, O. E. Yeager, H. F. Taylor and H. L. Abbott. It is hoped that this would be the final hearing in the matter and that an early decision would be rendered.

< PHILADELPHIA >

Many trade reports show a slight advance in trading, which is only corroborative of the optimistic business prediction for the early new year. Although there are no special indications of an upward movement in prices, it is noticeable that values are somewhat firmer all along the line. Yard buying has begun and many inquiries as to future delivery are being made, but a supreme caution is observable among the manufacturers as there is no doubt of a stiffening of quotations as orders increase. Railroad companies are sending out unmistakable feelers and in some instances fair orders are booked for material for repair work. The intention of the Baltimore & Ohio to spend \$30,000,000 in the near future gives hope that the other eastern roads sooner or later will conclude to spend an equally high figure.

Furniture factories are marking time, relying on result of the usual furniture exhibition sales, which as a rule are a dependable index as to future possibilities of the furniture market. Box makers keep fairly busy right along and builders are looking for a live season. Many are already pushing plans to take advantage of the exceptionally open winter.

Money is loosening up a little and indications are that a more liberal course will be pursued by the banks in the near future. Taking the situation as a whole the outlook is decidedly promising.

< PITTSBURGH >

The hardwood situation shows much improvement. There is a distinct uptrend to prices. Orders are more plenty. Inquiries are greatly improved. Sentiment is decidedly better on all sides. Stocks at the mills are being reduced a little, although they are still much too large to be profitable. Yard trade is not much in evidence as yet. Manufacturing buying is much more noticeable and many concerns which have been out of the market for months are now putting out good inquiries and requisitions.

← BOSTON →

The anticipated upward turn of the market after the new year has shown but limited results. While there is a small increase in inquiry, the amount of business being placed is but little, if any, above the recently prevailing situation. The general view of the dealers who come into wide contact with buyers is that there will be no sudden advance in business or prices, and it is agreed that this is a factor which is favorable in the long run. Stocks are low, curtailment has been in force for some time and new lumber could not be made available for use for a considerable period if wanted. Therefore, should the demand rise actively and approach consumption of the present stocks on hand, values would be unnaturally raised. This would have a speculative value in a few cases, but would be a detriment to the dealers in general, as the usual substitutions of a less valuable wood or a different material altogether would follow such an elevation of the cost of the manufactured goods. Substitutions have already made very serious inroads on hardwood consumption, and in the widely varied manufacturing industries of this section, the effect is plainly felt. The element of cost of material enters strongly into such replacements and it is one therefore that the hardwood men here hope to see developed with intelligence and care when the pressure of increased demand is felt on the curtailed stocks.

← BALTIMORE →

While no important changes in the hardwood situation are to be noted, it can be said that the inquiry has picked up somewhat and that more interest is being shown in the offers of the sellers. The number of orders taken by millmen and wholesalers has undergone an increase and the outlook is not without some encouraging features. In a general way, however, the movement shows no important modification, this applying especially to the range of the quotations. While many of the mills are still shut down and the available supplies have undergone some reduction, the effect upon prices has not been such as to be called a positive advance. The entire list continues to rule low and there is a notable lack of steadiness in the figures given to the buyers. For months past the hardwoods have been without any definite bottom, one seller naming a figure which seemed hardly to have any proper relation to the quotations of others; and the hardwood men have been in the position where they did not know what to quote. However, this state of affairs is less pronounced now than it was during a considerable part of last year, after the beginning of the war, the production having been curtailed sufficiently to narrow the selections and remove pressure on account of liberal offerings. The feeling in the trade is appreciably better, at least in so far as the domestic business is concerned.

Exports continue to give cause for much complaint, and to the other troubles of the exporters there has been added in the last few days an embargo upon shipments from Baltimore, Philadelphia and Norfolk, the steamship companies having served notice that they will for the present take no shipments for London and Liverpool on account of the inability to find room on the docks there. The exporters are of the opinion that the steamship lines are merely taking advantage of the scarcity of tonnage to shut out lumber for other freight which pays them better. This will naturally cause a still further contraction of the export movement and will necessitate a more complete falling back upon the home market, at least for the present. With the general business situation improving, there is a fair prospect that hardwoods will be benefited. The railroads are once more in the market to some extent, and there are indications that other consumers will augment their calls for stocks as the demand for their products expands. It is yet a little early in the year for the recovery to make itself felt in a very pronounced way, but there are signs that hardwoods will be favorably affected by recent developments and those that are to be expected in the near future.

← COLUMBUS →

The hardwood trade in Columbus and central Ohio has been fairly quiet during the past fortnight but that is to be expected. Semi-annual inventories have not been completed with the result that retailers' stocks are found to be short. Buying is expected to be more active within a short time. In fact some buying is now being done, both for immediate delivery and for shipment during the month of February. The tone of the market is better and future prospects are not believed to be bad.

Buying is pretty evenly divided between factories and retailers. Factories making vehicles and furniture are the best customers although some buying is being done by implement concerns now. Orders are generally small, as retailers as well as purchasing agents of manufacturing concerns are loath to accumulate stocks under present conditions.

Prices are rather steady at the levels which have prevailed for some time. There is less cutting of prices now to move stocks. In fact stocks in the hands of mill owners and jobbers are not large. Some cutting is being done in poplar and oak but this is not sufficient to demoralize the market. Collections are bad.

Shipments are coming out promptly and no trouble is experienced from a shortage of cars. Rural districts are probably buying better than cities

and towns. The indications are bright for a rather active building season when weather conditions again become favorable.

Oak, both plain and quarter-sawn, is in fairly good demand and prices rule steady. Chestnut is still active, especially sound wormy. Poplar is in better demand and all of the grades are moving more uniformly. Basswood and ash are steady, and other hardwoods are unchanged.

< CINCINNATI >

The continued improvement noted in the hardwood situation is gratifying to dealers who have been looking for a break in their favor shortly after the first of the year. Lumbermen are sure that the present numerous inquiries mean something, and already a considerable amount of business has resulted. Orders continue to be for small quantities but there is a better call for straight cars than for many weeks, and return orders are more numerous. Buyers still maintain extreme cautiousness, apparently not being disposed to buy beyond actual requirements—but at that they are buying more stock than a month ago and indications are the very best for continuation and on a larger scale.

Right now there is not much call for poplar in common and better grades but the low grades are in constant demand. The same is true of red gum, but all grades of sap gum find a fair market, especially low grades, which are in excellent demand. Chestnut has been on the slow list for many weeks and there is none too much improvement as yet except in the sound wormy grades, which in 6/4 and 8/4 finds a fair market. There is a light request for the good grades of cottonwood but like most of the other hardwoods suitable for the box makers there is a steady demand for No. 2 and No. 3 common at good prices. West Virginia maple is a fair seller in most grades of 4/4, but dry stock thicker than inch is in good demand. Ash in thick stock is a splendid seller, 16/4 being in excellent request and other thickness are finding a good market. Plain red and white oak in upper grades is in good demand, especially red oak, which seems to be in better request than white. The low grades, due to the backwardness of demand from furniture factories, are not moving satisfactorily. The call for good grades of quartered oak is on the increase and there is more interest being displayed in the lower grades than for many weeks. Considering conditions, prices are being well maintained for standard manufactured stock, and dealers look for better prices in a few weeks.

< INDIANAPOLIS >

There has been no marked change in the hardwood situation in this vicinity. Very little actual business has developed, although inquiries are still strong and encourage manufacturers and dealers to anticipate a fair business later. It is expected that the automobile business will show improvement following the New York and Chicago shows. The furniture business is expected to pick up shortly. Building operations promise to resume on a good scale as soon as weather conditions are favorable.

Prices remain almost stationary, and no change is anticipated until business conditions actually warrant changes being made.

< MEMPHIS >

There has been some increase in the amount of hardwood lumber being produced in this part of the country. The McLean Hardwood Lumber Company at Memphis has recently resumed operations and the Lamb-Fish Lumber Company at Charleston, Miss., has done likewise. Reports from Madison, Ark., say that J. W. Wheeler & Co. are running their plant on full time and there are reports from a number of points in the Memphis territory indicating that there is a tendency toward resuming milling operations. Some of these firms have either brought out or bought considerable quantities of timber and are finding it necessary to begin sawing in order to take care of these logs. There are others who believe that conditions have sufficiently improved to justify operations on a somewhat larger scale, though it is generally conceded that those who hold to this view are in the minority. A number of firms which have done practically no logging and which have been able to finance their holdings of both lumber and timber have consistently refused to resume manufacturing operations and have announced their intention during the past few days of awaiting still further developments before they undertake to put their machinery in operation again.

There have been a number of inquiries since the first of the year and the outlook is regarded as somewhat more favorable. It is pointed out, however, that the improvement is prospective rather than real, and that, so far as the volume of actual bookings is concerned, the gain has been comparatively slight. Most members of the trade are disposed to take an optimistic view of the outlook. There has been virtually no change in the relative position of the various items sold here. The lower grades of cottonwood and gum are in good demand. High-grade cottonwood, including box boards, is in rather limited request and prices are rather unsatisfactory. It was developed at the meeting of the Gum Lumber Manufacturers' Association here last week that there was much interest in red gum but that prices on this, as well as sap gum and box boards, were far from profitable. There is a fairly good demand for cypress in all grades, from shops up. Ash is in fairly active request but offerings are very limited. Export business in the entire hardwood line is at almost a standstill, with no prospect of much progress in that department until there are more ships available to carry lumber tonnage to Europe and until ocean freight rates are much lower.

The Largest Hardwood Sawmill in the World Is Again In Operation

During our few months' shut down we have maintained our usual prompt and efficient service on shipments of

Oak, Gum, Elm & Ash

from the 20,000,000 feet of stock we had in yard at time we stopped sawing.

Our stock is now rapidly assuming normal proportions and we shall welcome inquiries for immediate shipment.

< NASHVILLE >

The year 1915 is not far enough advanced to give a good idea of the outlook in the hardwood lumber market, but manufacturers here report a sprinkling of orders that gives indication of improvement in trade. It is expected that the demand will show gradual increase. The general tone of business has a tendency to more activity. A number of the lumber consuming plants are reported to be making plans for increased business, and several of them have resumed. No material change in prices is noted. Production of both logs and lumber continues on a light scale.

< BRISTOL >

Bristol lumbermen report the situation here a little more encouraging. They expect business to improve more rapidly toward spring. The movement of stock is light, which is probably attributable as much to the low yard stocks in this section as the condition of the lumber market. Some of the lumbermen have lost desirable orders on account of the small stock on hand. Most of the large mills have been idle for several weeks. The manufacturers believe that market conditions will soon justify resuming operations.

< LOUISVILLE >

Business is getting somewhat better, it appears, for lumbermen report both improved demand and somewhat better prices on certain items. These two, of course, go together, for better demand usually strengthens prices, and on the other hand advancing prices nearly always stimulate the demand. The general tendency of local hardwood men has been to follow the example of leading operators at the southern mills, and quote \$1 advances for delivery in February. It is beginning to look as though wholesalers who have accepted contracts covering delivery during the rest of the year on a current price basis, with the idea of being able to pick up the stock on the outside, will have some trouble doing so, particularly at a margin that will enable them to make any money. Lumber values are steady all along the line, authorities declare, and with a slight increase in consumption there is bound to be a rapid upward movement which will catch those who have been "bears," on the wrong side of the market. Quartered oak, plain white oak, thick poplar and good ash are among the best sellers at present.

< MILWAUKEE >

Milwaukee wholesale lumbermen say that trade in the hardwood field is beginning to show considerable improvement. Orders are being placed a little more freely and the prospects are much better than they have been for several weeks. Manufacturers and consumers of hardwoods, who were decidedly pessimistic during the latter part of the old year and were predicting that they would be forced to keep their plants closed for several weeks, are now taking a more hopeful view of the situation and are actually placing orders for stocks. Most of the lumber consuming industries have light stocks on hand and it would seem that business from this source ought to be good within the near future. The furniture manufacturers are not placing especially large orders for stock at this time, as business in this line is inclined to be quiet. The outlook is good, however. In view of the promise of extensive building to be carried on next spring, it is expected that the sash and door and general interior finishing concerns will be placing better orders for stock from now on.

Dealers about Wisconsin seem to be inclined to take more interest in the situation and are making good inquiries as well as placing better orders for stock. Wholesalers say that stocks at most retail yards are light, as most dealers bought carefully during the last half of the past year.

Prices are holding firm, a natural result of the light stocks of northern hardwoods and the gradually improving demand. Those concerns holding stocks are confident that higher prices may be expected after the spring business has really opened and for this reason they are not inclined to make any concessions in quotations at this time.

The amount of new building which is being launched in Milwaukee at this time is, of course, very light, but there is every indication that there will be plenty of activity next spring. So much building, planned for last fall, was carried over until spring because of the general business depression, that W. D. Harper, building inspector of Milwaukee, is confident that building figures for the ensuing year will attain a new high mark.

< DETROIT >

Opinion as to the hardwood trade in Detroit at present varies, some dealers pronouncing trade fair and others reporting the demand still unsteady or apathetic. It is generally agreed, however, that indications point to a revival of trade.

One very favorable indication was the automobile show just closed at Detroit. The general feeling in the automobile trade is for a steady business in 1915, and if such proves to be the case, the good effect is bound to be felt favorably in the hardwood trade. Light cars were prominent in the show, which is a further favorable indication.

Considerable business hooked is reported by furniture manufacturers who exhibited at the Grand Rapids mid-winter furniture show. The outlook in this industry is also for the better. Combining the favorable indications evident in these two big Michigan industries, automobile and furniture manufacturing, the outlook in the hardwood market may be truthfully said to be better.

TALLY BOOK**

This three-throw tally ticket cover is made
from aluminum, and accommodates four tally
tickets—4 1/2 x 8 1/2 inches in size.

Folds compactly to less than one-fourth inch
in thickness and fits side or inside coat pocket.

Gives large area of four tickets for compli-
cated tallies, or straight grade can be made
on one page.

Accommodates any form of tally ticket desired.
Special, patented, triplicate tally tickets supplied,
printed on waterproof paper with carbon backs. Tallies
made on these tickets are unalterable. Their use en-
ables the inspector to retain triplicate, and forward
original and duplicate. Duplicate designed to be
attached to invoice.

These tally books are perfection for durability,
convenience, accuracy, and for systematizing the inspec-
tion and measurement of lumber

Patent applied for on covers. Copyrighted, 1910,
Triplicate Tally Tickets patented.

Hardwood Consumers' Requirements for 1915

The business depression of the past year has compelled the woodworker to economize wherever possible. He has tried to save money by looking for the cheapest raw material that would meet his requirements. As a result, changes in kinds, grades and dimensions of hardwoods used for 1915 will be more marked and widespread than ever.

The most effective sales corps is the one which has most complete knowledge of customers' needs—a mediocre salesman with this information can make a better showing than the class A man who hasn't it.

A \$40,000 investment in collecting and compiling just this information proves to us that no company can afford to individually maintain such a service on a thoroughly effective basis. We offer you the opportunity of protecting your selling investment by providing it for you—all filed for quick reference and instant use.

It is now being corrected throughout for 1915 changes and will be ready for use in revised form in a couple of weeks.

Don't overlook this chance of making the work of your sales department more effective at very little cost.

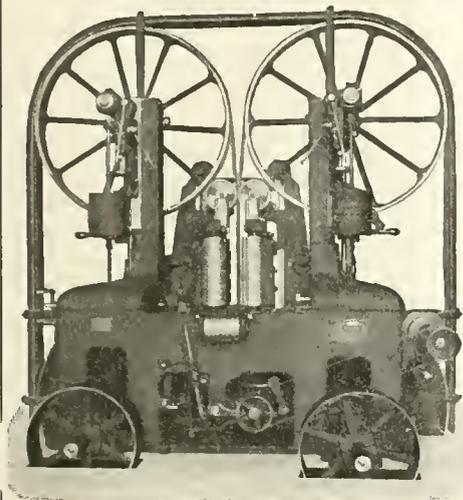

WRITE FOR PARTICULARS

Hardwood Record, Chicago, Ill.

The revised information is of course most effective while fresh

NOTHING BETTER

A Specialty - Not a Side Line
BAND RESAWS

Chicago, Ills., Nov. 14, 1914.

Dear Sir:

With reference to the Mershon Twin Band Saws, we are using two of these with the very best success. We can cut the stock just as accurately on these double bands as it is possible to do on any single band that we have ever operated, and we do not believe there is a single band saw built that will do any better work than these twin bands.

Our experience with them has been very satisfactory, and we have no doubt your work will be the same. Yours very truly,

Rathborne, Hair & Ridgway Co.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

What Veneer and Panel Consumers Will Use in 1915

This information is shown in our service of veneer and panel consumers' requirements lists—complete according to 1915 requirements.

The information contained is all first hand and guaranteed to be authentic. It gives all details that you want to know on which to base an intelligent quotation.

It would cost you thousands of dollars and years of work to compile the same information—we know because that is what it cost us. You can have it for 1% of its real cost.

As its best use is while it is fresh and it costs only two cents to write, drop us a line today and let us give you the details.

ST. FRANCIS BASIN OAK

THE GALLOWAY-PEASE KIND

↑ It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

↑ Kiln dries without checking. No honey-combing, and minimum shrinkage.

↑ Total absence of injurious insects insures sturdy, clean growth.

↑ Our band mills cut oak only—hence filer and sawyer get best possible results.

SAVE YOUR MONEY BY USING THE
RED BOOK Published Semi-annually in February and August
 It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers. The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.
 A well organized Collection Department is also operated and the same is open to you. Write for terms.
Lumbermen's Credit Assn., Established 1878
 608 So. Dearborn St. CHICAGO 55 John St. NEW YORK CITY
 Mention This Paper

A floor to adore

 For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.
 Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.
The T. Wilce Company
 22nd and Throop Sts. CHICAGO, ILL.

NASHVILLE

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

Plenty of Walnut, Mr. Manufacturer!

The hundred or more furniture manufacturers who are making walnut goods, and who are already demonstrating to their complete satisfaction the fact that the trade and the public favor furniture of this material, may rest assured that the supply will be ample for all the demands which may be made upon it. The production of 50,000,000 board feet a year which is proven by U. S. Government statistics, is steady, consistent and reliable; and consumers of both lumber and veneers will be able to get any amount which may be required for their trade. The lumber shown below is dry and ready to ship, and is backed up by facilities for increasing the supply as the demand requires.

CHICAGO, FEBRUARY 10, 1915

No. 8

Review and Outlook

General Market Conditions

LUMBERMEN GENERALLY, in expressing disappointment at the lack of anticipated revival after the first of the year, are overlooking the fact that only a little over a month has elapsed since 1915 came in and that during that period there have been numerous circumstances which have had a natural tendency to hold up trade. With the factory end the furniture shows had a very retarding influence, and inasmuch as quite a number of furniture manufacturers were disappointed at the outcome this influence has continued to be felt. However, too much stress has been laid on this disappointment and too little emphasis given to the experiences of those manufacturers who closed up some remarkably good orders for their lines, which has resulted in their resuming manufacture on a practically normal basis. It can be said with absolute truth that those cases are not exceptions by any means, and any statement that shows this year was not disappointing on the whole can be taken as based on real facts. The trouble with the situation is that a good many have been anticipating that an improvement in business would mean a return to normal sales for them and that the other fellow would probably have to stand the gaff of continued laxity in orders. As a matter of fact the increase in activity among the factory trade has resulted in the spreading out of orders over the entire trade, inasmuch as the tendency to shop for lumber is still a prominent feature of the buying market. As a consequence, while there has been an improvement it has been so spread out that no one has had a sufficient increase in business to justify the confident hope of marked augmenting of volume of trade, and quite a few lumbermen have become rather discouraged, apparently not realizing that any improvement in the situation must necessarily be very gradual.

As a matter of fact the railroads have continued to put out frequent inquiries for various classes of stock, and quotations are in the main still unattractive to those who can afford to hold their lumber for prices that represent real value. This condition has prevailed in many other lines in the factory and yard trade and there continues to be a considerable amount of cut price business placed.

An accurate analysis of actual conditions and reasons is still difficult. Experiences are so diversified and business so widely different that any kind of a representative estimate is next to impossible.

Any changes that have taken place in the demand for respective hardwoods have retained them on the same comparative plane of demand. Quartered oak is still in pretty fair shape and all box lumber is moving in a satisfactory manner. Some mills in the North and South have a great deal of lumber on hand, but it is a fact that the curtailment which has been nation-wide has materially cut down stocks at all mill points. The continued policy of buying for im-

mediate use at the yards and factories has prevented any general piling up of stocks at receiving ends. The consequence is that with a moderate resumption of business a great many lines will be seriously broken, and a firmer price level will consequently come into effect.

The Cover Picture

THE PICTURE WHICH ILLUSTRATES this number of HARDWOOD RECORD shows the Capitol at Washington under winter conditions, but the central object, from the timber standpoint, is the fine specimen of white elm in the foreground. This is the species which supplies the bulk of the elm lumber which reaches the markets of this country. Three other elms contribute to the lumber output, but white elm, which is known also as gray elm, is the commonest and of most importance. This tree grows throughout the whole eastern half of the United States, and when at its best is one of the largest hardwoods.

The elm that grows under forest conditions is tall and the trunk is usually free from limbs two-thirds of its length. Such a tree is quite different in form from one that grows in the open, like that in the illustration. Some of the finest shade trees of northern and eastern states are white elms. The branches spread enormously, and yet rise at sharp angles and shoot up to a great height. In that respect they differ from the branching habits of southern live oaks whose limbs extend horizontally or rise slightly. In horizontal extent of limbs the live oak probably surpasses this elm, but it is much inferior when both height and spread are considered. A century ago Michaux, the botanist, pronounced the white elm to be "the most magnificent vegetable of the temperate zone," and few persons are inclined to pronounce a different judgment.

In the northeastern states, particularly in New York and New England, planted elms, as well as those spared when the original forests were cleared, have been growing in parks and along highways during two hundred years. Trees of that age are still in good health and are growing vigorously. Many have attained gigantic proportions, with trunks from four to six feet in diameter, and others are from seven to nine feet. Some of the branches are as large as ordinary trees, and the extreme heights of such elms considerably exceed one hundred feet.

The elm which is featured in the picture is young. It was probably planted at about the close of the Civil war. When two hundred years have been added to its age, and growth has continued steadily during that time, as doubtless will be the case, barring accidents, it will be an object which will attract much more than passing notice.

The Capitol grounds have been planted with characteristic trees, not only from American forests, but from many countries. They are

not growing under forest conditions, crowded together and cramped for space; but they are arranged in the open where light and soil are sufficient and every line of beauty will be developed. The visitor to the nation's capital city, if he is interested in trees, misses a rare opportunity if he does not spend some time in the capitol grounds making or renewing acquaintance with the trees. That is easily done, because most of the species have their names on attached plates for ready reference.

The Tendency Unmistakable

THE TENDENCY TOWARD BETTER BUSINESS conditions is unmistakable. It is seen in the multiplication of recent orders for railroad material. Some of these orders are for domestic use, others are from foreign countries; but in both instances the work is coming to American shops, American labor is being employed, and home material is being used. That which foreign buyers are sending to us for manufacture is not war appliances, but consists of supplies needed by railroads in those countries. If foreign people are so busy fighting that they cannot make their own cars and locomotives, they will find facilities in the United States for doing the work; and at the same time our factories will be able to supply the needs of the home markets.

The following list of orders for railroad supplies which have reached American factories since the beginning of the year furnishes an unanswerable argument that industrial improvement is at hand:

Russian government, freight cars.....	\$12,000,000
Pennsylvania railroad, freight cars.....	12,000,000
Burlington road, cars and rails.....	4,000,000
Illinois Central road.....	3,750,000
Southern Pacific road, rails.....	900,000
Erie road, rails.....	900,000
Pennsylvania Tank Company, cars.....	800,000
Chicago & Northwestern, rails.....	800,000
Baltimore & Ohio road, rails.....	725,000
Swift & Co., cars.....	700,000
Mather Stock Car, cars.....	500,000
Boston & Maine road, rails.....	450,000
Chilean government, cars.....	250,000
French government, locomotives.....	200,000
Serbian government, locomotives.....	200,000

There has been a superabundance of prophecy that business improvement is on the way, but the receipt of the orders themselves is the best evidence that the prophecies are nearing fulfillment. The foregoing list of fifteen orders aggregates more than \$38,000,000, and a large number of smaller orders makes \$25,000,000 more, or \$63,000,000 in all, in business coming to manufacturers of railroad supplies in this country in a few days.

When other lines of activities are considered, it can easily be seen that the total amount of new business coming to the country's industries is sufficient to make its influence felt from one end of the land to the other. The wait for the return of prosperity has been long and the first auspicious signs of its coming will meet a genuine welcome.

Lumber Sold Without Grading

IT MAY NOT BE GENERALLY KNOWN that fully one-tenth of all the lumber bought and sold in the United States falls under none of the many grading rules in use in this country. This is the lumber that goes to box factories. Some of it is the culls, rejects, and left-overs after the regular grades have been taken out, and some of it consists of millrun where everything which the log makes goes into one pile to be sold without sorting, and some consists of odds and ends from many sources.

The industry which makes boxes is second largest of all the wood-using industries of the country. The yearly total exceeds four and a half billion feet. That is nearly four times as much wood as is consumed by all factories in the United States engaged in the manufacture of steam and electric cars of all kinds. It is five fold as great as the whole supply going to furniture factories in this country; six times greater than the vehicle stock; and greater than the combined demand for lumber by the fifty other industries which use wood as raw material. The only industry which uses more lumber than is worked into boxes is that which makes planing mill products, such as flooring, ceiling, siding, and general millwork.

Many a time the box maker saves the sawmill from serious loss. He buys what the mill can sell to no one else. It may be easily imagined what the result would be if box makers were not in the market for lumber. One-tenth of all the stuff sawed would be unsalable. Few sawmills could stand that loss.

It is fortunate that box factories are distributed in all timbered parts of the country. They furnish a convenient market for the low grade stuff which every mill has on hand and which it is anxious to sell. If box factories were not near, this lumber could not be sold, because it cannot pay freight on long hauls. The box factory may ship its shooks hundreds or even thousands of miles to reach a market, but box lumber cannot make that journey and pay the freight.

Box makers as a whole are not exacting in their demands. They take hardwoods and softwoods. There is not an important tree species in the United States which does not go to box factories somewhere. If a maker who produces a certain kind of box must reject a few unsuitable woods, another maker will take them, and they are not left to rot at the sawmill because no box man wants them. Knots, shakes and waness can be cut out with a minimum of waste, because so many dimensions go into boxes that the waste is remarkably small, considering the heterogeneous class of lumber that goes to the box factory. It is a mixture of all grades, of all lengths, breadths and thicknesses, all colors, weights, strengths and species; and the remarkable thing is that between four and five billion feet of this miscellaneous mass are bought, manufactured and distributed as finished boxes from end to end of the land, with the transactions moving as regularly as clockwork.

What Ocean Rate Increases Mean to America

SPEAKING IN TERMS OF COST per hundred pounds shipped, the remarkable increases in ocean freight rates which began immediately upon the outbreak of the present war cannot carry the significance to the average mind they would if put into total figures. The vast importance of this condition to the American public and its really vital effect upon their pocketbooks is seen in the statistics compiled by Secretaries McAdoo and Redfield and recently presented to the Senate. In some cases the increases have amounted to 900 and even 1,150 per cent since the beginning of the war, and according to the report in one year on the basis of exports maintained on a 1914 level the increased rates will make a charge of \$216,224,000 on American shippers, and if imports be included on the same basis the increased rates would reach \$314,864,000, or 141.6 per cent over the usual cost. If normal rates were taken in conjunction with abnormal rates on the same basis, the freight charge on both exports and imports in one year would make a grand total of \$532,110,000.

This means that just that much money is taken out of the pockets of the American people to pay steamship owners abroad.

In the lumber field the situation has a well-recognized effect in that steamship lines will not even consider figuring on shipments of lumber on account of the higher level of rates prevailing on cotton shipments, which, of course, has absolutely closed up any export trade that might legitimately be carried on during present depressed conditions in the home market.

These significant figures are contained in a letter issued by George D. Burgess, president of the National Lumber Exporters' Association, in which he refers to resolutions adopted at that association's recent meeting at Memphis urging immediate legislation to remedy that situation.

The two remedial courses which have so far been presented have been either to purchase outright ships of belligerent countries now tied up in our ports, or to subsidize home building with the idea of building up our own merchant marine in our own ship yards. Discussion of the merits of these two plans smacks too much of the political to warrant space in *HARDWOOD RECORD*. As to the latter plan, it hardly seems that it would offer relief at an early enough date to do much good, while the former suggestion of ship purchase has opened up an agitation which might seriously involve this country. It is not likely this bill will be passed.

There does, however, seem to be one other course that offers a logical method of at least temporary relief that might cover the period up to the time when this country could own sufficient ships of its own

to insure adequate carrying capacity. Under our laws steamship lines operating from ports in this country come within the jurisdiction of our own commissions. These commissions cannot, of course, say that steamship companies must accept the shipments of one commodity or other, or must refrain from discrimination in the granting of space to one line of trade in preference to another. However, it can and should demand that the basis of rates be so regulated that this discrimination will not occur. This statement is made in the full realization that it does not offer a suggestion as to just how to go about securing such action, but we have proved we are amply able to regulate big corporations through the check on the promiscuous advancement of railroad freight rates within our own boundaries. There is no more reason why the foreign steamship companies obtaining their revenue from carrying American goods and taking their revenue from the pockets of the American public should not be amenable to control by this country. We would not for a moment countenance such drastic and arbitrary action on the part of our railway systems under the stress of congested shipments to American ports for export if they were to result from the war. It is hardly more reasonable then to allow steamship lines to draw such an immoderate revenue from the United States, thus profiting so outrageously by the unfortunate circumstances in their own countries. The United States has been criticized by the same country whose ocean carriers charge such exorbitant rates, for seemingly laying undue stress on the pecuniary loss that would accrue through this war to our own citizens. It hardly seems a consistent policy for that power to countenance the maintenance of such an exorbitant freight rate which is existing simply because the shippers must and will stand this loss. Just why this country has not fully investigated this problem long before this is difficult to even surmise. It is not yet too late to institute a rigorous investigation and to relieve American shippers, if possible, from such overwhelming oppression.

The Menacing Carrying Charge

IT HAS BEEN FAIRLY definitely established in a hundred and one ways and on innumerable occasions that the average lumberman is pretty much at sea as far as having an intimate and accurate knowledge of the actual cost of carrying on his business is concerned. It is true that lumbermen as a whole have established themselves as substantial and successful citizens, and the opinion seems to be prevalent that the bulk of money that has been made in connection with lumbering has come from timber holdings.

The upset conditions for the past few years have resulted in demolishing many well-laid plans and have seriously altered the balance between cost and revenue for a great many well established institutions. This overthrowing of traditional methods of figuring has resulted most from that unfortunate peculiarity in the lumber business which makes it necessary to carry raw material for a long period of years, the result of which is not immediately apparent, and which hence has had a tendency to make the average operator blind himself to the unpleasant possibilities. Of course, operating charges and cost of supplies and machinery have advanced remarkably in the last few years, putting an additional tax on the unfortunate manufacturer. He has also had to pay added outlays in increased freight rates and other similar charges, and at the same time has found his markets being encroached upon through the energetic and business-like methods of manufacturers of substitutes for his products. At the same time the dominant factor militating against his investments has been the carrying charges on his timber. The compounding of interest in figuring such charges has rather upset his old plans and ideas and the tremendous increase in taxation and unjust application of tax laws has been an excessive burden hard to bear.

Considering all these factors, it is astonishing that the question has not been more seriously considered heretofore by duly recognized organizations of lumbermen. The seriousness of the conditions presented was brought in an unmistakable light to the members of a northern operators' association, which had the privilege of listening to a most able paper on "Cost of Carrying Timberlands and Its Relations to Markets," which was prepared by C. H. Worcester, a prominent northern operator.

HARDWOOD RECORD will not analyze the paper in this editorial, but will refer readers to the article which appears in full on pages 22-25. Operators would do well to read what Mr. Worcester has to say.

Planing Mill Oak

THE JOBBING PLANING MILLS throughout the country use a large quantity of oak, yet the average hardwood sawmill man manufacturing oak often finds the planing mill trade a difficult one to serve and one in which there is a continual wrangle about grades or some inherent objection to buying lumber on standard rules.

Some idea of the magnitude of the planing mill demand for oak may be had from the showing made in Illinois. Among the wood-working industries of that state the mantle, cabinet work, and interior trim are classed under one general head; and, including both red oak and white oak, there are consumed annually 6,500,000 feet in this line in Illinois alone. In fact there is more oak than any other when the cabinet and mantle factories are included with the planing mills. This does not hold in the jobbing planing mills scattered through the country although all of them use some oak, and the quantity of oak consumption has been on the increase of late years.

Inquiry among planing mills as to why regular grading rules are unsatisfactory and why there is difficulty about satisfying their wants develops the fact that when the planing mill buys firsts and seconds in oak strips and boards it wants lengths running 12, 14 and 16 feet. There is objection to shorter lengths even though some of them can be used and some of the work is cut up into short pieces. The objection is based on the ground that most of the interior work in oak is for base boards, door and window facing, picture moulding and hand rails, and it is difficult to satisfy the builders with short lengths.

A quantity of No. 1 common stock is used, especially in two-inch oak, for window framing, sills and cellar frames, and it seems that a planing mill can use the regular run of stock in this line. When it comes to the interior trim, however, those planing mill men who have used oak in much of this work claim that it is not practical for them to take common or low-grade oak and refine it like the furniture factories do to get the clear cuttings, for they want length in most of their stuff. Of course short stock is used for door and window heads but some of this is naturally acquired in cutting the sides of door and window casing. For baseboard, picture moulding, etc., long stuff in firsts and seconds is preferred, and even at a much higher price it proves more economical.

When the planing mill makes hardwood flooring it is a peculiar fact that there is an insistent call for long strips, even though many of them may be cut up and worked into parquetry. The planing mill men, and even the hardwood flooring manufacturers, find it more economical to buy firsts and seconds in clear oak strips for this work than to buy low-grade stock, because the low-grade will not furnish the lengths required.

There is, of course, room for much argument as to what might and what should be short, and how much short stuff the planing mill man can use advantageously. The stubborn fact remains, however, that among many planing mill men interviewed, who are large users of oak in interior trim, they are almost a unit in the assertion that it is better and cheaper to pay more money and get what they want. When they find a mill that will study their needs and supply lengths and qualities desired, they not only give that mill the preference in their orders but pay at times as much as \$5 more per thousand feet to get what they want.

After all, the purpose of the sawmill man is to serve the needs of his trade and let them pay according to what they get. If the planing mill man wants long stock and is willing to pay for it, it is simply a matter of determining how much above the price on regular lengths and grades should be paid for the special requirements. This planing mill is a growing factor and it has been one of the best consumers of oak lumber during the past year and promises to be even better this year. So it may well be studied earnestly by millmen who are in a position to serve the trade, because satisfaction in this trade is to be had only by making a close study of the needs and desires of the consumers.

OFFICERS AND PROMINENT MEMBERS OF NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS' ASSOCIATION.
 Top, Left to Right: E. A. Hamar, W. B. Clubine, W. A. Holt, G. E. Foster, W. C. Landon. Bottom: R. B. Goodman, J. T. Phillips, M. J. Quinlan, M. P. McCullough.

Wisconsin Manufacturers' Annual

The annual meeting of the Northern Hemlock and Hardwood Manufacturers' Association, held at the Hotel Pfister, Milwaukee, on Tuesday and Wednesday, January 26 and 27 was of unusual excellence in its attendance, in high quality of the addresses and discussions, and in the interest displayed on the part of all members, who in the main stayed right through all the sessions and unquestionably derived a great deal of information that will be of direct benefit to them in shaping their business policies.

Secretary's Report

Acting-secretary O. A. King delivered the first report on association work as follows:

Notwithstanding the depression in the lumber business in the year 1914, the Northern Hemlock and Hardwood Manufacturers' Association had a prosperous year so far as accomplishing a good deal of important work. The association commenced the year 1914 with eighty-one members. During the year six of the above members dropped out—four having suspended operations on account of having cut out all their timber, and the other two felt that they could not afford to be members. However, the association gained seven new members in the same length of time, one of whom is one of the largest operators in upper Michigan. The other six are new operators, so it will be seen that the association is better off at this time as far as membership is concerned than it was a year ago, having one more member and representing a larger cut.

The expense of the association in 1914 was \$24,078.75. This expense was partially offset by the following receipts:

Reinspections	\$691.81
Rate Books	32.75

\$724.56

Consequently, the net expenses were \$23,354.19. Deducting the amount spent for the Forest Products Exposition in Chicago and New York (\$3,231.75) and also considering the larger amount of money spent in 1914 for advertising than the year before, the cost of running the association in 1914 was approximately \$250.00 less than for 1913. This saving was made on the printing bills for sales reports, as recently there have not been very many members reporting sales.

We have yet to hear from four members as to their 1914 shipments, but assuming that they shipped the amounts estimated at the first of 1914, and making allowance for the balance of this year's advertising, the association commences the new year with a balance in the treasury of approximately \$2,000, as compared with a balance of \$3,300 at this time last year.

ESTIMATES

The estimated sales of the members last year were 413,100M feet of hemlock and 265,900M feet of hardwoods and pine. The actual shipments were 400,073M feet of hemlock—a decrease of 13,027M feet, and 253,954M feet of hardwood and pine—a decrease of 11,046M feet, or a total loss to the association of \$832.65, which is much better than was expected. The estimated sales of the members for 1915 are 411,100M feet of hemlock and 261,455M feet of hardwoods and pine—practically the same as for 1914. The association will, therefore, commence the new year with the same estimated sales as for 1914 and with a balance in the treasury, after all bills are paid, of \$2,000—a very good condition of affairs.

Treasurer G. E. Foster said that the balance on hand January 26, 1914, was \$3,369.69; receipts during the year, \$27,491.28; disbursements, \$27,010.14, leaving a balance on hand January 27, 1915, of \$3,850.83.

President's Address

President Goodman then read his annual report which follows in part:

You have seen our program and are anticipating with interest the papers and discussions on the various problems selected. I have but one comment to make and that briefly.

The point I wish to emphasize and which I want emphasized by the trade press in their reports of this meeting, and which every member of this association should carry home clearly fixed in his mind, is that this association is a co-operative organization and that its value to ourselves and to the lumber industry is measured by the extent we individually do co-operate in its work.

Five years ago Mr. Landon began to lay out our work on the co-operation principle—Mr. Hamar extended it still further by obtaining the co-operation of the loggers and the graders, and Mr. Kellogg for nearly five years has pounded this idea into every one of us. It is this spirit of co-operation by which each member is willing to give, not only his three or four cents per thousand, but his weekly report of sales; his monthly report of cut and shipments; his statistics of cost and realizations; his time to committee work and to the special features of the association work that interests him. It is this willingness to co-operate that makes this association valuable, for each one of us gets back in double measure all that he gives. A letter I received the other day on "Cost Accounting" from a lumberman in Kansas City concludes with this paragraph: "It has been said a man's intelligence is in proportion to his capacity to co-operate." With us this means to co-operate in each

doing his share in all things helpful to build and maintain profitable manufacturing and merchandising conditions in our portion of the lumber industry, and as an association to co-operate with other associations for the betterment of the industry as a whole.

Report of Railroad Committee

George H. Chapman, chairman of the railroad committee, said that the only thing of moment that commanded the attention of the committee during the past year was the proposal to advance rates on fuel, and that a hearing on this subject would come up in March, at which hearing the association would have representation.

In talking further along traffic matters, President Goodman introduced F. M. Elkington of the American Freight Traffic Bureau of Milwaukee, who told of the work done by that bureau, and expressed himself as believing that co-operation between it and the association would be for the benefit of the latter. He outlined three plans by which the organization could get together as follows:

FIRST: Handle all matters regarding rate information on a direct arrangement.

SECOND: To act in an advisory capacity, charging only for actual work done.

THIRD: To collect over-charges in freight rates.

Inter-Insurance Exchange Endorsed

Charles F. Simonson, general manager of the National Lumber Manufacturers' Inter-Insurance Exchange, talked interestingly regarding the work of that organization. Mr. Simonson gave the same talk before the Michigan Hardwood Manufacturers' Association meeting at Detroit two days later, and a more detailed account will be found in connection with the report of that meeting on page 28.

After complimentary reference to the plans of the Inter-Insurance Exchange, on motion of A. L. Osborn, the association formally approved of this work and suggested members getting lined up on these contracts as quickly as possible.

Cost of Compensation Insurance

A paper was then read by Chas. H. Crownhart, Madison, Wis., in which the working of the insurance and compensation laws of that state was explained in detail. Mr. Crownhart included in his paper a discussion of the various methods of insurance, for the purpose of compensating injured employes in Wisconsin. The industrial commission of the state looks carefully after this work, assists in carrying out the laws, and collects statistics on which to base rates of insurance. It does this at a yearly cost of slightly over \$21,000. Last year the commission made 453 awards, and adjusted more than 11,000 cases of compensation. The sum paid to the injured men was \$1,080,687.22. In speaking of the plan of the work Mr. Crownhart said:

Under the Wisconsin compensation act and the insurance laws of the state, employers are required to insure their compensation risks with companies permitted to do business within the state, or in lieu thereof, secure an exemption from the industrial commission upon a satisfactory financial showing of ability to carry their own risk. Where the employer carries his own risk, unless he lays by a portion of his earnings to take care of his payments under compensation, he cannot be said to be carrying insurance. He is simply taking his chance.

The purpose of insurance from the employers' standpoint, is to spread the risk so as not to cause a shock, or perhaps insolvency, to the business. From the compensation standpoint insurance assures the injured employe payment of his compensation. Because of the law of hazard, no one can safely say that his risk will be evenly spread over a term of months or a term of years unless he carries insurance.

About 500 employers in Wisconsin are carrying their own risk under compensation. From a financial point of view employers have met with success and up to date there has been no loss to injured employes.

THE UNKNOWN FUTURE

The trouble with allowing employers to carry their risk, so far as the industrial commission is concerned, is that the commission has not sufficient means to determine whether or not a golag concern may be solvent at any given date in the future. Under compensation, payments sometimes extend over long periods of time and in the case of widows, frequently compensation extends from six to nine years. What assurance has the commission that any concern, no matter how solvent, may not become insolvent before the expiration of that period of time?

The commission believes in employers carrying their risk in proper cases, but in order that the workmen and their dependents who are forced to become creditors over an extended period of time, may not lose their vested rights, we think some provision should be made whereby employers carrying their own risk should deposit, within a short time after the determination of the amount due the injured workman under compensation, the present worth of the deferred payments,

with the state or some supervised trust fund, to be there disbursed according to the award.

From a report of June 30, 1914, it was seen that employers carrying their own risk did so at an average cost of 55 cents on \$100 of payroll, while insured risks of the same classifications averaged 83.32

CARE SAVES MONEY

Employers carrying their own risk exercise greater care to prevent accidents. When accidents happen, they exercise better judgment in handling the cases. The injured man is looked after more closely and a greater effort is made to get him back into employment. If the workman cannot take his old job he may be able, pending recovery, to take a lighter job where he can earn a wage. This is good for the injured man and good for the employer. Frequently the man makes quicker and better recovery in such cases. Many a joint becomes permanently stiffened because of lack of use. Men laid off for considerable periods often worry over their condition until nervous disorders are set up which become serious. The digestion is upset, the muscles lose tone, the patient becomes neurasthenic, and really feels as badly as he thinks he does, all from lack of proper interest taken in the man's welfare. Under insurance often the proper relation does not exist between employer and employe, because the employe is turned over to the insurance adjuster, between whom there is a lack of cordiality. These are some of the reasons for lower cost to employers carrying their own risk than where the insurance company carries the risk.

Notwithstanding the lower cost, an employer should not attempt to carry his risk unless he is prepared to pay at least one death loss without undue shock to business. There are 12,000 accidents a year in Wisconsin, each causing a loss of over seven days' wages, besides medical care.

After a brief recess there was a discussion on compensation insurance which was inaugurated by a short talk by W. C. Landon of Wausau. He commented particularly on safe-guarding all dangerous operations, thus saving much in compensation, and said that nothing can be done in liability insurance to keep rates low which will have so beneficial a result as co-operation in prevention of accidents, and that sixty per cent of all accidents are due to carelessness, which is directly reducible by educational work.

Referring to the rate comparisons as outlined in Mr. Crownhart's paper, Mr. Landon said that the rates of the stock companies have been reduced forty per cent in the last three years directly as the result of competition by the mutual companies, and that the reason for the lower cost of this type of insurance is that all revenues go directly back to the interested people.

W. A. Holt asked Mr. Crownhart three questions, namely, regarding the rates on sawmills only; comparison of compensation in Michigan and Wisconsin, and also asked regarding Mr. Crownhart's statement that rates are no higher than five years ago, stating that his rate has gone up from five to ten times what it was at that time.

Regarding comparison of Michigan and Wisconsin rates, Mr. Crownhart answered that Wisconsin compensation insurance cost is sixty-eight per cent, and that the rate should bear the same proportion as in Michigan, which gives only fifty per cent of wages with an insurance cost of fifty per cent.

After discussion on newspaper reports as to the attitude of lumbermen regarding the Wisconsin compensation law, which in the main were derogatory, it was found that the consensus of the members present is very strongly in favor of the law. In fact it was definitely stated that an actual canvass by mail of all the association members resulted in an absolutely unanimous favorable comment on a proper workingmen's compensation act. It was stated that all the member were pleased with the act in spite of the increased premiums, it being especially pleasing that the employers are brought more closely in touch with the employes through the workings of this act.

Mr. Crownhart then spoke further regarding the general workings of the ideal compensation act. He said that inevitably there would be a much broader distribution of all compensation on the population as a whole and he instanced laws in effect in Germany as approaching the ideal.

The meeting adjourned for luncheon.

AFTERNOON'S SESSION—TUESDAY

The first question to come up in the afternoon session was a paper by R. G. Dahlberg of St. Paul on traffic service. Emphasis was laid on three points which ought to be considered in working out transportation rates more equitably for lumbermen. There should be different rates for different grades and values of lumber, so that the

low grades would not be shut out of markets because of prohibitive rates; there should be less discrimination against lumber and in favor of other commodities, some of which compete with lumber; and there should be a better spirit of co-operation between shippers and transportation companies in an effort to live and let live. The following is a summary of his address:

A rate can be a very low rate, still be a bad rate for a shipper; and a rate can be of itself a pretty high rate and still be so adjusted that traffic can freely move under it and therefore be a good rate from the shippers' standpoint. If rates are so adjusted that traffic does not move freely under them they are bad rates from a railroad standpoint, no matter how high they may be. It is therefore essential not only from the shippers' standpoint, but from the standpoint of the railroads, that the shippers take a keen and intelligent interest in the adjustment.

The transportation companies never consult the shippers in an effort to adjust rates satisfactorily to all concerned. It is true that the interests of the two parties are largely antagonistic, in that the carrier wants to get as much as he can for the service, while the shipper wishes to obtain the service at as low a price as possible; but still there are many points worth talking over.

The adjustment of a freight rate is not necessarily merely the question of taking money away from the railroads. It may be possible that you should pay the same as you have always paid, but that the man you are competing with should pay more. Possibly your competitor should pay more and you pay less. It may even be possible by a reduction in freight rates to materially increase the income of the carriers by increasing traffic, but all these matters are properly the subject of negotiations and cooperation between the shippers and the carriers.

There is no lack of disposition on the part of the shipping interest to cooperate with the carriers, and they will favorably respond if given practical opportunity. There is, however, pronounced opposition to being confronted with changed rates, the first notice of which comes in the form of a legally filed tariff, and then be expected to blindly approve the same. That is "taxation without representation" and out of harmony with the American spirit of fair play. Aside from any sentiment in the case, schedules so made up are generally so burdened with inequalities that shippers have substantial grounds for objecting, and would be remiss in their own affairs if they did not object.

The lumber industry produces more traffic than any other, except coal. How often does the railroad traffic manager invite the lumberman to confer with him on ways and means of arranging rates or service so as to enable you to best secure your raw material and dispose of your finished product?

DISCRIMINATION AGAINST LUMBER

The general commodity "lumber" is a low-grade freight, loads heavily, can be transported in any sort of equipment, does not require expedited services, moves steadily throughout the year, and in large volume, is not susceptible to damage, and should consequently take relatively low rates. Instead, lumber now takes relatively high rates.

Take the Northwestern system, which largely serves Wisconsin, as an example. The average revenue per car per mile for lumber for the year 1911 was approximately 17 cents. The average revenue per car per mile of all freight (which includes less than carload freight and perishable freight of all kinds) was 14 cents, so that lumber paid 21 per cent greater revenue per car per mile than all freight.

Grain is in the nature of a perishable commodity, requires particularly good equipment, necessitates the payment by the carriers annually of large sums for loss in transit, delay in reaching specified markets, allowances for cooerage of cars, expenditures for grain doors, etc. Still the average receipts per ton per mile throughout the United States for 1911 on grain was 6.2 mills, on lumber 7 mills.

In the eastern five per cent case the commission reports that the average net revenue per loaded car per mile received on hemlock lumber was 28 cents, oak lumber 16 cents, pine lumber 14 cents, as compared with, for instances, petroleum products 10 cents, sugar 10 cents, agricultural implements 10 cents, dressed meat 10 cents, cattle 6 cents, etc.

Since 1886 the average freight rate throughout the country has been reduced 25 per cent. The average freight revenue per ton per mile in 1886 was a little over 1 cent—in 1911 7½ mills. The lumber rates from Wisconsin and Minnesota territory not only have not been reduced, but in many instances materially advanced over the rates that were actually charged and collected by the railroads in 1886, and this notwithstanding that the loading per car has doubled.

Instances of discrimination against lumber in rates might be multiplied until they include many commodities, some of which, like cement, are direct competitors of lumber.

DIFFERENT LUMBER RATES NEEDED

One of the hardest problems facing the lumberman is that of disposing of his common lumber and this to a large measure is occasioned by the improper adjustment of freight rates, because common lumber will not readily move under rates that can and do move the higher grades. For this reason, with most mills common lumber instead of being a live asset, becomes a drug on the market.

It is in the interest of the transportation companies to produce traffic, and in no way can as much new traffic be readily created as by an ad-

justment of freight rates that will permit the easy movement of common lumber.

The suggestion to accomplish this contemplates splitting up the lumber classification and establishing one basis of rates on the higher grades of lumber, with a lower basis on the commons.

Such a scheme is no innovation, and for it there is plenty of precedence, both in lumber carrying and in other commodities.

Between points in Canada for years the Canadian Pacific and Great Northern railways carried different rates on different grades of cedar lumber. The rate from the coast to Winnipeg on No. 1 and clear cedar was 50 cents, the rate on common cedar lumber 40 cents.

Many railroads in the West have for years carried rates between various points on box lumber, based approximately 80 per cent of the regular lumber rates.

From the Pacific coast the fir lumber rate is materially lower than the cedar lumber rate.

In the South different rates are carried on different kinds of lumber, as, for instance, different rates on cypress and gum, pine and hardwood, yellow pine and cypress, and in some instances, different rates on oak hardwood than on other kinds of hardwood.

Numerous other instances illustrating that point could be cited as precedents for making better rates on our low-grade lumber.

Mr. Chapman asked Mr. Dahlberg to outline the proposition he indirectly suggested regarding co-operation between Mr. Dahlberg's traffic service bureau and the association. It was moved and the motion carried that it was the consensus of the meeting that the new railroad committee should consider the proposition suggested by Mr. Dahlberg and that this service would be of benefit to the association.

Standardizing Safety Appliances

C. W. Price of the industrial commission at Madison, told briefly of the work being performed by his commission in standardizing safety appliances. He said logging roads are not under the railroad commission, and thus come under the scope of the industrial commission work, and that that commission desires to work out standards of safety satisfactory to the mill owners. He suggested that a committee meet with the commission to take up such questions as automatic couplers and safety stakes. He also stated that the commission is not interested in anything not in line with present good practice with practical operations.

Edward Hines of Chicago, in commenting on Mr. Chapman's motion on the Dahlberg proposition, supported it emphatically and said that when he was president of the National Lumber Manufacturers' Association that organization had expert traffic advice and found rates on lumber higher than on all substitutes, thus giving to them an undue advantage in the fight for markets. He maintained that it is a mistake that the association officers in all associations do not have more money at their disposal to carry out legitimate and highly efficient plans, as instanced by the freight rate fight and the general contest between substitutes and lumber.

The question was raised as to the propriety of the Wisconsin association carrying on any general campaign in the interest of lumber, considering the position of the National Lumber Manufacturers' Association on this question.

Timberland Assessments

An address by W. A. Holt of Oconto, Wis., considered the subject of taxation from the lumberman's or timber owner's standpoint. He cited cases where taxes were placed so high that they amounted to confiscation. Timber was assessed at stumpage values absolutely beyond the reach of any buyer. In some instances if the timber were sawed into lumber it would scarcely sell for as much as the assessor laid on the standing trees. Figures showing assessment of acreage were quoted, where the land would not sell for half of its assessed value. When taxes under such excessive assessments are collected on timber, it is impossible for the owner to retain his prosperity without losing so heavily that he is compelled, in self protection, to sacrifice his timber, and let his land fall delinquent for non-payment of taxes. A remedy is needed. The speaker declared that a partial remedy at least would result if the assessing and levying were done with more business judgment and with less desire to hit the men who are trying to carry on the country's industries. At any rate, taxation ought to stop somewhere short of confiscation.

In commenting on the deplorable conditions existing in taxation methods of the various counties of the state, Mr. Holt cited one

instance in which he had actually offered an option to an assessor at one-third the assessed value. He stated that the assessors came out definitely saying that they had been instructed to raise valuations or lose their jobs, and that the blame would be found with people higher up than they.

He moved that a committee of five members be appointed to present the matter to the proper people at Madison with a view of getting taxation on a more just basis. The motion carried. Mr. Osborn was appointed chairman of the committee.

R. S. Kellogg read a paper entitled "Some Troubles of the Lumber Industry," which appears in briefed form in connection with the account of the Michigan hardwood manufacturers' meeting on page 28 in this issue.

R. H. Downman, New Orleans, president of the National Lumber Manufacturers' Association, said that lumbermen are too passive in support of their association and seemingly do not realize the tremendous benefits possible. He gave one instance of result of this passive attitude which came to his notice in New Orleans recently. It seemed that a certain New Orleans lumberman had a claim against a railroad which was based on an entirely just circumstance, that he placed it in the hands of an attorney who shortly reported that the best he could do was a very unsatisfactory compromise and that he would have to charge his fees for the entire amount, which would return a very small sum to the complainant. This man a couple of days after told his case to the secretary of the cypress association, who asked him why he had not put it up to the claim department of that body. The man said he never knew there was a claim department, and that he would be glad to do so. As a result he collected the entire amount and reinstated the former rate, unfair increase in which had been the basis of his claim.

Mr. Downman said that similar instances of lack of interest are constantly coming up. He cited another case of a letter received by ex-Secretary Rhodes of his association from the so-called Society Advocating Fire Elimination in Cleveland. This was such a striking letter that Mr. Rhodes had it printed and distributed broadcast, and at a meeting of the cypress association held in New Orleans a few days later he asked the various directors if they had received it. Quite a number of them had received the letter but only one of them had actually read it. He deplored this disinclination to accept any responsibility and said that results cannot come from working with that attitude.

Manufacturing Cost Discussed

Then followed a general discussion on costs during which the president called on various members for their opinions of cost of logging and sawmilling operations as compared to actual returns on investment. It was developed that very few members had in mind any definite figures although a few gave approximate estimates as to cost of operations and receipts. One stated that the item of real estate is credited with the difference between stumpage value and cost of logs delivered. He said that the cost is from about fifty to seventy-five cents a thousand delivered to the mill. Another manufacturer said that hemlock manufacturing costs \$2.65 through the mill and into the pile, and still another said you can't put lumber from the log pond to the ear for less than \$5.50; \$5 from the pond to the ear with a total cost of \$15, and an average value of products of \$12 was the estimate of another manufacturer. One man stated that manufacturing, logging and raw material costs all that they get for the stuff, and that the only profit his company is making is from the by-products.

The estimate of one manufacturer was that logs selling at \$9 cost \$2.50 for freight and unloading, \$5 to \$6 for manufacturing and sale, making total cost of hemlock \$17. He reported that an actual test of two days' run of logs of 80,000 feet netted an average of \$14.56 proceeds with every item listed. He said, however, that these figures did not give overrun.

It seemed to be the consensus of opinion that lack of specific knowledge showed the necessity of getting together on this subject.

WEDNESDAY'S SESSION

Matt Daly of Duluth, Minn., who is well known throughout the northern logging camps for his missionary work, gave an interesting

address on that subject. He pleaded for a closer sympathy between the employer and employe, making the suggestion as a business proposition, tending toward maintaining increased confidence and hence increased loyalty of employes.

On motion a special committee was appointed to look into the question outlined by Mr. Daly, Mr. Holt being appointed chairman of this committee.

W. W. Brown of the Hamilton Manufacturing Company, Two Rivers, Wis., gave a highly instructive and practical address entitled "Manufacturing Lumber to Fit the Needs of the Consuming Factories." This address is carried in full on pages 26-27 of this issue HARDWOOD RECORD.

With M. J. Quinlan, chairman of the bureau of grades in the chair, a discussion on grading rules and inspection was opened.

W. H. McDonald, chief inspector, said that figures for the past year showed that the inspectors had inspected in customers' yards 674,800 feet hemlock, 4.6 per cent being below grade and 7.9 per cent above grade. In hardwoods 451,787 feet were inspected in the same way with 5.7 per cent below and 3.3 per cent above. Figures in pine were 83,600 feet inspected in yards, 30 per cent below.

Mr. McDonald stated that lath should be given much more attention as far as grading and quality of manufacture are concerned.

There was a total of sixty-nine re-inspections during the year, and of these in hemlock 15.1 per cent was found below grade and 2.7 per cent above grade; in hardwoods, 4.5 per cent was below grade; hemlock lath 33.3 per cent below grade; on pine lumber 15.2 per cent was below grade. There was a total of yard inspections of 1,210,187 feet; re-inspections, 989,975 feet.

Mr. McDonald said that much closer attention must be given to manufacturing, grading and separating of different kinds of timber in making lath in order to keep hemlock in the present standing as a first-class material for lath manufacture. He said further that in making re-inspections he was brought face to face with all kinds and conditions, raising the point that many customers claim they do not receive what is represented to be sold to them. He advised manufacturers just how they could avoid those questions in the future.

Mr. McDonald further said that reinspection of hardwoods as to sound defects was a vital question coming up in reinspection as there is a wide variation in judgment of the inspectors, and even among National inspectors. He said there should be some means of conferring on this question among the heads of the different departments, thus keeping more uniformity among yard inspectors and association inspectors. Mr. McDonald said he believed most retailers are anxious to become better posted on lumber grades and want the co-operation of the inspection department of the association.

M. J. Quinlan of the bureau of grades, in commenting on stock and market conditions, said that stocks seemingly are in excess of last year, but there was considerable curtailment promised for this winter, which would unquestionably result in greatly reducing surplus stocks with anything like normal conditions prevailing.

President Goodman called attention to a diagram (see bottom of page 20) which had been distributed, showing in plotted form variations in cost of product and volume of sales from 1907 to 1912. He said that all must curtail production or wait a long time for readjustment so that the level of prices would be maintained on an even basis.

The morning's session then adjourned.

AFTERNOON'S SESSION—WEDNESDAY

Edward Hines opened the afternoon session with a talk on better business methods, and suggested a number of lines along which there is room for improvement. The association levies an assessment of four cents a thousand feet as a fund for promoting business, and the speaker expressed the belief that three times that would bring much better results proportionately, and might add a dollar a thousand to the returns. If so, this would prove to be one of the best investments that could be made. The importance of getting better prices cannot be overestimated. It seems that everybody else is trying to get more. The railroads are constantly figuring on ways to raise freights, and labor shows no willingness to accept lower wages. It costs more to log, saw and sell, and the lumbermen are under the

necessity of meeting advancing costs. The services of a railroad expert were recommended. His duties would consist in figuring out transportation problems for lumber shippers, showing how to save in freight and how to improve the service in other ways. Mr. Hines expressed his conviction that the lumber business generally would be helped by the organization of the Southern Pine Association.

President Goodman called on Enos Colburn of Green Bay, Wis., who told of methods of manufacturing birch for interior finish. Mr. Colburn said that these manufacturers should put up their birch in such a way that the interior finish companies can buy stock directly suitable for finish as they now have to carry much more lumber than it would be necessary for them to buy if they could get dimensions 6, 8, 10 and 12 feet in stock sizes to conform to the requirements of interior finish manufacture. His paper contained a great many technical suggestions that should prove valuable to birch manufacturers.

Timber Utilization

O. T. Swan of the Forest Service spoke on the subject of timber utilization, in which he reviewed the statistics that have been compiled by the government with a view of analyzing production and consumption of various types of lumber in all classes of consuming institutions. He told of the valuable information contained in this analysis, which would serve as a most effective basis on which to lay out an intelligent trade campaign to work up trade in industries in which certain woods have not found their market as yet.

Cost of Timberlands

C. H. Worcester not being present, R. S. Kellogg read his valuable paper on "Cost of Carrying Timberlands and Its Relation to the Lumber Market," which appears in full on pages 22-25 of this issue.

Advertising Committee Report

With M. P. McCullough, chairman of the advertising committee, in the chair there followed a general discussion of the advertising campaign with report of the advertising committee, the consensus of opinion being very strongly in favor of the continuance of the work which has proven its value as a paying investment. The report follows:

Report of Advertising Committee

We have passed through a very trying year; one in which an unusual amount of red ink has been used, therefore, to realize that our advertising has been of benefit one must see the actual results as evidenced by the records in our secretary's office. Your committee is thoroughly convinced that this feature of our association work is a paying investment, and we are positive that with the experience of the last twenty-seven months greater results will be possible in the future.

As a whole, the lumber manufacturers have not been advertisers to any extent, and there is no question that our business is suffering greatly on account of the active and extensive publicity of the so-called substitutes. We ask you to carefully consider the paper that has been given on this subject by Mr. Kellogg. We must realize that no longer does the consumer of lumber come to the manufacturer as in years past, and that we, therefore, must advertise to him in a general way in

addition to the personal efforts of each individual to market his particular stock.

The results obtained by the advertising of our association have been somewhat at the expense of the manufacturers of other woods in other parts of the country, and it is now very apparent that instead of "knocking" one another we must pull together to offset the inroads being made in our business by the substitutes. We frankly acknowledge that in many places it is not advisable to use lumber, notwithstanding the fact that in the past we may have had that business, yet, due entirely to unscrupulous advertising, many unworthy substitutes have temporarily replaced wood. To overcome the effects of their unfair methods and to promote the use of lumber the Forest Products Federation is being formed. It is our belief that this federation should have the unqualified support of our association.

During the past year we have made exhibits at the Wisconsin state fair, and at four county fairs in the state; the results being very satisfactory. We had a more complete exhibit at the meeting last week of the Northwestern Lumbermen's Association, and Mr. McDonald, who was in charge, will give you his report on it. It is our plan to exhibit at as many of the local fairs as possible during the coming season, as well as before the retail lumber dealers.

We do not believe it policy to go into detail in this report regarding our campaign as we have it mapped out, but we will welcome an opportunity to show our members the work we are doing and the results that are being obtained. From October 1, 1912, to April 1, 1913, we used our total appropriation for that period of \$4,100. From April 1, 1913, to April 1, 1914, our expenditures were \$4,600. You allowed this committee \$7,000 for the year ending March 31, 1915, and we will have a small balance on hand at that time, which, however, will be needed to take care of the replies to this last year's campaign.

We have plans for the 1915 work along much the same lines as in the past, and we ask you for a definite appropriation of \$7,000; the same amount as last year.

It may be much harder for all of us to meet this cost this year, yet we are satisfied that this department of our association work is a necessary one and that it will be impossible to carry on the work to advantage with a less amount. Of course, effective advertising can be carried on for less money but we do not feel that it would be advisable to cut down the appropriation.

This coming season twenty cents per M will be used in advertising cypress. About \$100,000 will be used by a small group of northern lumber manufacturers, and a like amount is planned for by the new yellow pine association. Only a few of the lumbermen are planning larger and greater campaigns for this year, and as we have a product that has merit we can well afford to advertise it.

R. S. Kellogg requested an appropriation of \$100 to help defray the expense of the coming massmeeting of the Forest Products Federation at Chicago. This was appropriated immediately.

Then followed a discussion on the advisability of carrying an exhibit of yard lumber and a discussion on the advisability of following up inquiries from the advertising campaign by personal call.

An emphatic protest was entered against the habit of the local railroads buying construction material from other states at a distance, and on motion it was decided to address a letter of protest to the presidents and purchasing agents, signed by the president and secretary of the association, against this method of doing business.

R. B. Goodman, president, requested a resolution on the establishment of a sales agency to take over the sale of birch of the smaller

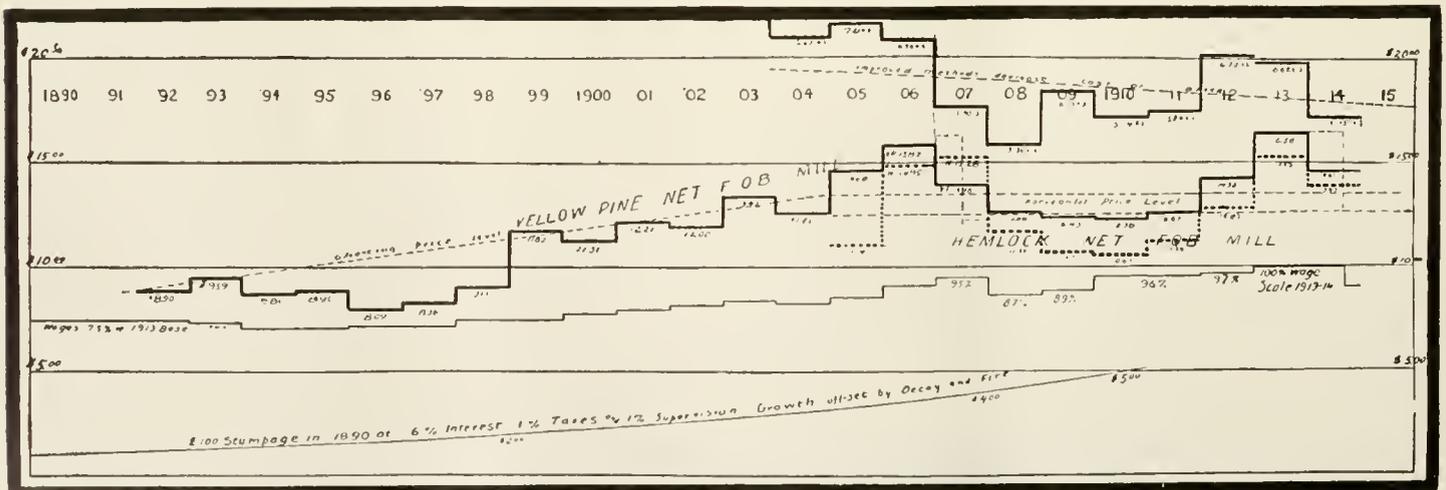

CHART SHOWING VARIATION IN YELLOW PINE AND HEMLOCK PRICES.

manufacturers. This thought had been suggested by Mr. Hines previously.

J. T. Phillips stated he believed the matter should be referred to the board of directors.

J. T. Phillips then read a resolution as follows:

WHEREAS, It is with extreme regret that we learn that this is the last meeting at which we are likely to have with us our long-time associate and brother in business, W. C. Landon, to whose unselfish efforts, sound judgment and wise counsel as president of this association for two years after its formation, and as a director and member of committees since that time a large measure of the progress of this organization is due; therefore be it

RESOLVED, That we tender Mr. Landon this feeble appreciation of services, which we cannot hope to repay, and assure him that in his new undertaking he will constantly have with him our sincerest wishes for his welfare and success.

The resolution was carried by a standing vote.

The nominating committee then reported, recommending the re-election of the officers for the ensuing year as follows:

PRESIDENT—R. B. Goodman, Goodman.

VICE-PRESIDENT—J. T. Phillips, Green Bay.

TREASURER—George E. Foster, Mellen.

DIRECTORS—W. B. Clubine, E. A. Hamer, H. H. Heineman and A. C. Wells.

A new ruling states that the chairmen of the different committees will appoint their own assistants.

The committee chairmen were elected as follows: M. J. Quinlan, bureau of grades; J. W. Kye, statistics and accounting; W. A. Holt, transportation and legislation; M. P. McCullough, promotion.

The secretary cast a ballot for the election of all of these appointees.

The last question up for discussion was as to whether the association should formally join the National Hardwood Lumber Association as a body. The resolution was offered that the bureau of grades be instructed to submit a plan to the directors under which the association members manufacturing one million feet or more of hardwoods annually will become members of the National Hardwood Lumber Association, the fees to the latter organization being paid by the Northern Hemlock & Hardwood Manufacturers' Association.

The resolution was adopted, after which the meeting adjourned.

Some Wrong Uses for Wood

Wood may be put to wrong uses in two ways. It may be too poor for the place it is expected to fill, or it may be better than is required. Of the two wrong uses, that to be preferred is the employment of a higher class of wood than is necessary. Such use is to be discouraged only because the wood might be more serviceable elsewhere. Recent statistics show that in some portions of the South a considerable amount of hickory is made into barn floors, farm bridges, and even board fences. That is wasteful, because the hickory should be worked into handles, vehicles and agricultural implements, for which there is no better wood; while there are plenty of cheaper timbers good enough for rough floors, fences, and bridges. Every wood, as far as possible, should be placed where it can give its best service. The tendency has set strongly in that direction, but much must yet be accomplished before ideal conditions shall be reached.

Fence rails are not made of black walnut now, and to do so would be the height of folly. Neither do Tennessee farmers build their houses and barns of red cedar logs, as they once did. The walnut is now sold for furniture and gun stocks, and the red cedar for lead pencils. However, many wrong uses of wood are still common. The Forest Service, co-operating with states and commercial associations, has published reports of the utilization of wood in most of the states, and a mass of valuable information may be gleaned, item by item, from these reports. Below will be found samples of such items, brought together here to illustrate the wrong uses of wood. In most instances, the woods have been carelessly put to wrong uses, often because that was the easiest thing to do.

Oil well drillers in California make walking beams of California laurel for pumping the wells. These heavy timbers should be sent to furniture factories, and the wells ought to be pumped with Douglas fir beams.

In Texas the frames of barrows are occasionally of hickory. They should be made of longleaf pine, and the hickory reserved for agricultural implements of a higher class.

In the same state house siding of red oak is reported. It is poorly suited to that purpose, but is excellent for inside finish. Any one of the southern yellow pines will give better service as siding.

Alabama manufacturers of kitchen cabinets include black walnut among other woods. In some instances that course would not be open to criticism, for it is conceivable that a walnut cabinet might be appropriate to harmonize with other finish; but such is unusual, to say the least. Walnut's place is in the library and parlor, not in the kitchen.

In the same state white ash is made into boxes. No objection can be taken to that, provided only such grades are sent to the box factory as are not fit for higher use; but the proper place for ash is in the factory that makes handles, boat oars, and certain kinds of cooperage.

Nearly the same use is reported in Missouri for sweet birch, but it is specified for crates rather than boxes. Here again much depends on grades. Some of the poorest is not good enough for much besides crates; but, sweet birch of anything like a fair grade is too good for the box factory.

In some parts of the South, sweet magnolia is found only in box factories; yet 150 years ago this wood was spoken of as a probable rival of mahogany in furniture making. The heart wood is extremely handsome. Its beauties seem to be overlooked at present, and it is found with the most ordinary woods at the box factory.

In New York, manufacturers of fences report the use of ash. Pine, oak, or hemlock would last longer and the ash could be employed in some other way.

In the same state the makers of shoe lasts work cherry. Possibly some particular pattern requires this wood; otherwise it is poor economy to give cherry a place which sugar maple, at half the cost, can fill better. Piano makers need the cherry.

Manufacturers of flooring employ some woods which are not the best to be had, if wearing qualities are considered. However, some floors are not intended to resist wear, and soft woods answer. Cucumber floors are reported in New York, basswood in Kentucky, and balm of gilead in Minnesota. Numerous other woods too soft for wear are mentioned in various state reports. White pine is still made into flooring. It was once in great demand for that purpose. The demand now falls principally on maple, birch, beech, oak, longleaf pine, and Douglas fir.

Basswood jackcrews are made in Minnesota. That would seem to be one of the poorest woods for that article. Hickory, maple, beech, birch, and oak are in use.

House siding of birch is listed among Arkansas manufacturers. That wood always belongs indoors. Its place is for furniture and interior finish. The logical wood for weather boarding in Arkansas is yellow pine.

In the same state shoe lasts are made of persimmon. Doubtless that wood makes a good last, but its best place is in the manufacture of shuttles, and the demand for it in that line is much greater than for lasts. The lasts can be made of sugar maple.

Railroads in Michigan use hickory for cattlestops. A cheaper wood serves better. Hickory is not durable when exposed to the weather. In Ohio this wood is reported for wagon beds. It is heavy, and besides the great strength and resiliency of hickory are practically wasted when the wood is made into wagon beds.

In Vermont scythe snaths are made of cherry. There is no necessity of making them of that wood. Ash is better and cheaper.

The foregoing instances of wrong use are selected as samples only. They might be extended almost indefinitely.

Timber Charges and Lumber Markets

BY C. H. WORCESTER.

Author's Note

This caption to an article outlines a big subject, which covers the operations of some 200,000 timber owners and about 50,000 sawmill operations scattered all over the United States. I do not pretend to be able, nor do I wish to attempt to cover in the following remarks anything except the conditions pertaining to our own section of the country, principally the northern peninsula of Michigan, and I wish it understood that in the following remarks I do not attempt to detail the conditions existing in any other part of the country.

The value of stumpage has in the past been established by the price at which lumber could be sold, the value of the stumpage being arrived at by deducting from the market value of the lumber a profit and operating cost—the balance representing the value of the stumpage, and inversely, in some cases, the market price of lumber has been sustained and upheld by the fact that the price of stumpage seldom has shown any retrograde movement. The movement has always been upward, but I think we will all agree that during the past five years over-production of lumber and under-consumption of the same have been running a race in opposite directions, and the law of supply and demand, without any relation to the cost of production or stumpage prices, has regulated the price, and so far as the value of softwood stumpage of this country is concerned, the market has been such on the finished product since 1907 that the majority of the softwood stumpage in this country cannot be sold today at any more than it sold for in 1907—seven years ago, and certainly the state of the lumber market at present does not warrant charging against the manufacturing operation any higher rate of stumpage.

If this be true, what becomes of the old saying that well-bought stumpage will carry taxes and interest and show a profit when cut. It will perhaps be argued in support of our partially discredited saying that because hemlock was worth \$2.00 to \$2.50 per M in 1906 and 1907 and the present selling price of hemlock lumber is such that it does not warrant any higher price for stumpage today, this situation is the result of disturbed business conditions unprecedented in the history of our country, and that the lumberman is to blame for this condition because he continued to manufacture more lumber than the country wanted and in the resultant sales competition the price of lumber has been artificially depressed. Other optimistic supporters of the situation will say "this depression is only temporary; it will soon be righted." We all hope fervently that our optimistic friends are right, but at the same time, it is the part of wisdom to face the facts of the situation and read the sign posts along the way.

FACTORS MAKING FOR OVER PRODUCTION

I think we will all agree that, commencing with 1907 and continuing with intermittent sunshine and gloom, we have had up and down disturbed conditions in the lumber business throughout the country. Prices have several times gone below the cost of production; part of the time they have been on a profitable level, but during the majority of this period over-production has been pronounced and continued, and average prices for the period 1907 to the close of 1914 have been such that, speaking generally and averaging the situation, there has been little if any advance in the value of soft wood stumpage in our section of the country, and from reports which I receive from other sections and offers which are constantly made, I believe that practically the same situation exists throughout the United States.

Over-production during periods when business conditions were such that the market would not readily absorb all the lumber manufactured, is undoubtedly the principal cause of the unsatisfactory condition

of the business and if there were no other contributing causes the lumbermen might well be blamed for not only causing his own losses but also those of timberland owners who have no other connection with the business and are entirely blameless.

One of these contributors to over-production is the growing country wide movement to substitute for lumber steel and iron, concrete, clay products, paper roofing, paper boxes, etc. These substitutes for wood are being aggressively pushed by organized campaign methods and have made serious inroads upon the normal consumption of lumber and it is now estimated that substitution has reached such proportions that it will prevent any increase in the total consumption of lumber in this country thereby taking away from the lumbermen and timberland owners the expected benefits from a natural increase in consumption of lumber proportionate to the natural increase in the volume of national business of all kinds.

Our conservationist friends in the various associations organized for that purpose in this country and the United States Forest Service point out that the lumbermen are at fault and are making their own troubles, manufacturing more lumber than the country needs and not only ruining one of the great businesses of the country, but also wasting important and necessary natural resources of the country by wasteful methods of cutting and artificially depressing the value of standing timber.

To this indictment the lumbermen must plead guilty, but at the same time they also enter in justification the plea of self defense. The fact is that the lumbermen of this country are being driven. They are not voluntarily running a reckless, thoughtless race. Most of them have no choice. It is a case of "Needs must when the devil drives" and in this case there are several devils, the most prominent among them being our old friends—interest and taxes—a team always on the job, working days, nights and Sundays, and driving the lumberman to do the same thing. Carrying charges on standing timber are increasing, due to the compounding of interest, the large increase in taxes, losses by fire and wind storms and increasing cost of care and surveillance. Happily, interest rates have not increased, but the total annual charges are such that large number of lumber manufacturers are forced by financial need to cut more lumber when the price is low than when it is high, as they must have certain sums of money each year with which to pay accrued debts and interest and taxes. When the price is low they must cut more lumber, as it requires more feet at the lower price to provide the funds. There are a large number of lumbermen in exactly this predicament and also a large number who are not in this condition. Those who are in debt feel that they have no choice; regardless of price, they must continue to run their mills to their limit of production. In times of depression these concerns, through necessity, demoralize prices by their eagerness borne of necessity, to sell. As before stated, there are many lumbermen who are not heavily in debt and not forced to run their mills when prices are such that there is no profit, but here again the twin devils, interest and taxes, are driving days, nights and Sundays, and the interest money, which in most cases represents income upon which to

C. H. WORCESTER, CHICAGO, ILL.

live, is just as dear to the investor in stumpage as it is to the investor in farm mortgage or municipal bonds. The pressure is greatest on the man in debt, but it is there also with the man who is not in debt but fears to lose the legitimate interest which is his due.

LONG TIME TIMBER INVESTMENTS A SERIOUS BURDEN

About all of this pressure on the lumberman to manufacture more lumber than the country wants arises from exceptional features which are the foundation of the business and which create a unique situation in the commercial world for the lumberman. I refer to the fact that a majority of the lumber manufacturers of this country are obliged to own and carry on hand the raw material with which to run their mill for from ten to twenty years. Consider this a minute. How many manufacturing concerns outside of the sawmilling business do you know of that have more than a few months' supply on hand of raw materials? There are a few minor industries, such as quarries, clay working concerns, cement works, etc., that have a stock of raw material sufficient to support their operations for many years, but these supplies are of the cheapest character and represent very small investment of capital. Fifty-five per cent of the steel and iron industry of this country carry only a few months' supply of ore on hand, while only about forty-five per cent carry any considerable reserves, but in this latter case the value of the ore in the ground is only about five per cent of the value of finished pig iron, while the lumberman's raw material represents from fifteen per cent to forty per cent of the value of the finished lumber. Probably ninety per cent of the manufacturing concerns in this country carry only a few months' supply of raw materials on hand, the carrying charge of which is a very small tax on their business. If by any chance the directors of a furniture factory found themselves in the position of having ten years' supply of lumber on hand and heavily in debt for the purchase, what would they do? They would probably go into the lumber business at once and get rid of it as quickly as possible by selling it on the open market, but if they found they could not do that at a profit, they would undoubtedly run their factory night and day and make it up into something salable as fast as possible and get down to a few months' supply, expecting the sawmill man to carry the raw material and supply it to them as they are ready to cut it up and make it into furniture. The factories that use lumber, the railroads and the contractors would regard a proposition to carry in stock a few years' supply of raw material as a ridiculously unbusinesslike proposition, involving the use of large amounts of capital, expense of interest, taxes, risk of fire losses and deterioration. Why carry such a stock when the lumbermen are there to do it for us? The lumberman has always done this and why should he not continue to do so indefinitely? The answer is that the lumberman has done this in the past because he could afford to and the holding of large stocks of timber was in the past a profitable part of his business. Large groups of land acquired from twenty to thirty years ago at \$1.25 to \$5.00 per acre could be carried twenty years at compound interest and still show a good profit, but the lumberman who bought his stumpage at prices ruling in 1907 does not find himself in the same position. He paid \$2.00 to \$2.50 in 1907 for hemlock and he finds that this stumpage today has cost him about \$4.60 and if carried eight or nine years more will cost him close to \$9.00. He also finds that the average cost of logging is greater and also the cost of his stumpage has doubled. He cannot sell his lumber for enough more in 1914 to equal the increase in the cost of the stumpage and the cost of logging and producing the lumber. With the menace of constantly advancing cost of raw material what does the average lumberman think? He thinks that he must cut this timber or it will eat his head off. He runs his mills night and day and doubles his cut. His neighbor does the same and the result is an overstocked market, intense competition for business, falling prices, no profit, temporary cessation of production; then, when the market commences to show a little strength, all go at it again, driven on by interest and taxes. This process has been in full swing for some time back and the question is—what will it do to the timber resources of the country?

LUMBERMEN FAVOR CONSERVATION BUT FIND IT IMPOSSIBLE

Conservationists employed by the government preach the gospel

of saving the timber for future generations, and the lumberman would hail with delight the means which would make it practicable to cut timber closer, utilize waste and conserve his raw material. The lumberman knows how to do it if he is allowed to do it, but on the present cost of production and the present margin of profit—or I might say lack of profit—no lumberman can adopt any conservation methods in the conduct of his business, as it would certainly increase the cost of production and cause a loss instead of a profit at the end of the year. The lumbermen know what ought to be done and would be glad to co-operate with the government foresters to the end that their raw material might be conserved, but the same government which advocates conservation also employs trained lawyers whose business it is to prosecute all who by agreement among themselves attempt to manage their businesses so as to accomplish what the government conservationists advocate. The lumberman is certainly being driven from the front and rear and there does not seem to be any place to sidestep.

Here is a commodity necessary for the welfare of the country. The supply each year becomes less. The growth of new timber in most cases is a negligible quantity. The end is not far off; yet the owners of this timber cannot afford to conserve it under present conditions.

I have enlarged upon the conditions existing in the lumber business because I believe it necessary to outline what effect the unsettled state of the lumber business has upon the cost of carrying timber, for certainly a loss in value on standing timber is part of the carrying charge.

Many owners of stumpage claim that the value of lumber is in the end determined by the price of stumpage and the increasing cost of timber will force lumber prices constantly higher. This I believe to be a fallacy. We hope it will be true, but in reality competition among lumber manufacturers is actually competition between stumpage owners to sell their trees in another form, and just so long as lumbermen stumpage owners offer their converted trees upon the market at low prices, just that long will the value of standing timber be depressed and thereby entail losses in carrying timberlands. In the last analysis lumber and standing timber are the same. An owner of standing timber in the upper peninsula of Michigan cannot sell his trees to the man in Illinois who wants to build a house. He must sell to the lumberman and the lumberman must buy the trees at a price determined by the value on the competitive market of the lumber which he can make from the trees offered to him.

If we are to secure any advance in the value of standing timber to compensate owners for the annual increase in cost, this increase must come through increased value of the finished product lumber, but the tendency of the lumber business at present is against this increase, against conservation of timber resources. In the absence of any regulating medium, we have an era of unrestricted competition; prices will decline, costs will increase and the lumberman will feel driven to get out from under as fast as possible. So long as this condition exists the cost of timberlands will bear no relation to the price of the finished product and timberlands will be carried at a loss.

INCREASING COST OF CARRYING TIMBER

The cost of carrying timberlands presents many interesting factors and in the following pages I have endeavored to trace the cost of carrying stumpage in the upper peninsula of Michigan, commencing with the year 1907.

We frequently read and hear references to the growth of timber as an offset to the cost of carrying stumpage. In some sections of the country, in certain classes of timber, this annual growth may be reckoned as of value during a period of twenty years, but in the territory which we have under consideration—the upper peninsula of Michigan, I think the experience of the past twenty years indicates that this growth is more than offset by the deterioration of timber which has reached its maturity and has started on the down grade. Certainly the growth of the younger timber would be offset by the deterioration of timber which has reached its maturity. I have solicited the opinions of many lumbermen in the upper peninsula of Michigan on this subject and they are unanimous in the opinion

that, taken as a whole, the forests of this section are deteriorating at a greater rate than the annual growth of the timber which has not yet reached its maturity. Therefore, as related to this territory, the item of annual growth may be considered as negligible.

An item of cost in carrying timber, which is by no means negligible but which cannot be ascertained definitely, is the damage done to timberlands by fires which occur annually all over the country, burning over cut over areas, eating into the edges of virgin forests and causing in the aggregate a large amount of damage. We are all spending considerable sums of money yearly to protect our forests but this does not suffice for complete protection, and damage continues more or less annually. This loss by fire, coupled with the damage from wind storms and insects, is large in the aggregate, but so indefinite in character that it can only be guessed at.

A few years ago we noticed that all our tamarack trees were dead, and some of us on inquiry learned that from the eastern edge of the peninsula extending west to Duluth and north up through Minnesota the same condition prevailed. We now know that the saw fly has killed eighty per cent of the tamarack timber in the upper peninsula of Michigan. The value of this timber has never been computed, but in the aggregate it is very large. These are real risks occurring annually, which should be offset by a sinking fund in the nature of an addition to the cost of carrying timber, as we do not know what any year, fire, cyclone or destructive insects may cause serious damage to our forests. The amount which should be included in carrying charges to compensate for losses of this kind cannot be accurately determined and the opinions of those who have had experience must be taken as a guide. These opinions vary according to individual experience; some have suffered more than others from damage to their timberlands and these are inclined to rate it as high as two per cent per year. Others put it as low as one-half per cent. An average of opinions solicited is close to one per cent of value. I have, therefore, adopted this figure as a part of the annual carrying charge.

The cost of taxes has been definitely ascertained by compiling returns from timber owners in each county in northern Michigan covering the period 1907 to 1915, and the progressive increase in cost of taxes is certainly alarming. There is no doubt that the increase in taxes works to prevent conservation, as it is a source of constant

pressure against the timber owner, driving him to realize and get out from under an accumulation of expense, and the only way the timber can be realized on is by conversion into lumber and other finished products, thus defeating the principle of conservation and adding new burdens to an already over-supplied lumber market.

Interest rates used in computing carrying charges vary from five per cent to six per cent, but most of the financing done by lumbermen in the form of bond issues consists of issues of six per cent bonds, which are sold to bond dealers at from 92c to 95c on the dollar, with an additional charge for expenses of examining the property covered by the mortgage, which is about equal to a further discount in the selling price of two per cent. A large part of the bond issues which have been floated on timber properties have netted the lumberman only 90c on the dollar. Most of them have run for ten years at six per cent, the discount equals an additional one per cent for the period, making the interest rate paid \$7.00 per year on the \$90.00 secured by the lumberman from the sale of his bonds, which is very close to eight per cent. At eight per cent, with the taxes added, the cost of timberland increases alarmingly fast. For the purpose of our computation six per cent is certainly a conservative figure for use in this case.

In order to arrive at a starting point for a computation, we have endeavored to ascertain the average value of the various kinds of timber growing in the northern peninsula of Michigan during the period 1907-8, and I have solicited the experiences of many lumbermen and timber owners in this section of the country, and have selected many actual sales and purchases made during that period, which, together with the opinions given, form a basis for an average of price ruling at that time. Some of the figures used were very low, placing hemlock at \$1.00; others placed it as high as \$3.50. The location of standing timber and the relative cost of getting the logs to the market enter so largely into the value of the standing timber that it is only by securing averages of this kind that dependable figures representing an average of the territory in question can be secured, and in making this computation I have endeavored to secure an average.

As the variety of timber on our lands is large, consisting of about sixteen different kinds of saw-logs and a list of other products in

TABLE No. 1 Jan. 1, 1907 - Jan. 1, 1915

addition, the task of distributing the taxes on forty acres of timberland equitably upon each item presents some difficulties. To simplify the matter some, short cuts were necessary which did not affect to any extent the accuracy of these figures. We received detailed estimates on 26,559 acres of timberland, covering practically all the forest counties in northern Michigan, with detail of all taxes on each description from 1907 to 1915.

Eliminating from the calculation such items as hemlock bark, cordwood, and making an allowance for ties, poles, etc., we computed the value of these lands, using the average stumpage prices ruling in 1907-8 for the different kinds of saw timber, secured as previously described. The taxes on these lands were then subdivided proportionately for each year, giving us the yearly taxes on each kind of wood, and it should be noted that the taxes have increased 146 per cent in the last eight years.

This process enables us to make the following table (see page 24), commencing with an initial cost January 1, 1907, and bringing the cost down to January 1, 1915, of each kind of saw-log timber which is of importance:

The figures in this table, which are too numerous to read in detail, are worthy of careful study. They show, perhaps more clearly than we have ever before realized, just how stumpage costs mount up year after year, and that if we bought stumpage, or had it in our possession on January 11, 1907, we must calculate that the cost on January 1, this year, was almost double that of eight years ago. The question that faces us, as stumpage owners, is whether we can sell our stumpage at prices which will let us out on these costs. The answer is given in the lumber market of 1915, as in the last analysis lumber and stumpage are the same, stumpage being what there is left out of our lumber prices after all costs of logging, manufacture and selling are deducted.

At this point, therefore, having ascertained the cost of our stumpage which has been carried since January 1, 1907, we can do no better than add on the actual operating cost so well presented by R. B. Goodman at the October association meeting. This I have done, in the following table, to which I have added a line giving the average selling prices for rough mill run lumber at interior Wisconsin and upper Michigan mills in 1914.

The last line of table No. 2 is the one that tells the story. It shows conclusively that based upon what were acknowledged to be fair stumpage values eight years ago the present average selling prices for lumber make a loss of from 50c to \$6.00 per thousand feet of lumber manufactured in that year.

Extended comment on this situation is unnecessary. We must either get more out of our timber, or incur greater loss each year, as carrying charges mount up with fatal persistence.

EDITOR'S NOTE: The foregoing is an address made by C. H. Worcester of Chicago, Ill., before the Northern Hemlock & Hardwood Manufacturers' Association in session at Milwaukee, Wis., January 26.

No Chance for Over Production in Memphis Territory

There has been a slight further increase in production of hardwood lumber in Memphis and the Memphis territory during the past fortnight. It is emphasized, however, that a number of the mills which have resumed are not running more than from fifty to sixty per cent of their full capacity and that there are still quite a goodly number which have made no preparations whatever to start up their machinery again. Taken as a whole, production for this section is still sharply below normal, and, while there may be some increase in the near future, it is pointed out by milling interests that it will be quite difficult to bring the output up to anything approximating normal even if conditions should become sufficiently favorable to justify this course.

This view is based largely upon the scarcity of logs available for immediate use. The millmen say that weather conditions have been such during the past few months that they have been able to make very little progress in getting out timber and, while some few of the larger firms are well supplied with logs, this is by no means true of the rank and file. It has been raining, sleeting, or snowing almost uninterruptedly in this territory for the past three or four weeks and the amount of clear weather since Thanksgiving day has been perhaps smaller than ever known for the same period. The ground is thoroughly water soaked throughout this entire section of country and the situation, from a logging standpoint has been very bad. This weather has very greatly restricted logging operations and these were further cut down during August, September, October and November as a result of the war in Europe which caused practical stoppage of both logging and milling.

One of the officials of the Valley Log Loading Company is authority for the statement that there are not 1,000 cars of logs to be handled on the Yazoo & Mississippi line of the Illinois Central and the Memphis-Marianna cut-off of the St. Louis, Iron Mountain & Southern, on which this firm operates log loading machinery. He says that there is only one loader in operation and that the company is loading about 300 to 400 cars per month, or between twenty and twenty-five per cent of its normal capacity. He does not see prospect of any material increase in the amount of timber in the near future, declaring that weather conditions have been such as to make preparation of timber for marketing almost impossible. This company loads from seventy-five to eighty per cent of the timber received at Memphis and at a number of points in the Memphis territory and its statement of logs in sight and the amount of timber being loaded is accepted here as quite trustworthy.

Lodgepole pine, one of the principal trees of the Rocky Mountains, makes good strong wrapping paper and pulp board.

Meeting the Consumers' Needs

Editor's Note

The following paper was read by W. W. Brown, of the Hamilton Manufacturing Company, of Two Rivers, Wis., before the Northern Hemlock and Hardwood Manufacturers' Association in session at Milwaukee, January 27.

I think you will all agree with me that the tendency these days is for the manufacturer to take his lumber direct to the consumer wherever it is both economical and practical. This is true not only with the lumber but with many another business, and where it is economical and practical, is bound to produce good results, providing the two parties can get together on a standard basis and deal honestly and intelligently with each other.

In order to accomplish this, each must know something of the other fellow's business. The lumberman must know the needs of the different manufacturers in order that he may cut his lumber to suit the market. The manufacturer should know something about the lumber business to be able to deal intelligently with the proposition, because it is not only a lumber proposition up to the time the manufacturer receives it, but it is a lumber proposition with the manufacturer on through his dry kilns, cutting department, planing department and gluing department up to the time the various parts are ready to be assembled into the manufactured article, and then after it gets to the finishing room, it is more or less a lumber proposition in the way the different kinds of wood take the finish and the difference in the texture of the same kind of wood in taking the finish.

For example: take a car of quartered white oak that is composed of lumber sawed from logs gathered together from different sections of the country—some cut from high land where the trees are more exposed and become hard and tough, and some from the denser timber of the low-lands where it grows larger and is of a softer quality; cut it up into the right dimension—say in a lot of fifty cabinets, and according to our experience the cabinet maker will be able to produce only twenty-five to thirty cabinets out of fifty that are matched up for color and that will finish evenly. The other twenty to twenty-five cabinets, having from twelve to twenty drawer fronts, will look like Joseph's coat of many colors no matter how careful the finisher may be, because of the different texture and hardness of the lumber.

We have found that by buying quartered oak from one tract of timber where there isn't any blue wagon makers' or highland oak mixed in, we reduce the number of cheap cabinets from twenty to twenty-five out of fifty to five or six out of fifty. The same trouble was experienced in mahogany. This trouble is done away with, however, by buying from a company that gets its logs direct out of one district or tract of timber; instead of from companies that have an assortment of logs derived from several districts along the African coast.

The manipulation of grades, except where there is an agreement or understanding between the lumberman and manufacturer, has caused considerable trouble and is a practice which I think ought to be eliminated. Neither side is wholly to blame. The manufacturer on the one hand, who insists on a cheap grade and won't pay the market value for the full product of the grade he wants, is much to blame, for the lumberman in order to sell his lumber must manipulate a grade for that particular price and give the fellow a cheap grade in quality as well as in price. In the end the manufacturer will find that he has been paying a good price for what he is getting, especially if the lumberman is a little unscrupulous and carries his manipulation to such an extent that it more than offsets the difference in price. On the other hand, there are lumbermen who seem to be looking for the fellow who doesn't understand lumber and is an easy prey to manipulation whether or not he pays the full market price for the lumber.

Most of the progressive lumbermen today express a desire to sell their lumber on a straight grade basis and demand a fair price, and it seems to me that this is the only way. The manufacturer would be ahead in dealing this way and he can and ought to help in many different ways. First, by learning something about the lumber that he can test the different grades in his factory and determine what is the

most economical for his use. Then he knows exactly what he wants and can give this information to the lumberman that he in turn may manufacture his lumber to suit that trade. Some manufacturers think they are giving away cherished secrets to take the lumberman into their confidence and tell him how they cut up the timber and what use is made of it. It strikes me that that is rather a foolish attitude to take, for the more a lumberman knows about how the lumber is cut up and what it is used for, the better can he serve the interests of the manufacturer.

To know which grade or combination of grades in the different kinds and thicknesses of lumber we should buy in our plant at Two Rivers, we conducted a few tests, by testing one grade against another or against a combination of grades. The first was in the 1/4 birch, which is cut into lengths from 11" to 4', used in the manufacture of printers' goods. In this stock we tested No. 1 common, No. 2 common, and No. 3 to find out the most economical grade to use. We made several tests of each grade and the result was that the clear product derived from the No. 1 common, figuring it at \$26.00 per thousand, cost about \$31.00 per thousand, figuring the waste and labor in cutting and handling. The No. 2 common, figuring the lumber at \$18.00 per thousand, cost about \$24.50, and the No. 3 common at \$16.00 per thousand cost \$32.00. You can see by these tests that the 1/4 No. 2 birch works up at a saving of \$6.50 per thousand over the No. 1 common and \$7.50 per thousand over the good No. 3 common. These tests prove that where the No. 2 grade is graded on a clear cutting basis and your cuttings are from one foot to four feet, that it is the most economical grade to use.

The next test was in 5/4 basswood. This stock we cut up into cuts from 4' to 8' lengths for engraving boards and print boards. These must be clear white, both faces, not even a brown or black streak the size of a lead pencil being allowed, and they must be free from all crossing marks. We have been buying 5/4 winter sawed basswood firsts and seconds, but most of it was sawed in the summer, and were getting the No. 1 and better the full product of the grades both brown and white in color, paying a good price for a first and second grade. Some lumberman had tried to make us believe that if basswood were sawn in the winter it was white. The consequence was that only about one-half of the product worked into the article for which it was intended and one-half of the stock had to be used where a good No. 2 and 3 grade was good enough. The loss in working off the half of the 5/4 was about \$20.00 per thousand. That is quite an item where you use from 100,000 to 150,000. We now buy a No. 1 common and better grade of white basswood and make a saving of several dollars per thousand, although we have to pay a little more, and buy a No. 2 and No. 3 common grade to take the place of what was culled out of the No. 1 and better mixed colored stock. The same was true with the 6/4 basswood, only we used up the waste from that at a much less loss.

In the 5/4 white maple the test was similar to that of 5/4 basswood, but the loss was not so great, effecting about a \$10 loss on about one-half of from 100,000 to 125,000 per year.

These are only a few of the many instances already tested out. In fact, we have only begun to get at the bottom of the matter. I have a number of other tests which I am now working on and expect to get equally as good results as in some of the tests mentioned.

The economic use of lumber is a study that every consumer ought to take up, for it not only means a saving in dollars in the cost of his material for the present year, but will help to prolong the timber cut of the country, thereby keeping prices within a reasonable limit for years to come. There is considerable work being done in conserving the timber of the forests and it is right there should be, for if there is any natural resource in this country that has been abused and wasted, it is timber. But what is the use of conserving

the timber if the product of that timber is mis-used and wasted after it is cut into lumber. The manufacturer and consumer cannot afford to go on like this indefinitely, spoiling lumber by mis-manufacturing and earing for it, using lumber that doesn't suit his purpose, and peddling a large share of it around town for firewood. The manufacturer can no more afford to waste the lumber than the sawmill man can afford to waste his timber without expecting the price of lumber to advance needlessly and the cost of production to go beyond reasonable bounds.

Both the lumberman and manufacturer are to blame for this needless waste—the lumberman for not specializing enough in the manufacture of lumber, oftentimes to poorly manufacture and care of it and in a great many cases to sell his lumber in the wrong market or to a consumer whose needs do not suit. The consumer, on the other hand, is to blame for not buying the right kind or quality that is the most economical and suited to his purpose—sometimes through ignorance, sometimes through carelessness or oversight.

From what experience I have had in lumber, it seems to me that if the lumbermen would specialize more in the manufacture of their goods, they would realize much more out of their product and find a more ready market. From this I mean, not to try to cater to all the trade by cutting up one kind of lumber into a dozen different thicknesses and that many grades, thereby spreading their stock out so thin that there is nothing left to any of the grades, especially the thinner stock; where the larger and better logs have been cut into thick stock. With the ordinary mill, where they have only 2,000,000 to 5,000,000 of hardwood lumber all told, it is impossible to cut all thicknesses of lumber and satisfy the different consumers' wants properly. If you have a good run of birch, for example, and you want to sell to the finish trade that takes a No. 1 and better unselected grade, saw your birch all 1", and with careful sorting your lower grades will be up to standard and give satisfaction.

I had some experience along that line when I was shipping lumber. One place my people had about two million feet of birch lumber cut from 1" to 2"; the better logs cut into thick stock No. 1 and better. In shipping the 5/4, 6/4 and 8/4 we experienced no difficulty in satisfying our customers. When we shipped the 4/4 we sorted out the 1 and 2 red and the No. 1 red, which went through fairly well, although there was complaint that it was not wide enough. Sawing the thick stock was to blame for that. Then we sorted the 1 and 2 plain, together with the one-face 1 and 2 plain, out of the No. 1 and 2 common grades to ship west for finish lumber; the 1 and 2 face 4" strips for flooring and moulding trade. And what was left of the No. 1 common and No. 2 common we sold and started shipping, but the first cars hadn't any more than reached destination before I got word not to ship any more of the No. 1 and 2 common birch. Somebody bought that birch who knew lumber and knew that it was robbed, and I don't blame him for kicking because it was not only skimmed on top by the choice No. 1 and No. 2 common getting into the thick stock, but it was skimmed on the bottom by sorting out the red common and choice red 2's; on one side by taking out the finish, and on the other side by taking out all the good strips. And a grade skimmed on four sides is mighty poor stuff and can't very well satisfy the easiest kind of a customer. Now had that stock been sawn into 1" and 1 1/4" or 1 1/2", or even a small amount of 2", being careful not to saw all the best logs into thick stock; throwing part of them into 1", and shipped straight grades without sorting out the red, strips and finish, there would have been no complaint.

Last spring I was in the market for some 4/4 No. 2 and better maple. One company quoted me a price so low that it looked like a bargain. I went to look the stock over to see what it was like and I found about 200,000 of 4/4 maple, sawed all the way from 3/4" to 1 1/4" thick, poorly edged and trimmed, nothing over 8" wide and all lengths piled together on 10-foot foundations, thus allowing the 16-foot to project about 6 feet to the weather. The crossings were so badly out of line with each other that there was scarcely a straight course in a pile. The foundation timbers were laid on an old fill without putting any new slabs or hog-feed under them; consequently they settled unevenly and the lumber became twisted. They had in the first place about a half million feet of good maple, sold all

the veneer logs, cut all the No. 1 and better thick stock they could, and the 4/4 that was left was jacket boards and lumber from small logs. There was a fairly good grade of narrow No. 1 and No. 2 common in the stock at that, with perhaps a sprinkling of five per cent of seconds, and would have been good lumber for a flooring mill had it not been almost entirely spoiled in sawing and by poor care. No manufacturer could afford to take that stock at \$10 per thousand unless he was going to cut it into very small cuts. Where lumber is mis-sawed, crooked, twisted, weather beaten and checked on the ends, it is impossible to get any sized cuttings without an enormous loss.

In the manufacture of lumber the first thing to be considered by the sawmill man is the size, quantity and quality of his logs and if he has a large enough amount of any one kind and they run good to quality and size, by careful engineering he can cut from two to three different thicknesses without needlessly robbing any one thickness.

The second consideration is the sawing and manufacturing. Care should be taken that the stock is full thickness when dry and is properly edged and trimmed.

The third and very important consideration is the proper piling and care of the lumber. A grade of No. 2 common well taken care of is of more economic value to a manufacturer than a No. 1 common grade that has been poorly piled and is stained and warped out of shape.

By careful study in regard to specifications for lumber, I find that very good results can be obtained by using the grading rules compiled by the various lumber associations. One can almost always find some grade or combination of grades that will meet every requirement. There are cases where a special length and width works up to better advantage but we must also keep in mind the fact that it costs more money and oftentimes the difference doesn't offset the extra cost.

In dealing with the lumber proposition along these lines, the manufacturer can greatly assist the millman by not forcing him to cut any more special stock than is absolutely necessary, and having left a large amount of stock on his hands that has been robbed and is hard to get rid of, and which does not fully satisfy the people to whom it is shipped. I believe that if the lumberman, in a case where his stock has been robbed or is below standard, would be honest and frank with his customers and tell them the exact condition of the stock and make a small concession in price according to how much the grade has been damaged, he would not experience the trouble in getting rid of that kind of stock and satisfying his customers that they do where the stock has been misrepresented and the consumer has become disappointed. Oftentimes the consumer can use just such a grade to good advantage if he knows exactly what it is, but you can't expect him to buy that grade at the same price that he can purchase the full produce of the grade for. I believe the time is here, with a little more frankness and understanding between the lumberman and the manufacturer, when these differences will be reduced to a minimum.

Oak Crating and Pickets

Several recent incidental international news items should hold considerable interest for manufacturers using oak lumber. One of these is contained in a consular report from New Zealand, dealing with the new merchandise trade going to that country and Australia through the Panama canal. Some complaint was made of packing which was supplemented by the remark that one decided improvement in packing merchandise for export is the substitution of oak and other tough woods for pine. The oak has greater strength and holding qualities, and while it is not recommended as straight box wood, this opinion should lend encouragement to the use of cull oak in crating furniture and many other articles going abroad.

Another international item tells of an inquiry for 5,000,000 oak squares for pickets to be used in constructing entanglements in the war zone. It is easily evident from these that there are many opportunities to use small dimensions and cull oak in lines of work which manufacturers have not heretofore sought to exploit extensively.

Michigan Manufacturers Meet

The mid-winter meeting of the Michigan Hardwood Manufacturers' Association was held at the Hotel Pontchartrain, Detroit, on Thursday, January 28. Unsettled conditions of the hardwood trade resulting in the desire among all manufacturers for opinions of their fellow lumbermen brought out an unusually large number of prominent manufacturers from all over the state.

President Charles T. Mitchell of Cadillac was in the chair.

Report of Secretary

The first regular business was the report of Secretary J. C. Knox as follows:

Conditions arising from events both in the United States and in foreign countries have had a large influence on business in all lines of industry in this country and have knocked out all previous calculations and figures for the last year and for the present. Notwithstanding this, general business here seems to be improving, but no one can predict at this time just how soon all business will assume its normal basis.

Our stock reports will show an increase of production over the estimate given a year ago of 11,000,000 feet, with two more members reporting for the actual output than reported for the estimate. The difference in hardwood production can be traced to one or two manufacturers who cut more than they anticipated they would at the beginning of the year. The difference in hemlock is about 15,000,000 feet more, with one less member reporting than a year ago. However, the estimate for the coming year is over 100,000,000 feet less than the 1914 cut in hardwoods, and 6,000,000 feet less in hemlock. Several mills have closed down.

Assessments levied on shipments of hardwoods from October 1, 1913, to October 1, 1914, have netted us \$2,924.08, with several members yet to hear from.

In discussing the treasurer's report, Secretary Knox said there was a nice balance in the general fund and also in the forest fire fund. He stated that the balance of the general assessment of one cent per 1,000 feet will be called for on May 1. He asked for better co-operation among the members in preparing reports of recent sales in order that all members may benefit by this authoritative information.

On the question of lumber freight rates Mr. Knox said that the Michigan rates were advanced October 26, 1914, to points in Michigan at too great a proportion in comparison with rates in Wisconsin and the upper peninsula of Michigan where an advance of five per cent was made. The Michigan advances were based on a permit from the Michigan Railroad Commission and were made to within ninety-five per cent of the new sixth class. This basis is not satisfactory to lumbermen of Michigan and the rates have been protested in an effort to place shipments on an equal basis with other competing territory. According to Mr. Knox, the working of the combination of general advance of five per cent and the allowed advance in Michigan territory will mean a total advance of at least seven and one-half cents.

There was no regular report of the grading committee, but there was a general discussion on grading problems, the general theme being a plea for the maintenance of present rules in effect.

Market Conditions Report

The market conditions report has always been a feature of these meetings, W. C. Hull of Traverse City being chairman of this committee. The report, while not mining matters nor endeavoring to gloss over the tone of the situation, was in the main satisfactorily optimistic. A lessened production but slightly increased stock in 1915 resulting in a smaller quantity of lumber for sale at this date than a year ago, were the contentions of the report. The market conditions committee came out emphatically in favor of the adherence to a reasonable amount of conservatism in manufacturing lumber during the coming year, or at least for a few months of the manufacturing season. If all the members would adhere to this policy, in the opinion of the market conditions committee, the situation will become very much clarified.

The report emphatically stated that there is no cause for anxiety as to No. 3 hardwood stocks, expressing as the opinion of the members of the committee that by January, 1916, any excess of No. 3 hardwood will have disappeared entirely. The present accumulation is the direct result of the railroads refraining from purchasing ties

into which this class of stock has been going for the past two years. The report continues:

"Old contracts are being speedily renewed and many inquiries are out and ties are being exported. The box business also shows signs of improvement."

R. H. Rayburn reporting for the legislative committee on employers' liability said he believed there would be no change made in the present liability legislation.

Fire-warden Hiekok, employed by the association, said that a new game warden will shortly be appointed and recommended that the association endorse both officially and through the personal efforts of the members, the application of R. H. Rayburn, member of the association for this position. He said Mr. Rayburn has not solicited the office, but is willing to accept it in behalf of the lumber business.

Inter-Insurance

In an address by Charles F. Simonson, Chicago, manager of the National Lumber Manufacturers' Inter-Insurance Exchange, he explained in detail the points of superiority of inter-insurance when compared with the methods of stock companies. The two main features of superiority, according to his explanation, were the less cost and the equal security of inter-insurance. The property included in the risks is widely scattered and conflagrations cannot endanger much of it; while that danger is perpetually present in cities and congested industrial centers.

The speaker insisted that the campaign against wood as a building material was based on false premises and reached erroneous conclusions.

It is idle to say that shingle roofs add unduly to the hazard, as there are undoubtedly many so-called composition roofings composed of tar and asphalt which are more inflammable and conduct heat more rapidly than wood shingles.

When you consider the use of wood in building construction and the increased cost of fireproof construction, what advantage was there in the so-called fireproof buildings which in Baltimore and San Francisco conflagrations suffered loss as high as ninety-eight per cent in the fire districts.

There is no question that the solid heavy plank and timber floor construction without openings, on columns of wood, has many advantages, and is the very best type of construction that can be used to resist fire in any building. Being in solid mass the wood is not quickly ignited, and burns very slowly, and tests show that a 12"x16" timber is weakened but about twenty per cent if burned to a depth of 1". Structural iron or steel, unless completely protected, softens rapidly, buckles under heat and collapses quickly when water strikes it, and many buildings so protected have been totally destroyed when subject to fire test.

So-called fireproof construction has not proven satisfactory, when put to the test as shown in such notable instances as the garment workers' fire in New York a few years ago, and the Edison plant a few weeks ago. The records show that fires have generally been controlled in buildings with solid plank floors, and there is no question that such a building will present greater resistance to fire within, and where it has brick walls, the equal to so-called fireproof construction from a fire without.

Mr. Simonson stated that the exchange will start writing business on February 15.

After a discussion on various pertinent features of the general insurance business, the association went on record as supporting the new exchange.

Some Troubles of the Lumber Industry

R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, pointed out a number of lumber troubles and suggested remedies. He said in part:

The business is second to the largest in the United States. Since 1850 the sawmill cut has approximated 2,000 billion feet, and there yet remains in private ownership enough timber to cut that much more.

Yet no fortunes have been made in lumbering. If wealth has resulted it has come from dealing in timberlands, not in cutting timber.

The claim has been repeated many times that waste is too great, that mills are taking timber faster than it is growing. It may be taken for granted that there would be little waste if it were possible to avoid it. No lumberman has ever wilfully wasted his capital. If he has sent only the best grades to market it has been because there was market for those grades only.

Much is heard of the campaign in favor of wood substitutes. The campaign is vigorous, and is backed by enormous advertising funds, while the promoters of wood are spending comparatively little for advertising. Because lumber is only lumber they seem to think there is little use of advertising, and it is left to sell itself. Last year there were \$600,000,000 spent in the United States for advertising purposes.

The National Lumber Manufacturers' Association has been trying to maintain the position of the lumber industry on less than \$20,000 a year. Limestone men in a single state have raised an advertising fund five times as great; the California raisin growers are spending \$100,000 a year to advertise raisins; one wall board firm pays \$125,000 a year for publicity. An examination of the advertising pages of magazines, trade papers and journals and newspapers generally brings out the fact that wood falls far below other building materials in the advertising received. In one list of papers, wood's pro rata of advertising was 6.5 per cent; other building materials aggregate 93.5 per cent. In another list wood's advertising was seven per cent to ninety-three for other building materials. Again the ratio was thirteen for lumber and eighty-seven for substitutes. In another list wood received six per cent of the advertising, substitutes ninety-four per cent. In only one instance under investigation did lumber receive one-third as much advertising as was given to substitutes. Cement interests pay hundreds of thousands yearly for advertising. The same is done by pressed brick, prepared roofing and metal building material.

Is it not time to look the problem squarely in the face? Eighty per cent of all buildings put up in the United States have wooden frames. There is much more to lose, and the promoters of substitutes are doing all they can to take the business away from lumber.

Mr. Kellogg suggested ten remedies to try in hope of bettering the lumber business, which, reduced to bare outline, are as follows:

1. The lumberman should work in the dark no longer. He should

establish clearly and scientifically what it costs to manufacture and sell lumber.

2. The utilization of timber tracts must become much more efficient and complete before the lumber industry can be put upon a stable basis. Ways must be found to market more than one-third of the volume of wood per acre.

3. There should be a greater insistence upon honest grades of lumber. Too many times the lumber business has been discredited by juggling with grades and by the substitution of grades because the consumer was ignorant of the rules.

4. In many kinds of timber there should be a greater diversity of grades carefully framed to meet the needs of various classes of consumers. The buyer does not generally object to paying a fair price if he gets what he wants.

5. Forest products should be sold more intelligently; that is, upon much wider and more complete information concerning the requirements of all classes of consumers.

6. The lumber manufacturer should tell the consumer how his product can be used. In the words of a prominent sales manager—"Lumber used to be bought, now it must be sold"—and it must be sold in the face of strong competition.

7. The public must be educated to the real merits and uses of wood, and the education must be a continuous process, not spasmodic.

8. The lumberman must have more faith in his own product. No man ever sold goods long and successfully who didn't believe in them heart and soul. The lumberman who hasn't the courage of his convictions when he undertakes to sell lumber, better be selling something else.

9. The only way to reduce the waste of forest resources equally deplored by lumbermen and conservationists is to restrict the production of lumber to market demands.

10. The lumber industry in the future must cooperate much more effectively than in the past through associations of producers. Lumbermen must learn what other successful manufacturers knew long ago—that in order to make money, money must be freely spent for promotion.

At the conclusion of his talk, Mr. Kellogg told of the necessity of raising funds immediately to defray expenses of the massmeeting of lumbermen to be held in Chicago on February 24 and 25. His request for \$100 was immediately granted by a special motion, after which the meeting adjourned.

Louisiana's Oldest Sawmill

The New Orleans *Lumber Trade Journal* of January 15 published an account of the discovery of the ruins of an old sawmill sunken in the mud and hidden by vines near Baton Rouge, La., and surmises that it "may have been the first sawmill in the South." Dates on the castings show that the mill was built in 1796 or later.

The mill built in 1796 is entitled to due respect, but it lacks a lot of being the first sawmill in the South. Perhaps every southern state had sawmills earlier than that. Louisiana had them long before that time. A semi-official report by a British officer named Philip Pittman, proves that fact. He visited the various settlements in the Mississippi valley during the period intervening between the French and Indian war and the American Revolution, and his report was published in London in 1770, under the title "Pittman's Mississippi Settlements." Bearing in mind the date of that publication—twenty-six years earlier than the date on the old sawmill castings recently discovered near Baton Rouge, the following paragraph, from page 60 of his report, and referring to Louisiana, is significant:

"Many of the planters have sawmills which are worked by the waters of the Mississippi in the time of floods, and then they are kept going night and day till the waters fall. The quantity of lumber sent from the Mississippi to the West India Islands is prodigious, and it generally goes to a good market."

The traveler made his way slowly northward through the Mississippi valley, visiting all the settlements and making particular note of such development as came under his observation. Nearly a thousand miles inland from the Gulf, and within the present state of Illinois, nearly opposite what is now St. Louis, he had this to say of mills (page 85):

"Mons. Paget was the first who introduced water mills into this country and he constructed a very fine one on the river Cascasquias [Kaskaskia] which was both for grinding corn and sawing boards. It lies about one mile from the village. The mill proved fatal to

him, he being killed as he was working in it, with two negroes, by a party of Cherokees, in the year 1764."

There is reason to believe, but positive proof may not be obtainable, that there was a sawmill near San Antonio, Texas, two hundred years ago. If some one should carefully dig out the early sawmill history of the South some very interesting facts would be discovered.

Modern Rip Saws Pay

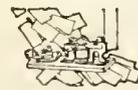

It pays the sawmill man making dimension stock and doing other ripping to use the modern self feed rip saws of large capacity rather than undertake to do quantities of work with the old hand feed machines. Considerable attention has been centered recently on ripping up planks and flitches and doing dimension work at the sawmills because of a pretty general cleaning up of thick stock. There is indication that much more of this class of work will be done during the year. Some of the hardwood mills while not operating the main saw have put in part of the time during the winter and spring trimming and ripping up lumber to fill orders and to fit it for market. It is in this work that both economy and greater capacity can be obtained by the use of modern types of power feed rip saws. The old hand feed rip saw is a mighty useful machine and is not surpassed in general utility. Moreover, every mill should have one or more, but when it comes to quantity of ripping there is economy in having the modern machines which save elbow grease and reduce cost.

It is estimated that the government's Grand Canyon game refuge, in Arizona, now contains about 10,000 deer.

More than 9,000,000 young trees and 10,000 pounds of seed were planted on the national forests in 1914.

Interesting Traffic Developments

Determined protests were lodged at the State Department last week in behalf of the H. Weston Lumber Company of Logtown, Miss. This company owns extensive timber tracts in Chihuahua, Mexico, and has been advised that timber stealing on a large scale is in progress on its property. The prostration of the civil authority in Chihuahua makes appeal for police protection impossible. The State Department is asked to request the military element in power there to furnish protection to the American holdings. The State Department is inclined to doubt that any important stealing of timber is in progress, due to the difficulties of securing a market. The Weston company acknowledges that its information is not direct, as its representatives were forced to leave Mexico a year or more ago. The State Department has instructed American consuls to call the matter to the attention of General Villa.

Carriers have been ordered by the Interstate Commerce Commission to pay reparation to lumber companies in the following cases: J. W. Turnbull Lumber Company versus the Atlantic Coast Line; Rawlinson Lumber Company versus Western Railway of Alabama; Lathrop Lumber Company versus Mobile and Ohio; Krauss Bros. Lumber Company versus Yazoo & Mississippi Valley; W. A. Davis Lumber Company versus St. Louis, Iron Mountain and Southern; Mingo Lumber Company versus Norfolk & Western; Consolidated Lumber Company versus Minneapolis, St. Paul & Sault Ste. Marie Railway; Trexler Lumber Company versus Illinois Central; Wm. B. Lukens Lumber Company versus Florida Central; Cyrus C. Warren versus New Orleans & Great Northern; Roddis Lumber and Veneer Company versus Minneapolis, St. Paul & Sault Ste. Marie; J. W. Darling Lumber Company versus Louisiana Railway and Navigation Company; Kraetzer-Cured Lumber Company versus Yazoo & Mississippi Valley; Snow Lumber Company versus Southern Railway; Trexler Lumber Company versus Philadelphia & Reading; Vestal Lumber Company versus Seaboard Air Line; Elm City Lumber Company versus Atlantic Coast Line; Berthold & Jennings Lumber Company versus Illinois Central; United Lumber Company versus Baltimore & Ohio; Bolz-McBride Cooperage Company versus Mississippi Valley Railway Company; Wm. Schuette & Co., versus Illinois Central; Willamette Box and Lumber Company versus Southern Pacific; Ohio Valley Tie Company versus Louisville & Nashville; Frost Johnson Lumber Company versus Kansas City Southern; Houston Bros. versus Illinois Central; Paine Lumber Company versus Cincinnati, Saginaw & Mackinac.

Applications by carriers to be relieved of the provisions of the fourth section restrictions with regard to rough, green fir lumber in Oregon and California have been denied.

The case of the Davis Brothers Lumber Company versus the Chicago, Rock Island & Pacific was dismissed last week. The case of the Meeds Lumber Company versus the Alabama Central was ordered reopened.

Rates on lumber and forest products from Wisconsin points to various destinations within the city limits of Chicago have been attacked by the J. S. Stearns Lumber Company of Chicago and the A. S. Pierce Lumber Company of Rhinelander, Wis. These companies declare that any rate in excess of ten cents from certain points on the Chicago & Northwestern is unreasonable. Heavy reparation is asked.

A brief has been submitted by the Louisville & Nashville in the case brought against it by the Powell-Myers Lumber Company of South Bend, Ind. The case involves the question of through rates on lumber for reconsignment between Alabama producing points and middle western destinations.

Overcharges said to have been made by the Minneapolis, St. Paul & Sault Ste. Marie form the basis of a complaint registered by the Bradley Timber and Railway Supply Company of Duluth.

The case of the Des Moines Sawmill Company versus the Minneapolis & St. Louis Railway will be heard February 25 in Des Moines by Examiner J. E. Smith.

Commissioner Daniels has set March 23 as the date on which he will hear evidence in the important matter on stoppage of cars in transit to complete loading or to unload partially. The hearings will be held in Chicago.

Proposed increases of rates on various kinds of lumber in carloads from southern producing points to Ohio river crossings, St. Louis, and to points beyond, have been suspended until July 28. The same order covers lumber traffic originating in Missouri and Arkansas and destined to gulf ports. The carriers designated October 1, 1914, as the date on which the new rates were to become effective. The commission suspended the rates until January 28 for investigation. As this has not been completed, the suspension date has been advanced to July 28.

In view of the fact that the Ashley, Drew & Northern Railroad has been divorced from the Crossett Lumber Company of Crossett, Ark., the Interstate Commerce Commission has ordered that it is not to be considered longer as a tap line. The railroad is being operated by the Arkansas, Louisiana & Gulf Railroad Company which has taken the road over on a lease with an option to purchase. None of the revenue now being earned by the railroad is going directly or indirectly to the stockholders of the Crossett Lumber Company.

Rates between West Virginia producing points and stations on the Pennsylvania railroad are attacked in a claim presented by the Forest Lumber Company of Pittsburgh against the Morgantown & Kingwood Railroad et al. Reparation also is asked on numerous shipments that have moved.

Weekly Wages on Sawmills

The Bureau of Labor Statistics, Department of Labor, has published a bulletin of 160 pages dealing with wages in different fields of the lumbering business. Most of the figures are for the years 1912 and 1913, but some go back to 1907, and a few are much older. The figures are compiled in tables and are then manipulated in all the ways known to the arithmetic laws of permutation, to show all percentages and other changes that may be rung on the combinations. The nub of the statistics relating to sawmill wages for 1912 and 1913 is given in the following summary:

Occupation.	Weekly wages 1912.	Weekly wages 1913.
Doggers	\$11.06	\$11.22
Edgermen	15.97	16.28
Laborers	19.03	19.40
Machine Feeders	11.07	11.34
Band Sawyers	33.47	33.90
Circular Sawyers	31.03	31.71
Gang Sawyers	18.86	19.02
Resawyers	15.41	15.77
Setters	15.29	15.71
Trimmer Operators	12.73	13.20

It may here be seen that wages have shown a slight tendency to increase. Figures which go further back indicate a like tendency generally since 1908, but during 1907 wages were frequently higher than in any succeeding year.

Wages for furniture makers, based on general averages, are given for the two years:

	1912.	1913.
Cabinet Makers	\$13.20	\$13.30
Hand Carvers	17.44	17.41
Chair Assemblers	11.10	11.32
Finishers	11.44	11.81
Machine Hands	12.30	12.50
Upholsters	16.33	16.42
Veneers	12.36	12.45

J. H. HIMMELBERGER, CAPE GIRARDEAU, MO., PRESIDENT

E. B. BURNS, HUNTINGTON, W. VA., FIRST VICE-PRESIDENT

RALPH MAY, MEMPHIS, TENN., SECOND VICE-PRESIDENT

Hardwood Manufacturers Meet

Attendance at the thirteenth annual meeting of the Hardwood Manufacturers' Association of the United States was very gratifying considering the general depression throughout the country and the disinclination on the part of everybody to spend even traveling money. The attendance was representative and the sessions closely attended.

President J. H. Himmelberger, Cape Girardeau, Mo., called the meeting to order on Thursday morning, January 28.

Mayor Frederick S. Spiegel of Cincinnati in his address of welcome told of the many attractions offered by the city, and extended a most cordial welcome to all of the visiting lumbermen. His expression of cordiality was further emphasized by Alex Schmidt, president of the Cincinnati Lumbermen's Club, who in his address brought in the question of the advisability of establishing a national merchant marine.

R. L. Hutchinson, president of the Hutchinson Lumber Company, Huntington, W. Va., raised a laugh in his response to the addresses of welcome through the humorous tone which he adopted.

President's Address

President J. H. Himmelberger, in his annual address, reviewed the business history of the past year as far as it is of concern to the lumbermen. There were some features in that history on which he preferred not to linger, because many things were not pleasant to bring in review. The last of the unpleasant circumstances have not yet wholly passed, but the lumbermen are showing a willingness to go ahead in the best way possible and do business in as good a manner as they can, while expecting better things in the future. A summary of his address follows:

When war with its loss of life and destruction of property has ended, a great deal of reconstruction must be done in the regions where hostilities have done their work, and lumbermen in America must not overlook the opportunities brought within their reach.

Many large questions are before the lumber interests of this country. Success depends upon the skill with which these problems are solved. One of the most important of these is the marketing of lumber. Lumbermen have spent too much time fighting one another and too little in fighting in a common cause where all have equal interest. All should stand together and push wood against substitutes, and should waste less time and energy in contending over the respective merits of grades, rules and different kinds of lumber. Fortunately, the financial situation does not appear to be giving anyone much concern at this time. The new banking law seems to be able to provide for any contingency that is likely to arise.

The National Lumber Manufacturers' Association has recently put into

the field a new insurance organization, known as the National Lumber Manufacturers' Inter-Insurance Exchange. The purpose of this exchange is to furnish reliable insurance to lumber manufacturers, planing mill operators, etc., who meet the requirements, at a reasonable cost. Insurance organizations of this character are past the experimental stage, and have been operated successfully for many years, and at a very considerable saving to the policyholders.

If the government's attitude toward business were a little more friendly the result would appear in the form of greater confidence among business men.

The manufacturers of lumber have it in their power to advance their own interests by making closer study of efficiency and giving more attention to manufacturing costs. They have a promising field for more efficient marketing by becoming better acquainted with their customers' needs.

The Forest Products Federation has come before the lumbermen of the country as a candidate for favor. There is a large field for its activities. An educational campaign is in contemplation no less than a purely business campaign.

Treasurer's Report

The treasurer's report showed a very satisfactory balance on hand with all expenses paid.

Cash in Bank, January 16, 1914.....	\$ 5,698.49
Cash in Office, January 16, 1914.....	.07
Cash Receipts of year ending January 16, 1915.....	23,051.13
Total cash	\$28,749.69
Disbursements for same period.....	25,209.97
	\$ 3,539.72
Balance to Bank.....	\$3,537.73
Cash in Office.....	1.99
	\$3,539.72

Report of the Secretary

Secretary Weller then read his report, which follows:

Nineteen Hundred and Fourteen would not be considered by association workers an ideal year for promoting the interests of their organizations. It is usually expected that periods of business depression shall cause a loss of interest, and a falling off of membership that will necessitate careful nursing to bring the organization back to its normal working condition; but our experience the past twelve months has been just the opposite, and we have come through a year marked by more than 18,000 failures in 1,655,496 concerns doing business, or 1.10 per cent of the whole number (the largest percentage in fifteen years) with an increase in membership, and what is even more gratifying, a membership that is thoroughly alive to what this association means to it, and which always stands ready to give its support to any movement that is for the betterment of the industry.

WM. H. WELLER, CINCINNATI, OHIO,
SECRETARY

LEON ISAACSEN, COAL GROVE, OHIO,
TREASURER

R. H. VANSANT, ASHLAND, KY.
DIRECTOR

We have not made so much of an effort the past year to increase our membership as we have to serve those we already had and bring about a closer relationship between our members in the different parts of the country.

Our members have gotten away from the old idea that in looking for a place to curtail expenses their association must be the first sacrifice. There is only one conclusion to draw from this and that is, that it is to the interest of their business for them to support their association, and treat it as if it were a part of their own business. Business men are not swayed by sentiment—association work with them is purely a business proposition and is in accord with the modern business idea, which is coöperation.

The number of inspections for the year has been reduced about forty per cent over 1913. This can be attributed in part to the smaller volume of lumber shipped, and also to the fact that our members are shipping more uniform grades than formerly. In this we see some of the results of our education work among the mills. An analysis of reports made by our inspectors brings out a point to which I want to call your attention, viz.: a great many complaints that can be easily eliminated, are due to careless manufacturing, and in urging you to watch your grades closely we also suggest that you do not overlook this very important point, which gives your customer just cause for complaint and reacts not only upon you and your fellow lumbermen, but upon your association.

Throughout the year we have supplemented the mill instruction work, which was carried on so vigorously last year with inspection schools, which have been held at convenient points by Chief Inspector White. These schools have been well attended and those who have been fortunate enough to attend them have become enthusiastic supporters of this work, and want it repeated at frequent intervals. The method of work is substantially this—the chief inspector selects several hundred line boards of the different species of wood and numbers them consecutively. Each inspector goes over the entire lot and his grades are recorded. The chief inspector then follows and passes on each board, and all points of difference are discussed and threshed out. It is here that we get results. Every man who has a wrong idea of the interpretation of any point in our rules is given special attention and set right. After the work is completed, a statement is furnished each employer which shows the record of the inspector, not only of his own, but all who participated in the work. He can then determine just where his men are weak or strong, as the case may be, and whether he is giving away his lumber, which means his money, or causing him endless trouble and making for him a reputation of unreliability by making grades that do not represent what he has sold.

We believe these inspection schools furnish the very best means yet devised for our members to keep a check on their grades. Unquestionably, we are getting closer to the much talked of and desired uniform grades, but there is still room for improvement, and your association is always ready to help you.

Our commercial report has come into such demand that it is now distributed weekly. Nearly every member of the association uses it as a guide to help him in his credits. As stated in previous reports, it is not intended to take the place of commercial agencies, but to supplement them by furnishing reliable interchange of ledger experience among our members. Non-members who are interested in this report may see how it operates by calling at our headquarters here in the hotel.

The financial condition of the association is excellent. The statement which has just been read shows a most gratifying condition of the

treasury, and it will please you to hear that we start the year with all bills paid up to time of closing the books.

We have continued the fight against substitutes begun last year, and have given our support in every possible way to all movements which have had for their object the development of a larger market for lumber.

The Forest Products Exposition at Chicago and New York last May furnished a fair example of what lumbermen can do toward educating the public. While this association did not make an exhibit, it gave the exposition its financial and moral support and helped to make it possible.

The executive board held four meetings in the past year—the dates being April 4, July 11, October 10, 1914, and January 27, 1915.

If you have had occasion at any time in the past year and a half to examine the schedules of the government for hardwood lumber, you have noticed that the rules of the Hardwood Manufacturers' Association were given equal prominence with other rules. On inquiries for construction oak, our rules only are specified and great quantities of oak timbers and other hardwood lumber have been bought by the government on our rules. If any of our members are interested in government inquiries and are not receiving them and will notify the secretary's office, he will see that they receive them.

I wish to thank all of you for the hearty support you have given me the past year and assure you that it is my earnest desire to serve you in every possible way.

THURSDAY AFTERNOON'S SESSION

In the absence of F. C. Gifford, secretary of the National Association of Box Manufacturers, his address was read by E. H. DeFebaugh. Mr. Gifford expressed the firm belief that the box business is gradually assuming a much more favorable condition. He went pretty thoroughly into the question of wood versus wood substitutes, referring specifically to the highly organized associations of substitute manufacturers, who have adopted the most modern merchandising methods in marketing their products through publicity and proper educational work among possible consumers as to proper uses of those materials.

Referring to the Prilham case, he said that paper packages now in use compared to the total number of containers, all classes, are the same as the quantity used two years ago, and further stated that the lack of initiative among lumbermen and the tendency to let the other fellow do the work have resulted in unsuccessful attempts to combat the growing markets for wood substitutes.

Mr. Gifford's paper, however, was very hopeful as to the future of this fight, stating that there is unquestionably a closer co-ordination of the lumber interests which will surely result in ultimately perfecting an organization that can actually accomplish something in this tremendous conflict.

Mr. Gifford's paper estimated that 5,500,000,000 feet of low-grade lumber is handled annually by the box manufacturers, who as a consequence consider that the fight for wood is their own fight.

R. H. Downman of New Orleans talked on the work done by the National Lumber Manufacturers' Association in behalf of the trade

C. F. SIMONSON, CHICAGO

ALEX SCHMIDT, PRESIDENT CINCINNATI LUMBERMEN'S CLUB

R. S. KELLOGG, CHICAGO

in general and asked emphatically for the moral and financial support of the Hardwood Manufacturers' Association.

J. M. Pritchard, secretary of the Gum Lumber Manufacturers' Association, Memphis, spoke on the subject "Gum" and told of ambitious plans on foot for the coming year.

President Himmelberger called the attention of the association to a meeting which was held the day before by the executive board, at which the following resolutions were formulated addressed to the Interstate Commerce Commission and railroad presidents.

TO THE INTERSTATE COMMERCE COMMISSION

The Hardwood Manufacturers' Association, having as members the majority of the important hardwood manufacturers in the southern states, and voicing the interests of more than 5,000 small hardwood manufacturers in those states, notes with alarm the decision and order issued in Docket 184, increasing the rates on hardwood lumber from those states, and in view of the hearing on Docket 520 now being held covering tariffs suspended, carrying all of the advances asked for by the carriers in 184, ask that the order issued by your commission in 184 be suspended until the hearing in 520 has been finished and your commission has had an opportunity to review the great volume of testimony the hardwood lumbermen have put in the record, showing that more than seventy five per cent of the hardwood mills in the South are now closed down and many others operating at a loss, and that inevitable disaster will follow if the railroads continue the short-sighted policy now being pursued in burdening this industry with rates which the business cannot stand, even in normal times. Freight rates on lumber are now proportionately higher than on any other commodity, and we think a readjustment should be made placing lumber on a fair basis as compared with other commodities. The railroads, while suffering from loss of tonnage, are securing full tariff rates on all freight that moves, whereas prices of hardwood lumber have declined correspondingly with the decline in the volume of business. The record in 520 is the most complete record ever made showing the condition of a particular industry, and we trust the inflexible sense of justice of the Interstate Commission will grant this appeal.

TO THE RAILROADS

The Hardwood Manufacturers' Association, having as members the majority of the important hardwood manufacturers in the southern states, and voicing the interests of more than 5,000 small hardwood manufacturers in those states, notes with alarm the decision and order of the Interstate Commerce Commission in Docket 184, increasing the rates on hardwood lumber from those states. More than seventy-five per cent of the hardwood mills in the South are now closed down and many others operating at a loss, and we appeal to your better judgment to avert the inevitable disaster which will follow if these rates are put into effect, burdening the industry with rates which the business cannot stand, even in normal times.

We, therefore, ask that your road does not act on five-day order granted in 184 and advance the rates granted, because the industry cannot stand it, and if done it means the ruination of the hardwood business on your line, which has been built up at such great expense.

May we have your favorable answer to the request?

Efficiency and Costs

An address by L. V. Estes, president of L. V. Estes, Inc., Chicago, dealt with the subject, "Efficiency and Costs."

The speaker made a distinction between "cost accounting" and "accounting for costs," and he explained the difference somewhat at length. According to his definition cost accounting is a function of the book keeping department and is wholly clerical. It consists of keeping records in proper shape after they have been sent to the bookkeeper's desk.

Accounting for costs, however, is a matter of a different kind, according to the definition given it. It includes investigation in the factory and yard. Something more is involved than recording figures. The handling of cost items includes planning in advance, not only for the purpose of determining of what such costs shall consist, but likewise to keep the costs within proper bounds, and to see to it that no items get there unless that is where they belong.

In other words, cost accounting should begin in the factory or yard and end in the office—it should not begin and end in the office. Many factories keep records which the office makes no use of, but should do so. For example, if the cutter at a swing saw stacks up a pile of waste, and by checking against original measurements can tell how much waste there is, that information ought to go to the office to be figured in the cost. Otherwise the cost sheet will be incomplete.

It is essential to know what becomes of every scrap, whether finally wasted or finally used. This is of no less importance than knowing what becomes of every minute of the workman's time which is paid for. Work accomplished and time profitably employed have a place in the cost account; but it is no less important that record should be kept and used of lost time and wasted material, and the proper place to head these items off is before they have taken place in the factory.

The Thursday session was concluded with a general discussion on business conditions, in which the following prominent members took part: J. W. Mayhew, Ralph May, S. B. Anderson, Max Pease, R. M. Carrier, R. H. Vansant, R. L. Hutchinson and W. E. DeLaney.

The concluding business was the appointment of committees on nomination, resolutions and officers' reports.

ENTERTAINMENT

An elaborate smoker had been arranged for by the association, at which practically every visiting and local lumberman was present. It seemed to be the consensus of opinion that this was one of the cleanest and most entertaining functions that had ever been offered at a lumber meeting.

FRIDAY MORNING SESSION

The first business of the Friday morning session was the consideration of the adoption of a new constitution. The president appointed as a committee on this question, W. B. Burke, R. M. Carrier and E. A. Lang

Mr. Lang reported as follows for this committee:

The committee appointed to revise the constitution, consisting of Mr. Burke, Mr. Carrier and myself, found so many causes for changes that we decided it should be rewritten entirely. The result of our work is already in your hands, and I move, Mr. President, that the constitution as rewritten and submitted to the membership be adopted.

R. H. Vansant seconded this resolution, which was carried.

There had been discussed pretty generally among the association problems and otherwise, a proposed test of a fireproofing paint, which would take place in a temporary structure at the river front in the afternoon. B. A. Johnson and R. H. Downman gave the details of this proposed test, both of them expressing confidence in the outcome and advising full attendance of the delegates in order that the merits of the proposition might be thoroughly understood. L. L. Wolff of Cincinnati is the patentee of this paint which is being marketed by the Edwards Manufacturing Company of that city.

Charles F. Simonson, manager of the National Lumber Manufacturers' Inter-Insurance Exchange, gave an address on that organization. This address appears on page 28 of this issue.

Business and the Banking Law

Congressman Robert J. Buckley of the twenty-third district of Ohio, addressed the meeting on the subject of the reserve banking law and the country's business, and a comparison of the working of the new law and the old was presented in detail.

Of the several forms of currency existing under the old law, none was in the least elastic. That is to say, there was no provision by which the volume of currency in the country could be increased or diminished in response to the needs of business. The volume of national bank circulation was dependent on whether the price of United States bonds at any particular time might be such as to afford a profit on circulation to the banks. And the volume of other forms of currency in circulation at any time was dependent upon other factors not at all related to the rise and fall of legitimate commercial demands.

As a consequence of the impossibility of readily securing additional currency to meet a demand heavier than the average, it was necessary to withdraw reserve money from the banks for circulation purposes whenever a large amount of circulation was needed. Such a need would exist each autumn about crop moving time, and bank reserves would have to be drawn down to supply circulation, so that the lending power of the banks would be reduced at the very season when it was most needed. The result would be the annual autumn stringency with its high interest rates, bringing inconvenience to business.

The new law is expected to provide a remedy for the faults of the old. The volume of money in circulation may be increased or diminished as the calls of business demand. Adequate means are provided to accomplish that purpose.

The law has been in operation less than three months. That has not been sufficient time to put it to the test of practice, but thus far it has met all the demands made upon it.

If any criticism has been heard it has related to what prophets fear will happen rather than to what has already happened; but that fear is not strong. Some persons are not sure that designing men or interests may not scheme to obtain control of the system and manipulate it for private benefit rather than for public good. This might be accomplished by changes in the law by which greater power may be given the reserve board. Though that peril is at present remote, it is the part of wisdom for the business men of the country to watch the law and its workings with jealousy and care and see to it that the rights and interests of the public are never placed in peril.

President Himmelberger called upon E. V. Babcock, president of the National Hardwood Lumber Association, who said he was in attendance purely as E. V. Babcock of Pittsburgh and not as E. V. Babcock, president of the National Hardwood Lumber Association, although in behalf of his organization he extended its greetings to the Hardwood Manufacturers' Association.

Referring to his presidency of the National Hardwood Lumber Association, Mr. Babcock said he was glad to be with the southern manufacturers and to take part in their deliberations and then said he thinks the lumbermen have too many associations, and in fact that they have the association habit. He said: "I am

quite sure that we have too many hardwood associations, and I welcome the day when some man with enough ingenuity, brains and nerve will spring something good enough to cause us all to sit up and cause the radicals in our association to reform and become conservative and the conservatives to get together on one set of rules and in one grand hardwood association."

This opinion as expressed by Mr. Babcock was received with the same enthusiastic applause as was President Himmelberger's suggestion along the same lines.

R. S. Kellogg addressed the meeting on "Some Troubles of the Lumber Industry." This paper is analyzed on page 28 of this issue.

R. H. Vansant submitted resolutions of thanks to the various people who had been responsible for entertaining the visitors, and also submitted resolutions on the death of the late C. M. Crawford of Coal Grove, O.

The committee on officers' reports reported favoring their adoption by the convention, R. H. Vansant saying that the committee on resolutions was not present in the morning when the address on inter-insurance was delivered. He moved that the association endorse the National Lumber Manufacturers' Inter-Insurance Exchange, which motion was unanimously adopted.

M. B. Cooper reported for the committee on nominations, recommending the re-election of the officers for the past year as follows:

PRESIDENT—J. H. Himmelberger, Cape Girardeau, Mo.
FIRST VICE-PRESIDENT—B. B. Burns, Huntington, W. Va.
SECOND VICE-PRESIDENT—Ralph May, Memphis, Tenn.
TREASURER—Leon Isaacsen, Coal Grove, O.

BOARD OF DIRECTORS: One year—Clinton Crane, Cincinnati, O.; R. H. Vansant, Ashland, Ky.; W. B. Burke, Charleston, Miss.; E. A. Lang, Chicago, Ill.; R. L. Hutchinson, Huntington, W. Va.

Two years—W. H. Dawkins, Ashland, Ky.; W. E. DeLoe, Lexington, Ky.; E. O. Robinson, Cincinnati, O.; R. M. Carrier, Sardis, Miss.; G. E. W. Luehrmann, St. Louis, Mo.

Three years—W. M. Ritter, Columbus, O.; E. M. Vestal, Knoxville, Tenn.; W. B. Townsend, Townsend, Tenn.; F. R. Gadd, Chicago, Ill.; J. F. McIntyre, Pine Bluff, Ark.

The following were recommended for state directors and vice-presidents:

ALABAMA: Vice-president, L. M. Cheely; directors, H. H. Hilt, J. T. Forman.

ARKANSAS: Vice-president, Howard Cole; directors, George W. Allport, R. E. Lee Wilson.

ILLINOIS: Vice-president, P. E. Gilbert; directors, H. S. McGee, R. J. McLellan.

KENTUCKY: Vice-president, George H. Gearhardt; directors, A. E. Schmauffer, T. B. Buskirk.

LOUISIANA: Vice-president, H. V. Sherrill; directors, C. A. Weis, E. B. Schwing.

MASSACHUSETTS: Vice-president, Frank W. Lawrence; directors, W. E. Litchfield, George French.

MISSISSIPPI: Vice-president, Fred Conn; directors, Ben Dulweber, C. F. Wheman.

MISSOURI: Vice-president, Max Pease; directors, W. P. Anderson, Charles Knott.

NORTH CAROLINA: Vice-president, W. J. Grandin; director, G. N. Hutton.

OHIO: Vice-president, W. G. Ward; directors, W. I. Barr, W. H. Nigh.

PENNSYLVANIA: Vice-president, P. A. Kirby.

SOUTH CAROLINA: Vice-president, Andrew Gennett.

TENNESSEE: Vice-president, J. K. William; directors, D. M. Rose, S. M. Nickey.

TEXAS: Vice-president, Albert Deutsch; directors, L. D. Gilbert, Phillip Ryan.

VIRGINIA: Vice-president, N. W. Easterly; directors, R. C. Duff, J. W. White.

WEST VIRGINIA: Vice-president, M. W. Stark; directors, Peter Carrol, W. N. Offut.

The officers named were duly elected on formal motion.

The meeting adjourned.

FIRE PROOFING TEST NOT CONCLUSIVE BUT APPARENTLY SATISFACTORY

On Friday afternoon practically all the lumbermen walked down to the river front to witness a test of a new fireproof paint patented by L. L. Wolff and marketed by the Edwards Manufacturing Company of Cincinnati. The paint was tested out on a roughly constructed building about 10 x 15 feet on the ground and in the neighborhood of 9 feet to the eaves, with a pitched roof which had about a 4-foot rise. The building was constructed of rough lumber and right there the patentees made a grave error inasmuch as the extremely severe test

was made even more severe by the possibilities of additional drafts through the many cracks, knotholes and other openings and through the poorly hung door. It would have been a fair and wise policy to have provided the test conditions as nearly as possible to normal conditions under which the paint might be tried out in actual practice. A good grade of matched lumber should have been used and the house made as air-tight as possible.

However, the test was made as above described and the building half filled with loosely piled excelsior, fragments of broken packing boxes, scraps of all kinds of light wood intended to create a severe blaze. All this was saturated with gallons of kerosene and gasoline and the extreme combustibility of the mass was well shown by the way it acted when ignited. A torch was touched to the excelsior from the door and instantly a sheet of flame filled the doorway and burst out from ten to fifteen feet from the building. In other words, the entire mass was almost instantly in flames.

It was apparent from the beginning that the building could not possibly withstand the test, and considering the tremendous heat created, which drove the crowds back 200 feet at least, the resistance made by the fireproofed wood was truly remarkable. The enormous tem-

perature would certainly have demolished an all steel building constructed of materials of equal weight to those used in the wooden shack probably in much less time. There surely is no sheet metal that could have been used that would have withstood the heat for more than five minutes, and were steel I beams or channel irons used in place of the joists, designed to give strength equal to that of the wooden joists, they would certainly have twisted and buckled or even melted in a short time.

The result of the test must have been a keen disappointment to the sponsors of the proposition, but they should in no wise be discouraged. It is to be hoped this will teach them a lesson that will show them there is such a thing as carrying a test to a ridiculous point. If they would carry on tests under conditions that would be as near as possible to actual conditions that might prevail in ordinary conflagrations in average dwellings, there is no doubt whatever that the paint would prove itself fully capable of the task put to it.

Before the fire, various fire department officials of Cincinnati expressed themselves as being very enthusiastic over the proposition, their enthusiasm being based on actual tests which they themselves had made previously.

Getting the Most Out of Hickory

A well-known hardwood yard had on hand for some time a stock of hickory planks and fitches of various thicknesses. Some of it had been culled out of previous shipments, some looked pretty rough originally and it had become something of a dead asset with apparently no good chance to market it as it stood, because it was not an inviting lot of stuff. A rip saw and crosscut had been installed in the yard for trimming and ripping to fill orders, and finally, in the desire to clean up this hickory and get rid of it, the idea was conceived of working it out in spare time and getting out of it what they could in clear dimension stock. It took a little thinking and figuring to decide what to cut but in the end there was realized much more for this rough accumulation of hickory than the owners had ever expected to receive from it.

This incident illustrates fairly how to get the most out of this wood. There may be times when the mill-man can fitch his hickory and sell it log run, but unless it is sold green, which involves a big freight item if it is shipped any distance, it is not likely to present an inviting appearance or bring what it should. If it is piled on the yard in fitches and planks it is much more likely to be attacked by insects than when cut up into dimensions, and it also takes longer to season.

Instances are reported where heavy hickory planks were brought into the mill again and worked over to dimension stock because they were showing damage from worms. It would have been better to work these into dimensions in the beginning. In other words, the way to get the most out of hickory is to cut it up into clear dimension stock when it is first reduced from the log. It may be found advantageous to keep a few planks and fitches to meet special call. There is a natural temptation to make planks in preference to dimension stock when the mill is crowded with work, because these can be produced and put out of the way in less time and at less expense, but the easiest way is not necessarily the best way with hickory, and the best way in the end is to get the most practical out of it. Generally the way to get this is to reduce it to specific dimensions while it is green. It will not

only bring more money but it will season and be ready for market much sooner.

At least twenty-five per cent of the larch timber over large areas in eastern Oregon has been killed or weakened by mistletoe, and the Forest Service is taking steps to combat the pest.

Success has followed forest planting on the sandhills of Nebraska. Jack pines planted there by the government Forest Service ten years ago now have a height of over fifteen feet and a diameter of four inches.

The government built more than 2,000 miles of trail and 3,000 miles of telephone line on the national forests in 1914.

WILL HE?

The Lumbermen's Round Table

Lessons From the War

One of the benefits which the war may bring to the lumber business is a realization on the part of consumers that it will not do to attempt to make the lumbermen carry the entire burden when it comes to the matter of material. For several years there has been a distinct tendency to reduce stocks, to get down to as low an investment in lumber as possible, and in some instances this plan has been followed to such an extent as to make a very unsafe condition. The war, which has stimulated the demand for certain thicknesses of hardwoods, especially 2-inch and thicker, has demonstrated to manufacturers using this material that it is not always easy to go out into the market and pick up just what is wanted at a moment's notice. It is showing that it is still necessary for the consumer who wants what he wants when he wants it to keep a stock on hand. This is especially true of those who prefer air-drying, or who must have material that has been fairly well seasoned before it is placed in the kiln.

The Use of Sheds

It is a mistake for the lumber manufacturer to leave his material on sticks indefinitely, as some concerns have the habit of doing. If a pile of lumber has been thoroughly dried in the air, allowing it to remain any longer is starting the process of deterioration, which is going on to some extent all the time but will be intensified by extending the period. The proper system, in the opinion of many, is to bulk the lumber under sheds, where it will be protected from the weather, and will keep the condition which has been arrived at by the curing process.

Now and then one sees a mill-yard where the lumberman has allowed certain stacks to get black with age without taking the stock down. Just because there was no demand for that particular material, he allowed it to stand just as it was. The ultimate result of such a course is that the lumber will have deteriorated in grade and every other respect to such an extent that when it is finally sold, the amount realized will not nearly cover the cost of manufacture and handling.

The Troubles of Hickory

A lot of hardwood men used to think that hickory was one of the best money-makers on the list, but the opinion is growing that it is a very unsatisfactory wood to handle. While it is true that the upper grades are often salable at good prices, the manufacturer or wholesaler is likely to be misled into thinking that he is sure to make money if he can move his stock. The trouble is that the low grade material is a very slow seller, and the necessity of carrying it for years, sometimes, means that the profit on the upper grades has to be unusually large to insure as good as an even break.

The best plan for the concern with hickory timber to manufacture would seem to be putting a small mill right in the timber and cutting out blanks for spoke and handle manufacture. These can be sold at a profit, while the proposition of making money out of the lumber is a much more difficult one.

Thick Stock and Labor

One of the difficulties which the lumberman meets with in connection with handling thick lumber is that of labor. It is very hard on yard employes to move, say, 3-inch oak, and wears out the men to such a degree that their usefulness is sometimes very seriously reduced. In fact, a good many hardwood men make the rule that when thick stock is being handled, if the conditions are such that rapid work is required, two shifts are employed, giving each lot of men a chance to rest.

"That is one of the several objections against handling much thick lumber," said a successful hardwood man recently. "It simply kills your men, and takes so much steam out of them that they are good for nothing for some time to come. The very fact that the boards are so heavy means that the stock is seldom piled exactly right, and it is the exception to see a stack of thick lumber which has been put up as well as one of thinner material. Considering the opportunity which thick lumber has to check and crack, it is a mighty uncertain and distasteful proposition to me."

A veteran hardwood man who has handled a lot of thick lumber in his time emphasizes the point of having the stacks face the south, so as to get as much sunshine as possible, and also putting the boards close together.

Supply and Demand

Although prices are governed by supply and demand, there are a number of considerations which enter into every case and qualify it to some extent.

For instance, the supply may get so small that this very fact will reduce the demand. That is true of cherry, for example. There isn't enough of it to make a market, as it were, and the result is that the demand for cherry is hardly sufficient to absorb even that which is available. On the other hand, the demand may be so strong that the price, following it, rises too high, resulting in a falling off of demand which, in spite of a possible reduction in output, knocks the bottom out of the market, with a big slump in prices. That happened to wide poplar a few years ago.

Supply and demand should not determine prices absolutely, but only the range within which prices should move. The basis price should be determined by the intrinsic value of the material and the cost of manufacture. This does not always happen, however, for the hardwood trade has been witnessing sales of lumber for less than it cost to make it. Intrinsic value does not always determine price, either, for, as one hardwood man pointed out recently, ash is intrinsically a better wood than red oak, and the supply is smaller, and yet the price of ash is no greater than that of plain red oak.

Teaching the Public

The public is learning gradually.

The writer recently attended a meeting of an advertising club, which had been waging a campaign against untruthful advertising, especially on the part of retailers. One of the "stunts" introduced as a means of bringing home the facts of the situation was the monologue of a black-face artist who related her experiences in purchasing goods of various kinds. She was assisted by the toastmaster, who questioned her at intervals.

She told of buying "American quartered oak" furniture at extremely low prices, and though questioned as to whether "American quartered oak" was real quartered oak, she clung to the belief that she had been getting the genuine. The audience, which was composed of business men from all lines, of course caught on to the fact which was being emphasized, that certain dealers and manufacturers are faking quartered oak through the medium of the prefix.

Little things of this sort show which way the wind is blowing, and gradually help to dissipate the vapors of ignorance which enable the faker to put over his imitation.

Get Down to Bed Rock Now

"Now is a good time for lumbermen to get down to bed-rock," said a hardwood manufacturer of considerable prominence. "In making up my inventory the first of the year, I cut prices to the bone. I did not attempt to deceive myself, nor did I fail to make due allowances for depreciation, bad accounts and other things which we are sometimes inclined to overlook, especially when conditions are not particularly favorable, and we would like to give ourselves a little more margin to go on. My idea is that as long as the situation is not good, it is an excellent time to clean house from cellar to garret, and to squeeze out all the possible water. Then, when conditions do improve, we will be in a position to take advantage of the change, and to make some real money, without having to carry the handicap of a lot of inflated values."

Special attention is being given the problem of pooling arrangements with regard to foreign lumber trade by the Forest Service. Recent utterances of the President calling attention to the desirability of such arrangements have given great impetus to the activities of friends of this system. The Forest Service already has made some investigation along this line. The work will be concluded as quickly as possible.

Pertinent Legal Findings

Right to Use Stream in Logging

In a suit which has recently been before the Idaho supreme court (Cameron Lumber Company vs. Stack-Gibbs Lumber Company, 144 Pacific Reporter 1114) involving conflicting uses of a river in floating and sorting logs, the following rules were laid down:

Every person has an equal right with others to use a stream for purposes of navigation to which it is reasonably adapted, but in exercising that right he must pay reasonable attention to the rights of others, and not unreasonably interfere therewith. But where booms and sorting works for logs placed in a river do, to some extent, form a hindrance to the free navigation of the stream at times, such hindrance should be considered only as an incident to the reasonable use of the stream for floating and securing logs. For such purpose, and as an incident to the reasonable use of the river for running and securing logs, parties may use temporary sheer or guide booms to direct the logs or lumber into proper places in which to detain them for use. If an obstruction merely impairs or renders more difficult the navigation of a stream without destroying it, an individual has no right to complain. He is not entitled to the best possible accommodations for navigation.

And in the case of Johnson vs. Wild Rice Boom Company, 150 Northwestern Reporter 218, the Minnesota supreme court recently decided that defendant company was entitled to accumulate and detain water by flooding dams for such time and in such quantities as was reasonably necessary to enable the company to drive with reasonable efficiency and dispatch the logs which were to be floated by it upon that part of the stream over which it operated, and this notwithstanding that such detention of the water so lessened the supply in the stream that plaintiff meanwhile was unable to run his flour mill, which was operated by water power derived from the same stream.

Duty to Safeguard High Platforms

A lumber company which maintains a platform several feet above the ground, upon which employes are required to work, is under obligation to provide a guardrail for the safety of such employes. (Texas court of civil appeals, Hamilton vs. Kirby Lumber Company, 171 Southwestern Reporter 546.)

Forfeiture of Standing Timber by Buyer

One who buys standing timber from the owner of the land on which it is growing, with a condition requiring removal of the trees within a limited time, forfeits the timber by failing to cut and remove it within that time, especially where the seller gives him notice in advance to make the removal within that time. (Texas court of civil appeals, Chavers vs. Henderson, 171 Southwestern Reporter 798.)

Who Are Entitled to Materialman's Lien

Under the Mechanics' lien law of Texas, a lumber company which supplies millwork for a building under a contract with a second company which in turn has contracted to furnish the work to the original contractor, is entitled to a lien against the building. (United States circuit court of appeals, fifth circuit; Huttig Sash & Door Company vs. Stitt, 218 Federal Reporter 1.)

Damages for Delaying Machinery

A seller of machinery to be used in a lumber mill is not liable for loss sustained by the buyer on account of the latter's men and teams being idle while awaiting delayed delivery of the machinery, unless the seller was advised when the sale was made that such loss would follow a delay. (Kentucky court of appeals, Combs vs. Frick Company, 171 Southwestern Reporter 999.)

Validity of Sunday Contract

An agreement to sell lumber is not invalid because orally entered into on Sunday, if it was ratified by letters written on a subsequent secular day. (Wisconsin supreme court, Webster Manufacturing Company vs. Montreal Lumber Company, 150 Northwestern Reporter 409.)

Proof of Disputed Question

When a lumber company sues for the price of lumber and the buyer denies that he received the quantity claimed by the company, the latter has the burden of proving by a preponderance of the

evidence that it delivered the quantity claimed. (Wisconsin supreme court, Olson vs. White Star Lumber Company, 150 Northwestern Reporter 443.)

Elements of Damage for Breach of Contract

In litigation arising from breach of contract to buy or sell lumber, the courts frequently find difficulty in determining just what items of damage are properly allowed. This is illustrated by a decision which has just been handed down by the New Hampshire supreme court in the case of Davis vs. New England Cotton Yarn Company, 92 Atlantic Reporter 732. Defendant agreed to buy a quantity of lumber to be delivered on an average date. After a few carloads had been shipped, plaintiff complied with defendant's request to hold the remainder for a time, and defendant having postponed receipt of the remaining lumber for three years, plaintiff sued to recover as for breach of defendant's agreement to buy. The trial court allowed plaintiff to recover the excess of the contract price of the undelivered lumber above what it was worth at the end of three years, plus the cost of resurveying it, and increase in cost of teaming over the agreed time for delivery, but refused to allow the amount of damage sustained to the lumber by exposure to the weather, taxes paid on it in the meantime, and interest on the money invested in the lumber. On appeal, the supreme court decided that it was improper to disallow any of the items of damage, saying:

"By 'damages,' as the term is used in the law of contracts, is intended compensation for a breach, measured in the terms of the contract. The only losses that can be said fairly to come within the terms of a contract are such as the parties must have had in mind when the contract was made, or such as they either knew or ought to have known would probably result from a failure to comply with its terms. Therefore the test to determine whether the plaintiff is entitled to recover any of his various claims for damages is to inquire whether the defendant either knew or ought to have known when it made the contract that he might sustain such a loss if it failed to comply with its terms. The plaintiff is therefore entitled to recover, not only all the items the court allowed him, but also three years' interest on the money he should have received for the lumber, and the taxes assessed on the lumber for the three years. The court has found that the defendant ought to have known that it might be necessary to resurvey the lumber, and that the expense of teaming it might increase; and all fair-minded men will agree that it ought to have known (1) that the weather would damage the lumber; (2) that the plaintiff would lose the use of his money; and (3) that he would be compelled to pay taxes on the lumber, not only while he was holding it for defendant, but also while he was finding another customer."

Duty to Provide Safe Appliances

A lumber company employing men in the operation of machinery may be found to be negligent in requiring an employe to stop machinery by shifting a belt with a stick. (South Carolina supreme court, Cutter vs. Mallard Lumber Company, 83 Southeastern Reporter 595.)

Demurrage Rules—Special Privileges

A switch track is "full," within the meaning of a demurrage rule to the effect that cars are to be deemed to have been delivered to a consignee when they would have been placed on his track except for the fact that it was full, when the maximum number of cars that can be practically unloaded at one time have been placed thereon, although the track would accommodate more cars, but not without interfering with unloading. An agreement whereby a railway company binds itself for a certain period not to furnish cars to be loaded for shipments to the other party to the contract is invalid as conferring special privileges. (Wisconsin supreme court, Chicago & Northwestern Railway Company vs. Menasha Paper Company, 149 Northwestern Reporter 751.)

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 853—English Firm Wants to Buy Plywood

Liverpool, England, January 25.—Editor HARDWOOD RECORD: We understand that plywood is now being exported from the States into English markets and we shall be glad to know if you can supply us with the names of firms who engage in this trade.

This correspondent has been advised of a few probable sources of supply. Others interested should write HARDWOOD RECORD.—EDITOR.

B 854—In the Market for Birch and Hickory

Camden, N. J., February 3.—Editor HARDWOOD RECORD: Will you please put us on your list for 16'4 and 18'4 hard birch, 1's and 2's preferred, also hickory in all thicknesses plank, sawn ditch and billets, sawn and split. We are always in the market for either dry stock or to be cut. If you know of anyone having such stock now, we are in the market. Can inspect at shipping point and pay cash, if necessary, on presentation of bill of lading.

The writer of this letter is a firm that is widely known in the lumber business. Mills desiring to connect with this class of trade can have the name on application to HARDWOOD RECORD offices.—EDITOR.

B 855—Wants 3-Ply Veneer for Shipping Boxes

Saginaw, Mich., January 29.—Editor HARDWOOD RECORD: We are endeavoring to locate concerns that manufacture 3-ply veneer stock for the manufacture of shipping boxes. Will be glad to have a list of names of any concerns you know of that are making a business of supplying box factories with built-up veneer.

Interested concerns can have the name of this inquirer by writing HARDWOOD RECORD.—EDITOR.

B 856—Wants to Buy Wood Ashes

Chicago, Ill., January 11.—Editor HARDWOOD RECORD: We are in the market for thirty-five carloads of wood ashes and will be glad to hear from anyone in position to furnish this material.

HARDWOOD RECORD will be glad to give sawmill concerns or others who have any accumulation of wood ashes the name of this inquirer.—EDITOR.

B 857—Wants Market for Ash

Aurora, Ind., January 26.—Editor HARDWOOD RECORD: In sawing a lot of 3" and 3½" dry ash lumber into sections for sawed feloes we have an offal that should not go under the boiler. Somebody wants them. The timber is of excellent quality, bone dry, and a good deal of it is all white. The largest pieces are 30" in length and it is possible to cut all of it that length. In cutting out this stock we have a semi-circular piece that will measure 4 to 6 inches wide at the center, tapering to a point at the ends. The thickness of this plank is 3" or 3½" and can cut out a square 15" long and 3" or 3½" square. If made shorter could get a wider plank than this. We can get out a carload of this stock in two months. Would appreciate information as to possible users.

HARDWOOD RECORD has given this concern a suggestion, and anybody who is in position to definitely figure on such a proposition can have the name of the company upon application.—EDITOR.

B 858—In the Market for Oak and Birch Squares

Chicago, Ill., January 26.—Editor HARDWOOD RECORD: Can you put us in touch with some hardwood mills or any hardwood manufacturers who can furnish us large quantities of 1" and 1¼" oak and birch squares? Just at present we want these squares 28" and 66" long.

Hardwood manufacturers who are interested in utilizing their waste to the best advantage can have the name of this inquirer upon application to this office.—EDITOR.

B 859—Wants to Purchase Teak

Chicago, Ill., February 2.—Editor HARDWOOD RECORD: We would be pleased to know if you could advise us where we can purchase teak wood. Any information you can furnish regarding same will be greatly appreciated.

Chicago concerns or others within shipping distance can have the name of this company upon writing HARDWOOD RECORD.—EDITOR.

B 860—Wants to Buy Ash

Boston, Mass., February 3.—Editor HARDWOOD RECORD: We are in the market for several cars of quarter-sawn white ash cut to the following dimensions, to be used for skis. This must be clear stock: 1 4/8"x4" - 6' 6", 7' 6", 8' long. Do you know of anyone who can get these out?

Anyone who can manufacture this stock to advantage will find this a satisfactory market.—EDITOR.

B 861—In the Market for Ash Dimension

San Francisco, Cal., January 29.—Editor HARDWOOD RECORD: We are in the market for from 600 to 1,000 feet 2"x24" ash. This stock must be clear or 1's and 2's, and must be reasonably dry. Could you put us on the track of a concern that could furnish this stock for us?

Interested parties should write HARDWOOD RECORD.—EDITOR.

B 862—A Correction

The last issue of HARDWOOD RECORD published an account of change in the personnel of the Pacific Lumber Company in which William D. Mershon and John D. Mershon are interested. William D. Mershon sent the following letter as a correction of a misstatement occurring in the former account:

Some time the latter part of December I sent you, under the head "News Item," a statement to the effect that I had sold my interest in a contract with the Pacific Lumber Company to my brother, John D. Mershon, and with \$10,000 of the proceeds I intended to keep right on with my business at this address. Your representatives frequently solicit news items from me, and I of course expected that you would give publicity to this item as I sent it to you. Instead of this you published a news item regarding the John D. Mershon Company which leads some of my friends to believe that I have retired from the lumber business, and I am put to some inconvenience to straighten the matter out. Of course, I understand that it is your privilege to publish what news you choose and decline whatever other news you choose, but I am wondering if I am entitled to some explanation or correction from you. I never worked for the John D. Mershon Lumber Company in any capacity whatever. I worked with them, or through them, on a fifteen-year selling contract with the Pacific Lumber Company, which contract belonged to John D. Mershon and me as individuals in equal shares, and it was only this asset that I disposed of. WM. D. MERSHON.

Clubs and Associations

Chicago Club to Give Final Entertainment

The recent decision of the Lumbermen's Club of Chicago to amalgamate with the Lumbermen's Association with headquarters in the new Lumbermen's building shortly to be opened, and which will mean closing up the affairs of the club and surrendering the lease for the present quarters on March 1, will mean the end of a series of highly entertaining functions that have been gotten up by the entertainment committee during the club's existence.

In order that the members may carry with them a last impression of the club's social policy, the entertainment committee has decided to spread itself in the last function of the kind which will be held Saturday evening, February 20, at the club rooms. It has issued an attractive invitation, and according to vague rumors as to what will occur, the affair is going to be one which will retain in the hearts of the lumbermen club members a fond remembrance of the many pleasant days which have been spent in the club rooms.

The entertainment committee consists of W. A. Eager, chairman; E. A. Lang, E. H. Tefebaugh, I. C. Marggraf, H. F. Arnemann, F. R. Gadd, Geo. C. King, F. L. Johnson, J. W. McCurdy and G. H. Holloway.

Aims of the Forest Products Federation

The executive committee of the Forest Products Federation, by its secretary, has issued a call for a massmeeting at La Salle hotel, Chicago, February 24 and 25. The purposes of the meeting are set forth in the following call:

The Forest Products Federation came into being in Chicago December 17, 1914, at a preliminary meeting of lumbermen called by the National Lumber Manufacturers' Association. It was decided to hold a mass meeting of the entire lumber industry in Chicago on February 24-25, which will be representative of all lumber associations and allied interests. An executive committee of five was appointed to arrange for the meeting and direct the affairs of the organization. Its chairman is R. H. Downman of New Orleans, president of the National Lumber Manufacturers' Association; while the National Wholesale Lumber Dealers' Association is represented by its president, Gordon C. Edwards of Ottawa; the Southwestern Lumbermen's Association by its secretary, J. R. Moorehead, Kansas City, Mo., and the general retail and wholesale interests by L. W. Crow, retiring president of the Lumbermen's Association of Chicago, and Julius Seidel of St. Louis. Further representation of many interests is found in the membership of the standing committees and in the speakers for the massmeeting.

The fundamental aim of the new federation is to promote the rightful use of wood and to bring about concerted action to this end. The lumbermen represent such a large and diversified industry that they must systematize and co-ordinate their efforts or else see much good wood wasted. To this end the meeting of the federation is called in order that the pressing problems of the industry may be presented and discussed, and ways and means found to increase the use of wood for all purposes to which it is best adapted. Reduced consumption and dwindling markets help no one; while education, publicity and intelligent market promotion on the most modern lines will benefit all concerned. Under modern conditions the lumbermen must get on the firing line and adopt effective promotion methods, if wood is to maintain its rightful place and find proper use in the homes and fields and factories of the land.

At the coming meeting on February 24-25, there will be presented by committee reports and addresses full and reliable information upon the influences and conditions which tend to reduce the consumption of wood or encourage the use of other materials. Lumbermen do not advocate the use of wood for purposes to which by modern criterions it is not suited, nor are they less interested in safety or proper service than any other class of citizens or business men. We do justly maintain, however, that forest products shall not be crowded out where their use is legitimate and economical, and that the field is big enough to afford a satisfactory market for the normal annual lumber output. There has never been an opportunity equal to the present, nor a meeting ever before called where the problems and conditions of all branches of the lumber industry would be outlined by the highest authorities, and so definite a basis given for concerted action.

The executive committee has arranged for five standing committee reports on as many current subjects. These include building codes, fire losses, comparative prices of building materials, shingles, and promotion. These reports will be the most authoritative and specific ever presented to the trade. In addition, allied interests will present by individual addresses their opinions on related problems. At least tentatively, it may be stated that the fire prevention organizations will give their views on the use of wood in modern structures; while the timber owners, carpenters, engineers and architects, and the press, will be heard either individually or through their representative organizations.

The first essential is a large, representative massmeeting of timber owners, manufacturers, wholesalers and retailers of lumber, since they are the most vitally concerned. The federation is at present a temporary organization created to meet a vital and most urgent need, and ready to be moulded into a great power for the promotion of the rightful use of forest products. It is performing an indispensable function by compiling information as to conditions of the trade, and on the attitude and policy of wood consuming industries. It is serving further as a rallying point, where full opportunity will be given to perfect an organization for the more effective merchandising of lumber.

The support and cooperation of the whole lumber trade is solicited for its mutual good. This is not the time for half-hearted support, but is rather an opportunity for every lumber association and every individual interested in the industry to establish, for once and all, a permanent organization for the systematic promotion and intelligent use of forest products, and to bring back prosperity to the ranking manufacturing industry of our country.

Sessions of the National Chamber of Commerce

The third annual meeting of the Chamber of Commerce of the United States of America was held at the New Willard hotel, Washington, D. C., February 3, 4 and 5.

On Tuesday, February 2, the program included a meeting of the National council, submission of program for approval, "A National Budget," by Harvey S. Chase of Boston, Mass., and the election of the nominating committee.

The first session of the regular meeting, February 3, opened with the appointment of convention committees, report of the National council and nominating committee, report of the treasurer and an address by President Fahy.

The second session was opened on the afternoon of Wednesday, February 3, by an address on "American Investments Abroad," by the Hon. William Jennings Bryan, Secretary of State. Samuel McRoberts, vice-president of the National City bank of New York City, presided over the discussion on "The Federal Reserve Act in Relation to Trade Expansion." Following was a report of the committee on credentials. A. W. Douglas, chairman of the standing committee on statistics and standards, reported on "The 1914 Census of Manufacturers and the Present Status of Government Export and Import Statistics." The report of the special committee on uniform food and drug regulations was read by Willoughby M. McCormick, chairman.

The evening session of February 3 was marked by the introduction of resolutions and an address by President Wilson.

On Thursday, February 4, discussion was instituted on the "Development of the Merchant Marine of the United States." There were also discussions by Secretary McAdoo and the Hon. Theodore E. Burton, United States senator from Ohio. A report of the special committee on merchant marine was submitted by William H. Douglas, chairman.

The afternoon session, Thursday, February 4, was opened by an address by the Hon. Joseph E. Davies, Commissioner of Corporations, on "The Federal Trade Commission." After an address on "How May We Secure Materials Needed in American Manufacture for Which We Are Now

Dependent of Foreign Countries," Paul T. Sherington, chairman of the special committee on maintenance of resale prices, delivered his preliminary report. Harry A. Wheeler of Chicago delivered the principal address on "Successful Methods of Commercial Organizations."

The annual banquet took place on Thursday evening, February 4, with William C. Redfield, Secretary of Commerce, and Charles S. Hamlin, governor of the Federal Reserve Board, the principal speakers.

During the morning session of February 5, the principal speakers were the Hon. Myron E. Herrick, former American ambassador to France, who chose as his topic "Rural Credits," Dr. E. E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, Department of Commerce, who spoke on "Recent Work of the Bureau of Foreign and Domestic Commerce," E. A. Ellene, vice-president of the International Congress of Chambers of Commerce, who spoke on "Trade Expansion and the European War," and report by R. C. Rhett, chairman of the special committee on trust legislation, who chose as his subject "Should Business Be Free to Enter Into Combination for the Development of Foreign Commerce."

The convention closed with the afternoon session on February 5 when the directors were elected and report of the committee on resolutions submitted.

Committees Appointed by Baltimore Exchange

President Rufus K. Goodnow of the Baltimore Lumber Exchange, at the recent meeting of the managing committee, announced the appointment of the following standing committees for the ensuing year:

ARBITRATION AND GRIEVANCE—Lewis Hill, chairman; Edward P. Gill, John L. Alcock, Theodore Mottu, R. B. Honer.

LEGISLATION AND TRANSPORTATION—Kidgway Merryman, chairman; William M. Buzan, Parker D. Dix, George H. Poehlmann, Samuel H. Helfrich.

INSPECTION—W. M. Buzan, chairman; George E. Waters, Theodore Mottu.

HARDWOOD INSPECTION—John L. Alcock, chairman; John J. Kidd and Daniel MacLean.

MEMBERSHIP—Edward P. Gill, chairman; John L. Alcock and Samuel H. Helfrich.

HOUSE—George E. Waters, chairman; Henry Suechting and George H. Poehlmann.

Southern Pine Association Getting Settled

Secretary-Manager Rhodes of the new Southern Pine Association is making rapid progress in building up the organization, and by the first of the month will have the work of the association well under way. A lease has just been closed for the sixth floor of the Interstate Bank building, corner of Camp and Canal streets, and this is now being remodeled for the needs of the association. The owners have promised to deliver the new office by February 15.

In the meantime the association is working under difficulties in temporary offices at 506 Hibernia Bank building. Despite the handicap of a lack of proper equipment the office is doing a big work in spreading the propaganda and gathering in subscriptions, as well as having already established the inspection and grading department.

As the association has purchased the office equipment of the old Yellow Pine Manufacturers' Association at St. Louis, which is now en route to New Orleans, it is not expected that the office can be put on a basis of high power efficiency until after February 15, when the new quarters will be ready, and complete office organization established. One of the gratifying features to the management is the patience that subscribers are manifesting toward the association because of the unavoidable delay in completing the office organization.

Edwin E. Myers, who has been appointed assistant secretary, has arrived and assumed his new duties on the first of the month, and now has the department work under his immediate supervision well in hand. Mr. Myers brings with him a valuable experience in his line of work, having been assistant secretary of the Hardwood Manufacturers' Association of the United States.

The inspection department has been inaugurated with nine inspectors, six of whom will do route work or mill instruction and three will take care of inspections. This inspection force will be materially increased as rapidly as necessary, as this is one of the most valuable direct benefits that subscribers of the association will receive.

A joint meeting of the advertising and trade extension committees has been called to be held in the Mercantile Club, St. Louis, Thursday, February 11. This meeting will take up the detail of the plan for vigorous exploitation of yellow pine, with special reference at this time to paving blocks.

Pennsylvania Association in Annual Meeting

The Pennsylvania Lumbermen's Association held its twenty-third annual meeting January 27 and 28 at the Hotel Walton, Philadelphia.

At the open meeting the subject "Unfair Competition" was disposed of intelligently by M. P. Cooper, Christlana, Pa. He shot off the epigram that "unrestrained competition is wasteful, while cooperation is helpful." He struck also at the western mill order houses which were flooding Lancaster county with spurlous corrugated roofing and by so doing reflecting on the lumber trade. "What inspection should be placed on sap pine and North Carolina plank and dimension sizes?" was answered by S. Ashton Souder of Edmund A. Souder & Company, Philadelphia. Owen M. Bruner, president of the Owen M. Bruner Company, Philadelphia, who has always something interesting and important to divulge, held the closest attention at the close of the first day's session with an instructive talk on the transportation of Pacific coast lumber through the Panama canal to eastern ports and re-distribution to interior points.

On the morning of January 28 the reading of the reports of the different committees was first in order, after which "Enlargement of Organization" was discussed. Stringent means were suggested to induce the increase of membership, as the advantages to the lumbermen are manifold.

The Hon. Irving C. Williams, deputy forestry commissioner of Pennsylvania, gave an interesting and instructive talk on forestry. Mr. Williams claimed that once Pennsylvania was looked upon as the lumberman's paradise, as the finest lumber in the country was obtained from this state. He stated that the Forestry Association was in possession of over 1,000,000 acres of land, which is being transformed into forests in order that the lumberman may buy the product in his own state. Publications are being issued describing as many as 125 species of trees grown in Pennsylvania. These will be distributed free to all who desire them and especially will the schools in this state be supplied.

The following officers were elected at this meeting: Theodore A. Mehl, Mehl & Latta, Rosemont, Pa., president; William S. Goff, Goff Lumber Company, Wilkes-Barre, Pa., vice-president; T. J. Snowden, Mason & Snowden, Scranton, Pa., treasurer; J. Frederick Martin, Philadelphia, secretary. S. C. Creasy, Creasy & Wells, Bloomsburg, Pa.; T. J. Snowden, Scranton, Pa., and J. Dyer Moyer, Willow Grove, Pa., were elected directors. The directors in meeting decided that the next semi-annual meeting should be held at Delaware Water Gap, Pa.

Lumbermen Hear Billy Sunday—Why?

About one hundred members of the Philadelphia Lumbermen's Exchange and their wives attended a Billy Sunday meeting at the tabernacle, 19th and Vine streets, on the evening of January 21. The text of his sermon was "I find no fault with Him." Seats had been reserved and entrance secured by tickets furnished by the exchange. The famous evangelist was as usual filled to the brim with religious wrath for the sins of the world, and unique and spectacular methods for the cure of them. He bombarded the vices, the abuses and shortcomings of mankind generally with anathemas, which tore and excoriated like dum-dum bullets. His language was not always that of polite society, but it was lucid and evidently effective. Not one of his hearers could mistake his meaning—there is nothing opaque about Billy Sunday. An audience of 24,000 listened with breathless attention to this remarkable sermon. At the conclusion 157 souls hit the sawdust trail, as Sunday expressed it in his chosen vernacular. This sight, combined with the singing of a chorus composed of several thousand voices, which accompanied the march to the trail, may be described as thrillingly impressive.

Meeting of Board of Governors of the National Lumber Manufacturers' Association

A meeting of the board of governors of the National Lumber Manufacturers' Association was held in Chicago on February 3, at which nearly all of the officers and members of the board were present either in person or by proxy. This being the usual mid-winter meeting of the board, a great deal of necessary routine business was transacted, including the formal acceptance of the resignation of Secretary Rhodes, effective January 1, and the appointment of R. S. Kellogg as his successor, taking place on the same date. A resolution was unanimously passed expressing regret of the board at having to lose the services of Mr. Rhodes, but at the same time recognizing the importance to the entire lumber industry of the development of the new Southern Pine Association under his management.

Secretary Kellogg reported that during the month of January he had represented the National Lumber Manufacturers' Association on the program of six large meetings.

A communication was presented from the National Association of Box Manufacturers stating that membership in that organization had been enlarged to include the lumber manufacturers as associate members, with annual dues of \$25, and also that Secretary Kellogg has been elected a member of the board of directors of the box association in order to represent the lumber industry in that organization. The proposition of offering associate membership in the box association to the lumber manufacturers was approved by the board, and the secretary was instructed to urge all firms to do so.

A report was presented from Dr. Hermann Von Schrenk regarding the progress of his work as technical engineer of the association during recent months. This was approved and continuance of the same character of work authorized.

President Downman reported favorably on the Blue Book and the new Inter-Insurance Exchange.

A letter from the National One Cent Letter Postage Association was presented, and the secretary was instructed to notify the organization that its work in favor of cheaper postage is approved.

It was unanimously decided to hold the annual meeting of the National association at San Francisco in May, on dates which will best suit the convenience of the West coast members.

After the transaction of considerable routine business, the board adjourned, to meet again at the La Salle hotel in Chicago, February 23-25, in connection with the meeting of the Forest Products Federation.

Cincinnati Lumbermen in Monthly Meeting

The regular monthly meeting of the Cincinnati Lumbermen's Club was held at the Hotel Metropole, Monday night, February 1. The usual large attendance was in evidence.

The river and rail committee reported that it had attended the rate

hearing at Louisville and that the proposed advances have been postponed to July 28. A communication from the Hardwood Manufacturers' Association was received thanking the club and its entertainment and reception committee for the assistance afforded the officers of the association in taking care of the visitors to the recent convention.

James S. Zoller of the Talbert-Zoller Lumber Company brought up the matter that an organized effort is being made on the part of a number of envelope manufacturers to stop the government printing return business addresses on stamped envelopes. Upon his request Secretary Bolser was instructed to write the congressmen and senators of this district of the club's disapproval of any interference with the present arrangements, which are considered satisfactory.

The boosters committee brought in three new members: The West Wood Planing Mill Company, the A. M. Lewan Lumber Company, and C. W. Caine of Cleves, O.

President Schmidt introduced the president of the Furniture Exchange, John Dornette, Jr., who was a guest of the club. Mr. Dornette's talk was impromptu and he dwelled much on the troubles of the furniture manufacturers finding a market at this time for their product. While he admitted there has been some improvement he was of the opinion that it will be some time before trade is normal and in his particular line export trade will have to open up before much can be done.

Protest Hardwood Rate Advance

The following is a copy of the protest sent to the secretary of the Interstate Commerce Commission, Washington, last week, by John R. Walker and L. N. Walter, representing the Memphis lumber interests and the Southern Freight Traffic Association; E. J. McVann, representing the Omaha, Neb., Board of Trade; S. D. Snow, representing the Wisconsin Lumber Company; Sidney F. Andrews, representing the St. Louis lumbermen and the Coopersage Traffic Bureau Association, and Geo. B. Webster, representing the Ozark Coopersage Company, St. Louis, protesting against the decision handed down January 12 by the Interstate Commerce Commission and made public last week, sustaining the advance in hardwood, etc., I. & S. Docket, 184, in the matter of investigation and suspension of advances in rates for transportation of hardwood and other kinds of lumber and articles manufacture therefrom, from points in Arkansas, Louisiana and other points to Memphis, Tenn., St. Louis, and other points of destination. The protest speaks for itself:

Hardwood lumber shippers affected by advance sustained in I&S 184 appeal to commission to avert disaster which will follow these advances. More than half mills are now closed down and practically all must close if these rates are advanced. Commission's opinion is based largely on following findings, all of which are erroneous: Gum lumber has great market value, hardwood originating in extreme Southwest paying yellow pine rates moves in considerable volume to northern markets, there has been small saving to trunk lines from changed tapline divisions, the Southwest is perhaps the principal source of hardwood production, and an increase in rates would not unduly curtail production. Other statements in opinion indicate a misapprehension of testimony which was taken in June last. Testimony now being taken in I&S 520 involving most of same rates shows conclusively the unreasonableness of proposed advance and utter inability of this traffic to pay any advance. This record will show carriers have largely increased revenue from lessened tapline allowances and will further show all facts which we can obtain from carriers and shippers during the twelve days continuous testimony with several days yet to be devoted to hearing. In view of all these circumstances we request commission to set aside order permitting advances and to set matter for further argument including record now being made in 520.

Memphis Lumbermen Solicit Traffic Members

Seventy-five members were present at the regular semi-monthly meeting of the Lumbermen's Club of Memphis held at the Hotel Gayoso, Saturday, January 30. President Kadel was in the chair while Secretary Heuer performed his duties. The usual luncheon was served.

The entertainment committee was instructed to arrange for another dance under the auspices of the Lumbermen's Club but only on condition that those members who attended defrayed all expenses so that the club will not incur any responsibility in connection therewith.

S. B. Anderson, chairman of the river and rail committee, called attention to the excellent work being done by the Southern Hardwood Traffic Association in opposing higher rates from southern territory to Ohio river crossings and expressed the view that every member of the club ought to become identified with that organization so that its burdens would be more fully distributed and thus greatly lightened. This suggestion from Mr. Anderson brought forth considerable discussion.

J. V. Stimson thought the present an opportune time to take up this subject. He declared that there was nothing which would bring such returns on the outlay as co-operation with the Southern Hardwood Traffic Association. He outlined the position the gum people would be in and what the lumber manufacturers of the South would lose if the association should prove unsuccessful in its efforts to defeat the proposed advances to Ohio river crossings.

Walker Wellford, general manager of the Chickasaw Coopersage Company, said that seven or eight firms in Memphis sent representatives to Louisville and St. Louis to give evidence in the rate case before the Interstate Commerce Commission during the past fortnight and that these firms bore all expenses of these representatives in addition to paying their regular prorata of the cost of maintaining the association. He did not see how any lumberman could sit still and see the association fighting his battles without lending a helping hand. He declared that the railroads had made up their minds to get all they could out of every line of business and that they had gone after the lumbermen first because they were the biggest suckers. He further asserted with

-emphasis that the roads would put the lumbermen out of business if they did not work together for the defeat of the carriers.

Jno. W. McClure, president of the Southern Hardwood Traffic Association, said that he thought a great deal could be accomplished by talking association. He thought all lumbermen should be brought into this body as it had a great deal of work in view, including a campaign of education among traffic men. He said the latter were ignorant of the lumber business and knew nothing about it beyond their desire to secure higher rates. He asserted that if rates were carried to their logical conclusion there would be no lumber tonnage. He declared that it was necessary to show the railroads that they must allow rates on lumber that will make it profitable for both manufacturers and distributors to engage in the lumber business. If they did not allow such rates there would soon be no lumber to move and the railroads would be losers instead of gainers by their anxiety to advance rates. He thought the association deserved the loyal support of every lumberman in this part of the country. He gave a statement of dues and other expenses incurred by members but said that, in addition to the rate contests which were waged by this organization, the members secured adequate returns on their money in the shape of traffic help, collection of claims and quotation of rates. He thought membership in the association represented the best investment any lumberman could make.

J. D. Allen suggested that a list be prepared showing the members of the club who are not identified with the association and that the river and rail committee be furnished with such a list so that all non-members might be personally solicited to join. Mr. Anderson said that he and his associates would be very glad to make up such a list and go after those who were not identified with the association.

Resolutions were adopted of respect to the memory of the late E. C. Stoneman.

J. W. Dickson, chairman of the special committee appointed to consider recommendations made by former President Allen, reported unfavorably on the payment of a salary to the secretary and the remission of the dues of the president during his term of office, and favorably on the adoption of Roberts Rules of Order as the official guide of the club. The recommendations of the committee were accepted.

S. B. Anderson, treasurer of the Anderson-Tully Company, and E. R. Brown, of the Eddy B. Brown Lumber Company, were elected to active membership. One application for active membership was reported. This will be acted on at the next regular meeting.

A letter from Ehrlich & Sons, St. Joseph, Mo., asking for the name and location of some manufacturers of sycamore blocks, was referred to the information committee.

A letter from the Forest Products Federation, Chicago, asking for a contribution to the movement in behalf of lumber as against the various substitutes used therefor, was referred to the publicity committee.

Ralph May was congratulated on his recent election as first vice-president of the Hardwood Manufacturers' Association of the United States.

Committees Appointed for St. Louis Club

At the meeting of the new board of directors of the Lumbermen's Exchange, elected January 4, Walter D. Dodd was re-elected secretary and W. W. Milne was re-elected treasurer. The following standing committees were announced for the year 1915:

TRAFFIC COMMITTEE—Henry A. Boeckeler, chairman, Boeckeler Lumber Company; Thomas E. Powe, Powe Lumber Company; George H. Cottrill, American Hardwood Lumber Company.

MEMBERSHIP COMMITTEE—F. H. Smith, chairman, Smith-Suehne Lumber Company; R. F. Krebs, Steele & Hibbard Lumber Company; Franz Waldstein, Waldstein Lumber Company.

PUBLIC AFFAIRS COMMITTEE—W. P. Anderson, chairman; Gideon-Anderson Lumber & Mercantile Company; William Lothman, Jr., Lothman Cypress Company; E. H. Luehrmann, Charles F. Luehrmann Hardwood Lumber Company.

FIRE INSURANCE COMMITTEE—G. E. W. Luehrmann, chairman, Charles F. Luehrmann Hardwood Lumber Company; G. E. Hibbard, Steele & Hibbard Lumber Company; E. W. Wiese, Thomas & Proetz Lumber Company.

REINSPECTION COMMITTEE—F. C. Moore, chairman, Moore-Jurden Lumber Company; T. J. Noser, Noser-Epler Lumber Company; J. L. Beuns, Waldstein Lumber Company.

ARBITRATION COMMITTEE—T. J. Noser, chairman, Noser-Epler Lumber Company; J. L. Cenas, Waldstein Lumber Company; C. E. Hascall, Pickroll Walnut Company; Louis Krug, Krug Lumber Company; Alcee Stewart, Alcee Stewart & Co.

Sawdust Club Elects Officers

The Sawdust Club of the Union League, Philadelphia, held its annual meeting and dinner at the League club house on January 29. Edwin B. Malone of Watson Malone & Sons was elected president to succeed the late Frank C. Gillingham; John T. Riley, Charles S. Riley & Company, vice-president, and William Henry Smedley, Smedley Brothers Company, secretary and treasurer.

Michigan Retailers Meet

The Michigan Retail Lumber Dealers' Association held its annual convention in the Bath city, February 2 and 3, when a program of great interest was carried out. Headquarters were at the Medea hotel. About three hundred members were present.

The first speaker after lunch was Dr. Herman Von Schrenk of St. Louis, Mo., technical engineer for the National Lumber Manufacturers' Association. Dr. Von Schrenk quoted figures to show that in point of value lumber is the most important commodity handled in the United States, coal alone excepted.

Frank P. Stockdale of Chicago discussed the rising costs of the lumber business, and gave an interesting account of how dealers arrive at costs, his information being drawn from special reports he had prepared. He believed that a more careful cost system would enable many business men to succeed who are now failures.

Arthur Holmes of Detroit spoke of the work of the association in helping to fight the federal government in the case for alleged violation of the Sherman anti-trust law, which is now being pushed against the Northwestern Lumber Association.

Chicago Association Elects Officers

In accordance with the by-laws of the Lumbermen's Association of Chicago the officers were not elected at the annual meeting which took place at the Hamilton Club, January 25. At that time the directors and chairmen of committees were duly elected and on Monday, February 1, the new directors met at the association headquarters and elected the following officers for 1915: President—George J. Pope, vice-president—H. H. Hettler, treasurer—George D. Griffith, secretary—E. E. Hooper.

Hoo-Hoo Officer Disappears

W. W. Stephenson, St. Louis, Mo., supreme scrivener of Hoo-Hoo, has mysteriously disappeared and according to latest reports is still missing. It is stated he had been ill for some little time and that on Monday, February 1, he left his office to keep an appointment at a hotel. Since then nothing has been heard from him.

Hearing on New York Lighterage

The local lumber association has received a notice of a hearing on the protest against proposed new lighterage regulations in New York harbor. The hearing will be held Wednesday, March 3, at the U. S. Custom House, Bowling Green, at 10 o'clock, before Examiner Burnside. The lumber trade is working with the Merchants' Association, which is handling the case for its members.

The lumber dealers are preparing data to be presented and it is stated that some telling blows will be dealt to railroads for the way they handle the lighterage business. The proposed regulations include a charge of twelve cents per ton for unloading in addition to the rate.

December Lumber Cut and Shipments

Figures compiled by the National Lumber Manufacturers' Association for December show the following totals: Cut December 1913, 448,

500,000 feet; cut December 1914, 357,700,000 feet; decrease 90,800,000 feet or 20 3/10 per cent. Shipments December 1913, 496,000,000 feet; shipments December 1914, 413,300,000 feet; decrease 82,700,000 feet or 16 6/10 per cent.

Shipments December 1913, 496,000,000 feet; cut December 1913, 448,500,000 feet; cut less than shipped 47,500,000 feet or 9 6/10 per cent. Shipments December 1914, 413,300,000 feet; cut December 1914, 357,700,000 feet; cut less than shipped 55,600,000 feet or 13 4/10 per cent.

GEORGE J. POPE, PRESIDENT OF THE LUMBERMEN'S ASSOCIATION OF CHICAGO.

With the Trade

Pennsylvania Mutual Holds Annual Meeting

The Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia, held its annual meeting on January 26, followed by a banquet in the evening at the Union League. Edward F. Henson, president of the company, acted as toast master. The speakers of the evening were the Honorable Hampton L. Carson, ex-attorney general of Pennsylvania, and the Hon. Irving C. Williams, deputy forestry commissioner of Pennsylvania.

The company states that it has passed through another successful year—in fact, 1914 was the second best in its history. It has increased its surplus \$40,000—assets, \$46,000; during the year it returned dividends to the extent of \$180,000, and paid losses to the extent of \$180,000. The directors at their meeting January 26 voted the continuance of the large dividend of forty per cent. A detailed statement of the financial condition of the company will be sent to the trade at large in due course.

The Davidson, Hicks & Greene Company Buys Timberlands

It is reported that the Davidson, Hicks & Greene Company of Nashville, Tenn., has purchased 44,000 acres of mountain timberland extending from near Cowan to the north Alabama line. It is reported at Cowan that spur tracks will be extended through the property and that an immense band sawmill employing 300 men will be established at that point. The company has one small mill in operation some miles out from Cowan and the larger development will begin with a rush as soon as the winter season breaks.

Plans Operating Big Tract

The Kentucky Lumber Company of Lexington, Ky., is preparing to operate a large tract of timber located about fifteen miles south of Williamsburg, near a small town known as Chaska, Tenn. This large tract of timber lies in the Pine mountains, which adjoin the Cumberland mountains near Lot, Ky. A side track is being constructed for the loading of logs on the Louisville & Nashville railway near Chaska, and from there tramroads will be constructed to extend into the heart of this timber. The tract consists of about 2,000 acres.

Will Represent the Erie Lumber Company

The Erie Lumber Company of Erie, Pa., announces that C. M. Pomeroy has accepted the position as salesman and will represent it among dealers in western New York. Mr. Pomeroy is qualified by long experience in the lumber business and accepts his new position with high recommendations.

To Represent the Steele & Hibbard Lumber Company

The Steele & Hibbard Lumber Company, St. Louis, Mo., advised **HARDWOOD RECORD** under recent date that James A. Braun of Chicago will hereafter represent that company in Chicago and contiguous territory, and will call on hardwood lumber buyers in the states in the vicinity of Chicago. Mr. Braun has had a long and varied experience in Chicago, having for the past nine years been with W. O. King & Co., and prior to that time he served in the St. Louis hardwood trade.

New Receiver Asked for Pooley Furniture Company

A petition asking for a new receiver to take charge of the affairs of the Pooley Furniture Company, Philadelphia, Pa., was presented to common pleas court No. 1 by George De Armond, who is one of the creditors. He asks that the new receiver be given the power to begin suit against the creditors' committee, which managed the Pooley Furniture Company from January 10, 1912, to February 7, 1914. This committee is composed of H. G. Michener, president of the Bank of North America, Charles H. Thompson and Max Weisman. A charge of unfairness and discrimination in the payment of claims by the creditors' committee is made. It is also alleged that large payments of principal and interest were made to preferred creditors. In answer to the above petition Max Weisman, receiver for the company, states that whatever action had been taken by the creditors' committee in the past was not the obligation of the committee, but it was the company which was responsible.

A New Nebraska Concern

The W. F. Hoppee Lumber Company has been incorporated at Lincoln, Neb., with \$50,000 capital stock to do a general lumber business. W. F. Hoppee has been with the R. M. Tidball Lumber Company of Lincoln for the last fourteen years and during the past six years has been secretary and treasurer of that company. He sold his interest in that corporation and has just formed the new company.

The W. F. Hoppee Lumber Company has purchased the yards, goodwill and business of Aspegran & Tamer, formerly known as the Easley & Graham Lumber Company's yards. The yards are located on the Rock Island and occupy half a block of ground. They are equipped with up-to-date sheds under which the lumber of all grades is kept under cover.

Mr. Hoppee has been intimately connected with the sales end of the lumber business in prominent capacities and brings with him into his new work a wide experience. He says he is the oldest man in continuous charge of sales in lumber.

The new company will maintain an up-town office located on the ground floor of the Lincoln hotel building.

Arthur Bailey & Co. Change Location

Arthur Bailey & Co., specialists in glued-up and one-piece hardwood dimension stock, formerly located at No. 1 Madison avenue, New York, N. Y., have moved to the Flat Iron building.

When last seen Mr. Bailey stated that the concern had closed several large contracts and expressed himself very optimistically regarding future business. The company's piano case stock, key beds and table tops have gained quite a wide reputation where this class of article is used.

Lumber Rate Hearing Closed

On February 2 at St. Louis an important rate hearing came to a close, so far as testimony was concerned. It was conducted before Examiner Watkins of the Interstate Commerce Commission, and several adjournments had been made. The hearing was commenced at Birmingham, Ala., and was resumed at Memphis, Tenn., and later at Louisville, Ky., and the final hearings were held at St. Louis.

The history of the case goes back to last August at which time carriers operating in southeastern Mississippi territory announced tariffs to take

effect Oct. 1, proposing advances on forest products to all Ohio and Mississippi crossings, St. Louis and Memphis, and points intermediate to the Ohio river crossings and St. Louis. Hardwood lumbermen put up vigorous opposition to the proposed advance in freights, and evidence was submitted at the several hearings, and a number of well-known lumbermen were on the witness stand in opposition to the proposed advance. The Interstate Commerce Commission suspended the tariff until all parties could be heard. The interested parties have now presented their side, and the ruling by the commission will follow in due time. It is the opinion of many well-informed lumbermen that the establishment of the advances as proposed would work great injury to the lumber trade in the territory concerned.

One Tree Brings \$100

The government has received \$99.40 in settlement for a single sugar pine tree which was cut in trespass in the Stanislaus national forest, in California, and which yielded more than enough actual lumber to build a good-sized suburban frame house. The tree scaled 18,933 board feet and was valued at \$5.25 per thousand feet.

Not many trees contain enough lumber to build a two-foot board walk nearly two miles long, and this is believed to be the first case on record in which a single tree felled in a national forest was valued at almost \$100 on the stump, although national forest timber is frequently sold at considerably higher rates.

Dr. Schenck Heard From

Many of Dr. C. A. Schenck's old-time friends in the lumber trade have been uncertain since the outbreak of the war as to his whereabouts and safety. Dr. Schenck was head of America's first forest school at Biltmore. The rumor was circulated a short time ago that he had fallen in battle in France, but this seems to have had no foundation, as the doctor has been serving on the Russian frontier since volunteering his services.

Being over the age limit Dr. Schenck volunteered his services at the outbreak of the war. The offer was accepted and for several weeks he was stationed near Maliz in charge of an engineering corps engaged in the construction of forts. His post cards and letters were full of that spirit which has always characterized his speech and written utterances. About the middle of October he returned to Darmstadt but was asked if he would go to the firing line, and shortly left for the Russian frontier sending the following message to his American friends:

"I have lived my life and had a full share of it, more full than most of us; the rest of it belongs by rights to my country."

A post card dated November 8 was received from him in Russian Poland at which time he was in excellent health, had seen some warm fighting but came through unharmed. A card from Mrs. Schenck December 18 states that Dr. Schenck had at that time been in Poland eight weeks and was well and in good spirits. Mrs. Schenck's eldest brother, Alexander Bopp, was killed during the first ten days of the war. **HARDWOOD RECORD** joins Mrs. Schenck's many friends in this country in expression of deepest sympathy. No further word has been received regarding the doctor's whereabouts, but it is the sincere desire of everyone who knows him that he would return to Darmstadt unharmed and in perfect health, and will eventually make his long promised return trip to America.

Lumber Crooks to Go to Prison

With the refusal of the United States supreme court to grant a rehearing to the officers of the International Lumber & Development Company of Philadelphia, Pa., those gentlemen face the imminent certainty of either forfeiting the heavy securities or spending a couple of years in jail. The decision was handed down on January 25 and ends a three years' fight against one of the biggest frauds that has ever been carried on in this country. The mandate will be forwarded to the United States district attorney of Philadelphia by the supreme court and the attorneys for the convicted promoters will be notified to produce them. They have thirty days under the law in which to do so, and if at the end of this time the convicted men fail to surrender for imprisonment, their bail will be forfeited and they will be arrested as fugitives from justice.

John R. Markley, Iowa attorney and Chicago promoter and contractor, and spoken of as king of American confidence men, who has floated some twenty-two fraudulent concerns and unloaded \$25,000,000 of worthless securities on the public during his fifteen years' career, is sentenced to serve one year and three months in the Eastern penitentiary and pay a fine of \$10,000.

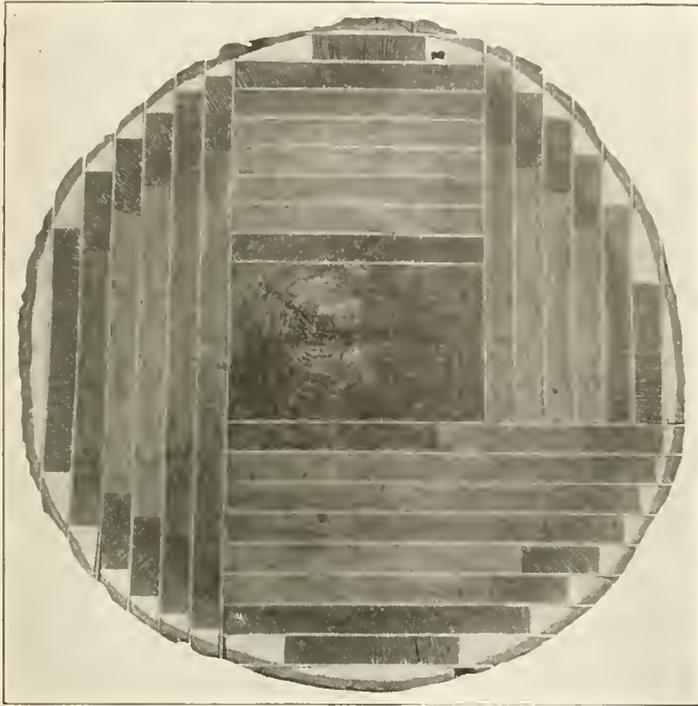

Isiah B. Miller, contracting partner of Markley in the International Lumber & Development Company fraud, was given a similar sentence.

Charles M. McMahon, secretary and treasurer for half a dozen Markley-Miller crooked enterprises and in charge of the main office of the concern at Philadelphia, is sentenced to serve two years and pay a fine of \$2,000.

William H. Armstrong, Jr., son of a former United States railroad commissioner, who was the figurehead president of several of the Markley-Miller fraudulent enterprises, is sentenced to serve two years and pay a fine of \$2,000. His son posed as general manager and is under sentence to serve two years in the Eastern penitentiary and pay a \$2,000 fine.

Colonel A. G. Stewart, former United States attorney-general for Porto Rico, legal adviser, special commissioner and vice-president of Markley-Miller promotions, is sentenced to serve one year and one day and pay a fine of \$1,000.

Other men who are connected indirectly with the fraud, but who evidently knew nothing about the fraudulent character of the enterprise are H. A. Merrill, Mason City, Iowa; Alfred Grantz, Philadelphia, Pa.; John S. Barnes of Nebraska, and W. W. Puscy.

CONVENTIONAL DIAGRAM SHOWING THE MANNER OF SAWING OAK LUMBER

The crooks were convicted in April, 1913. Since then the fight has been going back and forth, appeal being taken to the circuit court of appeals and from there it has been carried to the supreme court. Each of the five convicted promoters is under \$15,000 bail.

Pertinent Information

Interesting Figures on Run of Hardwood Logs

On this page are shown two cuts illustrating the percentages of different grades gotten from manufacturing typical oak and gum logs, which were cut up by a large southern manufacturer. The diagrams do not need any particular explanations other than to show the locations of the boards coming under certain grades in each log.

The following is a key showing quantity of each grade and value per 1,000 feet from the oak and gum logs. The oak log cut up as follows:

FAS Plain Oak	20	%	\$42.75 per M	Value \$ 8.50
No. 1 Com. Plain Oak	30	%	23.25 per M	Value 6.98
No. 2 Com. Plain Oak	36	%	13.75 per M	Value 4.95
No. 3 Com. Plain Oak	14	%	5.75 per M	Value .81

Mill Run \$21.24

The gum log cut up as follows:

FAS Red Gum	18	%	\$23.50 per M	Value \$ 4.23
No. 1 Com. Red Gum	16	%	14.50 per M	Value 2.32
Box Boards	2	%	21.25 per M	Value .42
FAS Sap Gum	20 1/2	%	14.75 per M	Value 3.02
No. 1 Com. Sap Gum	13 1/2	%	11.25 per M	Value 1.52
No. 2 Com. Sap Gum	17	%	9.00 per M	Value 1.53
No. 3 Com. Sap Gum	13	%	7.50 per M	Value .98

Mill Run \$14.02

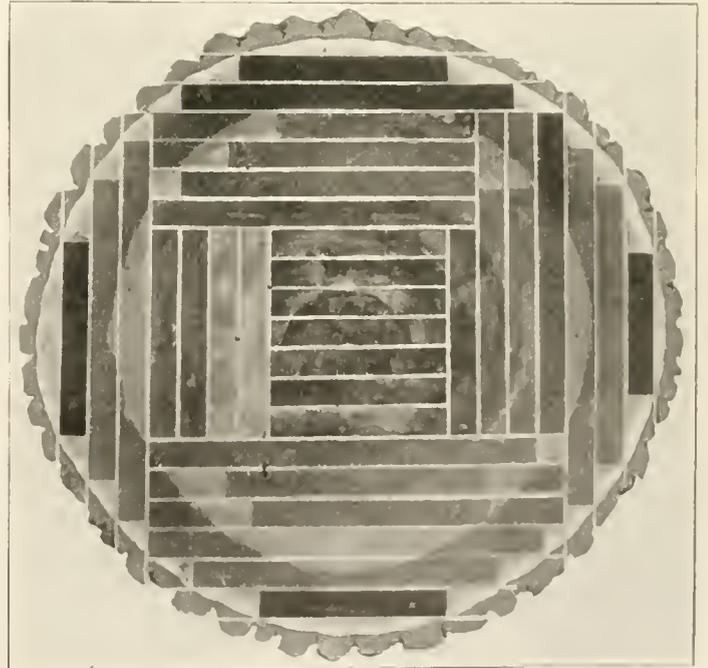

The cutting of the gum log would show the following: At the top the first two boards that are darkened are No. 1 common sap. The third board from the top at the right is No. 1 common red. Under this the next two shaded boards are FAS red, and the wide board next to this is No. 1 common red. Reading on down through the center the horizontal boards of the same length are No. 2 common red for the top and bottom and those intervening are No. 3 common. Reading right on down toward the bottom, the three boards just below the center boards of even length, which are shown as shaded, are all FAS red gum. The next two boards of a light gray color are FAS sap gum and the bottom board of darker color next to the slab is No. 1 common sap. The lighter ends of the wide boards running horizontally above and below the heart board are No. 2 common sap, and the small squares are waste.

Reading the vertical boards from left to right, the dark board at the left is No. 1 common sap, and the next two boards are FAS sap. Of the four vertical boards coming next fitting between the wide horizontal boards the first two are No. 1 common red and the next two are No. 2 common red. Then starting just at the right of the horizontal board in the heart, the first board is No. 3 common red, the next two boards as far as the shaded part is seen are No. 1 common red and the lighter colored ends running into the sap are No. 2 common sap. The next board running up to the edge of the sap is FAS red gum, and the dark end is No. 1 common sap. The two wide boards coming next are FAS sap and the outside dark board is No. 1 common sap.

Referring to the diagram of the oak log, starting at the top the two top boards are No. 2 common, the lighter portions of the next two boards are FAS, the lighter portions of the next four boards are No. 1 common, and the dark portions of all of these boards are No. 2 common. The heart is boxed to a 6x10 No. 3 timber. Reading down through below the heart, the first board is No. 2 common, the next two are No. 1 common, the next two are FAS, the next No. 1 common and the two outside boards next to the slab are No. 2 common. On the left, the first dark board and the outside ends of all the other boards are No. 2 common. The second board in from the slab is No. 1 common, the next three are FAS and the vertical board next to the heart is No. 1 common. On the right, the dark ends of all of these boards and the outside board next to the slab are all No. 2, the two wide boards next to the heart and the two in from the slab are No. 1, while the other two remaining boards are FAS.

Rate Advance Serious Question to Gum Manufacturers

Some manufacturers of hardwood lumber have about reached the decision, since the conclusion of the recent hearing in the case involving proposed advances in freight rates from points in southern territory to Ohio river crossings, that there is nothing to be made out of the manufacture of red gum under present conditions. Some of the exhibits which were filed by witnesses for the Southern Hardwood Traffic Association at Louisville and St. Louis were so complete and so striking in their illustration of costs and other features that some manufacturers have been led to go over their books with a view to determining just what their gum lumber was costing them, what freight rates they were paying, what selling charges they had to bear and what prices they were receiving. This examination has tended to prove that there is

METHOD OF DIAGRAMMING A GUM LOG FOR CONVERTING INTO LUMBER

little or no money in gum lumber at present prices and some of the manufacturers of hardwood lumber do not hesitate to say that the railroads, by persisting in their demand for higher rates for gum, with a view to increasing their revenues, may end by having a very heavy loss in revenues from this item through heavy curtailment of gum shipments. The Gum Lumber Manufacturers' Association and various individuals engaged in the manufacture of gum, have been doing a great deal of publicity work in behalf of this particular lumber. Just when they thought conditions were getting right for rapid progress along this line, the war broke out in Europe and put a decided quietus on the business. Now, after the war has resulted in prices which are far from remunerative, the railroads are coming along with demands for freight rates that

are regarded as practically prohibitive, especially since they will shut manufacturers of gum lumber out of territory which has heretofore been profitable on the basis of the old rates.

The Relation of Production to Markets

At the bottom of this page is shown a chart plotting the lumber cut, lumber shipped, and prices of two standard grades of western lumber compiled by the West Coast Lumber Manufacturers' Association in collaboration with the Lumbermen's Information Bureau. The information was compiled on January 25, 1915, and an explanation is hardly necessary.

The remarkable manner in which the lines denoting lumber cut and lumber shipped remain together show that the lumber production of the West

Coast is under some form of control after all. In a general way the price lines in both flooring and the No. 1 common retain a relative contour approximating the general contour of the production and shipment lines. That is, they reach the maximum height from March to May, 1913, in both items as do the lines of production and shipment.

It will be seen readily that the price curves have not responded to the rapidly varying conditions of production and shipment as it might have been expected they would.

Baltimore Exports Still Insignificant

The effect of the war is again strikingly shown in the statement of exports for January of this year, as compared with the same month in 1914, when the value of the lumber and logs, together with other wood products shipped from this port, was not less than three times as large. Some items, like hickory logs, which are used for certain purposes now especially in evidence, made gains, but in the main there was a heavy shrinkage, which is likely to attain even greater proportions now that steamship lines have decreed a virtual embargo on shipments to certain British ports, while the advance in the ocean freight rates is so high as to be practically prohibitive. Oak lumber, for instance, fell off more than fifty per cent, and the shrinkage in poplar was even heavier. Exports of certain items disappeared entirely during the month just ended. The comparative statement is as follows:

	1915		January		1914	
	Quantity	Value	Quantity	Value	Quantity	Value
Logs, hickory	76,000	\$ 2,773	24,000	888	946	24,000
Logs, walnut	53,000	3,929	184,000	10,893	10,893	184,000
Logs, all others	14,000	425	40,000	1,930	1,930	40,000
Lumber, oak	725,000	26,000	1,618,000	54,149	54,149	1,618,000
Lumber, pitch pine	50,000	1,860	98,000	3,133	3,133	50,000
Lumber, all other pine	114,000	15,000	19,000	700	700	114,000

		\$65,987		\$190,196		

Big Offering of National Forest Timber

The United States Forest Service is offering for sale 382,000,000 feet of timber on the Crater and Paulina forests in Oregon. This is the largest body of timber ever placed on the market in Oregon by the Forest Service, and it stands among the largest of national forest timber offerings.

The timber is in two blocks, one of 7,120 acres, just east of the Crater Lake national park; the other of 17,560 acres on the watershed of Bear creek, near Upper Klamath lake, in the Paulina forest. Both tracts are tributary to Klamath Falls, Oregon. All but 10,000,000 feet is western yellow pine of good quality, the rest being sugar, lodgepole and western white pine. The location and topography of the larger area are described as excellent for logging and that of the smaller as fair. A cutting period of nine years will be allowed a purchaser of the smaller tract, twelve years for the larger, and a maximum of sixteen years to a purchaser of both tracts. It is estimated that an investment of \$340,000 will be necessary for an operation on the larger tract.

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform. The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

A Convenient Form of Stock Sheet

Malcolm E. Miller of the Stearns Salt & Lumber Company, Ludington, Mich., has sent HARDWOOD RECORD a copy of a stock sheet issued to the salesmen of that company, which is illustrated herewith.

The sheets are put up in bunches of five and stapled in order that there will not be any difficulty in having the carbon copies line up with the printing. After the list is filled in the perforated section at the top is detached, and the sheet then fits, with one vertical fold, in an I-P loose leaf price book No. 506.

The figures in heavy type under the word "price" indicate the dry weight of the stock and the prices listed are f. o. b. the company's mill. The price column is placed to the left of the list resulting in the possibility of quicker reference. Each wood has a separate list, and three sets or fifteen copies are made for the use of the salesmen and the order department. The spacing is correct for any standard typewriter.

An Opening for Coffins

A consular report from Ceiba, Honduras, says that not one manufacturer of coffins is to be found in that district. The most primitive methods are followed. When a death occurs in a town or rural community some carpenter makes the required coffin, and it usually is a crude affair. The people are fairly well to do, and it is believed that ready made coffins would find a market in that region.

The Appalachian Lumber Company has started business as an incorporated concern with \$50,000 at Jonesboro, Tenn.

The Hub Motor Truck Company started business at Columbus, O., with \$300,000 capital, to manufacture all kinds of vehicles.

The Northern Coach Company has started business at Port Washington, Wis. This is an incorporated concern with \$25,000.

The Artisan Millwork Company has started business at Marshall, Ill. This is an incorporated concern with \$12,000 capital stock.

The Hammond-Chandler Lumber Company of Rice Lake, Wis., was recently incorporated, the authorized capital being \$100,000.

The National Service Corporation, an automobile manufacturing institution, has started business at Wilmington, Del., with \$100,000 capital stock.

The Auburn Wagon Company of Martinsburg, W. Va., announces the death of its general manager, Max Robinson, which occurred on Sunday, January 31.

A new furniture manufacturing institution known as the Jamestown Superior Furniture Company has been incorporated at Jamestown, N. Y., with \$25,000.

CHICAGO

Charles C. Boyd of C. C. Boyd & Co., hardwood and veneer manufacturers of Cincinnati, O., was in Chicago for a few days about a week ago.

J. D. Staple of the Northwestern Coopersage & Lumber Company, Gladstone, Mich., spent a day in Chicago last week.

H. W. Baker of the Baker-Mathews Manufacturing Company, Sikeston, Mo., spent a few days in Chicago last week.

E. M. Vestal of the Vestal Lumber & Manufacturing Company, Knoxville, Tenn., was in the city for a few days last week on a combination business and pleasure trip. He reports having sold quite a little Tennessee red cedar in the North.

E. D. Galloway and M. L. Pense of the Galloway Pense Company, Poplar Bluff, Mo., conferred in Chicago the greater part of last week.

C. H. Sherrill of the Colfax Hardwood Lumber Company, Colfax, La., spent several days last week in Chicago in conference with the local representative, H. J. Retebard.

C. B. Allen, manager of the veneer department of the Anderson-Tully Company, Memphis, Tenn., was in Chicago the greater part of last week.

The Anguera Lumber Company, Chicago, Ill., has been succeeded by the Anguera Lumber & Tie Company.

BUFFALO

The efforts of Mayor Fuhrmann and the Chamber of Commerce are being exerted to start a "build now" movement in this city and as far as possible municipal and other building work will be accelerated. The present cost of material is so low and the opportunity to obtain labor is so unusual that it is likely that the building trade will be stimulated. The city has been somewhat hampered by lack of funds, but at present these can be obtained on favorable terms.

An echo of the failure of the Blue Grass Lumber Company of this city is the filing of a petition in bankruptcy by Charles S. Creelman, a lumberman well known in Chicago and other cities. His debts are largely due to banks and his name is on notes to Southern institutions to the extent of \$157,000. Total liabilities are \$175,693.38, with assets of \$50.

Ten men were killed and five badly injured on February 3 in an explosion in the bunkhouse of the Mayburg Chemical Company, which owns thousands of acres of standing timber around Mayburg, Pa. It is believed that the hose to a lighted gas stove became detached and that the gas ignited from a lamp.

W. K. Jackson of Jackson & Tindle has been in Michigan lately, looking after the installation of new machinery and the starting up of the firm's new band sawmill at Pellston.

A. J. Elias has returned from a week's trip to Washington, D. C. G. Ellas & Bro. report the hardwood trade as rather quiet, but look for improvement in the next few weeks.

Blakeslee, Perrin & Darling state that the hardwood trade, while slow at present, has been picking up a little. The yard is getting in stocks of plain oak and ash.

M. M. Wall has returned from a business trip of several weeks to the South. He states that the lumber people there are not very busy just now, but are hopeful of better business soon.

The trade has turned in such a way that the A. J. Chestnut Lumber Co. has been increasing its purchases of Pennsylvania hardwoods, with an eye to certain customers in the New York city district.

The Yeager Lumber Company is getting in stocks of a number of woods, including birch, oak and chestnut. Maple, chestnut and ash have been among the best selling woods, next to oak.

The yard of T. Sullivan & Co. has been receiving some good shipments of brown ash and elm from Michigan. Trade has not been very active, but these two woods have been selling fairly well.

The McLean Mahogany & Cedar Company is finding business about as quiet as anyone, but President R. D. McLean does not think that it

is to last a great while. He is keeping routine matters up closely in order to be ready for the improvement. The company is now located at 601 White building.

BOSTON

The Massachusetts Wholesale Lumber Association, Inc., has appointed Wm. Bacon chairman of a committee to co-operate with the Massachusetts State Board of Trade in securing reasonable modifications of the proposed drastic fire prevention legislation and ordinances, more especially in the Metropolitan district. The most uneconomic and unwarranted restrictions on the uses of lumber which have been outlined by the newly created Fire Prevention Commission will greatly hamper much construction in this section and the lumbermen in their own interest and that of the community hope to have many of the uncalled for provisions withdrawn.

The firm of J. K. & B. Sears Company of Middleboro and also H. A. Fay of Lynn, Mass., have assigned; and the depressed condition of business is further evidenced by four bankruptcy petitions with liabilities aggregating \$50,565, the principal petitioners being Leonard F. Jones of Holyoke and C. M. Hebert of Ludlow, Mass.

The C. B. Swift Company has been incorporated at Boston, for the manufacture of furniture, with capital of \$25,000. In Maine two new firms have been organized: The Barker Lumber Company at Orono, Me., capitalized at \$100,000, the president and treasurer being Henry L. Barker of Old Town; also the Welsford Lumber Company at Danforth, Me., with capital of \$10,000, the president being John W. Hinch of the same town. The incorporation of the Gale Lumber Company at Cambridge, Mass., is also recorded. It has a capital of \$50,000. Wm. Glaston of Cambridge is president.

BALTIMORE

The Ryland & Brooks Lumber Company, which has headquarters in the American Building and which has been devoting itself almost exclusively to yellow pine, has of late taken up hardwoods to a much greater extent than before. To look after this end of the business it has formed a connection with Turner W. and Howard Isaac. The former is well known in the trade here, having been engaged for years as a wholesaler. More than two years ago he went to Norfolk, Va., to operate a mill. His brother has been associated with him.

Harrison Brothers have decided to erect a planing mill at Cumberland, Md. The building will be 28x75 feet and will be equipped with band and circular saws, turning lathes, headers, borers and other machines to be found in an up-to-date plant.

Hugh S. Leary of the well-known London lumber firm of C. Leary & Company, who has been in the United States since December, looking up supplies of lumber needed for the conduct of war and other purposes, reached Baltimore January 29. He spent considerable time with M. S. Baer of Richard P. Baer & Company, as his personal guest, and afterward left for New York, where he will take the steamer Fraconia this week for home. Considerable mystery was thrown around Mr. Leary's visit by the Baltimore papers, and the visitor rather added to it by declining to talk about the American trip or his mission. It is thought, however, that his purpose was not so much to take up stocks as to see to it that those already ordered go forward with reasonable expedition, more or less delay having been experienced. Furthermore, the suggestion is made that he may have given assurances as to financial arrangements, concerning which some doubt had been entertained. As far as could be learned Mr. Leary did not place any orders in Baltimore. He has visited a number of the large cities in the course of his trip and has also been at a number of the lumber centers.

Richard P. Baer returned recently from a trip South which took him as far as New Orleans. He visited a number of the mills and wholesalers, and returned with the belief that the gulf states are worse off. In so far as the foreign embargo is concerned, than the Atlantic seaboard. Mr. Baer found many of the mills still shut down and the production of hardwoods much curtailed.

COLUMBUS

The Powell Lumber and Construction Company of Columbus has been incorporated with a capital of \$25,000 to do a general lumber business, by F. Everson Powell, Fred W. Postle, E. M. Patterson, Mame Parks and E. W. Baldrige.

According to the report of the Columbus building inspector there were 59 permits issued during the month of January, 1915, valued at \$85,100, as compared with 122 permits and a valuation of \$178,740 in January, 1914.

The Cleveland Saw Guard Company of Cleveland has been incorporated with a capital of \$5,000 to manufacture guards for saws and other safety appliances, by W. F. Holliday, A. E. Clevenger, M. K. Davey, M. L. Heuer and Charles M. Buss.

In a ruling given to the Ohio State Board of Administration by the attorney general of Ohio it is held that the mechanics' lien law cannot be enforced against the state. The ruling affects all persons selling to contractors which do state work.

R. W. Horton of the W. M. Ritter Lumber Company says trade in hardwoods is holding up well under the circumstances. Buying is about equally divided between yards and manufacturing establishments. The

price list is well maintained at previous levels and the prospects for the future are good.

The Bloker Lumber Company of Lindsey, Ohio, has been incorporated with a capital of \$20,000, by C. T. Bloker, C. L. Bloker, R. C. Bloker, Hattie Bloker and C. S. Bloker.

The Chamber of Commerce of Lima, Ohio, has closed a contract with the Lewis Brothers Manufacturing Company of Rockford whereby the factory engaged in making indoor hardwood finish will be moved to Lima. J. A. Ford of the Imperial Lumber Company reports improved conditions in the hardwood trade all along the line.

< TOLEDO >

The largest and most successful convention ever held by the Ohio Association of Retail Lumber Dealers has just come to an end in this city. There were 1,000 lumber dealers in the city in attendance on this convention and that of the Union Association of Lumber, Sash and Door Salesmen, which is always held at the same time. Edward Hines of Chicago made an address before the convention Thursday afternoon. He called upon lumber dealers to wake up, charging that as a body they were asleep at the switch and due to have great inroads made in their source of livelihood unless they arose to the issue. He advocated persistent advertising and boosting of lumber. He commended the Ohio mechanic's lien law and declared that it was his intention to "carry it back to Illinois."

Many speakers took up and discussed the mechanic's lien law and the organization went on record as again endorsing this law which it was claimed had worked out with perfect success for a year and opposing the Lustig bill introduced in the Ohio legislature this week, and designed to absolutely repeal the mechanic's lien law. The program of entertainment closed Friday night with a banquet, smoker, moving picture and vaudeville entertainment, all of which were, as the saying goes, "worth the price of admission."

The Union Association of Sash and Door Salesmen held a banquet at the Secor, Wednesday evening, which was attended by 200 members. At the annual business meeting action was taken denouncing the proposed amendment granting an advance passenger rate to railroads. Officers of this association elected were: President, Ralph B. Peck of Toledo; D. R. Winn, Columbus, vice-president; J. P. Bartelle, Toledo, secretary-treasurer; John W. Chamberlin, Toledo, and George Swiger, Cleveland, directors.

Jethro G. Mitchell, one of the organizers and first secretary of the Mitchell & Rowland Lumber Company, died here recently, aged seventy-three years. He was survived by a wife and son.

< INDIANAPOLIS >

W. C. Raymond, president of the Marion Lumber Company, died at his home in Marion a few days ago, at the age of sixty-nine years. He was formerly in business at Peru and Kokomo.

The Udell Works, which was closed several weeks for inventory and repairs, has resumed operations with a full force of 200 men. Furniture and hardwood specialties are manufactured.

Additional bad checks to which the signature of the Interior Hardwood Company of this city was forged have been received here. They were cashed in Mobile and Birmingham, Ala. The company has sent a warning throughout the South to look out for such checks.

O. D. Haskett of the O. D. Haskett Lumber Company has returned from Washington, D. C., where he was counselor to the Indianapolis delegates at the meeting of the Chamber of Commerce of the United States.

The Bedna Young Lumber Company has been organized and incorporated with an authorized capitalization of \$98,000 to take over the hardwood lumber business at Evansville of the late Bedna Young. Those interested in the company are Mamie Young, F. M. Cutsinger and H. J. Schaefer.

A line of furniture will be manufactured at Lebanon by the newly organized George O. Palmer Furniture Company, which has been incorporated with an authorized capitalization of \$6,000. The principal stockholders are George O. Palmer, B. L. Palmer and Lew Palmer.

< MEMPHIS >

W. R. Barksdale, a well-known member of the hardwood lumber fraternity here, has returned from Fresno, Cal., where he maintains a winter home. Mr. Barksdale divides his time between Memphis and Fresno.

The Arkansas Oak Flooring Company, recently incorporated at Pine Bluff, Ark., with a capital stock of \$50,000, has purchased a five-acre site at that point and has already begun the construction of its plant. The latter will have a daily capacity of about 30,000 feet and will give employment to fifty or seventy-five men.

The shops of the Mobile & Ohio Railroad Company at Jackson, Tenn., reopened last week on about half schedule, after having been closed down since November 5. The present plan calls for working the entire force every other day. Only a short time ago the shops of the Louisville & Nashville at New Decatur, Ala., very greatly increased the number of men employed and the Illinois Central has also increased the hours of work at some of the shops on its lines.

The Southern Loggers' Association has, through a special committee, made arrangements for the publication in book form of the log grading rules it recently adopted. These are expected to prove beneficial to both

buyers and sellers. They will enable the former to pay proper prices for the various grades of logs received and they will make it possible for sellers to grade or classify their own stock. This book will be issued from the press shortly and will then be distributed to members of the association as well as to others who are desirous of obtaining it. This association was organized here some weeks ago and has for its purpose the solution of a number of problems confronting mill owners and handlers of timber generally. This question of proper grading is regarded as the most important of all.

James Alexander has been elected president of the Memphis Builders' Exchange for the ensuing year. L. T. Lindsay is first vice-president, J. W. Clark is second vice-president, J. W. Williamson is treasurer and the following are directors: I. N. Chambers, James E. Faires, J. W. Garrison, P. A. Gates and L. J. Moss. The election was held February 2. During the past two weeks the exchange has had an active membership committee in the field and thirty-three new members were captured as a result of its aggressive work. This brings the membership of this body to more than 175. The membership committee has been continued for another ten days in the hope that the 200 mark might be reached. The Memphis Builders' Exchange is closely affiliated with the National Association of Builders' Exchanges and is quite prominently identified with the handling of issues of far-reaching importance.

The Mississippi river at Memphis has already begun to rise rather rapidly and predictions are now made that a stage of thirty-five feet will be reached here early next week. This is not enough water to materially interfere with any of the hardwood plants in this city or section. It is also too small to affect seriously the levee system throughout the lower Mississippi valley. In fact, this is only the indicated danger line for Memphis and is between eleven and twelve feet below the maximum stage reached here during the past period of high water. It usually requires a stage of thirty-seven or thirty-eight feet to begin to interfere with manufacturing operations in this city, and lumber interests here will show very little concern until the water is well above thirty-five feet. It is possible that the thirty-five foot stage will give high enough water in both the Mississippi and its tributaries to greatly facilitate the handling of timber by water. It is the general impression, however, that comparatively few logs have been prepared for delivery by this method and it is not anticipated that river receipts at Memphis will be anything like normal.

Lumber exporters here are watching with much interest developments at Washington where the Democrats are making strenuous efforts to pass the shipping bill. It will be recalled that the National Lumber Exporters' Association, during its recent session here, passed vigorous resolutions in favor of larger ocean carrying facilities without specifying the particular legislation which should be enacted to bring about this result. In the meantime, rates on cotton are beginning to decline somewhat. Those to Bremen have dropped from \$3.50 to \$2.50 per hundred, to Barcelona from \$1.35 to 85 cents and to Rotterdam from \$2.50 to \$2.10. The Liverpool rate is the same as heretofore, \$1.15 to \$1.25. It is also reported that there is quite a decided increase in the amount of freight room offered. A prominent cotton man said recently that he could book freight room for at least 100,000 bales. A short time ago cotton interests were very much excited over the scarcity of ocean freight room, as well as over the high prices demanded therefor. It is pointed out by some exporters here that there is a good demand for southern hardwoods in Europe and that a reasonably large volume of business could be put through with lower ocean freight rates. As it stands, however, there is very little doing, although a few cars of lumber have been exported from this city and section within the past fortnight.

R. J. Darnell of R. J. Darnell, Inc., is authority for the statement that one of the two band mills of his firm at Leland, Miss., will resume next week after having been closed down for quite a while. R. J. Darnell, Inc., is running one side of its double band mill at Batesville and, when the plant at Leland starts up, this firm will be operating at about fifty per cent of its capacity. Mr. Darnell says that business is improving to some extent but that there is still room for a great deal more betterment.

F. T. Dooley of the Dooley Lumber Company has gone to Helena, Ark., where he is looking after logs being cut for his firm at that point. He is making arrangements to have a considerable quantity of both oak and cypress sawed for his firm.

< NASHVILLE >

Increased activity in the lumber trade is reported at Burns, Tenn. R. M. Holland reports the sale of about fifty cars in one week. The S. G. Holland Stave Company is again in the market for stave timber, and reports that its stocks have been about exhausted. Active demand is reported at Burns for hickory handle and white oak wagon timber.

Christian Kopp has purchased equipment for a new sawmill at Bridgeport, Tenn., which he plans to have in operation at an early date.

Shipment of 30,000 pickax handles is reported by a firm in Franklin, Tenn., to representatives of the allied governments in Europe, to be used in war operations.

The Interstate Commerce Commission has vacated the suspension of an advance of lumber rates on the Nashville, Chattanooga & St. Louis Railway between Nashville and Chattanooga. The commission finds that the rate of eleven cents is justified.

The Nashville Lumbermen's Club has changed the time of meeting

Indiana's Original Giant

This photograph was made while the tree was being cut for our mill.

It stood in Putnam County, Ind., and was a genuine FORKED-LEAF WHITE OAK—beyond question the finest white oak that ever grew.

Your customers were delighted with that quiet beauty, that rich, even color and figure that for all time have given to goods made from Indiana oak an *Individuality*.

You can please them again. How? Simply by buying a parcel of almost anything in lumber or sawed veneers from our yards. You can select from a full assortment. We positively carry no southern stock and can prove it.

And remember, we have built up our business by giving

Just a little better quality than you expect

T. E. Washington and Charles M. Morford of the Nashville Lumbermen's Club went to Louisville to attend a hearing of an important rate case before an examiner of the commission, in which the local shippers are interested.

—< BRISTOL >—

It was announced this week that the H. P. Wyman Lumber Company of this city will at once begin the construction of a logging road in Lee county, Virginia, preparatory to installing a mill in the early spring. The company has purchased a tract containing over 10,000,000 feet of hardwood stumpage. H. P. Wyman of the Bristol Door and Lumber Company is president of the company. The new mill will be located at Johnson's Mill, Va.

L. G. Gasteiger of the Pittsburgh Lumber Company returned this week from a visit to the company's home offices in Pittsburgh and reports that while the hardwood business is still dull there, the prospects are much more encouraging. The Pittsburgh Lumber Company's band mill at Hampton, Carter county, Tenn., which has a daily capacity of 40,000 feet, will resume operations this month. The company has a ten-year cut. Its mill has been idle only a few weeks.

The Pine Lumber Company has begun the work of rebuilding its plant at Statesville, N. C., which was destroyed by fire recently.

The Standard Oak Veneer Company, one of the largest manufacturers of parquet flooring in this section, is now working about half of its regular force. It expects to run its mill at Johnson City to its full capacity within the next few weeks.

While the majority of the mills in this section have been idle during the winter, a number of the largest have run steadily. It is expected that a large number of mills will resume about March 1. Several new mills will be ready to go into operation in March or April.

The R. C. Duff Lumber Company has resumed operations at Duffield, Va., and is running its band mill full time.

—< LOUISVILLE >—

Earl S. Gwin, president of the American National bank of Louisville, was the guest of the Louisville Hardwood Club at a recent meeting. Mr. Gwin, who is a comparative newcomer in Louisville, was anxious to become acquainted with the lumbermen, and was introduced to the club by Col. C. R. Mengel, president of the C. C. Mengel & Bro. Company. R. L. Callahan, a director of the bank and a well-known grain dealer, was also present at the dinner. Both of the visitors outlined their views on the financial and business situation, and took a rather optimistic attitude as to the future.

Louisville log buyers are very much pleased with the efforts of the Southern Loggers' Association to establish uniform rules for log grading, and believe that if such a plan were put into general effect, it would help the situation materially.

Heavy rainfalls recently caused the Ohio river to rise so rapidly that fears of a flood were entertained for a time. These proved to be groundless, however, largely on account of the fact that the chief rises were below. Several lumber concerns and other manufacturers on the "Point," the most exposed part of Louisville, had met the situation some time ago by filling in their yards, so that it would have taken a record-breaking flood to have damaged them much.

An interesting situation exists in the mahogany field just now. Owing to the high price of ocean freights and insurance, the cost of bringing in logs from either Mexico or Africa would be extremely large, but as a matter of fact tonnage is hardly available, and the supply of logs is very small. Owing to poor prices realized on the Liverpool markets, African loggers have discontinued operations, and it will be a long time before any more logs come out to the coast. Those now on the market are said to be small and rather inferior in grade. With the available supply at a minimum, and the expense and difficulty of getting any more logs into the country great, manufacturers with stocks of logs and lumber on hand have taken a very bullish attitude, and prices have been rising steadily. For a while prices slumped, when it was thought that the supply would be more than equal to the demand, but sentiment has been exactly reversed, and predictions of high prices and low stocks for the next year or two are now being heard.

The Kentucky court of appeals has outlined the points which must be taken into consideration by the legislature in drafting a workmen's compensation law, in order to have it held valid by the courts. The acceptance of the measure by the employe must be by some affirmative act, and not merely by silence, it was declared. Also, it is illegal to have his compensation, in the event of death, paid into the state fund, even if he leaves no dependents. The court held that provision must be made for appeal from the decisions of the workmen's compensation board. The ability of the legislature to restrict or eliminate the common law defenses of the employer was sustained. The way is now apparently opened for the enactment of a new law at the session of the legislature in 1916.

An interesting case involving the determination of hardwood flooring values was decided recently by the Kentucky court of appeals, the suit being that of R. M. Cunningham of Louisville, against Caldwell & Drake,

general contractors. Mr. Cunningham sold a lot of flooring to the contractors for an office building. They objected to the price which he invoiced the stock at, claiming that it was priced to them lower. The court held that acceptance and use of the material, in view of the charges made in the invoice, implied approval of them, and decided in favor of Mr. Cunningham.

J. E. Barton, state forester, has issued his report covering forest fires during 1914. There were 132 fires during the year, and the value of the work which the department has done is indicated by the fact that most of them were discovered and headed off before they had been able to do much damage. The fires burned over 50,921 acres of timber, destroyed 6,909,000 feet, board measure, with a loss of \$26,669, and also destroyed \$11,655 worth of young timber. Mr. Barton showed that co-operation is needed to prevent fires. Railroads caused twelve fires, sawmills four, brush burning twenty-three and campers and hunters twenty-six.

H. Green Garrett of the Brodhead-Garrett Lumber Company of Winchester, Ky., is a candidate for re-election to the state railroad commission, of which he is now a member. The company with which he is connected is planning a new development on Indian creek, in eastern Kentucky, and will probably build a railroad into the property.

— < ST. LOUIS > —

The building permits issued for January indicated an increase of about 25 per cent over the building operations for January last year. Last month 353 permits were issued for buildings and alterations, the estimated cost of which was \$1,094,673. In January last year, 578 permits were issued for buildings to cost \$854,122. The permit for the Missouri Athletic Association building, issued in January, which will cost \$500,000, represents nearly one-half of the total of the building business for the month.

According to the statement of receipts and shipments of lumber at St. Louis for the month of January as reported by the Merchants' Exchange, there were 15,235 cars of lumber received, as against 14,480 cars during January last year, a gain of 755 cars this January. Shipments of lumber were 8,771 cars as compared with 10,377 cars last January, a loss of 1,606 cars in January, 1915.

Speaking of the recent decision handed down by the Interstate Commerce Commission last week, sustaining the advance in hardwood rates, Thomas E. Powe of the Powe Lumber Company says that the rate discrimination between local rates in the Southwest and through rates for Chicago, as an illustration, is so great that he may have to discontinue to operate his assembling yard at Hugo, Okla. The decision takes practically a dollar a thousand off the value of all oak in this yard.

J. A. Hemphill, who left the Gideon-Anderson Lumber and Manufacturing Company, on January 1 to enter into business for himself under the name of the Hemphill Lumber Company, with offices in the Railway Exchange building, in addition to operating his own business and selling the cut from other mills, is the sales manager of the Lasswell Lumber Company. This concern succeeded to the manufacturing department of the Campbell Lumber Company, at Kennett, Mo., and was recently split into three separate concerns, the Allen Stave Company, the Lasswell Lumber Company, and retail yards at Campbell, Kennett and Saneth, Mo.

— < WISCONSIN > —

The Kaukauna Lumber & Manufacturing Company of Kaukauna has placed its sawmill in operation and is now running the plant full blast. The Hatton Lumber Company of New London is receiving about twelve cars of logs daily and its sawmill is now working overtime.

The sawmill property of Frank Falconer at Prentice, including sawmill, planing mill, lumber sheds and four acres of land, has been purchased by P. H. Hammer, president of the Red Birch Lumber Company at Catawba.

The N. S. Washburn Lumber Company of Sturgeon Bay has closed its sawmill after a successful season. The plant will be overhauled and placed in operation within a month or two.

The Wisconsin Seating Company of New London, owned by F. A. Dennett, has broken ground for two more additions to its plant, one to be 40x80 feet in dimensions and the other 49x40. Both will be three stories high. New equipment will be installed throughout. The company expects to be employing 350 men by May 1. New boilers have been installed in the heating plant. The concern will have an extensive exhibit, comprising the various types of chairs turned out, at the Panama-Pacific exposition. Charles E. Carqueville of Chicago has been made assistant in the general sales manager's office of the concern.

Robert P. Kraus, wholesale lumberman of Marshfield, has formed a partnership with Harry J. Stone of Minneapolis, and the business is now being conducted under the name of Kraus & Stone.

The Rice Lake Lumber Company and Lee Brothers of Rice Lake have resumed operations at their sawmills. Both concerns have large log supplies on hand.

The Northern Couch Company of Port Washington, Wis., has been incorporated with a capital stock of \$25,000 by J. M. Bostwick, J. E. Dennett and Edward J. Barrett.

The Jacob Mortenson Lumber Company of Wausau has resumed operations at its sawmill, which is now running on day and night shifts. The company has a large supply of logs on hand.

doors and blinds, has completed plans for the remodeling of its powerhouse and will install considerable new power equipment, including boilers, motors and generators.

The Kenfield-Lamoreaux Company of Wasburn has placed its sawmill on a day and night shift and will continue on the double shift all winter. The company's box and erating plant is in busy operation.

The J. S. Stearns Lumber Company of Odanah has filed a complaint with the Interstate Commerce Commission against the Chicago & Northwestern railroad, charging that rates on lumber from Odanah to various stations on the defendant's line are excessive. Reparation of \$2,433 is asked.

The Shawano Hub Manufacturing Company has been incorporated at Shawano with a capital stock of \$40,000 by W. C. Landon and T. S. Davis, well-known lumber manufacturers of Wausau, and George T. Harding of Merrill. Mr. Harding, formerly with the Kaul hub concern at Merrill, will manage the new concern.

At the annual meeting of the stockholders of the Merrill Veneer Company of Merrill, the following officers were elected: President, Louis Leidiger; vice-president, F. W. Kubasta; secretary and treasurer, W. A. Runge. The company has placed its plant in operation.

The Paine Lumber Company of Oshkosh has shipped an extensive and attractive exhibit of its goods to be placed on display at the Panama-Pacific exposition at San Francisco. The center of the display will comprise a replica of the double door entrance of the Canadian parliament building, hand carved and of mahogany. Around this center will be grouped a full representation of the styles of doors and other goods manufactured by the Oshkosh concern.

< ARKANSAS >

The Arkansas Oak Flooring Company of Pine Bluff, which was incorporated under the laws of the state in January with a capital stock of \$50,000, has purchased a building site, consisting of five acres, just west of the city limits at Pine Bluff. Work on the construction of the new plant has been begun and will be rushed through to completion. It is expected that the plant will be ready for operations by April 10. It will have a daily capacity of 30,000 feet and will employ sixty men. The principal stockholders in the new corporation are George and L. M. Anson of Wisconsin, James W. Reynolds and H. W. Coles of Pine Bluff.

The Golden Stave Company of Cottner, Ark., on January 26 filed articles of incorporation with the secretary of state, placing the capital stock at \$10,000, of which \$7,000 has been paid up. Ray R. Ramey, E. Billingsley, R. F. Wood and J. W. Williamson are the principal stockholders.

The big hardwood mill at Pine Bluff, owned and operated by J. F. McIntyre & Sons, which has been closed down since September of last year, resumed operations on January 22 and is now employing about 150 men.

The Southwestern Veneer Company's plant at Cotton Plant, Ark., which is one of the largest of its kind in the state, began operations anew in January, after having been closed since the outbreak of the European war.

The Pine Bluff Spoke Company has just received an order to get out 50,000 spokes to be used on the field gun carriages of the English and French armies.

The Mays Manufacturing Company of Leslie, Ark., has recently been awarded a contract by the Fort Smith Wagon Company to manufacture 4,000 wagon wheel hubs which will be used by the French government.

< DETROIT >

Edwin L. Thompson, president of the Detroit Lumber Company, one of the largest retail lumber companies in the Middle West, died suddenly on January 30, at the age of seventy years. He was born in Vermont and came to Michigan in 1886. At that date he began work in a lumber camp at Lapeer and he shortly afterward organized the firm of Thompson, Rich & Co. In 1875 he formed the firm of Piper & Thompson and five years later organized the firm Delta Lumber Company. In 1862 he became president of the Brunswick Lumber Company of Brunswick, Ga., which office he held until 1886. He first came to Detroit in 1881 and in 1883 organized the Thompson Lumber Company. Sixteen years later he formed the Detroit Lumber Company of which he was the active head until his death. As a mark of esteem all lumber companies in Detroit suspended operations the afternoon of his funeral.

The wood and manufactured products thereof exported from the port of Detroit in the fiscal year of 1914 had a total value of \$3,779,172. While the general total was somewhat lower than in 1913, wagons shipped last year set a record, their value amounting to \$375,302 in the month of October alone. The total is included in the grand total of all vehicles, automobiles, carriages, etc., which was \$7,196,666.

The Zealand Furniture Company of Zealand has closed a successful year, having paid a dividend of twelve per cent, the banner dividend in the history of the company. Officers have been re-elected as follows: President, G. Van Tongren; vice-president, R. DeBruyn; secretary and treasurer, C. Van Loo; directors, the officers and E. Glerum, R. Kampen and G. Keppel; manager, Benjamin Van Loo.

The Superior Seating Company of Muskegon will manufacture 1,100 desks a day in February and 1,200 a day in March, according to the

schedule its plant is now operating on. The company reports heavy orders booked.

There is yet evidence of lumbering at Hastings. A fair number of logs is being delivered to the T. B. True factory and the Halifax saw-mill north of Hastings is manufacturing a considerable quantity of lumber, most of which will be delivered to the furniture factories at Grand Rapids.

An addition which will materially increase the capacity of the Falcon Manufacturing Company's plant at Big Rapids is almost completed. The company lately added the manufacture of kitchen cabinets to its line, which necessitated additional space.

Oliver Lacombe & Son of Negaunee are conducting logging operations near Magnum. They have contracted to log sixty acres of land within three years but operations this year, if they continue the rest of the season the way they have been started, will leave little to do next season. Mining companies and railroads of the upper peninsula are buying most of the cut.

The Michigan Washing Machine Company of Muskegon Heights reports more than \$225,000 worth of business already booked. The company's plant will have to turn out 140 washing machines per day for six mouths to clear the orders away. A \$15,000 power equipment installed last summer enables the company to make a larger output.

The plant of the Manistee Manufacturing Company is now being operated full time. It had been running five days a week and eight hours a day. The company booked considerable business during the furniture expositions.

Otis A. Felger of Grand Rapids, president of the Felger-Robbins Lumber Company which operates a mill at Havana, Cuba, has directed his company to buy 1,000,000 feet of Cuban mahogany logs which will be manufactured at Havana.

The Williams Brothers Company of Cadillac recently made another shipment of last blocks to England. The company formerly shipped considerable to Germany but since the beginning of the war has made no shipments to that country.

The Langeland Manufacturing Company of Muskegon is now operating its plant in that city full force. It recently bought 1,000,000 feet of hardwood and hemlock at Manistiquette and Hiawatha, Mich., which is being delivered at the rate of five cars a week.

Wells, Higman & Co., manufacturers of baskets, operating factories at St. Joseph and Traverse City, Mich., have protested against the proposed uniform basket act on the ground that, if it becomes a law, it will render much of their valuable machinery useless.

The Embury-Martin Lumber Company's mill at Cheboygan has resumed day operations and a night crew will be added shortly. The company will manufacture considerable hardwood lumber from logs cut at Munro, Mich. Teams are delivering about 50,000 feet per day and the supply at Munro will last until navigation opens when logs cut in the upper peninsula will be delivered at Cheboygan by water.

The Illinois Manufacturing Company has been incorporated at Detroit to manufacture boxes, cases and other woodwork. Isaac Bloom is the principal stockholder.

D. N. McLeod of Garnet will begin operations in his mill at that place about February 15. Between 6,000,000 and 7,000,000 feet of lumber will be manufactured this season. He has a large force of men at work in the woods and when the mill is started a total of 200 men will be employed.

The Copper Country Commercial Club, an upper peninsula organization, reports negotiations with a lower Michigan maple flooring manufacturer relative to the location of a flooring plant in the upper peninsula, near one of the large stands of hardwood.

The Hardwood Market

< CHICAGO >

The hoped for improvement in business has not yet shown up in any more concrete form than a possible increase in the number of inquiries coming from the factory trade and the railroads. Business all over the country is still pretty quiet and nothing of special encouragement has been seen indicating an advance in prices. Inactivity in the various building woods is at least partially explained by the bad weather conditions which have continued to hold up practically all the building operations in which lumber is an important article as raw material.

The local trade, however, is still looking forward to a considerably increased demand as the spring months approach, and realizes the fact that there has been hardly time for sufficient readjustment and settling down of conditions to justify very much in the way of increased business. Quite a few new firms have been started in the local trade within the past few weeks, which would indicate not only that the incorporators of those firms had sufficient confidence in the situation to secure sufficient backing but that the backers themselves must have felt that a favorable change was imminent, otherwise they probably would not have been willing to make these various investments.

Factory and yard trade are all buying lumber although probably not

so much as had been expected and hoped for. There is nothing that would prove that the numerous inquiries coming in are not bona fide and if they turn out to be, the situation will show a much better tone within the next six weeks.

← NEW YORK →

The demand for hardwood lumber in this market is subject to great and frequent changes—some wholesalers reporting better volume and others only a small amount of orders. That some improvement is in sight is indicated in the better inquiry which is reported generally. The entire list is sharing in this, and low stocks on hand bespeak a somewhat quickened activity in hardwoods generally. Prices are still subject to cutting and evidently buyers are finding it easy to get supplies at prices which do not represent the value. This feature has been evident since last summer's depression and it was hoped that by now the market would be free of this kind of competition. The larger wholesalers are holding for better prices and getting them in some cases. The feeling is general that New York will see real busy times in the spring season.

← BUFFALO →

The hardwood trade has shown scarcely any improvement during the past two weeks and sales are running very light. The weather has no doubt had something to do with the quiet conditions, as the building business has been interfered with by the snow and cold. Yet there is the same tendency as for some time to hold off purchases because of a lack of industrial activity and there seems to be little prospect of any great improvement in the near future. Yards are getting in a little stock occasionally, but it is going out too slowly to make much buying necessary.

Though business is so slow at present, there is optimism as to the outlook for the spring. The banks have begun to lend money on a somewhat larger scale and the prospect is that building business, after the dull season of the past month or two, will again show a fair amount of activity. Factory buying is likely to revive also, as the stocks now on hand are small and a good deal of replenishment will be necessary.

Plain oak and maple are selling the most frequently at present, though orders are also being received for a number of other woods, including chestnut, ash and cypress.

← PHILADELPHIA →

It cannot be said that a strenuous activity has developed in the hardwood market during the last fortnight, but an initiative betterment in trading is noticeable, with prices firm. The actual result of the furniture exhibition has yet to be demonstrated, but, although the opinions as to outlook vary, there are indications of improved conditions in certain lines of manufacture. Optimism still obtains in the general trade and is augmented by the great advance in many lines in the export market, an improvement which will naturally conduce to the lumber trade extension in the near future. Building work for January shows a decrease of \$350,545, from the figures of the previous month, evidently due more or less to a stricture in bank loans. Plans, however, are being laid and the spring is expected to see a material advance in this line. The buying of material for repair work, etc., continues right along by the railroad companies, and although extremely close-mouthed as to future intentions, a nearby materialization of increased expenditures is anticipated. On the whole the situation is encouraging.

← BOSTON →

Conditions in this market remain practically unchanged. The practice of piecing out stocks by mixed cars and stored or transit stock still prevails, with the call principally for the best grades. Local prospects, however, are encouraging. While the basis for the favorable predictions applies primarily to building lumber, the nature of the buildings and the furnishing of them necessarily means the use of a great amount of various hardwoods. There will be commenced shortly fifteen buildings for Boston college, three municipal buildings for the city of Boston, one hotel to cost \$200,000, a residence of \$50,000, one 9-apartment house, one 6-apartment, and numerous others. In fact, the prospective work outlined is greater in amount than at any other corresponding season for many years. Although certain items are still weak and perhaps decreasing in value, there is no question that the great majority of hardwoods are in a position where even a moderate extension of the demand will cause advanced prices. There are several added instances of factories curtailing labor, but in general the dealers find more evidence of strength and encouragement in the market than otherwise.

← BALTIMORE →

As far as the information obtainable here is concerned, the hardwood business has undergone no departure from the conditions that have prevailed since the end of the year and even before that time. No such demand has developed as might have tended to give the trade a decided lift, but at the same time it is to be said that the stocks available are not large, a material curtailment of the production having taken place and still being in effect. Many of the mills are shut down, waiting for the situation to improve sufficiently to afford an outlet for stocks at

remunerative prices. Numerous plants did not resume after the holiday suspension, and as a result offerings of lumber of good quality and in proper shape for shipment are not heavy. The buyers, on the other hand, are feeling their way cautiously, and this tends to neutralize the effect of the reduced output, with the result that conditions are practically unchanged. In consequence of the indifferent inquiry the range of prices is far lower than could be desired; a wide variation in the quotations also prevails, so that the sellers are frequently at a loss to know just what prices to name. A fairly definite basis of values seems to be wanting, and in the absence of such a guide the figures furnished are frequently far apart. Assortment in yards are very much broken, and salesmen quick to see deficiencies are in a position to point out conditions which may not always receive proper attention from the yardmen. In this way sales are perhaps often made when, without such reminders, the buyer would feel that he has no needs to meet. The unsettlement in prices applies to the whole list and grows out of the peculiar conditions that prevail and that leave the retailers and consumers in a state of uncertainty as to what their requirements will be. The furniture expositions have closed, but manufacturers have not obtained so clear a view of the future as they ought to have to place orders with any sort of freedom. Hence it is not easy to get orders, though business continues to come in when least expected, and effort on the part of salesmen is productive of better results now than was the case not long ago. Orders to meet probable future needs are wanting, and confidence has not yet reached a point where commitments are entered into with any freedom, though a considerably better feeling prevails.

The foreign situation is receiving close attention. With ocean freight rates up to prohibitive figures where the steamship companies have not decreed a complete embargo, the outlook is by no means encouraging, and with the outcome of the war still much of a question and the end not in sight, further disturbances must be looked for. It should be said, however, that the needs of the British government appear to have become pressing, and the requirements there as well as in France and in the neutral countries are almost certain to stimulate the movement. Prices may be expected to advance, and the shippers with unsold stocks on the other side stand an excellent chance to realize liberal good returns.

◀ COLUMBUS ▶

The hardwood trade in Columbus and central Ohio has been fairly active during the past fortnight. More steadiness is shown and on the whole there is a better tone to the market. Future prospects appear to be improving and since there is a bright outlook for building operations in the spring, it is expected the lumber trade will be more active. Buying is pretty evenly divided between factories and yardmen. Dealers' stocks are still rather light and there is a disposition to increase them to a limited extent. Buying is well distributed over the list of grades and varieties, and shipments are coming out fairly promptly. One of the best features is the fact that dry stocks in the hands of mill owners are not large and lower prices are believed to be out of the question.

Manufacturers making vehicles and implements are laying in stocks. Furniture factories have not been buying to any extent but they are expected to be in the market in the near future. A better feeling is shown in industrial circles and this is being reflected in the hardwood business.

Prices have been fairly well maintained at the levels which have prevailed since the holidays. Some cutting of prices is reported where stocks have accumulated but this is not sufficient to demoralize the market in the least. There is no tendency to reduce prices further. Collections are bad all along the line and this is one of the worst features.

Quartered and plain oak are in fairly good demand and prices are firm. Chestnut is steady, there being an exceptionally good demand for sound wormy. Poplar is moving better although some slowness in demand. Ash and basswood are holding their own and the volume of business is about up to the usual amount. Other hardwoods are unchanged.

◀ CINCINNATI ▶

Market conditions are still improving slightly and within another month or so dealers expect to find orders coming in in a satisfactory manner. The furniture trade, which has been more backward than any of the lumber consuming industries, is showing signs of improvement and much hope is held out to the lumber trade on this account. This source of consumption is badly needed to take care of the medium grades of hardwoods, and when this class of stock begins moving the situation will be much improved. The implement trade is doing very well and taking in a fair quantity of the specialties that the trade requires. This is true of the wagon trade also. There is much improvement in the planing mill industry. Prospects for a good building season all over this section are good. Inquiries covering most all items on the hardwood list are numerous, but it is either the upper grades or the low grades that are moving.

Plain and quartered oak are moving fairly well. Poplar is slow but said to be improving slightly. Demand for chestnut seems to be a little better. Red and sap gum are in light request, the latter being in better call than the former. Ash is in excellent request and maple sells well and is improving nicely. Dealers do not look for better prices until the general demand they expect in the next sixty days arrives.

RED GUM

AMERICA'S FINEST CABINET WOOD

Consider its good qualities.

It has strength.

Can be brought to a very smooth surface and consequently will take high polish in finishing.

Will not split easily.

Runs strong to wide widths and long lengths.

Is not easily marred or dented.

It can be supplied flat and straight—free of warp and twist.

Has beauty, color, life and character.

Considering its numerous good qualities, it is the lowest priced good hardwood on the market today.

We are the largest producers of Gum in the world.

Have a large and well assorted stock on hand at all times.

Can manufacture special thicknesses on short notice.

< TOLEDO >

The hardwood outlook in this vicinity for the spring trade, according to local dealers, is good. There is little movement of lumber just at present, as dealers are pretty well stocked up and the extremely bad weather has made building an impossible project. Prices have held up fairly well in hardwood lines, however, and factory consumption is practically normal. There are many building projects on in this city to be begun as soon as weather conditions make it possible. There will be several large grade school buildings erected this summer, all of which will use heavily of hardwoods, and an effort is being made by the Glenwood Parents' Club, an incorporated organization of 500 members, to force a manual training department in the grade schools of the city. As this would mean re-furnishing of some of the buildings, hardwood interests are involved. There are many other important building projects in view for the summer.

< INDIANAPOLIS >

While the hardwood trade has brightened up a little during the past two weeks, the improvement has not been important. It is thought that business will come slowly and that it will be several months before normal conditions return.

Buying is mostly of the hand-to-mouth sort just now. No one seems to want to stock up to any extent. Prices are easy and it probably will take a slight advance to bring the buyers out. Few manufacturers are making concessions in order to force business.

The business depression is not disappearing so rapidly as it was thought a few weeks ago that it would. Manufacturers of all sorts are proceeding on a conservative scale and will increase their forces only as actual business develops.

< MEMPHIS >

The hardwood market here is slowly recovering from the depression which has been felt more or less since the war in Europe broke out. Inquiries are gradually increasing and the amount of lumber actually shipped is also gaining. One member of the trade said recently that he had sold nearly a million feet of oak and cypress within the past fortnight and another well-known firm said that its sales for January were much larger than the combined total for both November and December. Others testify to increase in their sales, and it is quite apparent that the market is looking up somewhat. Advances have been reported in some instances in high-grade plain and quartered oak, which is rather scarce and which is in reasonably active demand. The higher quotations are from \$1 to \$2 over what were asked a short time ago. There is a good business in the lower grades of cottonwood and gum. Offerings are quite small and the box factories are still sufficiently actively engaged to absorb virtually all of what is to be had. Prices are quite firm and some members of the trade are predicting an advance in these items on account of the restricted output. There is not much to be said in favor of the higher grades of either cottonwood or gum. Sap gum sells fairly well but prices are regarded as low. There is not much doing in red gum and the uncertainty about the rate situation as affecting this lumber is proving quite a serious handicap to both manufacturers and distributors thereof. There is not much ash offered for sale in this section, while the demand is fairly active. Cypress is in good request and the volume of business in this is steadily increasing. Prices are also firmer. The preference is for stock thicker than one inch. All grades from shops up are wanted.

Export business is comparatively quiet although a little lumber is being sent from Memphis to Great Britain and some of the neutral countries in Europe. Most members of the trade are inclined to take a more hopeful view of the situation, particularly as manufacturers of furniture and vehicles of every kind are showing decidedly increased interest. Much disappointment, however, is felt over the failure of the railroads to increase their purchases of timber and lumber. They claimed that they wanted higher rates on almost every commodity in order that they might greatly increase their purchasing power but, so far, the amount of buying they have done has not been sufficiently important to justify predictions of greater activity on their part.

< NASHVILLE >

The trend of hardwood trade in this market has been decidedly favorable the past two weeks. The weather has been unfavorable for good business if conditions were normal, but inquiries are coming freely, showing that buyers are interested in the market, and a liberal number of small orders are being placed. Oak, poplar, chestnut, ash and other hardwoods are moving. The local trade is very cheerful as to the outlook, and believes that trade will continue to show material improvement with the coming of spring.

< BRISTOL >

Business in this section is reported slightly better but the process of improvement is slow. However, it is believed that trade will show steady improvement during the remainder of the winter and until spring, when pronounced improvement is expected. The lumbermen of Bristol

The Largest Hardwood Sawmill in the World Is Again In Operation

During our few months' shut down we have maintained our usual prompt and efficient service on shipments of

Oak, Gum, Elm & Ash

from the 20,000,000 feet of stock we had in yard at time we stopped sawing.

Our stock is now rapidly assuming normal proportions and we shall welcome inquiries for immediate shipment.

Buying Time Is Here

Timber and sawmill properties are now offered on exceptionally favorable terms. The market today is rich in possibilities for the operator or the investor, which the far seeing will not overlook.

Timber Should Be Cruised Now

That tract of hardwood timber in which you are or may become interested should be cruised before the spring foliage comes on. In the North and South timber can be estimated in less time and probably with greater accuracy now than later.

Our efficient organization can serve you wherever the timber you wish to buy may be located.

James D. Lacey & Co.

Timber Land Factors

CHICAGO, ILL. 1750 McCormick Building
PORTLAND, ORE. 1313 Northwestern Bank Bldg.
SEATTLE, WASH. 1009 White Building

and this section are extremely optimistic as to the prospects for spring and summer business but an increased demand for stocks is showing up very slowly at this time. Yard stocks are very low, in fact lower than they have been for a long while, which is regarded as a hopeful sign.

< LOUISVILLE >

Much better conditions are believed to be developing, and the hardwood market is acquiring gradually a stronger tone. The demand is opening up, and while the increase in volume is not large, it has been sufficient to encourage many members of the trade, especially as the tendency on the part of consumers has been to place orders or contracts for large quantities of stock. This indicates also that buyers realize the strength of the market, in view of the fact that logs are scarce, sawmill operations not having brought out many additional ones, with the result that even if an effort were made to increase operations, assuming that brisker business made this desirable, it would be impossible to log the mills and market the lumber which they produced inside of six or eight months. For this reason the lumber now on sticks is bound to increase in value, and prices can hardly remain steady. In fact, scarcity of thick stock of many kinds has already developed, and some lumber is practically off the market on this account. Of course, there is still a big supply of certain staples, like plain oak and gum, but even these are improving, plain white oak having advanced, and the demand having shown a gain of late. Taken altogether, the hardwood men feel more optimistic, and are inclined to believe that normal business is just around the corner.

< ST. LOUIS >

The hardwood situation seems to be improving, although the disagreeable weather of the past few days is restricting the demand and also is preventing the hauling of lumber to and from the cars. There is a strengthening on all items. A little more buying of car stock is being done by the railroads. Other lines, such as box, wagon and implement material, are increasing their requests. Prices of gum are going up. Oak is showing considerable more strength. Quite a steady business in cypress in small orders is being done but weather conditions are unfavorable for much development. Many large consumers have been placing orders recently but not in the volume that is usual at this time of the year.

< LITTLE ROCK >

When compared with conditions prevailing during the past several months the activities in the lumber trade in Arkansas since the beginning of the new year indicate growing optimism and greater hopes for the future. While little improvement in prices has come, there are many indications that the lumbermen are expecting more business in the near future, though no one of course expects the change to come with a rush. The general belief seems to be that conditions will gradually improve until they have reached a fairly good status.

< MILWAUKEE >

The indications are that there will be plenty of building activity in Milwaukee during the coming spring, and this leads lumbermen to believe that business during the next few months ought to be very satisfactory. The amount of new building launched in this city during the month of January showed a decided falling off. There were 75 permits issued for structures to cost \$203,649, as compared with 136 permits and an investment of \$471,858 during the corresponding month in 1914. A great deal of important building was carried over from last fall because of the business depression, and it is predicted that the building record of 1915 will attain a new high mark as a result.

Local wholesale lumbermen say that the hardwood trade is showing gradual improvement. One of the most favorable developments during the past fortnight is the improved demand from the factory trade. Stocks are low at most of these plants, due to the conservative buying which has been followed for several months, and manufacturers are finding it necessary to come into the market a little more freely. The sash and door and general interior finishing concerns are beginning to show more interest in stocks. Demand from the furniture manufacturing concerns seems to be a little better, although more improvement from this source is expected later in the season. Most of the farm implement concerns in Milwaukee and at various points about Wisconsin are looking forward to a busy season. Most of these plants are putting on more men and are increasing their output.

It is confidently expected that a shortage in some lines of hardwood will be experienced by the time the spring trade is well under way. Wholesalers say that the available supply of birch, for example, is exceptionally low at the present time and that it is hard to quote prices or promise deliveries in this line, considering the state of stocks. Maple flooring is in better demand and it is understood that stocks in this line are not particularly large. Prices are naturally holding fairly firm under existing conditions.

The cold weather and heavy snows which have been experienced all over Wisconsin this winter have added plenty of activity to the logging business and all the mills are now receiving heavy shipments. It is said that the logging output will be considerably larger than was anticipated some months ago.

EXPERIENCED LOGGERS USE YELLOW STRAND POWERSTEEL

FREE Our monthly magazine—THE YELLOW STRAND—free for a year to all rope users. Write for it.

In every hardwood lumber district in the United States—wherever ropes of extra strength and durability are required—there you will find Yellow Strand Powersteel Wire Rope.

It is made especially to withstand the tremendous strains of logging and heavy hoisting of all kinds.

Every wire is drawn from a special steel having a tensile strength 75 to 100 per cent greater than ordinary crucible steel. This insures great strength, elasticity and long life to the rope.

You need this strong, tough, pliable rope in your business. Why not place the order now?

IF YOU WANT THE BEST SYSTEM OF ACCURATELY TALLYING AND RECORDING LUMBER SHIPMENTS OR RECEIPTS

YOU WILL BE INTERESTED IN

The Gibson Tally Book

This system of tallying lumber is employed by more than two thousand lumber producers, jobbers and wholesale consumers, and is available for tallying lumber, logs, flooring, dimension stock and all other commodities.

Makes three original tallies without the use of loose carbon sheets.

New Catalogue showing twenty-six various forms of tickets sent free on request.

Tally Book Dept., Hardwood Record, Chicago

Baldwin Loggers

are built for **SERVICE**, and they will **SERVE YOU WELL**

The 2-6-2 type, illustrated above, can be used in either switching or main line work. It is a safe engine on sharp curves and uneven tracks, and steams freely in the heaviest service.

The Right Dry Kiln for *YOUR* Lumber

is The Standard Moist Air Kiln. Because our system permits the *closest possible control* of the drying elements. It's easy to regulate these elements so as to secure the most satisfactory results in drying *fine hardwoods*.

This is proved by the testimony of many furniture and hardwood manufacturers who have had years of experience with The Standard Kiln. Their interesting letters are printed in our 64-page List of Users. This and our complete catalog will be mailed on request. Address: The Standard Dry Kiln Co., 1559 McCarty St., Indianapolis, Ind.

Broom Handle CHUCKING AND BORING MACHINE

It rounds end of handle and bores small hole in other end automatically at same time. Capacity, 45,000 handles in ten hours. All the operator has to do is to keep the handles fed to the machine. Used by the largest producers. Write for details and price.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

See That Joint

The lock joint feature of our cores cannot be too carefully considered by quality buyers.

Just as it would be foolish for the jeweler to set an exquisite design with a poor stone, so it would be foolish for us to feature this joint without the same thorough attention to every other feature of quality panel construction.

The test of time will bear this out.

You have to buy panels somewhere; you naturally want the best you can get for the money; we honestly think we have something of unusual merit. If we have, can you afford not to find it out through a small order? You will lose nothing and should gain a great deal.

ST. FRANCIS BASIN OAK

THE GALLOWAY-PEASE KIND

† It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

† Kiln dries without checking. No honey-combing, and minimum shrinkage.

† Total absence of injurious insects insures sturdy, clean growth.

† Our band mills cut oak only—hence filer and sawyer get best possible results.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

Review and Outlook

General Market Conditions

THE MOST PRONOUNCED FEATURE having direct bearing on lumber, which has shown for the last few weeks, is the better tone in the building situation in practically all parts of the country. By this it is not meant that building has yet reached anything like normal proportions, but actual figures show that the falling off in recent months as compared to corresponding months in the year 1914 is not nearly so serious as had been expected. There are encouraging circumstances to be considered in connection with actual figures showing new work authorized in the building line during the past month, namely that in addition to that actually shown there is a very marked activity in the offices of contractors and architects on preliminary plans for buildings which have not yet reached the stage where they are definitely listed as new structures, the plans not yet having been filed. In addition, there is a large amount of work which has been resumed, which had been interrupted at the beginning of hostilities on account of lack of funds. In many cases it has been impossible to secure the necessary backing to continue this work. This is going to have a marked effect upon the demand for materials going into building construction.

Reports from different hardwood consuming centers are practically unanimous in more favorable statements regarding the factory trade, the general belief being that there is really a noticeable increase in inquiries going out. It must be remembered that these inquiries are more than ordinarily significant as the general policy is still maintained by practically all buyers under which purchasing is still for immediate demands only. Thus the bulk of inquiries emanating from woodworking institutions are backed up by the definite desire to buy, and hence have a greater significance than the usual line of correspondence of this character.

The price level shows a slightly firmer indication, although it can hardly be said that there has been any general advance in most lines. In this connection an incident recently came to the attention of HARDWOOD RECORD, which seems to bear quite a marked significance. A large handler of southern hardwoods is controlled by one of the biggest so-called trusts in the country, a corporation which is noted for its sagacity and far-sighted business policy. This subsidiary institution, which handles a great deal of hardwoods, is rigidly holding its better grades of stocks for prices which will average in the neighborhood of \$5 over the average going prices in most markets. It insists that this policy will be rigidly adhered to until the price level has reached the point set. Inasmuch as the trust referred to controls this company, and inasmuch as this policy seems to be a definitely determined one and

to be in the form of actual instructions to those in charge of the active administering of the subsidiary's business, this circumstance indicates that the information available for those in the circle of the country's big business convinces them that the future holds much better prospects for actual strengthening of demand.

Analyzing the production and demand in the North and South, there seems no plausible reason why this policy should not prove to be a correct one. It has been conservatively estimated by men closely in touch with the situation that the production in the southern hardwood territories collectively would not average more than twenty-five to thirty per cent of normal from the beginning of the period of curtailment up to a few weeks ago. In the North an average curtailment of some forty per cent is the general estimate. The average of these then would place the hardwood production of the country on a general basis of approximately forty-five per cent of normal.

On the other hand, available information as to actual consumption in the same period would show it to have been between fifty and sixty per cent of normal. Thus from the mills's standpoint the situation as a whole appears to be excellent. It must also be remembered that conditions surrounding the yard and factory trades are in very much the same shape and that their stocks have gotten down to a point where they are not carrying complete lines of anything, and are placing orders for hurry-up shipment to meet the demands of actual needs. The truth of this condition is born out by numerous instances where great difficulty has been experienced in locating certain kinds of stock when they are needed in a hurry. There is only one possible outcome, as appears on the surface at least, and this is that the stock situation at mills and receiving points as compared to actual demand creates a situation under which with even a slight resumption of active buying there will be an excess of demand over supply and at least a partial reversion to seller's markets. The outcome, of course, will be a greatly strengthened price level.

That this possible outcome is based on real facts is pretty generally conceded by men who have taken the trouble to observe conditions as they are. This circumstance is not being received with any evidence of hysterical optimism, but is advanced by the more far-sighted element in the hardwood trade as indicative of conditions which can confidently be expected to materialize.

It is a fact that within the past month or so several large manufacturing factors have gotten back into the active producing field, but it is hardly possible that this circumstance will have an undue influence as over-balancing the scale of supply and demand in favor of the former. This resumption of manufacturing comes in

the face of an active and concrete evidence of accelerated buying, and it is hardly likely it will take care of the increased amount of business placed. It is also to be remembered that the lumber cut now will not be ready for shipment for several months so that anything that might develop in the meantime will not be affected by increased producing capacity.

The Cover Picture

A WILD, TREED BEAR is not photographed every day. The subject in proper pose is not easily found, and when at last he is found, the photographer and his camera are apt to be elsewhere, consequently it is a combination somewhat rare.

The cover picture which illustrates this number of HARDWOOD RECORD was caught at the psychological moment in the mountains of California in Sacramento county. The only criticism that can be directed against the picture is that the bear does not stand out from the trunk of the tree in relief as bold as the artist might desire. The animal presents a somewhat flat appearance; but it should be borne in mind that the bear was trying to accomplish that very effect. He did not climb that tree for the purpose of exhibiting himself, but he was endeavoring to "make himself scarce." The picture shows how well he succeeded.

Notice the patches of light and dark on the tree trunks in the vicinity of the bear, and notice how admirably his body mimics one of these dark patches. The counterfeit is not perfect enough to enable the animal to escape discovery, yet it contributes to that end. The tree which the bear has undertaken to climb appears to be a fir—probably *Abies concolor* of the botanists. The bark is black. It may be observed in the picture that the portions of the trunk on which the sun is not directly shining are about as black as the bear itself, and where the animal's body is in shadow there is no contrast. But the intensely bright California sunshine is breaking through the tree canopy above and patches of the bark are lit up until they appear nearly as white as snow. These bright patches on the black are known among artists as "high lights." They have upset the bear's scheme of concealment, for they bring one side of his body sharply into view.

The picture represents a grizzly bear region, but the specimen in the photo is the smaller black bear. The grizzly cannot climb trees. His weight is too great, and his claws are too long and straight; but the black bear, which is simply a big brother of the raccoon, has good climbing claws and does not hesitate to use them, though he cannot climb up-side-down as some small animals can. He climbs up head first and backs down. Sometimes, when in the act of climbing, as the one is in the picture, he sees a hunter approaching, he wastes no time by backing down the tree trunk, but lets all hold go, and falls. A bear usually prefers to trust himself in flight to remaining in a tree; but if dogs have been worrying him, he sometimes hangs fast to the trunk while the hunter approaches. In that case it becomes practicable to kodak him.

It is remarkable how great a distance a bear may fall from a tree without being killed. It is said that when hotly pursued he will curl up in a ball and roll down a steep mountain faster than any dogs can follow, and thus escape; but such stories are now generally catalogued among the productions of nature fakirs, along with the feats of the hoopsnake that is alleged to take its tail in its mouth and roll away at a mile a minute.

Lumber Changes in Thirty Years

LUMBERMEN OFTEN SEEM TO BE AT SEA when considering the question whether or not substitutes are making inroads on the use of wood. Viewed in one way, there is no doubt that substitutes are making headway. More of them are used now than formerly. But the question is open to debate when it is asked whether the use of wood is declining on account of losing places to substitute.

There are not sufficient data available to test the matter in detail by pure statistics. It is not known, for instance, how much larger the present use of wooden boxes would be, if fiber boxes had never been invented. It is certain that more wooden boxes would now be demanded, but statistics are too fragmentary to show exactly what

has taken place in that particular industry. It is the same in certain other industries where substitutes have made inroads on wood. Taken separately, it is hard to reach conclusions, backed by figures, as to exactly what has happened in the contest between wood and its competitors; but, fortunately, it is possible to take a wider view and consider the question as a whole.

When that is done, there is found no occasion to complain that wood has not held its own. In 1880 the lumber cut of the United States totaled 18,091,356,000 feet. The population at that time was 50,155,783. The per capita consumption of lumber was 360 feet. Thirty years later the population was 91,440,611, and the lumber output was 40,018,282,000 feet. The per capita consumption in 1910 was 437 feet.

A span of thirty years brings out the fact that the consumption of lumber shows a substantial increase per capita. In other words, the use of lumber has grown faster than the population. The opposite is sometimes stated to be the case, but statistics covering the thirty years period do not show it, and this period includes practically the whole time for which statistics on that subject can be had. Some fragmentary lumber figures exist for years earlier than 1880, but no adequate per capita comparisons can be worked out for earlier periods. It appears, therefore, that according to the records the use of lumber increased in this country from 1880 to 1910, not only in actual quantity, but also in proportion to population.

The cut varies from year to year, and that for a late year may not always exceed that of an earlier; but for the whole thirty-year period, the lumber output has increased 121 per cent, and the per capita increase has been 24 per cent for the same time. Figures later than 1910 are not included, because the census showing population has not been taken since, and no figures are available for calculating the per capita consumption of lumber during the last four years.

It is thus shown that in spite of competition with substitutes, more wood is now used, in proportion to population, than was used thirty years ago. Some branches of the lumber trade may have lost business; but the trade as a whole has not lost. It is true, however, that gain might have been larger but for the fight for business which substitutes have made. About as much as can be charged against substitutes, in face of the figures quoted above, is that they have somewhat hindered the expansion of the use of wood. The country's needs have greatly grown, and some of these needs have been supplied by materials which compete with wood; but in spite of that, the demand for wood has increased at a higher rate than the increase of population.

Home and Foreign Lumber Markets

DURING THE YEAR 1912 the exports of logs and lumber from the United States to all countries of the world amounted to 2,945,000,000 feet, valued at \$68,000,000. During the same year the home market took 37,055,000,000 feet, valued in the sawmill yard at \$568,794,000. On the face of the figures the home market was worth about eight times as much as the foreign.

Eight times as much falls far short of the whole difference in the home and foreign lumber trade. The value placed on exports is supposed to be the price which the foreigner pays in this country when he buys the lumber. When the American exporter has received that price, the lumber leaves the country forever, and Americans have no further business interest in it. It passes across the sea as logs or lumber, and whatever is made of it afterwards belongs to foreigners; whatever labor is expended on it, is expended by foreigners; whatever merchandizing is carried on with the further manufactured products, is carried on by foreigners.

The case is different with the lumber sold in the home markets. The value given above, \$568,794,000, represents the worth in the millyard. That includes the timber in the woods, the cost of cutting, sawing and yarding, with whatever profits are properly chargeable up to that stage of manufacture; but the lumber and its value do not end there. When lumber has reached the mill yard it has only commenced its career of usefulness and value, if it is destined for the home market.

Suppose it is on its way to a furniture factory. When it leaves the mill yard it changes hands and becomes property of the furniture maker. He pays freight and other expenses incurred in bringing it to his place of business. After that he pays wages to those who manufacture the lumber into furniture and he pays salesmen to go on the road and sell it. The wholesaler becomes the owner, and he pays another profit, and then passes it to the retailer, who contributes still another profit, and when he finally sells the furniture to the ultimate consumer, still another profit is paid.

The nub of the whole argument is that the lumber exported makes no further business for Americans, while that which is disposed of in the home market continues to pass through successive stages of manufacturing and handling until it finally enters into ultimate use, and it creates business along its whole journey, and all the business for the benefit of home people.

In that view of the case, it is apparent that the lumber which stays at home is worth much more per thousand feet than that which leaves us. Though the value of export lumber is placed at one-eighth of the amount of that which stays with us, that figure is wholly misleading, unless it is amended by adding to our home supply the value produced by further manufacturing, sales, commissions, and trading. It is true in nearly all lines that the best business is the home business. If we sell lumber at home, Americans receive the pay for the lumber and all the profits from handling and manufacturing, and Americans finally get the use of the lumber. This is not an argument against trying to build up foreign trade. We ought to build it up if we can; but if, in times like these, we see it disappearing, we should not conclude that we are losing more than we are keeping. By all odds, the best part of the lumber business remains with us, and the beauty of it is, the part that we hold cannot be taken from us by the misfortunes of foreign wars, but can be improved and increased by our own industry.

December export figures show that our foreign lumber trade has been badly cut. That has happened not only in countries which are at war, but also with countries at peace. The only two countries on earth that bought more lumber from us in December, 1914, than in the corresponding month in 1913 were Brazil and British Honduras. In nine countries imports of lumber or logs from the United States disappeared entirely in December. Even our exports to the Philippines wholly vanished.

Our loss on account of falling lumber exports is considerable, and regrettable, but why overestimate it? The city of Chicago alone provides a yearly market for 485,637,000 feet more lumber than the United States exported to the whole world in 1914. And the same city of Chicago manufactured into finished commodities, such as furniture, vehicles, boxes, etc., in the year 1909, more wood than this country sold in 1913 (a good year) to all the countries of Asia, Africa, South America, and all the islands of Oceania combined.

Figures like these ought to raise our opinion of our own home markets. When a single city in our midst over-balances four-fifths of the outside world, there is little excuse for discouragement over the decline of some branches of our foreign lumber trade.

Where Blue Sky Is Expensive

BLUE SKY IS A BLESSED THING in its place, but it is a monstrously expensive roof for agricultural machinery, live stock, and harvested farm crops.

Good shelter for everything that needs it is the surest and most constant money maker that the farmer can call to his assistance. The rains that fall, the sun's heat that accompanies the summer, and the dews and fogs which descend upon or hover over the places beneath, are the allies of the agriculturist while the crops are growing, but they are enemies after the harvests are ended. An investment in roofs to shelter machinery and crops is the safest and sanest outlay for the farm. It is to the gathered crop what fertilizers are to the growing crop.

The shingle, the weatherboard, and the paint brush are the three chief signs of progressiveness in rural communities. They indicate prosperity. The story which they tell points a moral wholly different from that pointed by rusty mowing machines, warped hay rakes,

ramshackle wagons, sprouting grain ricks, saw-boned cattle, long-haired horses, squalling shoats, and the signs of general shiftlessness painfully visible about the bareless and shedless premises of the farmer who does not patronize the lumber yard.

The Theme of the Massmeeting

THE PROMULGATION OF BIG THOUGHTS and far reaching plans characterized the two days' session of the Forest Products Federation massmeeting held at Chicago this week. The underlying theme of all the discussions, the thread of thought which was carried through the entire meeting was characteristic of the lumbermen's desire to always fight fair.

Something big is coming of this conference, something of immense moment to the entire lumber trade, but it can be confidently anticipated that any fight instituted by lumbermen will be along the lines of right, and will not be carried on with the assistance of false propaganda endeavoring to belittle or disparage the competing materials in the legitimate uses. The campaign will be of increased weight and effectiveness because it will carry with it the stamp of genuineness and sincerity.

Do Lumbermen Take Themselves Too Seriously?

THERE IS NO BETTER crowd of good fellows in the world than the lumbermen of this country. They are men of broad minds and big, sympathetic hearts. They are men who as a class have accomplished big things and whose line of vision is broad. They are sociable and convivial, and while they probably have not co-operated in a business way in the past as closely as the best interests of the whole trade would dictate, in their social gatherings nothing but a spirit of genuine and sincere good fellowship and camaraderie has been apparent. Yet we see periodically evidences of the impossibility of permanence of any purely social organization of lumbermen.

The latest disorganization is that of the Lumbermen's Club of Chicago, a body of local lumbermen and others affiliated through non-resident membership in different parts of the country. It is true that the club is dissolving with all honor, and with every appearance of having run a successful course. The fact nevertheless remains that any organization which becomes indispensable is going to endure regardless of outside circumstances. The trouble has not been with the management of the various clubs which have ceased to exist, as in every case the management has been competent and efficient to the highest degree.

It would appear on analysis that the fundamental reason is that the lumbermen as a whole take their work a little too seriously. It might be urged against this that the lumbermen have a general reputation of being good fellows, of easy-going dispositions, and this argument might have some weight if it had proven capable of holding such an organization together.

It is just possible that the trade as a whole is over-organized in this way, at least that there are too many varied associations that are open for membership to any one individual. The average lumberman may feel that as long as he has to join organizations he might as well spend his money for those that offer him a direct opportunity of getting value received. This policy may be altogether wise, but nevertheless it is a relief to get together with a party of good, whole-souled lumbermen under circumstances which taboo trade talk and which bring all of them out on a strictly social level and show up the man side rather than the business side.

No matter how genuine a man is, an almost imperceptible barrier of recognized competition is necessarily raised in his intercourse with his competitors when such intercourse is under circumstances which necessarily turn his mind toward thoughts of business. It is a good thing for everybody in every line of trade to be able to get absolutely away from business thoughts and to be able to give himself up for a certain length of time every day to unalloyed social intercourse with fellow businessmen. This is just the function served by a purely social lumber club, and the lumber trade suffers a genuine loss whenever such an organization is disbanded.

Letters to a Millman's Salesman

BY ARTHUR M. JOHNSTON*

To William Smith, who is just sprouting his pin feathers as a lumber salesman.

Dear William:—

I notice an order from you, just received, for three ears B and better dressed yellow pine sold to Matthew Williams of Jonesville. I have been looking over the last general census and I find that Jonesville is a farming town of about 3,000 population counting men, women, children and dogs. Now, William, did the idea ever seep into your osseous dome that three ears of B and better yellow pine is enough to glut the high-grade lumber market of a town the size of Jonesville for many moons to come? In my last letter I advised you to be a little sunbeam but I didn't think you were going to be the whole solar system.

You have jollied our friend Matthew until his appetite is bigger than his stomach and the joko is that you will have to be the little digestive tablet which must assist friend Matthew's business viscera to assimilate this enormous meal. How do you expect to sell this man any more lumber while his yard is suffering from such acute yellow pine dyspepsia? Do you ever hope to sell him again after loading him up with lumber for which he has no market? If you over expect to become a salesman and not merely an interruption, you must learn that the selling of the stock to the retailer is only half the transaction; it must be resold to the consumer to make the deal complete and the more assistance you can give your customer in moving his stock the more valuable you will be to us. Are you going to be a salesman upon whom your customers rely for real help, taking such a sincere interest in their business that they are really glad to see you when you come around; or do you think you have earned your salary when you have loaded some trusting customer to the ears with unsalable stock?

Have you ever taken your customers' troubles back to the hotel with you? If you never have, try it a few times and remember this—their troubles are our troubles. Cut out the usual card game and talkfest a few times and use up a few brain cells figuring on some of their problems. A few solved problems will be appreciated by your customers and they will soon begin to think you are a helva fellow. Your territory is like a farm and your crop will depend upon what you plant and how you cultivate it. The cinch bug, the army worm, the boll weevil and the coddling moth—all competitors of yours—will try to eat your seed, destroy your young plants and ruin your crop, but if you are a good farmer you will mix a few brains with the soil and be right on the job with the Paris green can and the Bordeaux mixture sprayer.

Now about this Matthew person: There are only two ways out of this situation. Double back to Jonesville and develop some scheme out of that calcareous knob of yours to move this stock for him, or suggest that he cancel two ears and reorder if he finds it necessary—which he won't. I have been making some inquiries and I find that Matthew Williams is new in the lumber business and needs a wet nurse more than anything else. Will you be that nurse, William? or are you going to be the bad boy that pushes the little fellow into the mud and gets his nice white pinafore all dirty? Don't forget that it pays to be a nurse. Some day your infant will learn to rely on you confidently and accept your advice about both the buying and selling of stock and then you will enter into your reward. When that time comes don't be a hog—give the other fellows a chance, but be right on the ground yourself to skim off all the richest cream.

I just want to say a word about your itinerary—if such a big word can be used to describe your hop, skip and jump progress over your territory. You seem to be always somewhere else. I get nervous waiting for you to light. Do you ever expect to get acquainted with your trade if you go through a town like a Dakota blizzard on its way to Kansas City? You are trying to cover altogether too much territory. You remind me somewhat of Riley

Jinigin. Not that you resemble him in any way but simply that you are liable to meet disaster as he did because you try to cover too much territory. Did I ever tell you about Riley?

Riley was a typical lumber jack in the early Michigan lumbering days. He was a mighty man of valor—or thought he was. When I knew him he bore the scars of a hundred conflicts. One ear had been entirely chewed off by some carnivorous adversary and the other one was following after. His nose was about three-quarters of an inch out of plumb and there were other alterations on his map which showed the fine Italian hands of shrewd antagonists. Architecturally Riley resembled an anthropoid ape, but there were times when the ape had it all over him save in ferocious ugliness. He was a canthook man and I am bound to say that he was an artist at it, but beyond using a canthook he knew nothing of useful occupation. He would work all winter in the woods, help to bring down the drive in the spring, collect his winter's wages and take the shortest route to the nearest emporium where the quickest acting brand of liquid lightning could be procured. Arriving there he would proceed to fill his skin full of Michigan lumberwood's whiskey, forty-rod whiskey—the kind of whiskey that makes you feel forty rods from the place where you really are. They say that this whiskey used to test nineteen fights to the pint. Being full of whiskey our friend Riley would naturally become belligerent and the result was sure to be a violent physical argument in which some one was bound to lose an ear, a nose, a finger, or some other useful or pulchritudinous member.

It was under such circumstances as these that our hero found himself in an AnSable snake factory in the days when that town was operating eight big sawmills night and day. It was an unusually peaceful and inoffensive crowd which faced him on that bright May morning when, having crammed every chink and cranny of his anatomy with squirrel whiskey, he turned from the bar to examine the crowd for signs of the trouble which was so dear to his savage heart. The spring sun filtered through the dusty windows and fixed its grip of lassitude upon every lounge. The bartender lazily swabbed the bar; at a table in one corner several men, just down from the woods, were drowsily playing seven-up for the drinks; on another table a riverman, still wearing his caulked boots, lay sprawled, sleeping off his jag. It was a peaceful scene—much too peaceful for the fierce heart of our friend Riley.

He stood with his back to the bar, both elbows on the top and one boot resting on the rail, at the foot. He surveyed the crowd with disgust and made insulting remarks anent its courage and fighting capacity; but, as every man present seemed to think these remarks intended not for himself, but for his neighbor, there was no word of protest. Riley took another drink and still further reviled them. He climbed their family trees even unto the fifth generation. He insulted every relative they ever had or ever expected to have, either lineally or collaterally, but without any movement of hostility on the part of the victims. He finally grew thoroughly out of patience with the pusillanimous attitude of the crowd and, jumping into the center of the bar room, he shouted:

"I kin lick any (several unprintable things) from Michigan."

He glared around and waited for results, but none came. His attitude grew more insulting as it appeared that not one loyal son of the good old Wolverine state had the courage to stand forth and do battle in her honor. Gathering confidence, he shouted again:

"I kin lick any (more unprintable things) from Michigan or Wisconsin."

He surveyed the crowd with eye of fire. There surely must be some loyal Badger present who would be willing to lose an eye or a nose for the honor of his state. The seven-up players still continued to play seven-up and the riverman on the table snored on. It certainly was discouraging. Riley took another drink and his wrath burned with fiercer flame. He again leaped to the center of the room and shouted hoarsely:

* Publicity manager for the Stearns Salt and Lumber Company, Ludington, Mich.

"I kin lick any (more things of an unprintable nature) from Michigan, Wisconsin or Minnesota!"

Now, by all the gods of war, this was too much even from a mighty man like Riley Jinigin. Over in the far corner of the room a big, blue-eyed, tow-headed Swede "upheaved his ponderous vastness." The card-players ceased their play and the sleeping riverman roused himself as if sensing the approach of epic conflict. The Swede came across the sawdust-covered floor like a traction engine on its way to a threshing bee. Raising a hand like a steam hammer he shook it in the air and shouted:

"Ay bane from Mannasotay, an Ay tank you bane tam big liar!"

Riley rushed upon him with a howl and gavo him the counter cheek quarrelsome right behind the ear. The blow was well aimed and well timed; ordinarily it would have felled an ox, but the Swede was not an ox—he was a bull, and he came on with a bellow of rage. He grabbed Riley by the neck and pushed him back over the bar. He hit him in the cosey corner and kicked him in the ingle nook. They both went to the floor and Riley squirmed around like an eel,

but the Swede swarmed over him like a ton of hay, his fists rising and falling like trip hammers.

When Riley finally capitulated, his adversary helped him to his feet and brushed the sawdust off his clothes and the blood out of his eyes. His face was pushed around nearly to the back of his neck and looked like a futurist picture of the battle of Waterloo. Several fresh bites had been taken out of his remaining ear and his nose was half an inch further out of plumb. He shook hands solemnly with his gigantic foe and they lined up to the bar to cement their new-made friendship over the flowing bowl. Said the Swede:

"You bane a good man, Yinigin."

"Yes," answered Riley, sadly, "but I tried to take in too d—n much territory."

There is a moral in this for you, William, if you can find it. Maybe you can stretch yourself out over all your territory at one time, but believe me you'll be mighty thin in spots.

Very truly yours,

JOHN MITCHELL.

Review of Scotland Timber Trade

The year 1914 has been an eventful one in the history of the timber trade. At the beginning conditions were quite encouraging, but very soon a decided dullness characterized the market. One important cause for this was shipbuilding. This industry has been the mainstay of the timber trade for many years and had then begun to present a less favorable aspect, and thus through time curtail the demand for timber. Buyers all over displayed a tendency to buy only for immediate requirements, owing probably to the fact that imports were made on a larger scale than was warranted. At the commencement of hostilities business in the timber trade was brought almost to a standstill. In a very short time it was found that the stock of packing case material was quite inadequate for the requirements of the market, causing prices to advance very rapidly. Previous to this Russia had been supplying a fair proportion of the stock, and with this source out of the count, it became necessary to look to Canada and Sweden to meet the market's demands, and naturally the cost was greater than before. Later on wood was declared contraband by Germany, and this left only Canada. In November, however, a sudden advance in freights took place, causing a material addition to the import cost of timber of all descriptions. This was particularly felt in the case of pitch pine and spruce, where the freight forms a large proportion of the delivered price.

Government orders contracted for by sawmillmen and joiners called for large quantities of spruce especially, although the general effect on wood consuming industries was unfavorable for quite a long time. Boxmakers have been busy making cases for the transport of food-stuffs for the troops. Wagon builders secured large orders from the government for transport wagons, and have been well employed. Cabinet making has been very dull, and as a result furniture woods have been slow, and prices accordingly dropped. Mahogany, owing to the large import, began to drop and Gaboon stock was much less in evidence than in 1913.

Shipments of Japanese oak have come in in larger quantities than usual, probably through shipments intended for Hamburg being diverted here, and naturally prices became somewhat easier. American hardwoods latterly hardened, owing to the depleted stocks and high freight rates. Birch logs were imported on a much smaller scale than last year. Greenheart, hickory, ash and California redwood remained firm without much variation from the previous year's figures.

FREIGHTS

The year opened with a considerable slump, and continued on a low level during the summer months. On the outbreak of war, chartering was suspended for three or four weeks during August, and a good many of the charters that had been previously arranged had to be rearranged or cancelled. Since November freights have reached an

extraordinarily high level, and there seems little to indicate any falling off. There are many reasons for this—losses through capture, seizure, and destruction at sea, supplies having to be brought greater distances, the time for voyages thus being prolonged, and delays at different ports through congestion and scarcity of labor.

SHIPBUILDING

The year 1914 was more eventful on the Clyde than in any other shipbuilding district. All previous records were eclipsed in 1913, so that there was hardly any chance that 1914 would maintain the record. The output for 1913 was 370 vessels of 756,976 tons. Nothing anywhere near approaching this had been turned out in any previous year, and it was generally anticipated that a falling off would certainly take place. From the beginning of the year down to the eve of the war operations were regularly lower over stated periods than those of 1913. One of the first effects of the war was to convert three of the largest shipbuilding and engineering establishments into government dockyards for the time being.

Lloyds' annual summary, just published, of the world's shipbuilding shows that 656 vessels of 1,683,553 tons gross were launched in the United Kingdom. The Clyde (including Greenock) occupies first place with 444,621 tons.

PROSPECTS

With Europe in the melting pot, it would be a wise prophet who could foretell trade conditions of the coming year. It is not possible to view the outlook from the same standpoint as hitherto, and the fluctuations will be swayed to a great extent by the progress of the war. One thing that is clear, however, is that unless the demand falls away altogether, which there is no justification to assume is likely to happen, there will be a serious shortage in stock in several instances, and high prices appear assured. No one at the present time will bring in supplies at the existing prices; especially with the high freight, and until these become easier, there is bound to be a serious check to imports. Everything points to a shortage of supplies, and there is no escape from the conclusion that prices all over must advance.

Increasing use of the national forests by local farmers and settlers to supply their needs for timber is shown in the fact that small timber sales on the forests numbered 8,298 in 1914, against 6,182 the previous year.

Recent sales by the government totaling 126,000,000 feet of saw timber in the Olympic national forest, in western Washington, mark the opening of this hitherto inaccessible storehouse of timber, estimated to contain a stand of 33,000,000,000 board feet.

Sawdust Unsuitable for Bread

"Behold, how great a matter a little fire kindleth!"

So spoke a New Testament writer nearly two thousand years ago, and the truth of the proverb still holds. That was recently illustrated in a forcible manner. Two or three months ago a newspaper waif of half a dozen lines was floating about the press, to the effect that in Germany bread is baked of a mixture of sawdust and rye flour. **HARDWOOD RECORD** passed the item along, but it seemed to take new life of a sudden. The Reuter news service cabled the item to Germany, and quoted **HARDWOOD RECORD** as authority; but the little item seems to have grown pretty rapidly after it got on the cable, and when it reached the other side of the sea it had expanded almost beyond recognition and had assumed a sensational form unknown to it on this side of the water.

HARDWOOD RECORD has been receiving some interesting mail on the subject from Germany, which is gladly published in order that the whole truth may be placed before the world.

H. Malmédie,
Coln-Sulz, Landaustr. 15. Tel B. 2753.

HARDWOOD RECORD,
Chicago, Ill.

Gentlemen: I read that your paper brought news by Reuter that the Germans make bread of sawdust and rye flour and that the Austrians manufacture briquets of sawdust and tar.

I am an American, living here since several years and cannot get over the humbug that is printed in the States.

One of the worst papers I find to be the New York Times. The editor is a rank Anglophile and has no sense and no idea of what trash he is thinking and printing.

Germany is today better fed than England, France, or Russia.

Don't forget that Germany has a higher education by its superior schools than any other country on the globe and the higher the standard of common education, the less barbarism.

Germany neglected to buy influence and "soak" foreign papers, thus the detestful behavior of the majority of them.

For the sake of culture and civilisation Germany must win this fight and so it will.

Very truly yours,

H. MALMÉDIE.

P. S. Another man that likes to hear himself talk and see his queer brain in print is that man Beck, former associate district attorney; he even went so far as to advise the German general staff what it should have done instead of going through Belgium. I hope you are all satisfied now that Belgium was no neutral country for the last six years. M.

The next correspondent writes from Hamburg and makes clear the position which he takes in the matter as follows:

Hamburg, January 19th, 1915.

HARDWOOD RECORD,
Chicago, Ill.

Gentlemen: I take the liberty to introduce myself to you as ardent reader of your esteemed journal, whose hobby it is since about twelve years to "stork" all photos and descriptions referring to trees and their uses, etc., and who naturally likewise "stocked" thereby a pile of theory which proves of great value in the lumber trade I am employed in (Richard Koeller, Hamburg).

Having thus become a "dormant partner" of the **HARDWOOD RECORD**, you will certainly permit me a few words in regard to an article contained in your issue of December 10th, 1914, page 42, under the title of "Various Uses for Sawdust." Enclosed you will please find a clipping of the German lumber paper, "*Die Holzzeitung*," reading in translation as follows:

Bread Made of Sawdust in Germany

A neat "Reuter" advice can be found in the **HARDWOOD RECORD** regarding the various uses for sawdust. This journal, of a decidedly high standing in the American lumber industry,—it appears in Chicago—contains the following news: "In Austria sawdust is mixed with rye to make fuel briquettes. In Germany the sawdust is mixed with rye flour and made into a kind of bread, which is eaten by human beings and horses. One German bakery turns out 20,000 such loaves per day. How entirely different is the standing of England in this regard. There the same sawdust which the German "barbarians" are said to eat is placed in spittoons." The advice stands amongst a series of other entirely serious remarks of the named lumber paper which has omitted to add that all lumber mills are busy in converting all lumber into sawdust, in order that Germany may have sufficient to eat.

So far said paper. Whence came this fairy-tale to you? No doubt from our special friends, the English, who have since years poisoned the American press with blast lies in regard to Germany's standing. You may rest assured that even today bread is considerably cheaper in Germany than in England, in spite of the latter's waving the rules (I beg your pardon, "ruling the waves" I intended to say). We know that the English, and likewise most of those speaking the English language, refer to Germany only in a disparaging sense, and perhaps a month later the English will cable you that, in order to keep things going in Germany,

the latter is forced to import from the United Kingdom the sawdust after it served for their spittoons, for bread making purposes.

The article would have been placed in a more favorable way on the page of your paper with the heading, "Pert, Pertinent and Impertinent," or don't you think it is "impertinent" to say that the Germans fill their bellies with sawdust? Sawdust does not contain any nutritious substance, and consequently it is of no use to swallow same.

Sawdust is used in Germany likewise for the manufacture of fuel briquettes; they strew it on foot-ways, especially in winter time, on the walks of railway stations, etc., etc. Sawdust bread would force us to ask the Lord for a new and better stomach, but he would certainly reply: "Thou shalt not eat sawdust!"

Should our friends, the English, tell you something like that, be assured that provisions in Germany are plentiful. Public and dining-rooms are closed at 12 o'clock in the night, sometimes at 1 or 2 o'clock only, and I only recently sent a bill-of-fare of a first-class dining-room to a friend of mine in Baltimore, in reply to the British lie that Hagenbeck's show was devastated and the lions and tigers were fed with the finest antelopes. Also, Hamburg has been taken and devastated seven times by the "Allies," but we know nothing of all these things and do hardly observe that Germany is in war. It is true, one or the other article, which in times of peace is more plenty in Germany, had a slight advance in price, but on the whole things are as in normal times.

What lies are scattered over the world in regard to Germany are unbelievable! A cablegram from Buenos Aires recently stated that a sea battle had taken place near Mulhausen; 36,000 Germans (the more the better) killed, 96 ships lost. We have no notice of this, and Mulhausen is a place high in the mountains.

The latest news is again that German soldiers are cruel. They bombard cathedrals, the houses of God. Yes, certainly, if the Allies want churches to remain houses of God they must abstain from placing machine guns in the steeple of churches. If people do not want to be hanged they should abstain from showing the enemy where our soldiers are. War is no 5 o'clock tea! And if we are said to wage a cruel war this is only a token of their impotence, as they are unable to resist our guns and men and consequently more of them are killed than of our people. They commenced the war, not we, and if the English talk of our "militarism," which is a necessity for us in view of the geographical and political situation, what is then the "marinism" of England, which at present behaves itself as the policeman of the world, and has ever done so? Letters from Amsterdam to Hamburg are opened by English censors and reach us with a stamp in English language, "Opened by censor." Who grants England the right to control letters from Holland to Germany? This would be the same thing as if England controlled the letters from Chicago to Mexico. The word impudent is certainly not too much.

With best wishes, and trusting that the war will be soon at an end, and that the lumber business between Uncle Sam and the Fatherland can soon be resumed with prospects for a good future, I beg to remain,

Respectfully yours,

A. EICHLER.

There is only one: John Bull; he's wonderful, wonderful!

The women of Germany have not been slow to defend the good name of their country. The writings of Ricarda Huch and Clara Vielig, upholding Germany in its war, have been widely read in America. The latter has been called "the George Eliot of Germany." There is no mistaking the spirit of patriotism which actuates the German women at this time; and the following letter is proof that the spirit is no less strong among some who are German by adoption only. The letter below, though coming from Germany, was written by a lady who was born in Missouri:

Halle a. S. Germany, 18/1, 1915, Dessauerstr 5 b.

HARDWOOD RECORD,
Chicago, Ill.

A Reuter telegram brought us a message of your paper, stating that in Germany sawdust mixed with rye flour is used for bread. Herewith I would like to rectify that falsehood. It is like much that is written about Germany—untrue and false slander!

In no country in the world are the food laws so severe and food preparers subject to such close inspection and punishment as in Germany, and no German baker would dare to so grossly violate the above laws.

I only hope that in case of the United States ever being involved in such a war as has come over Germany that the United States may be able to provide for the subsistence of its populace as well as the Germany government has done since the beginning of the war. The prices for flour, feed and most necessary articles for food and maintenance for the people are fixed and the manner of usage regulated so that all people, rich and poor, are well fed and cared for in spite of England's great effort to starve us out.

You do not seem to know that one of the greatest enemies that German soldiers are obliged to lattle with is Russian filth and French uncleanness. Every soldier coming from the battlefields will tell you this; there-

fore the Germans would never eat that sawdust bread in their own country.

German bread was a very welcome factor to Belgium and northern France, where the English frauds destroyed millions of francs' worth of provisions which might have done much good to the people whom the English plunged into this horrible war. The above fact I heard more than once from soldiers who helped to distribute bread and to supply food to the poor fugitives from the German military kitchens.

I would thank you very much if you would publish this article in your worthy paper for the enlightenment of your readers and to rectify the reputation of the German nation.

I am the daughter of an American citizen, live in Germany now 20 years, so that my opinion is free from all partiality. If you would send me a copy of your paper containing the above article it would be a great pleasure to me and thankfully received. In Chicago I have a number of friends.

Thanking you beforehand, I am, sir,

ELISABETH LOFFLER.

Neé Telle of St. Louis, Mo.

HARDWOOD RECORD wants to assure its German friends—and it sincerely hopes it still has some friends in Germany—that in spite of the cable's well-known tendency to leave out the *spirit* of the message, the little item which occupied only a half-dozen lines was published in the spirit of good-natured "kidding" of the German's serious minded concentration on utilization. It was not supposed to be in the nature of war news and in fact was in no way connected with the present conflict. It was not thought for a moment that anyone would so seriously doubt our intelligence as to think that we believed the little yarn, and in the same light this office certainly did not think anyone would give it credence. As a matter of fact, the type had been held over for some months—probably from prior to the date of the beginning of the war—and was intended purely to fill in a little hole.

HARDWOOD RECORD hopes that if in some way this story should come into the hands of the medium of communication which gave the

former item such an unfortunate twist, it will do us the justice of assuring its correspondents on the other side that it was really more of a jesting compliment to German thrift than anything else. The actual figures were added merely to hinge the story on. No German would consider as more than a joke the story of Chicago's stock yards in which it is said that the enterprising packers, having found a use for all by-products of the pig but the squeal; have found a process for canning that for phonographic use. The sawdust story was just about as serious in its intent as that, and Germans surely ought to give us credit for a little more intelligence than to think that it was used as a statement of fact.

The incident points out the possibility of much more serious misunderstandings on other matters where the intent and explanatory information are not carried with the report of many items coming from this side and taken up as affronts by the warring nations. It is regrettable that all seem to be looking for some excuse on which to hinge a protest of unfair treatment. Truly, Uncle Sam is placed in an unenviable position right now, and his friends abroad should see to it that the efforts of this or that belligerent to pin on him the badge of unfairness be not so twisted as to result in his receiving much more seriously unfair consideration from all. New evidences are seen every day that this is occurring constantly, but all of our friends in Europe, who complain of distorted tales reaching our shores via wireless and cable, should bear in mind the fact that the same injustice might result to the source of the messages *going from* this side. The little incident of the sawdust shows that this spirit is not always mixed with the consideration of many statements which the cable and the wireless put into the mouth of Uncle Sam. By using only parts of a statement it can be shown that, in the opinion of eminent scientists, black is white. Those across the water should remember this possibility.

Knife Whetting as an Art

Whetting, as an art, does not depend altogether on the skill of the man using the whetstone. As the painter must be skilled in the selection of colors and have the colors to select from, as well as being skilled with his brush, so also must a good mechanic who takes up the art of whetting consider the matter of the whetstones themselves. But whetters must not lose sight of the purpose of their art.

Proper whetting serves more good purposes than may be credited to it. Here, for example, is a point you may have overlooked. The longer you can keep a set of planer knives on a cutter-head doing good work before regrinding the smoother will be their work. In other words, in doing their work those that extend a little more than the others are worn more, and in the process of whetting them down one trues them up better than it is practical to do so by gauges in the original setting.

This should not be taken as an excuse for continuing the knives on the cutter-head after they need grinding, running them blunt, so that they pull heavily, or wasting time taking off metal tediously with the whetstone that should be taken off with the grinder. It should, however, be taken as a reason for grinding, whenever practical, with a view to long service on the cutter-head, and the maximum amount of whetting before the knives are to be removed. That is, it is an argument in favor of grinding the bevel back a little more than one might otherwise, and also in favor of hollowing it out so as to facilitate whetting to an edge from time to time, as the knife becomes dull from service.

This idea is perhaps most valuable in connection with working pine, cottonwood, and other soft woods. These permit of comparatively slender grinding, and one can humor the whetting in this way on soft woods more than is practical in working such hardwoods as oak, maple, birch and beech.

In connection with this point of advantage of keeping the knives on the cutter-head and continued whetting before regrinding, one

should bear in mind that the better the whetstones the less time is wasted and the more satisfaction can be had from it generally. It is doubtful if the average man realizes the chances for discrimination and selection among the whetstone offerings of today. Just as much progress has been made in whetstones as in grinding wheels, and therefore there is not much excuse for a man to use a stone that does not cut rapidly and smoothly. Quite a varied assortment of whetstones can be had—some in natural stones and many in the artificial stones that are made on a scientific basis, as to grit and composition. The makers of artificial whetstones have studied the subject as carefully as they have studied that of grinding and other abrasive work, so that they can furnish stones for all purposes—some for rapid cutting, and others for slicking up and taking the wire edge off.

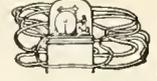

It is conceded by those who are in position to know that a soft rapid cutting stone is not good for taking off the wire edge and putting a keen point on a knife. It takes the hard slip or close-grained stone for this.

Investigate the whetstone business. Get an assortment. The more you learn about them, the more easily you will be able to do whetting to your satisfaction. Keep them in good working shape. There are a number of different methods of caring for them. Some men keep them immersed in a can of coal oil, others prefer different methods. Take your own choice of methods, or better yet experiment a little with the different methods as well as with the different stones. Soon you will not only learn that whetting is something of an art, but you will get some pleasure out of a job which heretofore has been too much of a nuisance to the average planer man.

To guard against tree repair fakers, or quack tree surgeons, the Massachusetts Forestry Association will inspect the shade trees belonging to its members, free of charge.

The Sale of Wood Ashes

Considerable inquiry is being made these days regarding a market for wood ashes. Heretofore there has been no regular market in this country, and the price has been too low to justify the collection or shipment of this article. Its principal value has been as a fertilizing agent, and it has not been able to compete successfully with potash obtained from mines, with commercial fertilizers manufactured from slaughter house waste, or with importations from the natural deposits of Chile.

The threatened scarcity of fertilizers on account of the disorganization of commerce due to the war, has changed values to such an extent that there is now a prospect that wood ashes may be sold at a profit. It should be clearly understood, however, that it is as yet only a prospect and not a certainty. There is no big fortune in sight in wood ashes, but the matter is worth looking into. Reliable information on the subject has been hard to get, because little was to be had. Nobody has been saving and selling ashes on a large scale in this country, though all practical farmers know that ashes are valuable to enrich soils of certain kinds.

Having understood that the burning and collection of ashes is something of an industry in Scotland, *HARDWOOD RECORD* recently made inquiries of the Board of Agriculture for Scotland at Edinburgh, concerning the manner of burning and collecting ashes in that country, and the prices obtained for the product. In reply the board of agriculture sent a bulletin recently printed, entitled "The Production of Potash Salts from Woodlands and Waste Lands."

MODERATE RETURNS

At this time there is threatened scarcity of potash in Scotland, the same as in America, and the board of agriculture has sent out printed instructions explaining how to burn ashes in the best way, what materials are best, and how to prepare the commodity for market. Exact prices are not quoted, which naturally could not be done, since value depends on analysis; but a probable value is named of \$15 to \$17 a ton for well-mixed ashes.

Persons in this country who are thinking of preparing ashes for sale can use those figures as a basis for calculating the returns, but of course they should be used in a very general way only. It would not be safe to depend strictly upon that as a price, and besides, the markets in Scotland and in America would doubtless differ, and there would likewise be differences in prices in different regions in this country.

It appears that a rather large part of the ashes bought and sold in Scotland is burned not from wood but from fern which in that country is commonly called bracken. It is a nuisance on many tracts, and pasturage is improved by clearing the bracken. Converting it into ashes is a convenient method of disposal. Ten acres of bracken land produce one ton of ashes. That would appear to be a small return for labor.

GRADES OF ASHES OBTAINED

Ash burned from fern is much richer in potash than the ash burned from wood. There is notable difference in the richness, and consequently in the value, of ashes produced from different parts of the tree. The portions richest in potash are the leaves, twigs, buds, and bark. Next is the branch wood, and finally the trunk wood, which is poorest of all. This fact should be considered by large sawmills which burn their sawdust. The ash produced from that part of the waste will be less valuable, ton for ton, than that burned from slabwood, which is largely bark.

The richness of ashes in potash is one thing, and the actual quantity of ashes that will result from burning different kinds of wood is another. Some woods, ton for ton, will yield five, ten, or even fifty times as much ash as another. Though ash from a certain wood may show poor in analysis, yet if this wood yields ten times as much ash as another which is richer in analysis, the former may be much more profitable.

In Scotland it is found profitable, under certain circumstances, to rake together leaves and twigs and burn them for their ashes. It is

doubtful if that could be profitably done in any part of the United States. In Scotland ashes are saved from small portable mills which produce as low as twenty-five pounds a day. That would scarcely be attempted in this country. Large mills would produce several hundreds or even thousands of pounds daily from their furnaces.

It is a fact that large furnaces, with strong drafts, may draw three-fourths of the ash up the stack, and winds will scatter it over the surrounding country. If found practicable to save ashes for sale, the owners of large furnaces would do well to see whether the most of the ash remains in the box or goes out with the smoke.

Ashes should be sheltered from rain and other dampness. Salts are easily leached out. Nothing will be made by selling ashes wet. They weigh more, but the purchaser fixes his price after analysis, and the chemist will see to it that no water is paid for.

In Scotland no ash is bought which has not passed through a three-sixteenth inch sieve. That screens out bits of charcoal, stoues, and other impurities. The ash is stored and transported in bags, barrels, or bins in Scotland. It is assumed that in handling it in the United States arrangements could be made for transporting it in bulk, by the car or barge.

Logging Conditions Around Memphis

The weather throughout this territory has been much more favorable during the past fortnight. There has been comparatively little rainfall, and sunshine has predominated. The country roads are a great deal better than heretofore and the woods are also in much better condition for logging operations, which are beginning in a moderate way and there is a possibility of reasonable progress if favorable weather continues. There is really nothing new in the timber situation in this section. The supply immediately available for the mills, with the exception of a few of the larger manufacturing firms, is rather small and it will require some time before there will be anything like a normal amount ready for conversion into lumber, even if the weather remains good. This is due to the fact that so little was accomplished in getting out timber last fall and thus far this winter. Spring is practically at hand and, with increased demand for southern hardwoods and with manufacturing operations on an ascending scale, it is anticipated that timber will be brought out more freely and that as rapidly as possible the somewhat strained relations as between supply and demand will be gradually adjusted. However, manufacturers of southern hardwoods are laying emphasis upon the fact that the small amount of timber available makes it difficult to forecast large manufacturing operations and there are not a few members of the trade who believe that the situation will gradually increase in strength and that higher prices for lumber will result from the fact that production is below normal.

The crest of the rise in the Mississippi river has already passed Memphis and all danger of interference from high water has passed so far as the present rise is concerned. The highest stage reached here was thirty-six feet, which is only one foot above the danger line. There is practically no interference with lumber or wood-working enterprises in this city or section with a stage of less than thirty-seven to thirty-eight feet. Some alarm was felt among lumber interests a few days ago when unofficial forecasts were made of a stage as high as thirty-seven to thirty-eight feet. While lumber interests are congratulating themselves upon the fact that the present high water has occasioned no inconvenience, they are mindful of the fact that it is quite a while before the period of possible high water will have passed. As a matter of fact the most serious floods in the history of this territory have usually occurred from the early part of March to the first of May, and developments in connection with the Mississippi and its tributaries will be closely watched with a view to gauging the first sign of any possible danger from that source. It is possible that the present high water will result in increased log receipts by water to some extent, but no large movement of this character is anticipated.

Interesting Traffic Developments

While the case at issue deals with a yellow pine blanket area the hardwood industry is interested directly in the decision of the Interstate Commerce Commission last week in the litigation between the Wisconsin and Arkansas Lumber Company and the St. Louis, Iron Mountain and Southern Railroad Company. The complainants, who are producers of yellow pine in Arkansas, asked that the southwestern yellow pine blanket be divided at the Arkansas-Louisiana state line and that the northern half be given proportional rates to certain gateways lower than those existing from the southern half.

The commission held that neither the existing blanket arrangement nor the rates are shown to be unreasonable or unjustly discriminatory. It was held further that blankets co-extensive with areas of natural resources are often in the interest of the community at large, as they favor a wide and uniform distribution of necessary commodities. The commission pointed out that instances of individual hardship cannot be remedied on the evidence submitted in the case as it was insufficient for conclusions.

Lumber interests were disappointed last week when the points of greatest moment in the case of Vulcan Coal and Mining Company versus the Illinois Central were left for further hearings. This case took up the question of reparation for damages occasioned by the failure of the carrier to furnish sufficient cars upon reasonable request. Loss of profits on sales which were lost for this reason and the greater cost of mining due to restricted output were asked. Heavy losses are sustained each year in the same manner by the manufacturers of lumber. While the commission has not decided whether this question is within its jurisdiction or is one for the courts this important opinion was expressed: "Although a full car supply cannot be expected all the time, carriers must do more than provide themselves with sufficient equipment for the slack period of production."

A question that often has been raised in the hardwood districts is affected by the following findings handed down by the commission last week in the case of the Boise Lumber Company versus the Pacific and Idaho Northern Railway Company:

If the nature or value of a commodity offered for transportation is such as to demand an unreasonably low rate, there is no lawful obligation upon the carrier to meet this demand.

Saw logs are a low-grade commodity, the transportation of which for long distances may not always be logical or practicable, and in so far as concerns the administration of the law the carrier has discharged its duty in this respect when it has accorded reasonable and nondiscriminatory rates.

Extending undue credit to a shipper is a concession and a discrimination in the eyes of the commission. The decision was brought out by a California case in which the Sierra Railway Company, a short line, served the Standard Lumber Company. T. S. Bullock is the principal stockholder in the railway and in the lumber company. There has been a system of credits in vogue between the two companies as the railroad is furnished lumber, ties and other supplies by the lumber company, but the accumulating freight greatly exceeded the value of the supplies furnished. This resulted in the lumber company always being on the debit side of the ledger. This practice was ordered discontinued. It is stated that this is a widespread custom throughout the lumber producing districts.

After a lengthy contest several important lumber companies in Virginia lost their case against the carriers serving central freight association territory. The complainants allege that the rates on lumber in carloads from certain producing points in Virginia to consuming points of which Pittsburgh, Pa., and Columbus, O., are representative are unreasonable to the extent that they exceed what are commonly known as "Virginia cities" rates, and subject complainants to undue and unreasonable prejudice and disadvantage in favor of their competitors at points from which Virginia cities rates apply.

The commission holds that Virginia cities rates, including rates on lumber, were made to meet conditions of transportation and com-

petition that do not exist at the points where complainants' lumber mills are located and that on the record presented, the rates in question, although higher than rates from the Virginia cities, are not unreasonable or otherwise in violation of the act.

Cancellation of the transit privileges at Jackson and Vicksburg, Miss., allowed the commission to dismiss the case of J. A. Adams & Sons Company versus the Vicksburg, Shreveport & Pacific.

The Parrott-Pope Lumber Company of Atlanta received an unfavorable ruling on the part of the commission in its demand for damages against the Louisville & Nashville railroad. The claim was based on alleged overcharges on lumber moving from Atlanta to Canadian points.

Arguments in the Chattanooga log rate cases will be heard in Washington March 10.

The following complaints were among the more important ones submitted to the commission during the past two weeks:

Nashville Tie Company, Nashville, charges that the Louisville & Nashville railroad's rates on white oak crossties are unreasonable.

Southern Lumber Company, Cairo, Ill., maintains that the rate on chair stock in the rough should take the lumber rate instead of three cents more than the lumber rate. The Big Four is the principal defendant.

Appalaehia Lumber Company versus the Louisville & Nashville promises to be an interesting case. Certain hardwood rates are attacked between Virginia and New York points.

The Brown Brothers Lumber Company, Rhinelander, Wis., submits further complaints as to the rates on lumber from certain Wisconsin points to points within the switching district of Chicago.

The Bristol Door and Lumber Company, Bristol, Tenn., attacks the rates on building material to New Jersey points.

In the following important fourth section order it is provided:

That the Nashville, Chattanooga & St. Louis Railway be, and it is hereby, authorized to establish a rate on logs, all kinds (except walnut, cherry and cedar), carloads, minimum weight 40,000 pounds, from Memphis, Tenn., to Paducah, Ky., via Hollow Rock, Tenn., when reshipped from Paducah, Ky., to points north of the Ohio river, the same as the rate currently in effect on like traffic via the line of the Illinois Central Railroad Company; and to maintain higher rates from intermediate points, provided that the present rates from said intermediate points are not exceeded, and provided further that rates from intermediate points shall not exceed the lowest combination of rates made on more distant points.

December Lumber Exports

The exports of hewed and sawed timber for the United States for December, 1914, make a poor showing when compared with figures for the corresponding month in 1913. For the former month the total to all the world was 16,556,000 feet, valued at \$338,778; and for last December 1,579,000 feet, worth \$30,139. The falling off amounted to ninety per cent, and was general in all markets. In France, Germany, Holland, Central America and Argentina, the cessation of the imports of timber was complete, and not one country showed an increase in this line of business. The figures for the years 1913 and 1914 indicate a sharp decline in the square timber trade. Exports during the first year totaled 471,197,000 feet and in 1914 they were 324,626,000.

The showing was a little better for the export of lumber than for timber, but the decline was nearly sixty-six per cent, comparing December, 1913, with December, 1914. The decline in the exports of furniture was in the same ratio. No lumber was exported to Belgium, Germany or Holland during last December. There was slight change in the average value of all lumber exported. In the former month it was \$22.58, and in the latter \$22.62.

Pertinent Legal Findings

Milling in Transit Privilege

The right of a lumber company to a refund of the amount of the difference between local distance tariffs paid on inbound shipments of rough lumber and the milling in transit rate was dependent upon the company causing the lumber to be moved out under rates in force when the inbound shipments were made, and, hence, the finished lumber, having been shipped out on reduced rates put in force by lawful authority, there was no right to a refund. (Oklahoma supreme court, *Walton-Chandler Lumber Company vs. St. Louis & San Francisco Railroad Company*, 145 Pacific Reporter 340.)

Warranty of Title to Timber Sold

When timber is sold under a warranty of title, a third person who buys from the purchaser is entitled to claim damages for breach of the warranty, although the deed under which he took title contained no express warranty. (Tennessee Supreme Court, *Galloway-Pease Co. vs. Sabin*, 172 Southwestern Reporter 292.)

Taxability of Logs

When the owner of land parts with ownership of standing timber, some interesting and important rules of law relating to taxation of property come into play. Until then the land and the trees have been assessed as one entire piece of property. Afterwards and until the timber is cut, it is still properly taxable as a part of the real estate, but the law takes notice of the separate ownership of the trees, and makes the purchaser of the growing trees liable for the part of the tax assessed against them.

When trees have been cut they, of course, become chattels and are taxable as such. The main difficulty which arises often is determination of the place where the logs are taxable. The courts have frequently recognized the general rule that logs are taxable at the place where they are found on the day when chattels are assessable, and not where the owner resides. It has been decided, however, that, under the statutes of several states, including Michigan and Wisconsin, logs in course of transportation to a particular mill, where it is intended that they shall be manufactured into lumber, are taxable in the district where the mill is located. For instance, the supreme court of Michigan held that logs should be assessed for taxation at the place of manufacture, where, at the time the assessment was made, they were banked, ready for transportation to the mill, and were delayed merely on account of floating conditions of a stream. In another case, the same court decided that logs floating in a lake, so that, at the time fixed by the tax laws for assessment, they were actually in different townships, although intended to be sent to a particular sawmill, were properly assessed in the township where the mill was situated. In the same case, it was held by the Michigan court that under a requirement of the Michigan statutes all forest products be taxed in the township where found on a certain date in the spring, except that, where such property is in course of transportation to some point within the state, it should be taxed at that place, and that under another statute providing that logs piled in any yard or railroad reserve should be assessed to the person having control of the yard, reserve or place of storage—logs piled on the right of way of a private railroad owned and used by a lumber concern were assessable in the township where they were located at the date fixed by law for assessing personal property.

On the subject of the taxability of logs intended to be transported from one state to another, the general rule has been stated by the Kentucky court of appeals to be as follows: "Logs, ties, etc., are taxable within the state where they were cut until they are actually delivered to a common carrier for transportation to their ultimate destination, or are actually floating on their way, mere delivery of them in readiness for transportation being insufficient." The Minnesota supreme court adopted this rule not long ago by holding that where logs were cut, banked and boomed on the ice with intent of exporting them from the state but were not delivered to the initial carrier until after May 1—the assessment date—they were subject to taxation in Minnesota for the current year. In a still later case, the

same court decided that, although logs had been floated many miles down the Mississippi, with intent to send them to an Iowa mill, they were nevertheless taxable at the boom where they were found May 1, being then held for the purpose of sorting, rafting and delivery to a carrier for transportation down the river.

Must Identify Logs to Levy Lien

An important judgment handed down by Judge McInnes in the county court at Vancouver, B. C., will, if sustained on an appeal, have a far reaching effect. It is that loggers and camp employes having a lien can claim on only those logs which they can identify. The decision was given in the case of seven loggers against J. J. Denman and William Symes, owners of limits at Holtham Sound, and Barney & Cardieff, contractors, who were employed by them to cut shingle bolts. The contractors hired the plaintiffs and fourteen others and agreed to pay them so much per cord. They worked for three months, and there being no money forthcoming on January 1 they put a lien on the bolts in the camp, which comprised only the December cut, the previous two months' cut having been sold. The lien covered claims for wages during the whole of the time they were working and was plastered upon the whole camp affecting work done by different gangs. The judge held that the loggers could claim only on the logs which they could themselves identify as having cut and cannot claim on logs cut in one month for their claims covering logs cut in previous months and which have been shipped out and sold, even though they were cut under the same contract. The judge further held that this applied not only to the loggers but to the camp cooks and others working around who could put a lien only upon logs then in the camp and which had been cut by the men for whom they were cooking.

Damages for Failure to Deliver Lumber

After it has been established that one who has contracted to sell a quantity of lumber has rendered himself liable in damages for breach of the contract, the question arises as to how much money can be recovered against him. This point arose in the Indiana case of *Ferguson vs. Pape*, 62 Northwestern Reporter 712—a suit to recover for defendant's failure to deliver certain logs and lumber. After finding that when the sale was made the seller knew that the purchase was being made for the purpose of resale by the buyer, the Indiana appellate court said that, under the general rule of damages, the buyer was entitled to recover the amount of his loss sustained on account of the breach, as a direct result of the seller's failure to deliver. "These damages are usually stated to be the difference between the contract price and the market value at the time and place of delivery. The law excludes uncertain and contingent profits as damages for breach of a contract, and also such damages as could not reasonably be supposed to have been in the contemplation of the parties at the time they made it as the probable result of its breach. If the lumber and logs in question had been purchased for the purpose of a special resale, and that fact had been communicated to the seller at the time of making the contract, the measure of damages would be the profit which would have accrued had the seller performed his contract."

Standing Timber Sales in Kentucky

Under the statutes of Kentucky an oral contract for a sale of standing timber is not enforceable, although immediate cutting and removal of the trees be contemplated, and although the trees be marked with the purchaser's brand. (Kentucky court of appeals, *Burris vs. Stepp*, 172 Southwestern Reporter 526.)

Liability for Injury to Employee

A lumber company engaged in operating a logging railroad is liable for injury to an employe who was knocked from a locomotive by a log which was negligently permitted to project too near the track, unless he was guilty of contributory negligence in failing to observe the presence of the logs. (North Carolina supreme court, *Buchanan vs. Ritter Lumber Company*, 84 Southeastern Reporter 50.)

Chicago Club Farewell Dinner

The sponsor of the social side of Chicago's lumber business, the Lumbermen's Club of Chicago, wound up three active and highly satisfactory years of existence on the evening of Saturday, February 20, at which time a final and farewell dinner and entertainment were tendered by the club to its members and visiting guests. There was no curb placed on the plan of the entertainment committee, which, headed by "Bill" Eager, surpassed itself in the variety and lively humor of the entertainment provided.

The dinner was a most impressive affair from a culinary standpoint and the beauty of it was, the further it went on the more impressive it became, as the entertainment committee had drawn up its plan in collaboration with the committee on liquidation.

The closing up of the affairs of the club comes as an altogether logical sequence of the completion of the plans for the Lumbermen's building, and for enlargement of the facilities and scope of the Lumbermen's Association.

The impressive quarters of the latter organization will provide just those added social and recreation facilities that gave to the club its excuse for existence, and now that the opening of the association quarters is imminent, the club would really have no logical claim on its members in the future, and hence its affairs are being liquidated under circumstances which pronounce the entire plan a complete and unmistakable success.

We would like to be able to put into type the sparkling, effervescent spirit of social, good fellowship which overflowed the club rooms on Saturday night. However, a severe cold in the head is usually not conducive to literary accomplishments, along these lines, of a satisfactory character. About all it is possible to do is to record the events as they were presented and to insure HARDWOOD RECORD readers that a surpassingly "good time was had by all."

As promised in the original announcement of the function, the business session was "very, very short," consisting mainly of the report of the liquidating committee, the most significant feature of which report was the statement that the club will issue a dividend to all members in good standing rather than being compelled to call upon them for an assessment to meet obligations.

Phil Gilbert of the Wisconsin Lumber Company closed up the business session without any prospect of its being reopened by requesting a vote of thanks to the officers, committees, etc. This much of the program having been accomplished, the chair was turned over to Toastmaster E. H. Defebaugh, who acquitted

himself with remarkable versatility and with an unusual display of clever wit which he used in announcing the various features.

There was a generous arrangement for professional and amateur entertainment along prearranged lines, which was interspersed by oratorical efforts by some of the notables of the club, who acquitted themselves with varying degrees of success.

F. R. Gadd of the Wisconsin Lumber Company, second president, was selected to present retiring-president A. C. Quixley with a beautiful watch as a token from the club members. He took the opportunity presented of indulging his own oratorical bent for a few minutes prior to the formal speech of presentation. The gift was accepted by President Quixley with a good deal of feeling. Why shouldn't it be?

George C. King, retiring secretary, was also rewarded for his most efficient efforts in the secretaryship, with a similar token of esteem, the watch being presented by H. B. Darlington, who acquitted himself in a commendable manner considering his lack of experience in this line.

E. A. Thornton, whose name is necessary on any program of speechmaking, made a little talk on nothing in particular and involving a story of unusually effective point.

Others who talked were Bolling Arthur Johnson, R. S. Kellogg and C. B. Flinn. Mr. Flinn is one of the oldest men in years of age who belongs to the club, and had some interesting anecdotes to tell of the old days in the woods.

E. L. Thornton selected as the topic for his talk "The Early Days of the Lumber Trade in Chicago."

Ed. Lang, the first president, read a piece of prose which conveyed in no uncertain manner its idea.

Some of the members prepared a tableau, using as a theme the present war situation, with several dressed as European rulers and one as Uncle Sam. They carried out a little sketch that was supposed to represent the amicable settlement that would result from the intervention of "Uncle" in the turmoil across the water.

George Pope, the new president of the Chicago Lumbermen's Association, told of plans for enlarging the work of that organization.

President Quixley of the club closed the entertainment with a farewell talk, which was along just the proper lines to touch the sentimental feeling of those who have by their efforts and by their loyal attendance made the club the success which it has been.

E. A. LANG, FIRST PRESIDENT

A. C. QUIXLEY, RETIRING PRESIDENT

F. R. GADD, SECOND PRESIDENT

Forest Products Federation

The mass meeting of lumbermen, timber owners, and manufacturers which was set for February 24 and 25, at La Salle hotel, Chicago, for the purpose of organizing a Forest Products Federation, was called to order at 10:30 a. m. by R. H. Downman, chairman of the executive committee.

The United States was represented from all its parts. A number of persons were in attendance from the Pacific coast, while the Atlantic region, the Lake states, the South, the Plains states, and the central territory sent well-known lumbermen to the meeting. All the leading associations had one or more men present at the opening of the first session, and the attendance increased later.

The purposes for which the meeting was called were stated by E. A. Sterling, secretary, in a paper that touched only the main points by way of suggestions, and left the details and the working out of plans to those present. Little more than two months have passed since the idea of a federation of forest and lumber interests first assumed visible form; but within that time much work of a preliminary nature has been done. In addition to numerous letters written to individuals, more than 32,000 printed circulars and cards have been mailed from the Chicago office at 1621 Otis building, by the secretary and R. S. Kellogg, treasurer of the federation.

Mr. Sterling's paper, which might be called the preface to the meeting, pointed out certain things which dealers in lumber ought to earnestly consider. The first of these is that wood has held its ground chiefly because it sells itself, and that a time has now come when it is questionable whether it can continue to do so in the same way. Whatever steps may be taken to promote the uses of forest products, should consider all woods, and not those of particular regions or certain kinds. The movement, if it means anything, is broad enough to take care of all alike, with promotion for all and booms for none.

Mr. Sterling laid particular stress upon the fact that the field for the chief work lies outside the lumber business, not within. Buyers, not sellers, are the men to reach. The ultimate users are the ones who can make or mar the whole lumber business, because they are the court of last resort, to adopt or reject wood when it is presented in competition with other materials.

BUILDING CODES

The report of the committee on building codes struck straight to the business in hand. The committee was assisted in the preparation of the report by the United States Forest Products Laboratory at Madison, Wis. That assistance was extremely opportune, because when the committee took up its work it discovered that there was no directory and little information covering that subject, and it appeared that building codes of the hundreds of cities which have or ought to have them could be consulted only after months of labor in bringing them together. It was found, however, that the Madison Laboratory had already done that work, and the director, Howard P. Weiss, placed in the hands of the committee a summary of the information desired.

It was declared that building codes constitute an unexplored field for lumbermen. They never consult them, and often do not know that such things exist; yet it frequently happens that these very codes do more than anything else to shut wood from places which it formerly filled and which it ought to continue to fill. The reason for that is, that a city's building code specifies what kinds of material shall be used in buildings, and if no lumberman or other person interested in seeing wood used has a hand in compiling the codes, the probability is that wood will get a shabby deal, and that is exactly what it has been getting.

Other building materials are looked after by persons whose business it is to do so; but it seems to have been nobody's business to look after wood when most of the building codes were made up. In fact, it was intimated that the most prolific writers of building codes in the United States are the insurance companies. One city which found that the cost of preparing a code would exceed \$15,000 was generously offered one free by the insurance people.

Figures were quoted to illustrate the enormous inconsistencies contained in different codes in specifying strength and other properties demanded in building timbers. Variations ran as high as 200 per cent in some instances. There seems to be no standard whatever in wood, according to the wild and meaningless specifications discovered in comparing the code of one city with that of another. That is because nobody is looking after the interest of wood when the codes are being compiled.

Whatever gets in, as specifications, must be complied with by the lumberman who furnishes the stuff; and what chance has he, compared with the steel, stone, cement, and tile dealer who finds practically the same specifications in his lines (and reasonable specifications) everywhere? The interests of all dealers in building materials are looked after by competent experts, except wood, and that has been left to chance and the tender mercies of its enemies.

One of the first things the Federation should do, according to the committee's recommendation, will be to make it somebody's business to look after wood and see that it gets proper consideration and receives just recognition in the building codes of towns and cities. It was shown by statistics that in some cities there is a heavy decrease in the number of frame buildings erected; and the blame for it is placed on the pitiful consideration accorded wood in building codes, and to the energetic campaign carried on by the sellers of substitutes. There is just now a strong tendency in the country to revise building codes, and now is the time to get in the best licks.

It was further urged that steps be taken to standardize the names of woods; to adopt and use one name only for each wood. At present, some common woods have three or four names, and when used in specifications, confusion and serious misunderstandings often result. One name should belong to one wood, no matter where it is bought, sold, and used. The code committee consisted of J. V. O'Brien, chairman, E. H. Burgess and W. W. Knight. Mr. Burgess read the committee's report.

Among the men who spoke on the building code question were Howard W. Weiss, of the Madison Laboratory, Herman von Schrenck and Julius Seidel of St. Louis.

RIGHT AND WRONG METHODS OF PROMOTION

A discussion in which a number of prominent men took part was introduced by Robert D. Kohn of New York, president of the National Fire Protection Association, under the text: "The Right and Wrong Way to Promote the Use of Wood in Buildings." The speaker said he was a practical architect and spoke from his knowledge of that subject and from his experience in New York and elsewhere. He said that two causes were open to the Federation. One he called the open democratic policy, the other the dog-in-the-manger policy. If the former is followed, wood will be pushed only along those lines where it can be wisely used; but if the dog-in-the-manger course is adopted, there will be a fight against every material that can take the place of wood, regardless of whether it is better or worse than wood. Hope was expressed that the latter course would not be followed.

Lumber interests have not gone to enough pains to prove their case, said Mr. Kohn. They should make sure of their facts and figures, and then drive them home in a way to make them stick. For instance, the speaker gave it as his opinion, and as the opinion of other architects of his acquaintance, that wooden floors, properly laid, and properly isolated by partitions, do not increase fire risk in tall business blocks; but lumbermen have taken no trouble to prove this, or to furnish figures and facts, or to convince architects that it is so. He expressed a similar opinion regarding wooden trim in tall buildings; but lumbermen seem to have lain down and have not taken advantage of the opportunity to push wood into that important place. All the propaganda has been against wood for that place, nothing to help it along. Nearly the same thing was said of heavy wooden beams, of suitable kinds, in New York. The impression has gone out in that district that good heavy timbers can no longer be had, so architects are specifying steel. At the same time there are

billions of feet of as good timber for heavy beams as there ever was; but the people who want to use such beams do not know it. It is up to the lumberman to show them, and to tell them where they can get the kind of stuff they want, and to make it easy for them to get it. That has not been done.

Speakers who occupied the floor while this topic was under discussion were R. A. Long and J. R. Moorhead of Kansas City, and J. E. Rhodes of New Orleans, secretary of the Yellow Pine association. Mr. Long added his opinion to that of Mr. Kohn that the lumbermen should confine their campaign solely to pushing wood into places where it is safe and wise to use it, and steer clear of a policy of indiscriminate attack upon substitutes or competing materials.

LUMBER ON THE FARM

The topic on the program was "Relation of the Farm Press to the Lumber Industry," but the speaker, Frank W. Lovejoy, of the *Wisconsin Agriculturist*, announced that the title did not exactly indicate the direction he expected his remarks to take.

The speaker insisted principally upon the fact that the lumberman has an advantage over the sellers of most substitutes when the farmer is the buyer. That is because most farmers have always been familiar with wood and know how to work with it, but have never learned how to lay tiles, place cement, and fit metals. In buildings and repairs about the farm, the farmer expects to do some of the work himself at odd times, and he knows how to handle wood. He is predisposed in its favor. Other things being equal, he will buy lumber for buildings, fences, and repairs.

But other things are often not equal, the way matters have been going lately, because the farmer, when he reads his agricultural papers, as all do these days, is constantly face to face with all manner of advertisements of substitutes, and seldom reads anything about wood. Constant dinning in his ears of cement, tile, felt, iron, and other building materials gradually leads him to buy them. He often uses them really against his will, or at least against his former judgment, and it is because of the activity with which these materials are pushed by their manufacturers.

The remedy consists in organizing a similar push for lumber in agricultural papers. Do not let farmers forget lumber. Keep it before them constantly, so that, when they are ready to buy stuff for buildings and repairs, lumber will be the first thing to come in their minds.

WEDNESDAY AFTERNOON SESSION

Adolph Pfund, secretary of the Wisconsin Retail Lumber Dealers' Association, reported as chairman of the committee on comparative costs of building construction. The report proper was prepared on request of the committee by J. Norman Jensen, engineer of the building department of Chicago. The tone of Mr. Jensen's paper was very favorable to lumber. The thought brought out was that cost comparison tests based on standard and typical specifications and plans prepared by leading architects and on bids by competent contractors showed mill construction to be considerably cheaper than concrete construction, and frame construction much less in cost than brick and stucco residences. Mr. Jensen came out openly in the statement that practical engineers in charge of city construction have no doubts whatever on this question, and are surprised at the popular impression to the contrary.

In closing, Mr. Jensen gave seven suggestions which must be followed out to prevent the lumber market from being reduced to a point that would jeopardize the industry. They are:

- 1—The collection of specific and scientific information on utility of all kinds and classes of lumber.
- 2—Actual tests of strength of various woods so that engineers can figure with definite and dependable information before them.
- 3—Lumbermen should publish a handbook for broadcast distribution giving handy tables showing all necessary technical information and similar suggestions.
- 4—Tests should be made to make wood fire-retardant.
- 5—Arguments covering all favorable points of wood should be prepared and spread broadcast.
- 6—In advocating wood to city officials, lumbermen should confine themselves purely to actual technical data.
- 7—A general educational campaign on proper uses of wood should be launched.

In commenting on the report, Julius Seidel of St. Louis said lumbermen should advocate the delivering to building jobs of lumber cut to size instead of in the rough. The report will be reviewed more fully in the March 10 issue.

WOOD BURNS

C. F. Weiho of Chicago read a lengthy but remarkably fruitful report analyzing the charge of great inflammability raised against wood. The report is too meaty to give it proper justice in a review in this issue. It will be reviewed fully in the issue of March 10.

The conclusions (all based on provable facts) are as follows:

- 1—That large and frequent fires are not traceable to wood.
- 2—That the problem of genuine fireproof construction has not been solved.
- 3—That inflammable contents are not made less so by fireproof construction as illustrated by many famous fires in which contents fed the flames.
- 4—That the fact that wood is consumed with a flame whereas so-called fireproof substitutes are not is a much less objectionable trait than the tendency of substitutes, such as iron, steel and concrete, to warp, twist, crack, crumble under heat or when water is applied, and to do so without notice thus increasing the hazard to life.
- 5—That reasonably fireproof construction, contents not considered, is excessively costly while mill construction on proper lines will be inexpensive and will easily resist fire until fire fighters arrive.
- 6—That every effort to reduce the nation's fire loss be supported by the federation as lumbermen but that the federation protest against depreciatory and false statements and literature pertaining to wood when all fire records here and abroad show them to be false.
- 7—That the greatest direct cause of fire is lack of methods for eliminating conditions leading up to fire.
- 8—That instant adequate action is necessary to conserve woods market, that finance committees be formed to immediately raise funds, and that a publicity committee to promulgate truths and contradict falsehoods is advisable.
- 9—That a legislation committee with paid counsel to combat legislation inimical to wood is necessary.
- 10—That the only way of collecting and compiling statistics is through a permanent and well-backed organization, and that these statistics and data favoring wood be given country-wide publicity.

Other conclusions had to do with fire statistics, showing them to be meager and hard to obtain. Stringent personal responsibility laws in Europe are responsible for small loss ratio rather than type of construction. The report says that the personal equation and the contents of buildings are the main factors affecting fire losses and suggests that existing insurance evils be legislated out.

The report closed with recommendations. The first urged the establishment of conditions making possible the federal control of insurance companies, and in the event of this being impossible to provide for state insurance in all states. The second recommended that the federation organize itself for educational purposes with proper committees to adequately combat the agitation against wood as a building material and organization, publicity and legislation committees.

TIMBER OWNER'S VIEWPOINT

E. T. Allen, forester of the Western Forestry and Conservation Association, spoke briefly on the topic, "The Timberland Owner's Interest in Promoting the Use of Wood." He dealt principally with statistics of supply, and pointed out the enormous resources which the American forests still contain, after the people have drawn upon them during generations. He said that some of the supplies of the far West were not likely to go to market soon, because they are at present out of reach; but their time will come, though in some lines probably not until they are called upon to supply markets which eastern timbers will no longer be able to fill.

That is necessarily in the future. The timber may stand a long time before it will be called for. Present investments will increase all the time, through the accumulation of interest, insurance and taxes, so that future sales on the stump must be made at greatly increased figures, if the timber owner is to receive any profit from holding his timber so long. The owner's interest lies in seeing the uses of wood increase, methods of manufacture improve, and markets expand, so that when timber is put up for sale in the future, it will bring enough to recompense the holder for his long wait.

SECOND DAY'S SESSION

The second day of the Forest Products Federation opened with a report by the shingle committee, consisting of F. H. Hofheins,

E. H. Shaffer, George E. Watson, James Costello, and G. A. Thompson. The gist of the report was that the fire risk from shingles has been much overestimated in public opinion, and statistics collected in all parts of the country were submitted to prove that most of the blame laid on shingles has been undeserved.

Manufacturers, wholesalers, and retailers, both east and west, took part in the discussion which followed the reading of the report. It was suggested that the shingle business could be bettered if the manufacturer would grade his product better, if the retailer would push the sale of the best grades rather than the poorest, if some concerted effort were made to have only good nails used, and if the carpenter who puts the roof on would see that the lumber foundation for the shingles is thick enough and of sound wood, so that the roof will not go to pieces on account of failure of its foundation.

A paper dealing with safety in wood construction was to have been read by James P. Whiskeman, chairman of the committee on approval of materials, but he was unable to be present, and a letter from John W. Hardy, of the American Society for Fire Prevention, was read instead.

CARPENTERS IN THE FIGHT

An address by Frank Duffy of Indianapolis, member of an organization of 260,000 carpenters in the United States, was listened to with interest. His subject was: "How Can Carpenters Promote the Uses of Wood?"

Mr. Duffy said that carpenters can fully sympathize with the lumberman's fight against substitutes, because they face that fight all the time and at every time. When they work to retain the use of wood where it should be, they are helping the sale of lumber. The interests of the carpenter and the lumberman are identical in that particular. Each is an enemy to the unwarranted use of other materials in places where wood is better.

THURSDAY AFTERNOON SESSION

A. T. Gerrans opened the Thursday afternoon session with a report of committee No. 5 on promotion. He outlined the comprehensive and exhaustive publicity campaigns as carried on by substitute interests showing the intricate scheme of development and promotion work financed at a great cost by individuals and associations, and reviewed specific cases.

In conclusion he said that the controlling factor is the amount of money available not only for the advertising work, but for all kinds of educational and development work along modern merchandising lines.

Dr. Herman von Schrenk of St. Louis addressed the meeting on "Modern Uses of Wood." He expounded his views regarding the proper manner of procedure in following out the plan previously outlined. His most emphatic contention was that lumbermen must be frank in admitting lumber is not pre-eminently fitted for use for every purpose, and that they must be broad enough to admit the superiority of certain other commodities to be used in certain places.

Dr. Von Schrenk maintained that the educational campaign should indicate the defects of lumber and the best ways of meeting them.

He stated that there is bound to be a closer specification of various classes of lumber for various uses, and illustrated his views with descriptions and methods in vogue abroad in the lumber business and in this country in the steel and packing businesses.

"Money invested will come back one thousand fold because wood already has the advantage in that it is a popular commodity surrounded with more or less sentiment which gives to lumbermen an advantage at the start. The only thing left to do is to get up and shout. If you don't do that, the Lord help you.

After a general discussion of the subject, the chairman called for the report of the executive committee on permanent organization, which was delivered by A. T. Gerrans. The report opened with discussion of the function of the mass meeting, outlining it as an aim to bring together the representatives of the lumber industry in order to crystallize sentiment in favor of promoting the rightful use of forest products, through the endeavor to meet the

more detailed and specified demands of consumers. Mr. Gerrans compared efforts of substitute manufacturers to adapt their products specifically to specified purposes with the supine indifference of the lumbermen to consumers' requirements.

The report states that the fundamental aims of the organization are the development of the lumber market, the education of the consumer of lumber and forest products, to promote in legitimate ways the use of wood wherever it is the best available material or where it can be made equal to other materials for specified purposes.

It recommends that the work be carried on by the National Lumber Manufacturers' Association in a department known as the department of trade extension, to be administered with the assistance of an advisory committee, composed of the chairman of the federation, a representative wholesaler, retailer, consumer, a timberland owner and two manufacturers.

The initial activity covers:

1. Compilation of full details and reliable information on fire losses, insurance rates, building codes, uses of wood, substitutes for wood, anti-wood legislation.
2. To co-operate with and assist other organizations of woodworking and consuming interests;
3. To disseminate information by speakers, bulletins, newspapers and magazine articles, exhibits, advertising, etc., upon the properties and uses of wood.
4. To oppose unfair discrimination against wood in building codes, regulations, ordinances, legislation, etc.;
5. To conduct technical investigations of the properties of wood as a construction material.
6. To develop and extend practical fire prevention methods and processes.

The plan proposes an organization under a manager who will be the administrative head; to be assisted by a statistician, a construction engineer, and a publicity expert.

The financial aim shall be the creation of an annual fund of \$200,000 for five consecutive years, and that the work be started when a fund of \$50,000 a year for five years is assured.

The report was adopted as read.

President Downman expressed his sentiments still further in closing on receiving a motion for adjournment, by saying:

"I hereby declare the meeting adjourned 'sign or die.'"

Hepburn Case Decided in Favor of Shipper

The supreme court interpreted the Hepburn rate law in a decision handed down February 23 as authorizing the Interstate Commerce Commission to award damages to shippers for unfair rates and discriminations, no matter what the date of such unfair practices might be, the only provision being that claims must have been filed prior to August 28, 1907, at which time, according to the decision the act went into effect.

The case was decided on a suit of New York coal dealers involving \$116,000, the Lehigh Valley Railroad being the defendant, for claims dating back to 1900, and the first year after the law went into effect thousands of other claims were filed, and this decision will be in favor of the shippers.

Demand for Lower Grades

Those familiar with the walnut situation report that the demand for No. 1 and No. 2 common has been picking up during the past few months, and that the experience of consumers who have been using these grades has been very satisfactory.

"The demand for firsts and seconds for war purposes has been unusually large," said a lumberman who is in close touch with the walnut business, "and this has naturally caused values to advance, and the supply, relatively, to be less than it is in other grades. Consumers who have been wise enough to appreciate the conditions have been trying out the lower grades, which are selling for less, in proportion to intrinsic values, than firsts and seconds, on account of the difference in the demand. They found that, after figuring waste and additional manufacturing expense, they have been able to make a very satisfactory showing, and in many cases will use the grades below firsts and seconds regularly hereafter, assuming, of course, that relative values remain unchanged."

The experience in the use of walnut recalls the oak situation a few years ago, when consumers thought that nothing worse than a first and second board would do for furniture manufacturing. Some of the leaders finally realized that they could cut up the lower grade stock to better advantage, price considered, and since then No. 1 common has been used right along in that field.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 863—Wants to Buy Dimension Stock and Maple Strips

Detroit, Mich., Feb. 16.—Editor HARDWOOD RECORD: We are using about two cars per week of clear, straight grain maple strips free from knots, shake, and wane, and suitable for bending into automobile steering wheel rims, thickness $1\frac{1}{8}$ " , width $1\frac{3}{4}$ " , half of which to be 51" long, half to be 55" long, and can use either green or dry stock. If green stock is used, however, pieces must be cut $\frac{1}{8}$ of an inch larger in thickness to allow for shrinkage.

We also use large quantities of clear straight grain maple strips free from knots, shake, and wane, and suitable for bending into automobile steering wheel rims:

Length	Width Dry	Thickness preferred dry
62"	$1\frac{7}{8}$ "	$1\frac{1}{4}$ "
56	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
62	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
57	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
66	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
62	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
81	$1\frac{7}{8}$ "	$1\frac{3}{8}$ "
75	"	$1\frac{1}{4}$ "

The above lengths are what we must actually have to work, and strips should be free from end checks and splits or due allowance made for same so that each strip will produce a good sound piece the length given above.

If you are unable to furnish strips, possibly you can furnish lumber from which we can saw same here, arranging, of course, to furnish stock in multiples of the length mentioned—that is, for the 51 and 55-inch stock we could use boards either nine, ten or fourteen feet long, etc.

About 85% of all the stock we use is $1\frac{1}{8}$ "x $1\frac{3}{4}$ "x51" and 55".

This is a steady business and should prove a good outlet if you can make us the right kind of a proposition. Kindly advise whether or not you are in a position to furnish material as above and if so, whether you can furnish green or dry stock, and your best price, E. O. B. Detroit, and be sure to state how soon you could make shipment in the event of our sending you an order, and how many cars per month you could furnish.

Interested parties can have the name of this party by addressing HARDWOOD RECORD.—EDITOR.

B 864—Wants to Buy Basswood Strips

New York, N. Y., Feb. 19.—Editor HARDWOOD RECORD: We are in the market for two or three carloads of $4/4$ x5" basswood strips. This should be an easy grade of lumber for a mill to sort out, which is manufacturing much basswood, as they may contain any amount of sound stain, but we do not want any large knots. A small pin knot will go or one large knot in a 14 or 16' piece, if not over 2' from the end. In other words, give us a 12' cutting without large knots. We want to get these strips delivered New York. At the right price we can give you an order for two or three carloads, which will be paid for in cash.

This seems a good opportunity for a market for this kind of stock.—EDITOR.

B 865—Wants List of Walnut and Poplar Log Exporters

Montreal, Que., Feb. 16.—Editor HARDWOOD RECORD: Will you be good enough to send me personally a list of a few exporters of walnut and yellow poplar logs? We want these for veneer purposes. We would very much appreciate any information you may be able to give us.

The writer of this letter is the purchasing agent for a large consuming institution in Montreal, and those interested should correspond with HARDWOOD RECORD.—EDITOR.

B 866—Wants Information as to Proper Care of Persimmon and Hickory

Chicopee, Mass., Feb. 16.—Editor HARDWOOD RECORD: Have you any literature pertaining to the proper method of caring for persimmon and hickory? What we are most interested in is the elimination of the possibility of worms getting into the stock. Our hickory pieces measure $1\frac{1}{2}$ x48" long, and our persimmon blocks are about 9" long x $3\frac{3}{4}$ " square. All of this stock we, of course, keep under cover, and the sheds we have are very well ventilated, and the hickory squares are also piled in such a manner that there is a very good circulation of air. We assure you any information you can let us have will be very much appreciated.

W. H. TOMLINSON,

Purchasing Agent, A. G. Spalding & Bros. Manufacturing Company.

HARDWOOD RECORD has given to the inquirer such information as it has available, but would appreciate the record of experiences of manufacturers and others handling this class of stock.—EDITOR.

B 867—Wants to Buy Sound Props and Pit Props

New York, N. Y., Feb. 16.—Editor HARDWOOD RECORD: I have an inquiry from one of our foreign customers for a lot of sound props 4" in diameter, 61 $\frac{1}{2}$ ' long, peeled or unpeeled, for delivery to nearest seaport for export; one lot of pit props 3 to 7" in diameter, 2 to 9' long, for delivery to the nearest seaport for export. We want the first item delivered preferably at Gulfport or Galveston, or, in fact, can use it at any Atlantic seaport. The second item may be delivered to any Atlantic seaport.

Interested parties should communicate with HARDWOOD RECORD.—EDITOR.

B 868—Considers Hackberry for Veneer Cores

Menomonie, Wis., Feb. 12.—Editor HARDWOOD RECORD: Will you please advise us as to the advisability of using hackberry lumber as a corewood to veneer over, and of any peculiarities of this wood that we ought to know? We would indeed be pleased to receive an early reply.

To this HARDWOOD RECORD has replied as follows:

The only sure test of the suitability of hackberry for corewood is to try it. There seems to be no report of its use for that purpose. Theoretically, it should act about like elm, it being a member of the elm family; but the wood is really more like ash than elm, except that it is not so hard or so strong as ash.

Some complaint has been heard of hackberry's liability to be bored by insects; but that probably would not occur in veneer work. No technical report is known, showing its habits of shrinking, swelling and warping; but its general behavior in that respect is much like ash.

HARDWOOD RECORD would appreciate information on this subject which might be furnished by anyone experienced in handling hackberry for this purpose.—EDITOR.

B 869—Wants Information on Quarter-Sawing

Monroe, Mich., Feb. 13.—Editor HARDWOOD RECORD: On page 43 of your current issue we find a very graphic illustration or method of cutting oak lumber. The writer has frequently been asked to explain how quartered oak is cut, and we are wondering whether you have available an illustration showing cross section of a log as it is cut for quartered oak. We would appreciate your favoring us with the above, if possible.

HARDWOOD RECORD has given this inquirer, who is with an important woodworking concern, what information it has available on the question of quarter-sawing. Of course quarter-sawing methods change materially with the timber and with the ideas of the sawyers engaged, and HARDWOOD RECORD would welcome any new thoughts along this line that subscribers might care to submit.—EDITOR.

B 870—A Note of Optimism

HARDWOOD RECORD has received a good many optimistic letters in the last few months, but most of them were presaging better business rather than denoting actually favorable experiences.

The following is a letter from a large concern in Wisconsin, which manufactures hemlock and hardwood lumber.—EDITOR.

Phillips, Wis., Feb. 13.—Editor HARDWOOD RECORD: We are pleased to advise that the outlook is much brighter and we have been able to secure some very good contracts for future delivery.

B 871—Wants Market for Hickory and Ash Dimension

The following letter speaks for itself:

Chicago, Feb. 15.—Editor HARDWOOD RECORD: We have a considerable amount of waste of bone dry hickory in both No. 1 and No. 2 grades which can be cut into the following sizes: $1\frac{1}{2}$ x $1\frac{1}{2}$ x16, 26, 30, 32, 33, 36, 39 and 42" long; $1\frac{1}{4}$ x $1\frac{1}{4}$ x14 and 16" long; $1\frac{3}{4}$ x $1\frac{3}{4}$ x66" long. We will let this stock go at a very low price and will appreciate it if you can put us in touch with some firms who will be interested.

We also have some waste in white ash that we would like to dispose of. The stock is 3" thick, 6" to 14" wide and 12" to 30" long, with an average length of about 20".

We will be glad to cut up this stock into smaller dimensions and let it go at a very reasonable price in case anyone could use it.

Those in a position to use the stock can have the name of the inquirer by writing HARDWOOD RECORD.—EDITOR.

B 872—Wants to Buy European Ash

Chicopee, Mass., February 23.—Editor HARDWOOD RECORD: We are desirous of securing Norwegian ash. Please advise names of shippers.

Norwegian ash and European ash are the same, botanically known as *Fraxinus excelsior*.—EDITOR.

Clubs and Associations

Southern Pine Association Established in New Quarters

The Southern Pine Association announces that on Saturday, February 20, it established its new offices on the sixth floor of the Interstate Bank building, New Orleans, La., which offices occupy practically the entire floor. The office has been laid out to facilitate the big work the association has under way.

In speaking of the last meeting of the Southern Pine Association, Secretary-Manager Rhodes says that the work includes every phase of association activity that can be legally carried on. It includes inspection of lumber at mills once every thirty days at least, and the handling of special complaints with the utmost dispatch.

A traffic department will also be included and the accounting department will investigate the sawmill cost accounting and recommend special forms. It will also endeavor to determine actual value of yellow pine stumpage.

The research department will include scientific investigation of all questions dealing with the proper use of yellow pine, and will co-operate actively with the advertising department in furnishing the latter with material for a proposed campaign. Other departments will be the legal department, the forestry department and a statistical department.

Officials Confer on Future of Hoo-Hoo

At an important and enthusiastic joint meeting held at Chicago on February 23 of the House of Ancients and the Supreme Nine of the Concatenated Order of Hoo-Hoo, specially called to consider the condition and the future of the order, it was unanimously resolved to go ahead with this great organization of lumbermen of America, which now has an active membership of 13,000 throughout the world; to immediately take steps to put it on a firm and substantial business basis, and to increase its usefulness. Supreme Spunk E. D. Tennant of Winnipeg, Man., and Supreme Gurdon George H. Grayson of Graysonia, Ark., will immediately take temporary charge of the executive offices of the order at St. Louis, until such time as a competent secretary or manager can be selected and installed.

It is understood that the joint governing boards in session here today will speedily issue to all members an announcement of future plans for organic changes.

West Virginia Lumbermen to Hold Meeting

The first annual meeting of the West Virginia Lumber and Builders Supply Dealers' Association will be held at the Chancellor hotel, Parkersburg, W. Va., March 10 and 11. The association was organized on April 4, 1914, there having been no state organization of that character up to that time.

The association has grown in strength and the membership fairly well, considering the fact that very little membership work has as yet been done. There are now over one hundred members. The association has been incorporated under the laws of West Virginia and it is hoped that it will eventually be one of the largest organizations of this kind in the country, as all builders and supply dealers are eligible.

Resolution on Resignation of J. E. Rhodes

At the recent meeting of the board of governors of the National Lumber Manufacturers' Association in Chicago the following resolution was unanimously adopted regarding the resignation of Secretary Rhodes on January 1, 1915:

RESOLVED, That while it is with a unanimous sentiment of regret that we have accepted the resignation of Secretary Rhodes, we do so because we realize the importance to the lumber industry of the country of an efficient organization of the yellow pine manufacturers, and knowing as we do, that no one else is perhaps so well fitted to develop and perfect such an organization as Mr. Rhodes, we wish him the utmost success in his new undertaking, and in behalf of the National Lumber Manufacturers' Association, stand ready to promote in every way possible, the work of the Southern Pine Association.

Philadelphia Lumbermen Discuss Tax Question

The Philadelphia Lumbermen's Exchange held its regularly monthly meeting preceded by a luncheon on the evening of February 4, Vice-President Charles M. Chesnut in the chair. At this meeting J. Randall Williams, Jr., as chairman of committee representing the exchange at the thirty-fourth annual convention of the American Forestry Association held in New York January 11, made a lengthy and very interesting report of the work carried on by that body.

An animated discussion of the question of taxing all houses doing a mail order business was a feature of the meeting. It appears that a bill is before Congress which refers to a tax being placed on interstate mail order business and which requires that houses conducting such a business shall keep an accurate and complete account of all goods, wages, and merchandise of every character and description sold, together with the actual selling price of the same, with any and every state of the Union; that the tax shall be apportioned among the several states at the rates of the actual amount of goods sold in such state, and that the tax so apportioned shall be paid by the Secretary of the Treasury to the various state treasurers entitled to said tax, to be used in such manner and for

such purposes as the state may desire. It is said many of the mail order houses pay no tax in those states in which they do business. During the discussion it was remarked that such a tax would hit every manufacturer, wholesaler and retailer in every line of business, for there is not a firm in any line that does not at times write a letter to customers on certain goods they want to sell, consequently would come under that act. It was decided at this meeting that the matter be placed in the hands of the legislative committee to investigate and report at a later meeting.

J. Randall Williams, Jr., made a motion that the secretary of the exchange appeal to its members to make voluntary contributions in the name of the exchange, to be used by the Emergency Aid Society, for distribution among the city's poor. This motion was carried.

Producers and Consumers Get Together on Grades

In accordance with the action taken at a meeting held on January 5, 1915, committees representing the Federation of Furniture and Fixture Manufacturers and the National Hardwood Lumber Association met in Chicago, Wednesday, February 17. The Federation of Furniture and Fixture Manufacturers was represented by the following: George A. Buckstaff, chairman; John D. Spalding, Frank Ackley, E. K. Pritchett, W. H. Kinder.

The National Hardwood Lumber Association was represented by the following: Hugh McLean, chairman; J. W. McClure, C. R. Mengel, A. R. Owen, D. H. Day, G. Von Platen, C. A. Goodman, J. L. Benas, Theodore Fathauer, E. D. Walker, Chas. H. Barnaby, E. V. Babcock. At the close of the conference the following resolutions were adopted:

RESOLVED, That pursuant to the request of the inspection rules committee of the Federation of Furniture and Fixture Manufacturers, the National Hardwood Lumber Association appoint a special committee of five for the purpose of conferring with a committee of like number representing the Federation of Furniture and Fixture Manufacturers on the subject of inspection rules and to conduct such test inspections as may be mutually decided upon; the object of such conference being to endeavor to harmonize as far as possible such differences as may be found to exist and to bring about a closer co-operation between the organizations represented; and be it further

RESOLVED, That this action is taken in consideration that the Federation of Furniture and Fixture Manufacturers will accept the present standard of inspection of the National Hardwood Lumber Association as the basis for inspection until final report of the joint committee is rendered.

Owing to the absence of Robert W. Irwin, president of the Federation of Furniture and Fixture Manufacturers, the special committee from that organization cannot be announced at this time, and President Babcock of the National Hardwood Lumber Association states that a committee of five will be appointed by the National Hardwood Lumber Association in the near future.

New Committees of Chicago Association

The following committees were appointed at a meeting of board of directors of the Lumbermen's Association of Chicago, February 9, 1915:

TRAFFIC COMMITTEE: A. Fletcher Marsh, chairman, F. T. Boles, Herman H. Hettler, John G. Hodges, W. M. Hopkins.

INSPECTION COMMITTEE: L. W. Crow, chairman, Pine, Edmund A. Allen, Geo. D. Griffith, V. F. Mashek, Geo. T. Mickle, Hardwood, O. O. Agler, S. C. Bennett, W. M. Hopkins, H. H. Krentzer.

MEMBERSHIP COMMITTEE: F. L. Brown, chairman, F. J. Heitman, F. J. Pike, A. H. Rutb, Al. Wallerstein.

ENTERTAINMENT COMMITTEE: L. E. Rollo, chairman, C. C. Collins, J. H. Dion, John S. Hurd, J. L. Lane, H. D. Welch.

TRADE RELATIONS COMMITTEE: F. H. Heitman, H. H. Krentzer, G. H. Holloway, Geo. D. Griffith, J. F. Halpin, M. S. Porter, E. W. Dierssen, A. A. Sisket.

PUBLICITY COMMITTEE: Paul Schmechel, chairman, Hamilton Daughaday, L. H. Dodd, Peter DeVries, Fred D. Smith.

FINANCE COMMITTEE: Murdock MacLeod, chairman, E. W. Dierssen, W. O. King, A. T. Stewart, E. A. Thornton.

CREDIT COMMITTEE: Geo. A. Miller, chairman, E. H. Burgess, Peter DeVries, C. E. Gamet, Geo. G. King, F. J. Pike, A. H. Schoen.

HOUSE COMMITTEE: J. H. Dion, chairman, F. T. Boles, F. L. Johnson, Jr., F. B. McMullen, E. A. Thornton.

Doings of the Memphis Lumbermen's Club

The Lumbermen's Club of Memphis, at its semi-monthly meeting at the Hotel Gayoso February 13, voted an appropriation of \$50 to the Forest Products Federation at Chicago, which is doing everything in its power to offset the campaign in behalf of substitutes for lumber. A letter was received from this organization a short time ago asking for assistance from the Lumbermen's Club of Memphis. The subject was referred to the publicity committee and the latter, at this meeting, voted to give the sum indicated. It was also decided that a list of the members of the Lumbermen's Club of Memphis would be sent to the Forest Products Federation at Chicago so that those identified with the former may have all the information disseminated by the latter in its efforts to defeat those who are urging substitutes for lumber in all parts of the country.

The entertainment committee reported that the dance given at the Hotel Chisca under the auspices of the club was one of the most successful of the series already enjoyed. It was a full dress affair and the big ball room of the hotel was beautifully decorated for the occasion. A delightful menu was served. Quite a little fun was had in making the report on this entertainment. Col. S. B. Anderson, one of the older mem-

bers of the club, made quite a humorous talk, selecting W. R. Barksdale and other older members as the butts of his jokes.

S. B. Anderson, chairman of the river and rail committee, again spoke in behalf of the Southern Hardwood Traffic Association, urging support and co-operation on the part of all members of the Lumbermen's Club of Memphis. He pointed out that this organization was undertaking a vast amount of work which would prove highly beneficial to hardwood lumber interests throughout the Middle South, with particular reference to the efforts it is making to defeat higher rates on lumber from practically all southern originating points to Ohio river crossings and other northern destinations. He said that the lumbermen would be in a very untenable position if the railroads were successful in bringing about the higher rates they were seeking and that the Southern Hardwood Traffic Association, as the champion of the lumber interests, deserved every bit of the support that could be given it. Mr. Anderson and the other members of the river and rail committee are compiling a list of the members of the Lumbermen's Club who are not identified with the Southern Hardwood Traffic Association and when this is completed an effort will be made to bring in all who are not members of that body. The river and rail committee looked after all traffic matters affecting members of the Lumbermen's Club of Memphis prior to the organization of the Southern Hardwood Traffic Association, but the latter is handling all of these matters now, and the river and rail committee is anxious to render every assistance in its power.

J. H. Townshend, secretary and general manager of the Southern Hardwood Traffic Association, spoke briefly. He said that all the help that could be given was needed. He also gave the members a detailed statement as to the expenses incurred in belonging to the association, but he thought these were extremely light when the beneficial results were considered.

W. T. Castles, Hurlburt, Ark., who is engaged in the sawmill business under his own name, was elected an active member at this meeting. Three more applications were reported by the membership committee. These will be acted upon at the next regular meeting.

There were seventy-five members and guests present and the meeting, while a very short one, was thoroughly enjoyable. President Kadel was in the chair. The usual luncheon was served. Among the prominent visitors were Martin Butler and Dr. Lawbaugh, both of Chicago. These gentlemen are interested in timberlands in this part of the country.

Missing Hoo-Hoo Officer Returns Home

W. M. Stephenson, supreme scrivener of Hoo-Hoo, who had been missing from his home in St. Louis since Monday, February 1, was located not long afterwards in a sanitarium at St. Louis. Mr. Stephenson has been seriously sick for some time and he personally could not be seen.

He came to St. Louis on February 1 with his wife and they separated in the downtown section, arranging to meet in the hotel in the afternoon. He did not appear and was not heard from again until he was found.

A Big Letter From a Big Man

The following is a copy of an open letter sent out by the Chamber of Commerce of the United States by President John H. Fahy to the membership:

RESTORING SHATTERED CONFIDENCE

A Lesson of the War

Shocked as almost never before in our history by the terrific impact of an unexpected war, the country's business was almost prostrated less than six months ago. The unsettling character of this disturbance you well know; and yet within this short period the recovery from it has been little short of marvelous. Able and patriotic business men, and resourceful organizations of business men, did their full share, working shoulder to shoulder with the responsible heads of the government in repairing the broken down machinery and in restoring shattered confidence.

That this great historical happening will have far-reaching results cannot be denied. What the ultimate effect will be depends largely on us as a people, on the wisdom of our statesmen and the courage and leadership of our business men. Perhaps this catastrophe has brought us to a keener realization of our common interest than ever before. The farmer and the worker have come to see their dependence on the transportation agencies and the business men and likewise there has developed an equally better understanding on our own part of our relation to these other great interests.

It seems clear that we are going further out into the world than ever before; that America and things American will be better known in lands where we have been almost strangers. In this evolution let us see to it that our America carries the impression we would like to have it convey, that it stands for liberty and justice and honest dealing. On no other basis can our influence be long sustained.

In the countries across the Atlantic, now rent by strife, but a few months ago things of serious portent were developing. Violent social, racial and religious prejudices were aroused over projected reforms in nearly all of them. Even civil war threatened. But when the cataclysm came, dissensions were forgotten over night. Rich and poor, high and low, came together in each nation in the common cause.

The example is sharply before us. Do we need any greater crisis than that through which we have passed so recently to make clear to all of us the necessity of real national co-operation and understanding? It is quite as patriotic, it is quite as much our duty, that in the blessedness of peace we should forget prejudices and partisanship and undertake to work together efficiently and persistently, supporting with all our energy that which makes for the greatness of the republic and of its people.

As we go forward in this effort we will surely find that so far as business is concerned, unity of action and efficient organization will prove a great instrument for helpfulness and service. It is with this sense of service that we should support it and work for it,—for better business and a grander republic.

Atkins' Pioneers Hold Annual Banquet

E. C. Atkins & Co., Indianapolis, have forwarded *HARDWOOD RECORD* a copy of the program of the annual banquet held February 6, for the

Atkins' pioneers, made up of men who have served that company for twenty years or more. The program shows there are 119 men on the honor roll.

The guests enjoyed a mighty pleasant, sociable evening and the tastefully arranged dinner. The entertainment consisted of musical features and recitations.

The Atkins' pioneers are nominated and elected by ballot, and are those who have served either consecutively or in the aggregate twenty years with E. C. Atkins & Co. The pioneers were organized February 1, 1906, with a membership at that time of sixty-two. The object is to foster a closer fraternal feeling and to add a little social intercourse to the business associations.

Each candidate pays one dollar for death benefit, and ten cents for initiation fee.

With the Trade

Morton Dry Kiln Company Moves Offices

HARDWOOD RECORD has been advised that the downtown office of the Morton Dry Kiln Company, Chicago, has been moved to the factory at 351-357 West Fifty-ninth street. The company requests that correspondence be addressed to the new offices in place of the downtown office as in the past.

C. A. Smith Affairs Being Straightened Out

There has been a rumor current for some time of the more or less tangled financial difficulties of C. A. Smith of the C. A. Smith Timber Company, who operates on the Pacific coast. Mr. Smith has been known as the "lumber king" of California and Oregon, and while actually short of ready cash, he was far from being a bankrupt.

The recent statements show that Mr. Smith's liabilities are little in excess of \$5,000,000 while his assets fully exceed \$15,000,000. His predicament is due to a desire to acquire additional timberlands and sawmills by giving notes and mortgages on his holdings and failure to provide for these obligations when they became due.

It is stated that the Russell Sage fund has come to the rescue by obligating itself to take care of the obligations outstanding against his redwood holdings. Also that J. D. Ruggles, a wealthy lumberman of Michigan, has arranged to look after the bonded indebtedness against the pine holdings, and an eastern syndicate will look after the obligations upon the pulp and navigation interests.

In order to avoid bankruptcy and to secure his creditors Mr. Smith has placed his affairs in the hands of a liquidation committee, giving it the responsibility of evolving a stable condition out of existing conditions. The commission appointed two weeks ago by Mr. Smith is composed of C. R. Johnson, S. M. Bloss of Chicago, James E. Daneher of Detroit, Herman Waideck, vice-president of the Continental-Commercial National Bank, Chicago; John W. Blodgett, Grand Rapids, Mich.; W. B. Pettibone of Hannibal, Mo.; H. C. Clarke, Minneapolis; William R. Compton, St. Louis, and C. L. Poole of Chicago.

With the creditors co-operating, there is no fear as to the financial settlement of Mr. Smith's involved affairs.

Refrigerator and Ice Machine Company Plant to Be Sold

The plant and personal property of the United Refrigerator and Ice Machine Company, Kenosha, Wis., recently adjudged bankrupt, will be sold at public auction on March 15. This is in keeping with an order issued by the referee in bankruptcy, February 11. The assets of the company are inventoried at \$200,000.

Dr. Schenck Reported Wounded but Convalescing

Dr. C. A. Schenck, formerly of Biltmore Forest School, has since the war started been serving in the German army on the Russian frontier, and in December was reported wounded in the German attack on the city of Lodz, Poland.

Harry B. Oakleaf of the United States Forest Service, Portland, Ore., an old Biltmore man, received the information in a letter from the Doctor, who says that he was seriously wounded but at the time his letter was written was rapidly recovering at Darmstadt, Germany. The letter was written on January 8 and then Dr. Schenck stated he expected to be back at the front again within four weeks.

West Virginia Timber Company Starts Mills

In a letter dated February 11 the West Virginia Timber Company advises that George E. Breece, president of that company, was in the South on that day arranging to start up the plants at Monroe, La., and Arkansas City, Ark. Weather conditions may not permit logging at Arkansas City immediately, but more favorable weather recently has probably made it possible to start up the plant on full time.

Mr. Breece has been installing several new American flooring machines at Baskin, La., as well as end matchers. These replaced old machines. The band mill at Baskin is now in operation.

Keeping the Wheels Going

Notwithstanding the general business depression during the past fall and early winter, due to the European war, the Brod-riek & Bascom Rope Company, St. Louis, New York and Seattle, manufacturer of world-famous Yellow Strand Powersteel wire rope, carefully arranged matters

so that every man and boy on its pay rolls had work. The company decided it was best to employ all the force, day and night shifts, even if only part time, rather than to work one-half of the force full time.

Last spring the St. Louis plant was running full force, at least eighty-five per cent full time. Later in the year it operated three-fourths time, but kept the entire day and night force. Finally, during part of October and all of November, it ran one-half time, still keeping all the men employed.

During December, that the men might have some extra money for Christmas, it operated the entire St. Louis plant full time, day and night, even though that meant piling up large stocks of wire rope. Now, with improving conditions, the matter of employment, time, etc., is working itself out naturally.

The mayor of St. Louis and the president of the St. Louis Business Men's League, on December 23, wrote to all St. Louis manufacturers, urging them to do just what the Broderick & Bascom Rope Company had voluntarily done for months, that is, keep all their employes working, even if only part time.

Red Book Announces Revised Edition

The Lumbermen's Credit Association announces the publication of the revised edition of the Red Book, which is a widely used reference publication for the use of lumbermen and those in other ways connected with the lumber industry. The February number for this year was placed in circulation recently, and the Lumbermen's Credit Association suggests that members who have not received the book should advise that office.

Partnership Incorporates

Charles F. Felin & Co., Philadelphia, announce that since February 1 they have been incorporated, and the business of the co-partnership will henceforth be conducted as an incorporated proposition as Charles F. Felin & Co., Inc. All accounts due the old concern will be collected by the corporation and outgoing accounts will be paid in the usual manner.

Stearns Notes

The annual banquet of the Stearns Salt and Lumber Company to its office employes was given Saturday evening, February 6, at the Stearns hotel, Ludington, Mich. Over one hundred sat down to the tables, which were beautifully lighted and decorated. James E. Dewey, sales manager, was master of ceremonies. Stories and vaudeville stunts were interspersed between the courses. After the banquet the entire company joined in dancing and games in charge of A. M. Johnston, advertising manager. All of the salesmen were in off the road, and the affair was one of the most delightful of the kind ever given in the city.

Five million feet of lumber sold and delivered is the record of the company for January. It expects to better this during February and is looking for a banner year in 1915. That it has been able to operate its mills continuously night and day during the past year it states is owing to the high quality of its product and the fact that quiet business has only spurred it to greater efforts to keep things moving.

Bedna Young Lumber Company, Inc.

HARDWOOD RECORD has been advised that the Bedna Young Lumber Company has succeeded the firm of Young & Cutsinger at Jackson, Tenn., and will continue to manufacture on its band mill a complete line of quartered and plain oak and other hardwoods.

The sales office will be located at Greensburg, Ind., in charge of Frank L. Donnell.

The incorporators of the new company have all been connected with

the lumber business for years and are: F. M. Cutsinger, M. L. Young, Harry J. Schaefer, Thomas C. Hanley and Frank L. Donnell.

Wagons for the Warring World

The Kentucky Wagon Manufacturing Company of Louisville, Ky., is operating its plant more actively as the result of the war orders which it has received. It will deliver 12,000 portable kitchens, or kitchens on wheels, to the allied armies in France. It has let a sub-contract to the Embury Box Company of Louisville for feed-boxes, tool-boxes, cutting boards, etc., besides one to a local iron-working concern for much of the metal work. The order amounts to several hundred thousand dollars, and will use up a lot of material. The plant has not been operating full time for quite a while previous to the placing of the war order. An ill wind that blows nobody good?

Major Ahern Resigns

After serving fifteen years in the Philippines, much of the time as forester in charge of the islands, Major George P. Aherns resigned November 27, and the next day left the islands. It is understood that failing health was his reason for taking the step.

Recent advices from Manila announce the appointment of W. F. Sherfese, director of the bureau of forestry, succeeding Maj. George P. Ahern.

Mr. Sherfese graduated from Yale forest school in 1905. Entering the United States Forest Service immediately, he soon became chief of the department of wood preservation. He went to the Philippines in 1909, and for the past two years has been assistant director of the bureau of forestry in the Philippines.

A New Hardwood Mill

Early in March construction work will begin, according to announcement on a new hardwood mill at Nashville, Ark. J. H. Allen has leased the site of the Graysonia-Nashville Lumber Company plant at Nashville. He hails from Louisiana and has purchased the hardwood timber on the pine holdings of the Graysonia-Nashville Lumber Company and also leased the crate and box factory. The mill will have a capacity of 40,000 feet and will be modern in all its arrangements.

Complaint Concerning High Tie Rates

The Nashville Tie Company recently filed a complaint with the Interstate Commerce Commission against the Louisville & Nashville, alleging that on shipments of oak ties to Nashville rates of 31 cents per 100 pounds were charged from Cumberland Furnace, and 26 cents per 100 pounds from Sylvia, Tenn., while ties were classed in the tariff with lumber, which is rated at 8 cents per 100 pounds. The latter rate is declared remunerative by the complainant, which denounces the rates charged as excessive, unreasonable and unjust. The commission is asked to order lower rates put into effect and award \$476.85 reparation.

Frank A. Satterwhite Appointed Sales Manager of Large St. Louis Concern

The Gideon-Anderson Lumber and Mercantile Company announces the appointment of Frank A. Satterwhite as its new sales manager. Mr. Satterwhite has been connected with the company in the St. Louis office as assistant sales manager for the past two or three years and his promotion to the position of sales manager is in recognition of his ability. The mills of the Gideon-Anderson Lumber and Mercantile Company are located at Gideon, Mo., and have a daily capacity of 100,000 feet. A band and sawmill are operated, and the cut is ash, cypress, cottonwood, elm, hickory, maple, oak and sycamore. A planing mill is operated in connection with the sawmills.

F. M. CUTSINGER, EVANSVILLE, IND.

FRANK L. DONNELL, GREENSBURG, IND.

FRANK A. SATTERWHITE, ST. LOUIS, MO.

Riel Lumber Company Expands

The Riel Lumber Company of Memphis, Tenn., has been succeeded by the Riel-Kadel Lumber Company. The capital stock of the latter is \$100,000, one-half of which has been paid in. The firm is composed of Geo. F. Riel, former head of the Riel Lumber Company, Charles G. Kadel, president of the Lumbermen's Club of Memphis and representative here for a number of years of P. F. Stone; W. L. Crenshaw of the Crenshaw-Gary Lumber Company; F. E. Gary of the Bellgrade Lumber Company, and C. L. Wheeler and William Pritchard of J. W. Wheeler & Co. The new firm will make a specialty of ash, although it will handle other southern hardwoods. For the present no mills will be operated and it will confine its attentions to the wholesale handling of lumber. Yards and offices are located in South Memphis.

Kansas City Firm Enters Memphis

The Penrod-Jurden-McCowan Lumber Company has filed application for a charter under the laws of Tennessee with a capital stock of \$350,000. This firm proposes to establish large yards at Memphis for the handling of all of its southern hardwood business. Mr. Penrod and his associates recently took over the mill and holdings of the Bennett Hardwood Lumber Company in North Memphis and this plant will be operated under the new management. This firm will also have the output of a mill at Brasfield, Ark., and one at Helena, Ark. It will thus have control of three hardwood plants, the output of which will be concentrated at Memphis for distribution. The Penrod Walnut & Veneer Company has operated at Kansas City for a number of years and practically all of its business in both walnut and southern hardwoods has been handled from that point. The walnut business at Kansas City will be continued from that place but the southern hardwood end of the business will be looked after entirely from Memphis. Mr. Penrod will be in charge at Kansas City while R. L. Jurden will be in general charge of operations here. He will be assisted by Mr. McCowan of Louisville. Mr. Penrod has been prominently identified with a number of the more important hardwood lumber companies operating in this city and is quite well known to the entire hardwood trade. R. L. Jurden made his initial appearance here as receiver for the J. W. Thompson Lumber Company and has more recently been at Sheffield, Ala., and Helena, Ark.

Philadelphia Lumberman to Wed

Olive May Wilson, known as the "Santa Claus Girl of Jenkintown" alias the "Happy Princess of Jenkintown" from her having taken up the beautiful work of bringing a bountiful and happy Christmas to the little unfortunates in the slums and the children of impecunious parents in the rural districts generally, announces her engagement to Birchall Hammer, son of Thomas B. Hammer, head of the Hammer Lumber Company, Philadelphia, Pa. Miss Wilson's name is blessed by thousands of poor little destitute and warped lives who bubble over with happiness at least one day in the year. Her marriage will not interfere with her work in the least—instead she will have some one to help her who is equally interested. Mr. Hammer is interested with his father in the lumber business in this city and North Carolina. He was graduated from the Chestnut Hill Academy, in class of 1909. He came from a distinguished family, tracing back to Peter Birk Keyser, one of the earliest and most conspicuous settlers of Germantown, Pa.

Philadelphian Found Dead

William F. Robinson, who has been carrying on a wholesale lumber business in the Crozer building for a number of years and who was one of the best liked of the young lumbermen in this section, was found dead in a bedroom of their home by his wife on the afternoon of February 4. Death was due to asphyxiation by gas. Besides the widow he leaves a son aged five years. No details concerning the matter could be learned.

Car Company Report Not Encouraging

The recent report of the J. G. Brill Company, Philadelphia, one of the most extensive car building concerns in the country, in its 1914 showing, is of special interest to the lumber trade as it indicates more or less the effect of the foreign disturbance of the export market of this country. The Brill cars have a world wide reputation. Total sales for year 1914 were \$4,903,510, compared with \$9,154,433 in 1913, a drop of nearly one-half. Profits for the year 1914 were \$313,105, compared with the previous year which was \$1,064,377. Deducting \$154,221 for depreciation reserve, a balance of \$158,883 was left for dividend, equal to 3.47 per cent on the \$4,580,000 preferred stock, on which dividends aggregating 6¼ per cent were paid last year, the regular quarterly dividend of 1¼ per cent, having been reduced to 1 per cent last November. In 1913 profits were equal to 11.77 per cent on the \$5,000,000 of common stock after the 7 per cent had been paid on the preferred.

Treatise on Forest Valuation

A number of books dealing with various phases of forestry and wood-utilization have been published within recent months in this country. The latest is from the pen of Herman H. Chapman, professor of forest management at Yale University. It is published by John Wiley & Sons, New York and London. The treatise deals particularly with forest valuation, and is a technical work prepared specially for advanced students in forestry; but the general reader, if interested along that

line, will find the book of great value. The title describes the treatise exactly. The present and future value of a tract of growing timber are worked out by rule and formula. The careless and inattentive reader has no business with this book, but the man who approaches the subject seriously will find the answer to almost every conceivable question belonging in the indicated field. Professor Chapman is among the leading foresters of this country and his book simplifies the subject as far as a naturally difficult subject can be made easy. The presswork and binding which the publishers have given the book leave nothing to be desired.

Pertinent Information

Wisconsin Law Unconstitutional

A recent decision of the Wisconsin supreme court holds that the constitutional amendment under which the reforestry laws of the state were passed is illegal, consequently the laws based on the amendment are void. The chief statute affected is that under which land was purchased for timber reserves. The substance of the court's decision is that the present scheme of reforestation is unlawful and that about \$3,000,000 belonging to trust funds, which are the school and drainage land funds, have been unlawfully diverted. The referee, working with the state land commissioners, will determine how much money has been unlawfully diverted from the state trust funds and in what manner it shall be returned to such fund. The supreme court will hear the report of the referee within the coming year and confirm or modify. The legislature now has it in its power to sell most of the lands in the reserve and place the proceeds in the trust fund. Or it could adopt the policy of maintaining the forest reserve as the property of the school trust funds, and for the benefit of those funds.

Practically the only holding not affected by the decision is the 20,000 acres donated by the government, the 600 small islands ceded to the state by the government and the 5,000-acre Weyerhaeuser tract on the Brule river. The exact status of the other state holdings will be disclosed by an investigation to be made by Judge Samuel D. Hastings, of Green Bay.

Discouraging Large Holdings

A bill before the West Virginia legislature with a chance of becoming a law, as it is backed by the governor, proposes a graduated increasing tax on large timber holdings. The effect will not begin to strike until the aggregate exceeds 5,000 acres. On tracts from 5,000 to 10,000 acres an extra tax of five cents an acre will be laid yearly. If the holding exceeds 10,000 and does not exceed 50,000, the special tax above 10,000 acres will be ten cents an acre. If the timber holdings exceed 50,000 acres, the tax on all above that amount will be fifteen cents an acre. If the bill becomes a law at the present session of the legislature, the tax will become payable June 1, 1915. The purpose evidently is to discourage very large holdings of timber lands in the state.

National Forests Much Used

Selling some billion and a half board feet of timber and supervising the cutting on several thousand different areas, overseeing the grazing of more than 1,500,000 cattle and 7,500,000 sheep, and building more than 600 miles of road, 2,000 miles of trail, 3,000 miles of telephone line, and 700 miles of fire line are some of the things which the government Forest Service did last year, as disclosed in the report of the chief forester for 1914. All these activities were on the national forests which at present total about 185,000,000 acres.

There is need, says the chief forester, to increase the cut of timber from the national forests wherever a fair price can be obtained for the stumpage, because a great deal of it is mature and ought to be taken out to make room for young growth. Unfavorable conditions in the lumber trade caused new sales of national forest timber to fall off somewhat during the past year, though the operations on outstanding sales contracts brought the total cut above that of the previous year by 130,000,000 board feet. There was, however, a big increase in small timber sales, these numbering 8,298 in 1914 against 6,182 the previous year. Desirable blocks of national forest timber have been appraised and put on the market, and it is expected that these will find purchasers when conditions in the lumber industry improve. All told, the government received \$1,304,053.66 from the sale of timber on the forests in 1914. The receipts from all sources totaled \$2,437,710.21.

After eight years of experience stockmen are well satisfied, says the chief forester, with the way the grazing of livestock on the forests is regulated, and even have urged upon Congress the application of the same method of control to the unreserved public range. Almost 29,000 permittees graze stock on the national forests, and these paid to the government in the fiscal year 1914 fees amounting to over a million dollars. The present tendency to raise fewer sheep and goats and more cattle and horses is shown in the fact that the number of cattle and horse permittees on the western forests increased last year by 1,579, while the number of sheep and goat permittees fell off by a total of 268. The western stock business, the forester points out, is becoming attached to the soil, and the itinerant sheep grower and the speculator in cattle

are giving place to the permanent resident and owner of improved ranch property. The latter is always given preference in the use of national forest range.

Some \$400,000 was spent by the Forest Service during the year for permanent improvements on the national forests to make them accessible and to insure their protection from fire. These improvements include 270 miles of new road 2,153 miles of trail, 3,063 miles of telephone line, 775 miles of fire line, and 106 lookout structures, besides bridges, corals, fences, and cabins. In addition, 642 miles of road were built for the public by the use of 10 per cent of the national forest receipts, as authorized by Congress.

Under another law, 25 per cent of the national forest receipts for the year, amounting to \$586,593.39, were paid over to the various states in which the forests lie for the benefit of county schools and roads.

Since 1909, when systematic classification of national forest lands was begun more than 10,000,000 acres have been eliminated. Scattered interior tracts which it is not practical to eliminate are opened to settlement through listing, which allows them to be taken up under the forest homestead law. Anyone may apply to have land within a forest examined to determine whether it is best suited for agriculture, and if found so it is opened to settlement under this law. During the year 2,690 tracts, totaling 282,483 acres, applied for by individuals were opened for entry. By elimination and listing the percentage of unpatented agricultural land within the national forests, never large, has been reduced to a very small amount.

American Woods in London Market

In reviewing the timber situation in London for the year 1915 the Times of January 22, 1915, gave the following summary:

Pencil cedar.—Only 152 logs were imported, while 1,609 logs went into consumption. Business in slats for pencil makers has been steady at satisfactory prices.

American black walnut.—Imports amounted to 565 logs and 496 logs have been delivered. The tone of the market has been consistently discouraging throughout the year.

American oak.—Quartered: But little business has been possible, and the cutting off of supplies from European countries, brought about by the war, has so far had no favorable influence upon the American product. Plain: The serious labor disturbances in the building trade interfered with the consumption of planks, and supplies were frequently in excess of the demand; during the last few months some improvement has occurred, largely owing to war requirements. Until the outbreak of hostilities, business in graded lumber was fairly steady, but sales have been difficult to effect during the last five months. Logs: There is practically no inquiry.

Yellow poplar.—Lumber: The year's trading must be written down as disappointing. Logs: There has been very little demand.

Red gum.—Lumber: The market never thoroughly recovered from the severe slump which was reported at the end of last year.

American ash.—Logs: Fair inquiry for new season's timber, but the high freight rates prevailing make business difficult. Lumber: A good steady trade throughout the year in prime tough planks, and government requirements during the last four months have given a fresh impetus to sales. Prospects are encouraging.

Hickory.—Logs: There has been but little inquiry.

American tupelo.—Consumption has been quite moderate.

Backsets for Forestry

Bills have been introduced in the Indiana legislature to abolish the state board of forestry and the position of state forester. One bill just introduced would place this work in the hands of Purdue University, a state institution. Another bill would consolidate the forestry board, state geologist, state statistician, state entomologist, oil and gas inspectors and state veterinarian under one commission. At present the Indiana Hardwood Lumbermen's Association and the Retail Lumbermen's Association of Indiana name one member each of the forestry board and they are opposed to abolishing the board.

The legislature of West Virginia has failed to pass the forestry bill that was before it. It is said the bill was opposed because too narrow. It would have made the forestry measure an adjunct to the office of the game warden, thus "putting the cart before the horse." Forests are not maintained for the sake of game.

More Money Wanted for Reserves

Senator Gallinger of New Hampshire, a member of the National Forest Reservation Commission, it is understood, will introduce an amendment to the agricultural appropriation bill to provide that \$3,000,000, not heretofore used under the Weeks' forestry law, shall be made available for the purchase of land in the Southern Appalachians and White Mountains.

January Building Permits

A mitigation of the unfavorable building statement for January may properly be made. For two reasons the present actual building conditions are less unsatisfactory than the statistics would indicate. In the first place many architects are engaged on plans for spring work, permits for which have not yet been sought. Office work is therefore more active than that of the permits issued. In the second place current construction includes much work, the permits for which were secured several months ago, the actual work at that time having been deferred on account of an unfavorable money market.

Official reports of the building permits issued during the month of January in 75 cities, received by the American Contractor, Chicago, show a total of \$34,712,718, compared with \$46,447,497 for January, 1914, a decrease of 25 per cent. Of the cities 20 show gains and 55 losses. New York City makes the splendid gain of 35 per cent, only two of its five boroughs showing losses. At Chicago the comparative loss is only 9 per cent. Among the winners in the comparison, together with percentages of gains, are the following: Albany, 128; Montclair, 312; Paterson, 147; Schenectady, 2,192; Spokane, 171; Springfield, Ill., 136; Syracuse, 105; Toledo, 129; Troy, 416; Utica, 152. Details are as follows:

City—	January, 1915.	January, 1914.	Per Cent Gain Loss
Akron	\$ 52,635	\$ 138,150	62

Land Tax Bill in Arkansas

The Arkansas legislature passed the resolution introduced by Representative Carruth of Bradley county to submit to the people at the general election in September, 1916, a proposed amendment to the constitution providing for a graduated land and income tax. It provides for a graduated tax on all unimproved lands held by any person, firm or corporation in excess of 320 acres. The amendment is aimed at large corporations holding lands which, according to Mr. Carruth, will not sell the lands at reasonable prices. The principle of the amendment, relating to the levying of a state income tax, is identical with that of the federal income tax law. The burden, Mr. Carruth explained, would fall on the persons who are most able to pay the tax.

The Lumber Industry in Montana

Outside of smelting, the sawmill and logging industry is first in importance of the manufacturing industries of Montana, according to the report recently made by the commissioner of labor and industries of that state to the governor, covering the years 1913-1914. In 1909, according to the thirteenth census, it gave employment to an average of 3,106 wage earners, and its products amounted to \$6,334,000. In November, 1909, the month of greatest activity, 3,773 wage earners were employed. It will be seen from the table given in this report, compiled

from returns received by this department, that 4,554 people found employment in this industry in Montana during the winter season of 1913-1914. These figures would indicate a steady growth and improvement since the last United States census period. The lumber and timber industry is, to a considerable extent, a seasonal industry both for logging and milling operations. Many logging concerns do not attempt to operate during the summer season, and a number of mills, especially the smaller ones, are idle during that period of the year.

In the table given, figures are not included for mills idle and not in operation. Most of the lumbering operations are carried on in the western part of the state, although a number of small active mills were found on the eastern slope of the continental divide, particularly in Gallatin and Park counties. It is estimated that the merchantable timber uncut in Montana approximates 65,000,000,000 feet. Computing the value of the stumpage at \$3.00 per thousand feet, it would indicate that the standing saw timber of the state is worth \$195,000,000, or when reduced to lumber at the sawmill, the value would be \$975,000,000—twice the value of the output of Montana mines, since gold was first discovered.

If the 97 mills operating in the state in 1913 cut close to their capacity, 531,964,000 feet were manufactured into lumber during the twelve months of that period alone. Conditions in many of the larger mills of the state are improving, many of them having adopted the nine-hour work day, whereas a few years ago, the ten-hour day was universal. Wages, too, have increased to an appreciable extent, safety appliances have been installed in many plants, and sanitary and general conditions have shown improvement. Much of the lumber milled is pine and larch, and in the production of the latter, Montana is said to be the leading state.

Famous Arkansas Case Nears Settlement

That the famous Arkansas rate cases, which have been in the courts for more than six years, may soon be terminated, so far as the Iron Mountain and the Cotton Belt railroads are concerned, is the belief of many people here at present. The following letter which is being sent out by the members of the Arkansas Railroad Commission to the interested shippers and consignees perhaps explains the status as well as the case might be put:

The master in the rate cases of the St. Louis, Iron Mountain & Southern Railway Company and the St. Louis Southwestern Railway Company filed his report in December, allowing over a million dollars freight and passenger claims against those roads as overcharge during the time the state freight and passenger rates were under injunction, and disallowing two or three hundred thousand dollars claims, to which disallowance numerous exceptions have been filed.

The railroad companies have filed exceptions to all of the claims allowed by the master, denying liability on all of them on many grounds and questioning the sufficiency of the proof in many cases, and also on the ground that many of the shipments were interstate and not intrastate shipments. The state has intervened and prays that from the refunds allowed it be reimbursed for the \$65,000.00 which it has expended in defense of the rate suits and for such further sums it has incurred for counsel.

The following offer of compromise has been made: The railroads will, first, pay \$85,000.00 to the state in ninety days; second, pay all expenses of the master's office and court costs; third, pay all passenger claims in full, without interest, in transferable intrastate mileage, good for two years; fourth, pay fifty per cent of the principal of all freight claims allowed by the master, in transferable scrip, good for two years for intrastate freight charges, except (a) the railroads will reserve the right to try all exceptions as to duplications and clerical errors, the decision of the District Court on these exceptions to be final, and (b) the railroads will reserve the right to try exceptions as to rough material claims and all exceptions as to claims as intrastate; fifth, the right is reserved to holders of all rejected claims who have excepted to them to contest the disallowances. The contested claims are not included in the settlement. If the claimants win, they will get full payment; if they lose, they will get nothing.

The commission desires that all interested passengers and shippers appear before it on February 15, 1915, at 10 o'clock a. m., when a full hearing will be had as to the advisability of accepting the said compromise. This proposition has been approved by the governor and attorney general on behalf of the state's claim for reimbursement, and the commission will, if it is approved by the shippers and passengers, present it to the court for consummation.

Spokes for Gun Carriages

Arkansas hickory will help make a noise on the Europe battlefields in the near future. An order for 50,000 spokes for gun carriages is now being filled at Pine Bluff. This supply should be sufficient to equip 600 guns, with an extra wheel for each carriage. Tough American hickory may be expected to stand the strain if any wood will do it. In Belgium the Germans have been cutting down the elms and oaks for gun wheels and foundations. There were some small but very fine forests in Belgium, some of which came down with scarcely a stick amiss from the time of Caesar. If accounts are correct, these venerable forests are now being cut for military work by the Germans. None of this timber is equal as wheel stock to the hickory which is now going forward from Arkansas. Some of the hickory spokes are for the French and others for the English armies.

National Forest Fire Loss in 1914

Fire on the national forests of the West in 1914 caused a loss to the government of not quite 340,000,000 board feet of merchantable timber, valued at \$307,303, and of reproduction, or young growth of trees, valued at \$192,408, according to statistics just compiled by the Forest Service. There were 6,605 fires, of which only 1,545 burned over an area of ten acres or more. About 77 per cent of all the fires did damage of less than \$100 each. In addition to the losses suffered by the government, timber on state and private lands within the forests, totaling 228,008,000 board

feet and valued at \$175,302, was lost. The total area burned over was 690,240 acres, of which 310,583 acres were state and private lands.

Notwithstanding that it was an exceptionally bad year for fires, on account of high temperatures, heavy winds, and prolonged drought, the average loss per fire was \$103, as against \$131 in 1911, when there were only about half as many fires. Eighty-five per cent of the total loss was caused by fires in Idaho, Montana, Oregon, and Washington, where more than half the timber in all the national forests stands. Less than one-tenth of one per cent of this timber was affected. Of the 6,605 fires reported, 3,691, or 55.9 per cent, occurred in these states, and of the 99 fires causing losses of more than \$1,000 each, 81 were in this region.

Lightning was the chief cause, starting 2,032 fires; campers came next with 1,126, followed closely by railroad locomotives, with 1,110. Incendiaries lighted 470 and the rest were attributed to brush burning, sawmills, etc., or their origin was unknown.

Alliance Winter Fires

The figures showing fire losses for December and January have been published by the Lumbermen's Underwriting Alliance, with headquarters at Kansas City, Mo. The records show small losses on the manufacturing divisions of lumber plants, but relatively large losses on lumber. The total reported loss was \$36,906, and was scattered through Louisiana, Alabama, Mississippi, Texas and Wisconsin.

Car Stake Allowances

At a meeting of the Southern Classification Committee at Atlanta, Ga., in February, W. S. Phippen, traffic manager of the National Wholesale Lumber Dealers' Association, represented that association and the North Carolina Pine Association and urged the classification committee to incorporate in the Southern Classification the following provision covering the car stake allowance of 500 pounds on open cars:

An allowance of 500 pounds per car will be made to cover weight of racks, standards, strips, braces and supports used on flat, gondola or coal cars when loaded with carload shipments of logs, lumber, or other forest products, except that in no case shall less than the established minimum car weight be charged.

Some of the railroads of the country formerly allowed offsets similar to what is here asked, while others did not. There has recently been an inclination on the part of some of the roads to get away from this allowance, but where shippers load forest products on open cars and have to stake these cars in order to load up to the minimum required by the railroads, it is certainly unreasonable to expect a shipper to pay freight on the stakes and binders which are used as a part of the car equipment.

Statement of Car Statistics

Statistical bulletin No. 1 issued by the American Railway Association, through its committee on relations between railroads, says that on February 1, 1915, the total surplus of freight cars was 227,473 as against 172,325 on November 1, 1914. Surplus on February 1 a year ago was 211,960, showing the situation as indicated in this manner is not so bad as it might appear to be.

The figures for February 1 were, however, received from 159 roads as against 192 roads reporting on November 1, 1914. The report estimates that 50,000 cars should be added to the figure for February 1, 1915.

The shortage February 1 of this year was practically negligible, there being reported only 832 cars short as against 2,229 on November 1, 1914.

Dense Stands of Pine

A bulletin dealing with the life history of lodgepole pine among the Rocky Mountains, written by D. T. Mason of the United States Forest Service, contains a number of interesting facts. Few species will produce larger numbers per acre. On an area in Montana a stand was counted which contained 101,000 living trees seventy years old per acre, besides 79,000 dead trees. This was a pure stand of lodgepole pine which took possession of the tract after fire had killed all the old growth. Though the trees had been growing for seventy years, they were still so small that they could be grasped by their tops and uprooted like weeds. The average diameter of the trunks of these seventy-year-old trees was less than one-third of an inch, and the average height four feet. They were so crowded together that they had no room to grow. Few kinds of trees will live through such severe crowding for so long a time. This pine may finally reach a size from one to three feet in trunk diameter. Its cones sometimes hang on the tree seventy-five years, and a considerable number of the seeds remain in the cone without losing their power of germination during all that time.

The Trees of Pennsylvania

The Pennsylvania Department of Forestry has published a report on the forest trees of that state. The work covers 231 pages and is from the pen of J. S. Illick, professor of dendrology in the State Forest Academy.

Pennsylvania usually does well what it undertakes, and this report is no exception to that rule. About the only way of improving the work would be to make a larger book. About one-half of the work is devoted to forestry rather than to descriptions of individual tree species.

Pennsylvania is doing a great work for the purpose of saving such remnants of its forests as remain and of reforesting the broad expanses where trees once grew abundantly but where ax and the match united to make a desolation. The state has 5,000,000 acres of stumps. Lumbering began 200 years ago in the eastern part and it is going on yet. The state has produced marvelously. The history of lumbering in Pennsylvania, if fully and adequately written, would read like a romance;

but the result has been that the forests have been almost destroyed, and now the state has set its foresters to work planting trees and fighting fire, in an effort to redeem the wastes caused by two centuries of abnse. Fortunately, Pennsylvania is not niggardly in furnishing money for this necessary work, and the result is the state has one of the most efficient corps of forest workers in the whole country, and future years will have a tale of redemption and development to tell in that region. The 5,000,000 acres of stumps will assume a different aspect as the years go by.

Percentage of Hardwoods in Michigan Forests

A recent botanical reconnaissance in the upper peninsula of Michigan by Roland M. Harper brought out the interesting fact that hardwoods are more numerous in that region than softwoods. It might be supposed that the many forests and thickets of pine, fir, spruce, tamarack, hemlock and cedar in that region would place the number of individual trees of these softwoods far above the broadleaf or hardwood trees; but it was found that fifty-four per cent are hardwoods and forty-six per cent softwoods. Mr. Harper traveled 135 miles on this investigation, going from St. Ignace to Sanlt Ste. Marie and returning by another route. At numerous points he made actual counts of trees in certain areas, and thus arrived at what he considered a fair average for the 135 miles covered. The soil where hardwoods grow is usually more fertile than that which suffices for softwoods.

Hardwood News Notes

◀ MISCELLANEOUS ▶

The Siebler Table Company, Baltimore, Md., has sold out to A. A. Gassinger & Sons.

At Jackson, Tenn., Fetterman & Richardson recently began a wholesale hardwood business.

The Wisconsin Seating Company, New London, Wis., suffered a slight loss by fire recently.

The George Webster Lumber Company, Springfield, Mass., has become an involuntary bankrupt.

The Atlantic Wirebound Box Company has been incorporated at Boston, Mass., with \$50,000 capital.

At Louisville, Ky., the Gernert Bros. Lumber Company has reduced its capital stock to \$100,000.

Fire destroyed the plant of the R. S. Parks Stave Company at Tip-topville, Tenn., on February 12.

At Tacoma, Wash., the Bevel Flooring & Manufacturing Company has been incorporated with \$50,000 capital.

The Beech Mountain Lumber Company has been organized at Dover, Del., with a capital stock of \$300,000.

The Standard Chair & Table Company has been incorporated at Washington C. H., O., with \$30,000 capital stock.

The American Showcase & Manufacturing Company, Detroit, Mich., was recently incorporated with \$10,000 capital stock.

The Jamestown Superior Furniture Company has been incorporated with a capital stock of \$25,000 at Jamestown, N. Y.

The Delta Lumber Company has started business at Hurts, Ala., with a capital stock of \$25,000. The company is incorporated.

The Carolina Veneer Company, Baltimore, N. C., recently lost its plant by fire. It is reported that the plant will be rebuilt immediately.

It is reported that the Bender Wagon Works, Texarkana, Ark., which was destroyed by fire recently, will be reconstructed immediately.

Harper, Hayslip & Belt will be the name of a new hardwood lumber manufacturing firm to commence business at Decatur, Ind., March 1.

Amended articles of incorporation were filed by the Summers-Johnson Lumber Company to increase the capital stock from \$10,000 to \$25,000. William H. Miller is president.

Charter has been filed by the Cove City Lumber Company, Nashville, Tenn. The interested parties are Morton Butler, R. Boyte and C. Howell, and the capital stock is \$150,000.

The Hammond-Chandler Lumber Company's interests at Saron, Wis., have been succeeded by the Saron Lumber Company, a newly incorporated concern with \$12,000 capital stock.

John Clark Udall, Inc., is the style of a new incorporation at New York, N. Y., to manufacture all kinds of manufacturing materials, implements and utensils. The capital is \$100,000.

It is reported that the company known as the American Motor Company has been incorporated at Rome, Ga., for the manufacture of motor trucks of various kinds. The capital is \$150,000. This company will erect its own plant.

The American Harvester & Implement Manufacturing Company has been incorporated at Springfield, Ill., with a capital stock of \$100,000. The company will manufacture all kinds of farming implements and machinery. The incorporators are William A. Sower, Edward H. Putten, Harry G. Kerst, all of Springfield.

◀ CHICAGO ▶

Returning from a business trip to Florida last week, R. B. Goodman of the Goodman Lumber Company, Goodman, Wis., and president of the

Northern Hemlock and Hardwood Manufacturers' Association, spent a day among friends in Chicago, while on his way home. The association has not yet elected a successor to take Mr. Kellogg's place as secretary, but the selection will be made at a meeting to be held in a few days.

Hugh McLean of Buffalo, N. Y., paid a visit to Chicago last week. He is chairman of the National Hardwood Lumber Association's grading rules committee and is in close touch with the trade. He says the demand from factories is better than it was a few weeks ago.

Among last week's Chicago visitors was Giles Wright of Ashland, Ky., president of the Wright-Kitchen Lumber Company, manufacturer of hardwoods. He reports that business prospects and actual business in his line are encouraging.

Arthur Jarvis, Eau Claire, Wis., representing the Steven & Jarvis Lumber Company of that city, was recently in Chicago looking after his firm's business in this quarter and consulting with the firm's Chicago representative, H. A. Walker. Mr. Jarvis is satisfied that the tendency of business is upward and that results will be apparent in a short time.

M. J. Fox of the Von Platen Lumber Company, Iron Mountain, Mich., spent several days in this city on business last week.

W. H. Weller, secretary of the Hardwood Manufacturers' Association, with headquarters in Cincinnati, spent several days in Chicago recently.

R. M. Carrier of the Carrier Lumber & Manufacturing Company, Sardis, Miss., accompanied by his wife, was located at the Auditorium hotel, Chicago, for a few days of last week.

B. B. Burns of the Rockcastle Lumber Company and the Tug River Lumber Company, Huntington, W. Va., was in Chicago on a business trip a short time ago.

C. H. Barnaby, prominent lumber manufacturer of Greencastle, Ind., spent some time with the local trade last week.

Charles Ransom of the Gayoso Lumber Company, Memphis, Tenn., was in Chicago on business recently.

W. E. DeLaney of the Kentucky Lumber Company, Lexington, Ky., met some of his friends around Chicago while in the city during last week.

Leon Isaacsen of the Yellow Poplar Lumber Company, Coal Grove, O., spent a few days with the local trade on business recently.

C. A. Goodman of the Sawyer-Goodman Company, Marinette, Wis., has been spending the past few days in Chicago.

J. H. Himmelberger of the Himmelberger-Harrison Lumber Company, Cape Girardeau, Mo., was in Chicago recently in conference with W. H. Weller, secretary of the Hardwood Manufacturers' Association, of which Mr. Himmelberger is president.

C. B. Allen, manager of the veneer department of the Anderson-Tully Company, Memphis, Tenn., has been around the city for the past few days.

A. P. Goldsmith of the Radford-Portsmouth Veneer Company, Radford, Va., has been in the city on business for the past few days.

HARDWOOD RECORD acknowledges receipt of the monthly bulletin published by the National Hardwood Lumber Association, which is No. 9 of volume 2. The bulletin contains a good deal of valuable information on various subjects of interest, a short outline of plans for the eighteenth annual convention of the association, which will be held at Chicago on June 10 and 11.

HARDWOOD RECORD has been advised of the marriage of James Edward Stark of Memphis to Marion Emma Hatch, daughter of Mrs. Emma Lyon Sullivan. The marriage took place in Chicago on Wednesday, February 10. Wistar, Underhill & Nixon advise that on February 18, Harry I. Soble has been engaged as salesman for the Metropolitan district.

The Mowbray & Robinson Company, Cincinnati, announces that the Cleveland office is now located at 420 Citizens' building, J. J. Linehan being manager.

The Lumber Products Company has been incorporated at Chicago with a capital stock of \$2,500.

◀ BUFFALO ▶

The Buffalo Lumber Exchange has passed a resolution opposing the collection of any duty from the shipper of lumber into Canada. The new tariff puts a duty of 7½ per cent on lumber and there is some question likely to arise over shipments across, especially where transit cars have been started or a contract is in effect. Sales to Canada have lately been on a rather small scale on account of the depression caused there by the war.

The Standard Hardwood Lumber Company has been receiving a large amount of stock from the Cumberland section during the past few weeks, much of it oak. Trade is reported only fairly good at present.

Miller, Sturm & Miller report some increase in hardwood sales. E. J. Sturm has returned from a business trip to the East.

The McLean Mahogany & Cedar Company now has a mill in eastern Cuba, where it turns out all kinds of mahogany lumber, mostly dimension stuff. Some lumber is being carried in yard in Buffalo.

The National Lumber Company states that the flooring trade is quieter than a short time ago, though sales are expected to pick up again in the spring.

Blakeslee, Perrin & Darling have found trade slightly better recently, though not very active as yet.

G. Elias & Bro. find no marked improvement in the hardwood demand, but look for increased business next month, as the building prospects in this section appear good.

The A. J. Chestnut Lumber Company is devoting most of its attention

to the sale of Pennsylvania hardwoods, but expects later on to enter the New Hampshire hardwood trade again.

The Yeager Lumber Company reports January business as fair, but there is not much activity to hardwood trade just at present. The yard is receiving a fair amount of cypress this month.

The Hugh McLean Lumber Company states that its Birmingham and Memphis mills are running again and that there is a pretty good demand for the better grades of quartered oak.

T. Sullivan & Co. have purchased about 2,000,000 feet of brown ash for delivery this season. This wood is moving fairly well at present. F. M. Sullivan has returned from a trip to the mills in Michigan.

Anthony Miller finds the hardwood trade running along at about the same rate as two or three weeks ago.

◀ PITTSBURGH ▶

The Western Lumber Company has added to its force of salesmen George W. Haines, who was until lately one of the partners in the Ellwood Lumber Company of this city. He will work the eastern and Ohio manufacturing trade for this concern.

The Mutual Lumber Company, a leading hardwood concern, reports good business with the manufacturing firms and is getting some very nice orders from the automobile concerns. Prices are just about on the level with those of January 1.

The Aberdeen Lumber Company finds business, and especially inquiries, a little better. There is no big gain but a steady improvement, which seems to indicate more business later on.

The United Furniture Manufacturing Company has been organized with capital of \$25,000 at Port Allegany, Pa., to manufacture pedestals and tabourets.

The Johnston-Davies Lumber Company reports business a little slow. It is selling some piling and mixed hardwoods, but prices are cut pretty hard.

The C. E. Breitweiser Lumber Company, which has been in business three years in the Bessemer building, has moved its offices to the First National Bank building, where it has very fine quarters.

President W. D. Johnston of the American Lumber and Manufacturing Company reports business a little hard to get and good prices especially hard to secure. He believes there will be considerable improvement between now and April 1, but doesn't look for any boom.

The Dailey & Allen Lumber Company is finding southern mills pretty bullish on prices. This company has made excellent connections for southwestern hardwood stocks and will push them hard this year.

The Adelman Lumber Company has made a fine connection for red cypress with a big Louisiana firm and is arranging to go right after this business in tri-state territory this year. It reports business just fair, with yard trade dragging.

The J. W. Cottrell Lumber Company recently bought 9,000 acres of hardwood timber on the Norfolk & Western railroad and will ship it from Epscomb, Va. Included in the deal is a splendid sawmill, a lumber railroad with locomotives, and a fine commissary. The company expects to cut more than 10,000,000 feet of first class lumber, at least 125,000 ties and a large quantity of poles, acid wood and bark and will have at least a three years' operation.

The annual convention of the Retail Lumber Dealers' Association of Pennsylvania will be held Wednesday and Thursday of this week at the Monongahela House in this city. On Tuesday evening, the Pittsburgh Lumbermen's Club will entertain the crowd at the Fort Pitt Hotel. On Wednesday evening the Pittsburgh Wholesale Lumber Dealers' Association will entertain the association with a vaudeville entertainment and smoker at the same hotel.

◀ BOSTON ▶

The annual meeting of the Lumber Trade Club of Boston was held February 5 at Riverbank Court, Cambridge. Officers elected were: President, W. J. Barry of the Buttrick Lumber Company, Waltham; first vice-president, D. A. Lucey of Curtis & Pope Lumber Company, Boston; second vice-president, M. E. Philbrick of John M. Woods & Co., East Cambridge; secretary-treasurer, J. L. Barney of Pope Lumber Company, Dorchester. The main topic of the meeting was the necessity and methods of securing equitable modifications of the drastic fire prevention laws now before the state legislature.

The Deering Lumber Company has been incorporated at Melrose, Mass., to operate the business conducted by the late J. P. Deering. The incorporators are Fred A. Perkins, S. S. Patten, F. A. Smith and the capital is \$25,000.

C. C. Batchelder, president of the Boston Lumber Company, has withdrawn from that firm, having been succeeded in office by Edward N. Eames. The business will be conducted as heretofore.

◀ BALTIMORE ▶

While the late Gen. William D. Gill of Wm. D. Gill & Son, this city, was essentially and primarily a yellow pine man, yet he occupied so prominent a position in the lumber trade of this city as to make his death, which occurred February 9, appear as a loss to all divisions of the business. His firm traded on a large scale and handled big timber, and its transactions frequently went beyond the limits of southern pine. In a sense it was a general trade and brought General Gill in close contact with lumbermen

over a large section. General Gill succumbed to heart trouble, with which he had been afflicted for more than a year. In 1914 his condition was at one time very grave, being complicated with pneumonia. An unusually robust constitution carried him through and he appeared to regain much of his old elasticity. His death, therefore, although by no means a surprise, was all the more lamented. General Gill was a son of the late William D. Gill, and only forty-eight years old. He attended public and private schools in this city and Virginia, and on reaching his majority was taken into the office of his father, founder of the firm, to be grounded in the details of the business. He quickly proved his aptitude, and on January 1, 1894, he became a partner, his brother, Edward P. Gill, being admitted in due course of time. Under the direction of the brothers the firm extended its activities, and became prominent in taking government contracts. General Gill's jovial disposition early led him into connection with a number of clubs and other organizations. He was on the managing committee of the Baltimore Lumber Exchange at different times, and also endeavored to promote the interests of the retailers by heading their organization, which disbanded before the government trust prosecutions. He joined the Hoo-Hoo when that organization had a revival here several years ago, and in other ways gained prominence. One of his last acts was to provide in his will for the creation of a chair of forestry at the Johns Hopkins University. It is stipulated that the residue of the estate after the death of Mrs. Gill shall be used for this purpose. The brother has the right to acquire the interest of the decedent in the firm on the basis of a valuation fixed by appraisal. General Gill is survived by his wife.

A number of lumber and coal companies are made defendants in ejectment proceedings instituted at Lynchburg, Va., on February 15, when declarations were filed in five suits involving title to about 146,109 acres of timber and mineral land in Buchanan county, Virginia. Among the defendants named are the W. M. Ritter Lumber Company, Russell Fork Coal and Lumber Company, Levisa Land and Timber Company, Whitewood Land and Coal Company, Honker Lumber Company, and Excelsior Coal and Lumber Company. Governor Stuart of Virginia is named as one of the defendants. The suits attack the constitutionality of an act passed by the general assembly of Virginia repealing a statute relative to the proof of land titles in Buchanan county, and it is understood that title to the land in question is claimed under a tax sale. If the cases are successful, other proceedings of a similar nature will be brought. The Virginia-West Virginia Coal Company is the plaintiff.

To complete railroad facilities with its new warehouse on North avenue, near Maryland avenue, the Morgan Millwork Company, the parent house of which is at Oshkosh, Wis., has purchased a number of houses on Falls road, adjoining the Pennsylvania railroad tracks. The houses are to be torn down and connection made with the railroad, which will also afford direct communication with the Baltimore & Ohio, the Western Maryland, and the Maryland & Delaware.

That there is a fair prospect of a good building year, with encouraging local demand for lumber, is indicated by the report of the building inspector for January. This report shows that the value of the new buildings, permits for which were issued during the month, with the alterations and additions, totaled \$479,227, which compares very favorably with the beginning of last year, when the yards enjoyed an exceptionally busy period, though because of the prevailing competition prices ruled low. The returns for the month do not include the new elevator to be erected in South Baltimore for the Western Maryland railroad at a cost of half a million or more, and the contract for which has been awarded, nor some other big undertakings. There is every indication that February will show up big.

Herman Noss, senior member of Herman Noss & Sons, York, Pa., died there February 4. He was eighty-four years old and had been engaged in the business for thirty-seven years. He leaves a widow, three sons and two daughters. The sons were engaged with him in the business.

H. L. Grube, a wholesale lumberman, with offices in the American building, has been receiving condolences on the death of his son, Louis H. Grube, who was killed almost instantly February 11 in a collision between his automobile and another at Charles street and Mount Royal avenue, this city. Young Grube was coming in from a place where he was looking after work for his father, with two other young men also employed by Mr. Grube, and at the corner mentioned the two vehicles crashed, the Grube car being overturned and falling on the young man. His skull was fractured, and he died on the way to a hospital.

◀ COLUMBUS ▶

Representative Herbert Briggs of the Ohio legislature is authority for the statement that Ohio should have a building code consisting of generalities only and not one containing a ramification of specifications. He claims that it is fundamentally wrong to write into the law conditions which might change over night. He is thus opposed to the new Ohio building code which has been completed by the code commission and which will soon be presented to the general assembly.

William N. Bean, a well-known lumberman of Hillsboro, brought his wife to Cincinnati recently for an operation and was himself stricken and was taken to the same hospital where his wife was recuperating. He died soon afterwards, an operation failing to save his life.

The Seneca Lumber Company of Tiffin, O., has been taken over by the Dickelman Manufacturing and Lumber Company of Forest, O.

A. H. Smith has purchased the Leet Lumber Company at Oak Hill, O.

The old company has been dissolved. The new owner was manager of the mill for several years.

The Sandusky Lumber and Box Company of Sandusky has passed out of existence, when the stockholders voted to surrender the charter.

The Safety Window Company of Cincinnati has been incorporated with a capital of \$10,000 to manufacture safety windows, by L. W. Hiser, G. F. William, C. C. Kuhfeln, John Hart and Walter H. Tarr, Jr.

At Utica, Sinsabaugh & McConnell have been succeeded by J. Sinsabaugh.

The E. M. Blair Lumber Company has taken over the business of James Cole at Newcomerstown, O.

The Leet Lumber Company of Portsmouth, at the recent annual meeting of the stockholders, showed a good report for the past year. The company has branches at Sciotoville, Peebles, and at Wheelersburg, O.

The Marks Lumber Company of Cleveland has been incorporated with a capital of \$10,000 to deal in all kinds of lumber. S. E. Marks, J. S. Kohn, L. J. Kohn, L. M. Young and B. G. Landeman are the incorporators. At Jeffersonville, O., the firm of French & Thomas has succeeded Charles C. French.

The Preble County Lumber Company of West Alexandria, O., has been incorporated with a capital of \$5,000 by Peter Kuntz, Jr., Martin Kuntz, C. F. Hill, J. S. Payne and R. E. Chambers.

R. W. Horton of the W. M. Ritter Lumber Company says trade in hardwoods is showing a gradual improvement all along the line. Buying is about equally divided between yards and factories. Retailers' stocks are light and with the approach of the spring building season they will be compelled to increase stocks. Prices are rather firm at the levels which have been maintained for some time. The outlook for the future is brighter.

J. A. Ford of the Imperial Lumber Company reports an improvement in hardwood conditions generally.

◀ TOLEDO ▶

President Booth of the Booth Column Company states that business in columns is a trifle dull at present. The factory is well supplied with materials. Both prices and demand are somewhat low owing to the small amount of building being done. The demand for automobile bumpers in which this concern is also engaged is heavy and this department of the factory is showing large gains.

The Buckeye Furniture Company recently purchased the building occupied by the company's store and factory at Monroe and Twenty-first streets, the purchase price being about \$45,000. The factory is to be enlarged by the addition of another story. The store-room is to be enlarged also. The improvements have been made necessary by the increased business of the concern.

The Skinner Bending Company reports a much improved business from the standpoint of actual orders for stock. The West and Middle West are showing the heaviest improvement and orders are coming in for wagon stock. The buggy business still seems to be a little quiet. The company is increasing its operations and for the first time in weeks has been enabled to operate its factory on Saturdays. Prices are reported somewhat low, but this is in a measure offset by the fact that stock is plentiful at fair prices.

◀ MEMPHIS ▶

Lumbermen here who own timberland in Mississippi are very much interested in the outcome of the case of J. C. Johnston, revenue agent for the state of Mississippi, against R. J. Darnell, Inc. This involves the question of the right of that state to collect taxes on standing timber in addition to the land on which it is located. The case has been decided in favor of the state in the lower courts but the defendants have given notice of appeal and will carry the litigation to the supreme court of Mississippi. There are a number of prominent lumber companies in Memphis which own timberlands in Mississippi, including Russe & Burgess, Inc., R. J. Darnell, Inc., The Bellgrade Lumber Company, Lamb-Fish Lumber Company, Gayoso Lumber Company, Anderson-Tully Company, and the Creshaw-Gary Lumber Company. These firms are already standing a very heavy burden of taxation under the Mississippi laws and a still further addition on standing timber would be regarded by them as a serious blow. The progress of the case will therefore be closely watched and stubborn resistance will be offered.

The Lamar Lumber Company, domiciled at Clyde, Miss., has made application for a charter under the laws of that state. It is capitalized at \$350,000. G. L. Hawkes, V. M. Scanlan, and others are the incorporators.

W. T. Trice, Cotton Plant, Ark., has recently purchased 17,000 acres of timberland near that point from Dr. E. W. Groves, St. Louis. The new owner intends to establish sawmills at or near Cotton Plant for the development of the timber on this property to the end that it may be prepared for agricultural developments.

The Pudephatt Furniture Manufacturing Company, Pine Bluff, Ark., has recently gone into the hands of A. D. Foster, cashier of the Merchants and Planters Bank, as receiver. This action on the part of the stockholders was entirely voluntary. The failure of the bank of Pine Bluff and inability to collect outstanding accounts are given as the principal causes of the present troubles of the company. This was one of the three furniture manufacturing companies doing business in Arkansas and it had very extensive connections in Arkansas, Louisiana,

and Missouri. Assets and liabilities are not given. Charles H. and William Pudephatt were the principal stockholders.

Dispatches received here indicate that a number of mills in Mississippi have recently resumed operations or are preparing to do so with as little delay as possible. Memphis correspondence to *HARDWOOD RECORD* has shown a considerable increase in manufacturing operations on the part of manufacturing firms in North Mississippi. It appears now that pine plants in the lower part of the state are beginning to show decidedly more activity as a result of the improvement which has recently taken place in the yellow pine market.

It is reported that the Arkansas-Eastern Railroad, which is chartered under the laws of Arkansas and operated by the Baker Lumber Company, principally as a log road, is to be purchased by the Frisco and extended to Earle, Ark. The timber from most of the land along this road has already been removed and a large portion of the latter has been sold. It has been the understanding of the purchasers that the road would be developed and the hope is expressed that this will be done with as little delay as possible.

S. M. Nickey of the Green River Lumber Company has returned from an extended business trip in the North and East. He reports the situation and outlook as very much improved.

John McClure of the Bellgrade Lumber Company left Memphis last week to attend an important meeting of the inspection rules committee of the National Hardwood Lumber Association of which he is a member. This meeting is for the purpose of adjusting inspection matters between the National Hardwood Lumber Association and the Federation of Furniture and Fixture Manufacturers.

◀ NASHVILLE ▶

Lumber shippers were gratified at the decision of the Interstate Commerce Commission, ordering reciprocal switching rates on competitive business between the Louisville & Nashville and Tennessee Central. Heretofore the two companies have had no reciprocal switching on competitive business because of prohibitive charges. The usual rate on non-competitive business is \$3 per car, while the companies have charged on competitive business rates of \$5 to \$36 per car. The decision will be of great benefit to Nashville.

Johnson City, Tenn., reports more activity in lumber business. Sells & Miller have purchased several hundred acres of land from David Gifford, and are having a plant installed to get out the timber. The Pittsburgh Lumber Company at Hampton, near Johnson City, reports plans to resume operation on a large scale. The Kingsport Lumber Company at Johnson City also reports plans to resume.

The Cove City Lumber Company of Nashville has been incorporated, with authorized capital stock of \$150,000. The company owns about 8,000 acres of land in Craven and Jones counties, North Carolina. Morton Butler of Chicago and John Toomey of Helenwood, Tenn., are the principal owners of the company. The charter was taken out by R. Boyte Howell, M. B. Adams, E. E. Barthell, A. S. Britt and Ken Feldman.

The Davidson, Hicks & Greene Company of Nashville says that the recent report that the company had purchased 44,000 acres of land in Franklin county was misleading. This land was purchased about one year ago, and the company will develop it when business conditions improve.

The R. & M. Lumber Company of Nashville has surrendered its charter of incorporation.

◀ BRISTOL ▶

The Atkins Lumber Company of Atkins, Smyth county, Va., has completed its new mill and will put it into operation during March. The company has built a twenty mile line of logging road and is already getting out many logs for the new mill.

A new purchase of timber has just been made by the R. C. Duff Lumber Company of Duffield, Va. The company has run its band mill at Duffield regularly through the winter and has done a large volume of business. As soon as the present timber supply is exhausted the development of the new area will begin.

Charles F. Hagan of this city, trustee of the large estate of his father, Col. Patrick Hagan, has sold three important areas of timberland in Scott county, Virginia, and as a result some new mills will be put in operation early in the spring. R. T. Irvine and associates are among those who will develop sections of the Hagan tract.

A new mill will at once be established at Rye Cove, Va., by E. H. Walker, who recently purchased a boundary of timber in Scott county.

The Pittsburgh Lumber Company last week resumed operation of its band mill at Hampton, Tenn., twenty-five miles south of Bristol. The mill has a daily capacity of 50,000 feet of lumber and the company expects to continue to operate regularly. General Manager L. G. Gasteiger is just back from the East and reports the lumber outlook as encouraging.

The Lovelady Lumber Company started its new mill at Jasper, Va., last week. The company's plant at this point burned out some time ago and it has completed at Jasper one of the largest plants in this section. It is on the Virginia & Southwestern railway, near Bristol.

The Cox Lumber Company will at once install a mill near Clinchport, Va., east of Bristol.

The Kingsport Lumber Company is preparing to begin operation of

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform.
The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

its new band mill near Kingsport. The company will cut the Preston area of timber, recently purchased from J. G. Preston by S. E. Wilkinson.

J. P. Moorman of this city has gone to Waxahatchie, Tex., where he has entered the lumber business.

The Paxton Lumber Company reports business slightly better. It is running its mills and doing a fair volume of business.

← LOUISVILLE →

Edward L. Davis, head of the Edward L. Davis Lumber Company, who was recently in southern territory, reports that sawmill men are generally very enthusiastic over the new rules for log grading, and he believes that buyers will do well to use the rules.

E. V. Knight of the New Albany, Ind., Veneering Company has recently returned from the East, where business is quiet. Trade is brisk in the Northwest and other agricultural sections, however. Mr. Knight believes that all that business needs at present is a little more confidence.

The Louisville Hardwood Club has been having a number of interesting meetings recently. At one held at the Seelbach hotel, February 9, Earl S. Gwin, president of the American National bank, of Louisville, and R. L. Callahan, a director of the institution, attended and discussed business conditions. J. V. Stimson was a recent visitor.

Allan McLean is representing the Wood-Mosaic Company, which recently affiliated with the club. He has been in the local field for only a few months, having come from Rochester to look after the New Albany sawmill. Mr. McLean has already made many friends in Louisville, and is an up-to-date lumber manufacturer.

Prospects of a flood scared lumbermen on the "Point" a few weeks ago, but the Ohio river behaved very nicely this time, falling to rise high enough to even threaten the lumber yards. It has been only two years since the last flood, however, and veneer, box and lumber manufacturers in that district have a vivid recollection of what the river on a rampage looks like.

Owing to the short supply of mahogany logs, due to the cessation of operations both in Mexico and Africa, as well as the prohibitive ocean freight rates which now prevail, mahogany lumber prices have been advancing. Buying has been stimulated somewhat by the increases, and the mills of the C. C. Mengel & Bro. Company, of Louisville, which is well stocked with logs, have been running steadily.

The Indiana Veneer & Panel Company, of New Albany, is one of the concerns which has been operating on good time right along during the past few months. It is running in all departments, and while less than a full force is working, the hours have not been cut.

The Mengel Box Company is developing its glued-up business, having

installed equipment at Hickman, Ky., for the manufacture of three-ply gum panels for drawer-bottoms, backs, etc. Charles E. Davis, who is in charge of the lumber department of the company, has been handling sales, and reports that inquiries have been good. The gluing department has been equipped with a lot of special machinery, the presses in particular being of unusually heavy design.

Good quartered oak is in fair demand, but most lumbermen making this stock report that the common grades are slow. Another oak peculiarity is that while plain white is in good demand, with prices stronger, red oak is slow, and quotations remain unsatisfactory.

The membership committee of the Louisville Hardwood Club reports that several strong concerns will probably be added to the rolls in the near future. In spite of the general condition of trade, members of the hardwood organization are finding the weekly meetings profitable and interesting, and club work is being maintained in all directions.

R. F. Smith and Clyde Smith of the Ohio River Sawmill Company have resigned in order to go into business for themselves. They expect to locate somewhere in the vicinity of Louisville, if not in this market. The probable name of their concern will be the Southern Star Lumber Company.

The Gernert Brothers Lumber Company has amended its articles of incorporation, fixing its capitalization at \$100,000. Fred and John W. Gernert are the principal members of the concern.

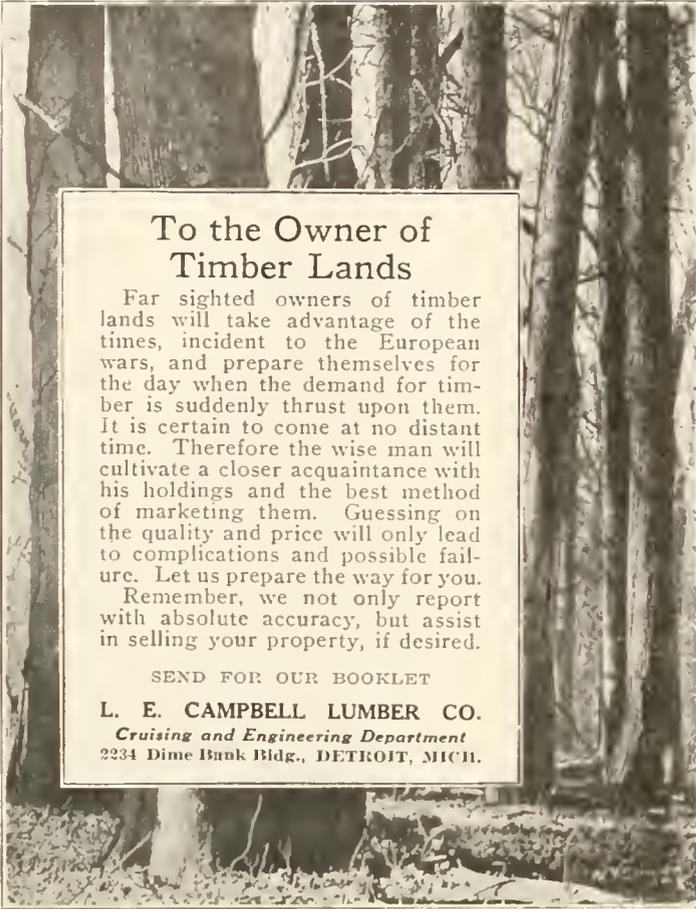

Final action in the bankrupt case of the Falls City Lumber Company, which was managed by the late Charles Stotz, will be taken in the Federal district court in Louisville March 27.

The Broadhead-Garret Lumber Company of Winchester, Ky., which operates a large mill at Clay City, Ky., plans the construction of a railroad into the Indian creek district for the purpose of reaching a big boundary of hardwood timber in that section.

A. R. Keeton, who formerly operated sawmills in Ohio and Grayson counties, Ky., died in Louisville recently at the age of sixty.

← ST. LOUIS →

The members of the Lumbermen's Exchange of St. Louis and other lumbermen interested in the higher freight rates sought by railroads on lumber, are getting their data in shape to be submitted to the Missouri Public Service Commission, at a hearing to be held at the Jefferson hotel, St. Louis on Tuesday, February 23. The railroads of the state want an increase from two to three cents per hundred on intrastate shipments. The entire lumber interests of St. Louis and throughout the state are going to make a hard fight against the rates. E. Kauffman, traffic manager of the Thomas & Proetz Lumber Company, St. Louis, is

To the Owner of Timber Lands

Far sighted owners of timber lands will take advantage of the times, incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. It is certain to come at no distant time. Therefore the wise man will cultivate a closer acquaintance with his holdings and the best method of marketing them. Guessing on the quality and price will only lead to complications and possible failure. Let us prepare the way for you.

Remember, we not only report with absolute accuracy, but assist in selling your property, if desired.

arranging the data so that there will not be so much accumulative evidence presented and it is thought that only a few hardwood lumbermen will be put on the stand. They will show that the lumber business is in such a condition that it cannot stand the proposed rate increase.

According to an advance bulletin given out a few days ago by the Bureau of Labor Statistics, Missouri last year stood first in the quality and value of sycamore lumber, fourth for cottonwood, and fifth for walnut and elm lumber. There were 1,210 sawmills which operated in Missouri last year, and statistics from these for the year showed the lumber output for the fiscal year was 422,470,000 feet, which, at an average price of \$18.25, was worth \$7,710,978. Missouri held a higher rank and produced more lumber a few years ago than it does now. This was before the vast fertile area of Dunklin, Pemiscott and New Madrid counties had been turned into cotton plantations, they then being covered with heavy growths of cottonwood, sycamore, cypress, elm, oak and other lumber which prevails in Missouri. The high water mark year for the state was probably 1899, when 723,754,000 feet of lumber was marketed. In 1900, 719,968 feet was cut and sold. In 1909, there was a revival of the lumber industry for Missouri, 660,159,000 feet being marketed that year.

The hardwoods utilized for lumber are oak, maple, red gum, tulip poplar, beech, birch, basswood, hickory, elm, ash, cottonwood, tupelo and walnut. More oak is cut for lumber in Missouri than any other lumber. Missouri ranks first for red gum cooperage, but it is surpassed by several other states in the output of red gum lumber. Sycamore lumber is produced by twenty-eight states, Missouri having produced in the year under consideration, nearly one-sixth of the entire output of the country. The production is fairly constant from year to year. Missouri in 1914 supplied 8,223,000 feet.

Of cypress there was marketed 24,146,000 feet, cedar, 4,285,000 feet, oak 206,147,000 feet, maple 9,557,000 feet, red gum, 54,564,000 feet, tulip poplar 1,470,000 feet, beech 170,000 feet, birch 1,638,000 feet, basswood 467,000 feet, hickory, 4,060,000 feet, gum 22,279,000 feet, ash 6,298,000 feet, cottonwood 11,967,000 feet, tupelo 4,602,000 feet, sycamore 8,223,000 feet, walnut 4,635,000 feet and miscellaneous 562,000 feet.

L. E. Cornelius, who has been manager of the cypress department of the Chicago Lumber and Coal Company for the past ten years and connected with the company for twelve years, will leave the company on March 1 to go into business for himself. He will handle the output of some four or five southern hardwood mills. He is now down in the hardwood producing territory, visiting the mills he will represent. Robert Fullerton, Jr., will succeed him as manager of the cypress department.

WISCONSIN

The Sexsmith-Gorman Lumber Company has been organized at Wausau, Wis., to carry on a general wholesale business in lumber. Lamar Sexsmith is president, Fred L. Sexsmith, vice-president and Walter Gorman, secretary and treasurer.

The Phoenix Furniture Company of Eau Claire, Wis., has been securing an unusually large number of orders for new equipment from various banking concerns about the country. Among them was an order from the First National Bank of Menomonie, Wis., for \$10,000 worth of new fixtures.

W. H. Hatten, head of the Hatten Lumber Company of New London, Wis., well-known political leader of Wisconsin, has returned from a trip through the South, where he looked after his lumber interests in Alabama and Mississippi. He said that the southern lumbermen are looking for better business soon.

The Montana Waumandee Railway Company, with headquarters at Alma, Wis., is advertising through F. D. Brandenberg, general manager, for 25,000 ties for construction of a road of standard and regular dimensions.

The Heineman Lumber Company of Merrill, Wis., has placed its plant in operation after a closedown for necessary repairs. The Jacob Mortenson Lumber Company of Wausau, Wis., has again placed its sawmill on a day and night shift. It is said that the company has about 8,000,000 feet of logs on hand. The Keith & Hiles Lumber Company of Crandon placed its mill in operation on February 15. The Faust Lumber Company of Antigo has resumed operations at its sawmill.

The MacKinnon Manufacturing Company of Grand Rapids, Wis., has increased its capital stock from \$50,000 to \$100,000 and will increase its wagon output to 200 wagons per month.

The Wisconsin Seating Company of New London, Wis., has moved its office force into the new quarters on the second floor of the new three-story addition. Handsome new furnishings have been installed.

O. E. Gram, head of the accounting and credit department of the Phoenix Chair Company of Sheboygan, Wis., for the past nine years, has resigned to join the Crocker Chair Company.

The Shawano Hub Company, recently incorporated at Shawano, Wis., with a capital stock of \$40,000, has completed its organization by the election of the following officers: President, George Harding; vice-president, Albert Trathen; secretary-treasurer, T. S. Davis. The officers, together with W. C. Landon of Wausau and A. N. Hazelton, are the directors. A site has been donated by the business men of Shawano and work on the erection of a plant has been started.

DETROIT

John J. Comerford has been elected president of the Detroit Lumber Company, the largest retail lumber company in Detroit, to fill the vacancy caused by the recent death of Edwin L. Thompson. In connection with the election of Mr. Comerford, Henry Otis, former treasurer of the company, becomes vice-president and general manager. Christian H. Hecker, former secretary, becomes secretary and treasurer. The officers and Col. Frank Hecker constitute the board of directors.

The plant of the Williams Brothers Company at Cadillac is busy on an order of 100,000 rough "ten plis" to be used in a big bowlog tourney at Peoria, Ill. The order comes from the Brunswick-Balke-Collender Company.

Frank W. Squier, prominent Grand Rapids lumberman, died at his home in that city at the age of sixty-two years. He settled in Michigan at an early age and was connected with Charles B. Kelsey and other Grand Rapids men in the formation of the United Tanners' Lumber Company, of which he became president. Before that time he made many profitable investments in Michigan timber and later acquired considerable holdings in the South and West.

David S. Shaw, one of the pioneer Michigan lumbermen, died at the home of his daughter, Mrs. Ross Holmes, at Detroit, at the age of ninety-five years. He retired thirty years ago, at which time he was connected with Rogers & Jenness, then among the large lumber firms.

The Traverse City Wagon Works has just paid \$100 for lumber produced from one ash tree, cut in Grand Traverse county. It is thought that it was the last tree of its size in the county. It stood 90 feet high and produced six 12-foot logs, amounting to 2,300 feet. Officials of the wagon works claim it was the most perfect tree ever found in the Grand Traverse section.

The mammoth new sawmill of Jackson & Tindle, erected at Pellston to replace a mill destroyed by fire several months ago, is completed and will shortly commence operations. It is modern throughout and is equipped with a main drive belt 133 feet long and 4 feet wide. The R. A. Darling planing mill at Pellston will also begin operations shortly.

The Langeland Manufacturing Company at Muskegon has commenced the erection of a new flooring plant. Its capacity will be 6,000 feet of flooring per day. Oak, maple, beech and birch flooring will be manufactured.

The Cadillac Cabinet & Construction Company of Cadillac has added another wood product to those already manufactured in that city. It has taken a contract to manufacture 1,000 washing machines for the Florin Washing Machine Company of Stanton, Mich.

The I. E. Dupont de Nemours Company is constructing a plant at Bay City to manufacture acetone, a chemical heretofore made in Germany.

It is manufactured from acetate of lime, a product obtained from wood refuse. The company is erecting a plant at Grayling, which will be supplied with mill waste by the sawmills at that place. That supply and products obtained from Bay City mills will provide for the new plant.

The bondholders of the Marshall Butters Lumber Company have purchased the company's plant at L'Anse from receivers for \$758,377. It will be held for six months, which is the length of time given the stockholders in which to redeem it. The plant is a big one and was erected in 1912. It is one of the most modern mills in the state.

Andrew Bjorkman of Iron Mountain, the largest individual logger in the upper peninsula, estimates that his total cut this season will be close to 8,000,000 feet. He has employed ten jobbers throughout the season. Only a small percentage of this output will be banked on river banks, the greater part being shipped by rail to the Sawyer-Goodman Company at Marinette, Wis. In addition Bjorkman cut about 13,000 cords of pulpwood.

The Hardwood Market

< CHICAGO >

Chicago lumbermen have gotten no small measure of satisfaction from the excellent promises for the future in the building situation in the city. Prospects are excellent for the beginning of a good deal of new building, and a considerable amount of construction work started some time ago is being pushed on to completion on account of the ability to secure the necessary funds which were not available before. The weather conditions have been unusually favorable, considering the time of the year, for active building work both in open and covered structures, and quite a little work has been gotten under way which ordinarily would have been held up until a later date. Taken as a whole the prospects for building are very good in view of conditions in business in general.

Factory trade is continuing along about the same policy as has been maintained for several months past, but the fact that the requirements of furniture manufacturers and others in similar lines seem to be increasing is indicated by more frequent inquiries for different kinds of stock. There continues to be no disposition to stock up on any line, but more lumber is actually being bought in Chicago than heretofore.

The yard trades are showing a slightly more animated aspect, apparently in anticipation of the necessity for more complete lines of stock to meet the demands of improved building activity.

Prices are still a very uncertain proposition, but a great many staple concerns in this city and those selling in Chicago from outside territory are continuing to insist upon holding their stocks for better prices. They seem to have confidence of the ultimate working out of this policy.

< NEW YORK >

It appears that the little spurt noticed soon after the turn of the year has dwindled away rather than continued along its way to full proportions, as was hoped and expected. The whole situation presents many phases no one of which may be taken as a criterion and each going far to dissipate the effect of the others. The sum total is that many dealers report a very small amount of business and can see no immediate prospect for a change. In the face of a heavy curtailment of output with a fair amount of business in the past seven months, it is surprising to note the freedom in which hardwood stocks are offered at present low prices. Prices are subject to all sorts of variations and it would be difficult to say what the market is on any one item. We are at the very door to the best season of the year, but so far without anything to count upon to make it a highly satisfactory one. There is some prospect of renewed activity in the local building market which may produce some demand for hardwoods and hardwood flooring. Local yards and manufacturers are not carrying large supplies, evidently content to wait for actual demands before buying and willing to pay higher prices when the time comes if necessary.

< BUFFALO >

The demand for hardwoods is small, having shown little increase from two weeks ago. Little lumber is coming in to the yards, the quantity being just enough to replenish stocks which have been moving out. While prices are low enough to warrant additions, trade is too dull to make much purchasing necessary. However, everybody feels that trade is going to show up better very soon.

Reports received from the lake district are to the effect that prices at the mills are on a basis that is below last year's prices and which may afford an opportunity for marketing more lumber eastward. The lake trade in hardwoods has not amounted to much for a long time, owing to the fact that prices asked at the mills were regarded as high for this market.

The chief woods in demand are plain oak and maple, though sales are not up to the standard. A fair amount of business is being done in cypress at some yards. Crating lumber of different kinds is moving pretty well and the quotations remain firm. Flooring is not so active as it was some weeks ago.

The Nation

Has before it a far-reaching "Safety First" campaign, but of equal importance, though less talked of, is the increasing sentiment for Quality First.

This company has always operated with that as its slogan. Absolute fair dealing is our constant desire; and, while we are not infallible, we stand behind every board of our lumber.

The following items of band sawed, winter cut stock are the product of the best known methods of manufacture.

PHILADELPHIA

Notwithstanding the glowing prophecies of a vigorous opening prosperity with the new year, it is evident that instead there is only a strained activity. However, the strenuous efforts that are being made by the large trade organizations and the leaders of the large corporations, firms and financial institutions toward the development of new trade centers for this market and which all feel must at a not remote period be crowned with success, serves to keep alive a sustaining optimism. Buying at this time proceeds with fits and starts and mostly better grades of lumber are called for, with values steady. Large concerns on account of the stock situation at the mills are holding out for better prices, and as a rule are getting them, although in some quarters goods are offered at reduced rates. Everybody is hopeful that the spring will see an advance in trading in all lines. Already there is an incipient improvement in building work as quite a number of permits have been obtained recently for large operations for rows of dwelling houses—evidently the banks and trust companies are somewhat less stringent as regards requested loans.

An election permitting the borrowing of \$6,000,000, the first installment of about \$150,000,000, for rapid transit improvements in subways, elevated roads, docks, ferries, etc., will be held in April, which, if successful, promises extensive employment of labor. This step is looked upon as an encouraging sign of the much looked for recuperation in local business.

PITTSBURGH

Hardwood men are having altogether the best of it these days. They are doing business right along. Orders from the big industrial and manufacturing concerns of this district are much more encouraging. The automobile manufacturers are also contributing more business. Prices are holding up better than a few weeks ago. There is not such a glut of stock being offered. Yard trade has not started up to any extent, but will, it is expected, develop just as soon as the weather becomes suitable for building operations.

BOSTON

In most respects the market for hardwood remains about as at previous reports. The reduced volume of trade becomes a subject of less complaint as time goes on and there is closer application to business and adjustment to conditions. The values in the market are more stable, although on a scale generally considered under the market. Many favorable factors apply to the local trade. The "build now" campaign is enthusiastically urged by a local daily paper and the figures from the mayor's annual report have influenced many to prepare for a moderate spring revival of business. The report referred to shows January construction from one to two million dollars' advance over 1912, '13 and '14, and, further, the construction in 1914 amounted to \$24,796,353 as against a little less than \$24,000,000 in 1913 and about \$23,600,000 in 1912. The anti-fire agitation in this state has tended to add to the consumption of hardwood rather than otherwise on account of many buildings which would have been built of wood with less expensive finish, having been constructed of brick, cement, etc., with a correspondingly better finish. The necessity of generally raising the confidence of investors by maintaining fair stocks and in every reasonable way aiming at normal conditions has replaced to a large extent the emphasizing of any current adversity in comparison with old conditions.

BALTIMORE

The hardwood men of this city, or at least a portion of them, express a measure of disappointment with the developments in the trade so far this year. About the middle of January it looked as though a decided revival might be expected, but after that the interest in offerings of stocks appeared to lag, and so far the anticipations then entertained have not been realized. It cannot be said that the situation is without encouraging features, but the movement none the less leaves much to be desired, and the manufacturers as well as the dealers are disposed to pursue a conservative course. The entire list seems to be affected about the same, with the domestic buyers still rather undecided as to what the future may bring forth. The railroads have thus far manifested no such wants as might have been looked for as a result of the increase in freight rates awarded them. The hardwood business seems to have gone back into the previous rut of uneventfulness, so that in spite of the absence of heavy accumulations, the situation is not so strong as it might be. Many of the mills are still out of the running, and there is no eagerness on the part of the owners to resume operations until the range of values works up to a higher level. The lack of snap about the inquiry is responsible for much unsettlement in the quotations. It is still a frequent complaint of the millmen that they do not know what they should ask for lumber, and as a consequence the figures named show decidedly wide divergences. In fact, there is a marked absence of a definite price level, everyone who has hardwoods to sell proceeding to do the best he can under the circumstances. To be sure, very little would be required to correct this state of affairs, but in spite of the circumstance that assortments in the yards are generally very much broken, the present time is not regarded as propitious for any considerable adding to the selections of lumber in hand. Most of the buyers prefer to go along from day to day, and this accounts for the irregularity with which orders come in, some days being productive of a number of them, while others show a decided scantness. For

the most part the lower grades are weakest, with the demand for the better classifications rather better, and with chestnut one of the least active woods on the list. The export situation is interesting in a way. Inquiries seem to be numerous enough, but the difficulties in the way of the exporters filling orders or making shipment are such that in numerous instances nothing can be done. The combination of climbing freight rates, the virtual embargo imposed by some of the steamship lines, the reduced sailings, and difficulties about financial arrangements are spoiling much business, which could be done on a very satisfactory basis, if shipping facilities were available. Needs of the English buyers and those in some other countries appear to be increasing, but they cannot easily be taken care of, and the interests of the exporters are seriously injured. When anything like adequate relief will be afforded no one is in a position to say.

◀ COLUMBUS ▶

A distinct improvement has been shown in the hardwood trade in Columbus and central Ohio during the past fortnight. Trade is brisk and judging from the increased inquiries there is a much better tone developing. With the spring building season approaching it is believed that the volume of business will increase. All grades of hardwoods are in fair demand and there is no especial accumulation of any varieties or grades.

Prices are ruling firm at the levels which have prevailed for some time. There is less cutting in order to force trade and more stability is shown on all sides. Shipments are coming out promptly. Retailers' stocks are light and they are still following the policy of buying only for the immediate future.

Indications are bright for an active building season, judging from the work being done by architects and contractors. Plans have been prepared for buildings of all kinds. This is true especially in the larger cities and towns in central Ohio. The rural sections also show quite a building boom.

Factories making vehicles, implements, and furniture are in the market for hardwoods. Furniture factories have had a fair show season, although not up to expectations. Vehicle factories are busy and more activity is shown in implement lines.

Quartered oak is one of the stronger points in the market and prices are ruling firm. The same is true of the demand for plain oak. Chestnut is moving in fair volume at steady prices. Sound wormy is especially active. Poplar stocks are moving well and all grades are firm. Basswood is rather active, while ash is quiet. On the whole the entire list is in better position than a fortnight ago.

◀ CINCINNATI ▶

While it cannot be said that hardwood conditions are any better than a week or so ago surely the situation is no worse. All indications point toward a very early spring, and the fine weather of the last several days should it continue is bound to help. Dealers are not at all disappointed because business did not open up with a rush right after the first of the year as some expected, fully realizing the demoralized condition in every line of business. Knowing full well that it would take time for the adjustment to come, they are well pleased to note the steady increase, slight as it is, and feel that there is to be a steady improvement as the season advances. Many of the woodworking plants are buying in small quantities as usual, but the frequency of these small orders are beginning to amount up, making fair totals under the conditions at the end of the month. Some wholesalers report a scarcity of certain items right now and all state that mills with well manufactured hardwoods are just a little more independent when quoting prices than a month ago. The slowest seller on the list is red gum in common and better, but sap gum of same quality is doing nicely. There is a little better demand for plain oak, and quartered oak of good grades is in fair request. West Virginia maple is in much improved condition, and the call for this stock is rapidly increasing. Chestnut in common and better grades is moving slowly, but sound wormy in all thicknesses is showing considerable strength. There is a decided improvement in the request for ash, especially thick stock. Prices are strong at recent quotations, but dealers do not anticipate better prices for a month or two at least, when a general movement in hardwoods is expected. With the long curtailment of product at mill points when the demand does come there will be none too much dry stock to meet it.

◀ TOLEDO ▶

There is a better tone to business here than there has been for a long time past. With the coming of better weather people seem to have recovered both their spirits and their confidence and it is generally predicted that a few more weeks will witness what might be termed another building boom. Local architects are busy with plans for structures of various kinds, ranging from private residences to duplexes, apartment houses, public buildings, school houses, etc. The building will be heavy this season throughout northwestern Ohio. Many of the smaller cities are planning public buildings of an important nature. The trade is still light, but inquiries are plentiful and everything indicates an early opening up of business. Dealers are fairly well supplied and stocks for immediate use are easy to secure. Prices are fairly firm considering general trade conditions. Toledo has the proud record of heading the list of large Ohio cities in building gains for January. Permits were issued here in January for 165 buildings to cost \$537,297, while last year's valuation amounted to but \$234,894, showing a gain of 125 per cent.

DRIER DEPARTMENT

The A. H. Andrews Co.115-117 S. Wabash Avenue
CHICAGO, ILLINOIS**< INDIANAPOLIS >**

Bright, spring-like days have caused a little brightening in the hardwood trade in this vicinity during the past two weeks, and have had an appreciable effect toward strengthening nearly all lines of business.

Hardwoods are moving a little better, though prices remain about the same. No large amount of business is in sight, however, and both the dealers and manufacturers will be satisfied if it comes anywhere near normal. Woodworking plants everywhere continue to increase their activities slightly, but few of them are yet running on regular schedules. It is the general consensus of opinion that hardwood men need not expect any great amount of business during the first half of this year.

< MEMPHIS >

The hardwood market here has shown still further improvement during the past fortnight, both in prices and in the volume of business. It may also be noted that there is a general disposition to look for still further betterment in domestic circles. Export business is almost at a standstill. Exporters are complaining bitterly about the scarcity of ocean freight room and the practically prohibitive rates when any is available. In fact, they make no effort to conceal their disapproval of the alleged arbitrary attitude of ocean carrying companies toward lumber cargoes. Domestic demand is gradually broadening and this means a more general movement of southern hardwoods than for some time. The call is particularly good for plain and quartered oak, both red and white, for ash and for sap gum. Prices on oak are being gradually raised and ash is selling at good figures. There is not a little complaint, however, regarding values commanded by red gum. The lower grades of cottonwood and gum are still moving freely, as the box manufacturers throughout this section are operating at full capacity. It is possible that offerings in low-grade gum are increasing somewhat, but there is no gain in the amount of low-grade cottonwood available. Poplar is reported in good request and there is a satisfactory demand for cypress in grades above shops. Red gum continues rather quiet and the higher grades of cottonwood, including box boards, appear to be in rather limited request. Hardwood production is increasing somewhat, but it is doubtful if it is more than keeping pace with shipments, with the result that offerings are generally somewhat below normal.

< NASHVILLE >

There was little change in the hardwood lumber situation during the first half of February. Some of the dealers report more business, while others report a light volume of trade. The general tendency seem to be to improvement. There has been no material change in values, it being the opinion of manufacturers that any reduction would not be to their benefit. Stocks are generally liberal, though production has been curtailed heavily for six months. There is trading in oak, ash, poplar, chestnut and the other lines.

< BRISTOL >

While the actual surface improvement in business is very light, Bristol hardwood men think the situation will begin to improve materially within the next few weeks. In anticipation of this many mills in this section are resuming operation. Fully a dozen large mills have gone into operation in the past thirty days and it is believed that a goodly number of those still idle will start up before April, so general is the feeling that business will improve sufficiently to justify it. The yard stocks in this section are very low as a rule. Some of the lumbermen report a heavy movement of stock, while the majority report trade dull.

< LOUISVILLE >

Business in the Louisville hardwood market during the past fortnight has been fairly good. Although there has been no rushing demand, most of the leading concerns report that the demand has shown more snap than heretofore, and buyers in many lines are entering the market more aggressively. While rising prices may have helped some, as in the case of mahogany, which is advancing on account of the log shortage and high ocean freight rates, actual consumption is picking up to such an extent as to justify more extensive purchases of materials. In the territories where the agricultural interests are large furniture sales have been excellent, but in industrial sections, where unemployment has been an adverse factor, the furniture manufacturers have found business poor, and sales of lumber and veneers have been slow on that account. The implement and vehicle trade continues to show improvement, and much is looked for from the building situation, which promises to open up in the immediate future. Prices are strengthening on a good many items, due to the lack of production and the consequent shortages, but most of the staples remain in ample supply, and quotations are generally unchanged on these. Thick stock as a rule is not plentiful, and is being held at advanced figures.

< ST. LOUIS >

Reports differ in regard to hardwood conditions. Some of the local distributors say they are having a fair volume of business and the demand is increasing right along, while others report that the situation is quiet

and there remains to the credit of members over

**Nine Hundred Thousand
Dollars**

The membership, which is constantly increasing, is now composed of nearly four hundred and fifty of the best saw mill plants in the country. Insurance in force exceeds thirty-five million and nearly three million dollars has been paid in losses. If you have a first-class plant adequately protected and are interested in low cost fire insurance, correct policy forms, an inspection service which may save you from a disastrous fire, with the certainty of a prompt and equitable adjustment in case loss does occur, and wish a list of members and annual statement we will be glad to hear from you.

Attorney in Fact
KANSAS CITY, MO.

and is just about the same as it has been for several weeks. There is a slight strengthening in prices all along the line, with prospects of a general increase when the demand becomes better. The cypress people report a fair volume of business with an increase in sight within the next few weeks. Dealers in the territory tributary to St. Louis are doing a fair amount of business in anticipation of their spring trade, but the consumers are not coming into the market as liberally as they should and their trade is below the average. Prices are steady, with an upward tendency.

< DETROIT >

The hardwood market is not improving so rapidly as was expected a few months ago. There is little demand for all lines for interior finish, due entirely to the slackening of new building operations, in which Detroit has suffered with the rest of the country. New building is largely restricted to the man who has money enough to build what he wants as a home. Investments in new buildings are few.

The manufacturing demand in Detroit is slack; in fact, cannot be said to show any great improvement over that of the last few months in 1914. Several of the consuming factories are not operating full forces nor are they working full time. In some cases suspension of exports is the cause, while in others a falling off in domestic demand is at fault.

< MILWAUKEE >

Judging from the inquiries which are being made, there ought to be plenty of business ahead. The actual orders which are being placed are increasing slowly, although possibly not at the rate which lumbermen would like to see. The factory trade is buying a little more freely, and a better business from this source is looked for later in the season when spring building operations are more advanced. Stocks on hand at most of the sash and door and general interior woodworking plants are light, as these concerns have been buying carefully for so many months. It looks as though it would be absolutely necessary for these industries to place their orders more freely within the near future. Wholesalers say that retailers about the state are making inquiries and are actually buying a little more stock, in order to be in readiness for the building which will be carried on about the state this year. The farm implement manufacturing concerns in Milwaukee and other cities in southern Wisconsin are buying fairly well. The furniture people are still buying rather carefully.

Building operations in Milwaukee, which have been rather inactive since the opening of the new year, are now showing more life and the indications are that much delayed building, held over from last fall, will now be carried on. Twenty-eight permits were issued during the past week for structures to cost \$163,430, as compared with 36 permits and an investment of \$116,150 during the corresponding week a year ago. Architects and contractors say that plans are being made for many new building projects.

Prices on northern hardwoods are holding firm, as stocks in this line are light and will be unequal to requirements when once the spring trade becomes more active. Wholesalers believe that birch, maple and beech, and probably basswood, will show advances later in the season. It is reported that both plain and quarter-sawed oak is a little stronger. There are occasional rumors of price cutting, but this practice is not general.

The mild weather of the past week or so has tended to melt the snow and break up the logging roads in the northern Wisconsin lumber country, although operations have not been interfered with to any extent as yet. The weather has been so favorable all winter that it is anticipated that the log output will be much larger than had been predicted earlier in the season.

< LIVERPOOL >

The market here has been exceedingly active during the past two months, but the activity has not been of much value to American shippers. Prices in Liverpool are materially higher but with 65 cents per hundred pounds being paid for freight from southern ports to Liverpool the advance is not of much value to shippers. Cypress boards are about the best points. Stocks of 1x8 and up prime or select grade are moving well at good prices. Values, however, are very uncertain owing to the freight position. There is practically no stock of boards left in Liverpool. Ash and hickory logs for various government orders are also selling well. The advice given recently as to oak staves seems to have served some shippers a good turn, as many thousands are now being landed on the Liverpool quays. Nearly all hickory logs are cleared out and new arrivals would come to a very firm market, but shippers should send logs as far as possible 12½ feet and up. The same applies to round ash. Very little birch is in stock and prices are very high. There have been no public sales of mahogany since July, though some sales have been made privately. Oak planks especially free of heart stock are moving very briskly, particularly stocks which are dry or nearly so. Ash planks are not nearly so strong, and shipments are not advised. The congestion in Liverpool is the worst consideration, and it is no uncommon thing to find ships hung up in Liverpool docks for over a month before being able to discharge their cargoes. Then, when the cargo is landed, considerable difficulty is found with railways due to the shortage of labor and trucks. So many Lancashire men have joined the British army that labor is very scarce even for important war office consignments.

BUSINESS OPPORTUNITIES

PARTNER WANTED

Undersigned would like to meet a practical mill man with \$10,000 capital, who will handle the mill end, manufacturing flooring, inside trim, dimension stock and various profitable novelties and staple goods.

Advertiser has plant and large tract of valuable timber 130 miles from New York, and a large share of the capital. Brains, energy and ability of a practical man desired rather than any great amount of capital. Thorough inspection courted and given. The opportunity of a life time for the right man. Sell interest in the whole or any part of it. Highest references given and expected. Will give right kind of man chance to acquire the whole. Address "Retired Manufacturer," care HARDWOOD RECORD.

FOR SALE—BOX FACTORY.

Complete and in running order. Equipped for manufacturing baskets, boxes, crates and veneers; now in operation; located in one of the largest Southern cities, in heart of long and Short Leaf Pine and Red Gum timber belt, with annual local trade of about \$50,000. Splendid opportunity for the right man. Will sell all or half interest to party capable of taking active management of the plant. Address "SALE," care HARDWOOD RECORD.

INTERIOR TRIM PLANT FOR SALE.

For quick sale, the best factory in the South for manufacture of furniture or interior trim. Special advantages in rates, taxes, labor, raw material, both yellow pine and hardwoods. Plant is new, fireproof and insurance rate is 66 cents per \$100.00. Sale price is less than half the cost. Write for particulars and photographs.

J. P. MULHERIN, TRUSTEE, Augusta, Ga.

FOR SALE

Modern Band Sawmill, Veneer Mills and Dimension department. First-class condition. Best location for southern hardwoods. Plenty of timber, with river and rail connection; good organization and trade established. Always made money, enabling owners to retire. Now is the time—you will never have a better chance. Plant has never closed down and is now running. If interested, write to "BOX 29," care HARDWOOD RECORD.

PUBLIC SALE

of the real estate, machinery and stock of United Refrigerator & Ice Machine Co., bankrupt, of Kenosha, Wis., will occur March 15, 1915, on the premises. Property will be offered both in separate parcels and as a whole. This plant is acknowledged to be one of the best and most completely equipped factories producing refrigerating fixtures and small ice machines. Will sell lumber and manufactured goods now at private sale.

Send for lists and full particulars.
J. D. ROWLAND, Trustee,
Kenosha, Wis.

Hardwood Consumers' Requirements for 1915

The business depression of the past year has compelled the woodworker to economize wherever possible. He has tried to save money by looking for the cheapest raw material that would meet his requirements. As a result, changes in kinds, grades and dimensions of hardwoods used for 1915 will be more marked and widespread than ever.

The most effective sales corps is the one which has most complete knowledge of customers' needs—a mediocre salesman with this information can make a better showing than the class A man who hasn't it.

A \$40,000 investment in collecting and compiling just this information proves to us that no company can afford to individually maintain such a service on a thoroughly effective basis. We offer you the opportunity of protecting your selling investment by providing it for you—all filed for quick reference and instant use.

It is now being corrected throughout for 1915 changes and will be ready for use in revised form in a couple of weeks.

Don't overlook this chance of making the work of your sales department more effective at very little cost.

WRITE FOR PARTICULARS

Hardwood Record, Chicago, Ill.

The revised information is of course most effective while fresh

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have speclalized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

See That Joint

The lock joint feature of our cores cannot be too carefully considered by quality buyers.

Just as it would be foolish for the jeweler to set an exquisite design with a poor stone, so it would be foolish for us to feature this joint without the same thorough attention to every other feature of quality panel construction.

The test of time will bear this out.

You have to buy panels somewhere; you naturally want the best you can get for the money; we honestly think we have something of unusual merit. If we have, can you afford not to find it out through a small order? You will lose nothing and should gain a great deal.

ST. FRANCIS BASIN OAK

THE GALLOWAY-PEASE KIND

¶ It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

¶ Kiln dries without checking. No honey-combing, and minimum shrinkage.

¶ Total absence of injurious insects insures sturdy, clean growth.

¶ Our band mills cut oak only—hence filer and sawyer get best possible results.

What Veneer and Panel Consumers Will Use in 1915

This information is shown in our service of veneer and panel consumers' requirements lists—complete according to 1915 requirements.

The information contained is all first hand and guaranteed to be authentic. It gives all details that you want to know on which to base an intelligent quotation.

It would cost you thousands of dollars and years of work to compile the same information—we know because that is what it cost us. You can have it for 1% of its real cost.

As its best use is while it is fresh and it costs only two cents to write, drop us a line today and let us give you the details.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

22nd and Throop Sts. CHICAGO, ILL.

Hardwood Record's

strongest circulation is in the region where things are made of wood—WISCONSIN, MICHIGAN, ILLINOIS, INDIANA, OHIO, PENNSYLVANIA, NEW YORK and the East. **It's the BEST sales medium for hardwood lumber.**

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

NASHVILLE

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

Review and Outlook

General Market Conditions

THERE IS APPARENTLY NO CHECKING the growing belief that the lumber business is looking up. Conditions seem to have passed a point where good business is predicted and to have reached that stage where predictions actually show a material evidence of existence. Contrary to reports of a month or two ago, more favorable summaries of trade are not exceptional or local, but emanate from all of the important hardwood centers of the North and the South. However, everyone seems to realize the futility of endeavoring to fool one's self, and as a consequence even the optimists are decidedly conservative in what they have to say regarding the improvement in trade. However, the rapidly increasing number of voices on the affirmative on this question is carrying greater and greater conviction. This opinion has been backed up within the last ten days by undeniably affirmative evidence in the form of actual orders placed at advanced prices. This is particularly true of oak.

Heretofore reports have been taken up with arguments tending to show why trade *should* be better. Of late these reports have been more specific and have given a good deal more satisfaction in their analysis of why trade *is* better. The arguments advanced are precisely the same for different parts of the country, and leave no room for doubt that trade is being very gradually accelerated.

Renewed vigor in the building trade has been the chief source of satisfaction for a month or so. Up to the last couple of weeks, however, it has been more or less of a hoped for condition, but the very mild weather that has prevailed pretty much all over the country for some weeks back has resulted in the completion of arrangements for a great deal of new work which will actually be gotten under way very quickly. There is nothing at all imaginary in this, as it is based directly on actual records.

There continues to be some disappointment as a result of the fact that the railroads are not going ahead with purchases on a normal basis. However, the majority of the trade realizes that regardless of freight rate increases, the carriers are up against practically the same circumstances that other lines of industries have had to face. The railroads immediately feel the effects of any period of depression, and it is altogether logical to expect them to retrench wherever possible immediately upon there being evidence of a country-wide inertia. That they have actually shown a greater interest in the purchase of materials in the last couple of months should be sufficient reason for a considerable amount of satisfaction. It is true that they have not been willing to place orders for any quantities of raw material on the basis of a particularly favorable price level, but they are not to blame for not wanting to pay more than the lowest prices prevailing. How-

ever, there is certainly going to be a shortage in a good many of the lines the railroads purchase and the fact that most of the substantial lumber institutions have insistently held their stock for fair values cannot but result in their realizing sales on advanced prices.

HARDWOOD RECORD has dwelt very strongly and consistently on the logical outcome of comparative stock conditions at producing and consuming points. This suggestion is so full of favorable portent that it is worth still further emphasis. Nothing has developed within the last couple of weeks that would give reason for apprehension that stock conditions will be able to take care of the stimulated demand. It is true that quite a number of hardwood mills have started up, but many of them have not been able to log on a favorable basis and many others have resumed operating on more or less restricted lines.

There is every reason to believe that a marked improvement will be in effect considerably sooner than the completion of the drying period for this newly manufactured stock. In the meantime there is a growing evidence of rapid breaking up of stock in a great number of items. The number of lines in which there is a marked scarcity is rapidly increasing. In short, there seems no possible outcome other than a situation that will show a much better face than the hardwood trade has shown at any time in the last few months. No one has become hysterical over orders or prices as yet (that is, hysterically elated), and it is not at all likely that there will be sufficient incentive for anyone to develop such a state of mind until the entire country is again placed on a purely *commercial war* basis. In the meantime this country is every day becoming more sanely adjusted to the new conditions, and is daily coming to realize more forcibly the truth of the often repeated statement that it can get along pretty nicely regardless of what the rest of them are doing.

Lumber, of course, is not exactly a barometer indicating such changes in national sentiment, but other industries can be considered more or less in that light. Such industries, for instance, as that having to do with iron and steel are showing a much more healthy tone. It is necessary that only a start be made in this direction in order that the whole country will follow. It certainly seems as though the tide has turned and that it is gradually submerging the rocks of doubt, uncertainty, and fear to a depth which will make conservative but much more active business possible.

The Cover Picture

PENNSYLVANIA HAS PLAYED a leading part in the lumber game in the United States, and it continues to occupy a prominent place and will always do so. It is one of the states which has taken hold of the forest problem in earnest and is solving it. Pennsylvania's forestry department is one of the best in America. The prime-

val woodlands of that region were rich and varied, and they covered every part of the area. There were no prairies and no vacant places. Even the wild Indians seem to have had few corn fields and pumpkin patches there, and the woods had never been extensively burned by the savages, as was the case further east, south and west. Early travelers, especially Peter Kalm and John Bartram, have left descriptions of the splendid Pennsylvania forests prevailing in their time.

One hundred and sixty-five years have passed since then, and the state's population has increased from two hundred thousand to seven million, and the woods are still sufficient to supply a large part of the people's wants. The cover picture which illustrates this number of *HARDWOOD RECORD* is a Pennsylvania forest scene on the waters of Allegheny river about one hundred miles northeast from Pittsburgh, and near the village of Nebraska. It is practically a primeval forest, but a little culling has been done. There are hardwoods and needle leaf trees, intermixed as nature planted them. The hardwoods include twenty or more species, with oak, beech, birch, and maple prevailing. The soft woods consist principally, perhaps wholly, of white pine and hemlock.

Anything like accurate figures of annual lumber cut in Pennsylvania have been kept only about sixteen years. Before that time there were a few estimates and many guesses. In 1880, according to government figures, Pennsylvania supplied more lumber than any other state, except Michigan, which was then at the zenith of its white pine production. It is not improbable that if the whole period of the country's history is considered, Pennsylvania has produced more lumber than any other state. Lumbering has been a business there for two hundred years, and the end is not in sight.

False Economy in Forestry

AN ARAB YOKES A CAMEL and a cow to a cart, but it is not a good team, though it may be the best the bedouin can do with his limited resources.

Some of the states in their attempts to provide for their forests are imitating the Arab. They harness a forester to a game warden and put the leading-rein on the warden. In spite of all good intentions, it is not a team likely to do effective work. A number of states have done this and have lived to repent it; yet, in spite of failures, others are still trying to do it.

Efforts to conserve the state's forest resources are commendable; enthusiasm in the cause is commendable; steps taken with a sincere purpose of accomplishing something are commendable; but when any state supposes that it is providing an efficient forestry department by affixing a forester to the game warden's office, it is laboring under a delusion. It is a case of mistaken judgment, and failure will follow.

A forester's place is higher than a game warden's. The larger field to be covered, the greater responsibilities, the wider vision required, the more complicated problems to be worked out, the more complete store of basic information demanded, all combine to place upon a forester a line of duty which the game warden knows not of. To place the forester in the subordinate place, and to curtail his freedom of action and to discourage his initiative, amount to no less than dooming his efforts to failure before he has taken his first step.

The argument advanced by legislators in favor of having game and forests under a single commission and practically under the same man, is that one commission or one department is more economical than two. Politicians shy from new jobs. They wish to avoid the appearance of multiplying commissions or positions, lest they are accused of extravagance. They know the forests ought to be cared for. The people have asked that steps be taken along that line. So the legislature, with good intentions but with little information as to results, attaches a forest service to the game warden's job. That has been tried often enough and long enough, and there ought no longer be any doubt of the outcome; yet the lesson has not been learned. Economy can be so close that it strangles what it is meant to help. Experience has shown that only in rare instances has a game warden or a game commission ever done anything to help forestry. These men are not hostile, but they do not have the proper viewpoint, and they do not know how. They over-value the importance of wild game, and fail to appreciate the worth of the forests. That

is natural from their training and the consequent channel of thought.

A few years ago at a conservation meeting in Washington, D. C., a game warden of a southern state, who was also ex-officio forester, delivered a pyrotechnic oration on the glories of forestry, and declared that his overpowering enthusiasm for the science was due to the fact that forests shelter foxes, and fox hunting is the grandest gentleman's sport in the world. That was a pretty accurate exposition of the ordinary game warden's conception of forestry. It may not run to fox hunting, but it is apt to hold that game is the chief thing and forests are supplementary only. It is into hands of men with such inadequate conceptions of the question that some states are willing to place the present and future of their forest resources with the attendant complex problems.

Some states, after regrettable mistakes and expensive experiments, have found their bearings and have divorced forestry from game wardens; but others are willing to continue experiments along the back tracks of states which have discovered their errors and turned from them. The legislatures of a number of states which possess vast forest wealth and possibilities, continue to labor under the delusion that the forest problem is of so little importance that some man who is not a forester and probably not even a lumberman, can handle it as a side line. Railroads are in charge of railroad men; agriculture is in the hands of farmers; colleges are managed by educators, politics by politicians, churches by preachers, and forestry ought to be in the hands of foresters.

Hardly an Ideal Patriotism

SOME OF OUR FRIENDS across the border on the North seem to get a good measure of satisfaction from having put one over on the shrewd Yankee. The imposition of the 7½ per cent war tax, (and it certainly is an imposition on the exporter of American lumber to be compelled to either absorb the tax or pass up the sales), presents quite a serious difficulty to exporters of American hardwoods who have counted more or less on the Canadian markets as a partial outlet for their lumber.

Ostensibly the tax is for the purpose of assisting in financing the war moves of England, and inasmuch as Canadians and not Americans are directly interested in giving this assistance, it would seem at least a part of logical patriotism for them to raise no objection to absorbing the tax themselves. It is illogical and unreasonable to expect the American exporters to further detract from the narrow margin of profit from hardwood lumber at present by forcing them to deduct a tax from the charges, thereby cutting the profit on the ear to the vanishing point. It is not at all likely that this is the general practice, but the issue has been raised by certain Canadian concerns who have made purchases of American hardwood lumber, and in one case the charge amounted to \$45 on a single carload, making the sale practically a losing proposition. This firm has since practically given up all efforts to secure Canadian business.

Patriotism as considered in the terms of vocal ability is one thing, and patriotism as considered in the terms of dollars and cents is another. Evidently in those instances where the Canadian importer has insisted upon the American exporter absorbing his (the Canadian's) share in the burden of war, the former type of patriotism has been much more attractive than the latter. This way of looking at the matter from the Canadian side is fortunately not at all the general viewpoint, in fact, it can be said that these examples are infrequent. However, the spectacle presented by even one such instance cannot be looked upon as at all flattering.

HARDWOOD RECORD is not at all familiar with the conditions surrounding the imposition of tax, nor does it know whether or not these conditions make any provision for the tax being collected automatically from the exporter. Regardless of this, however, even if such provision were part of the enactment, it would really be a very simple matter to make some private arrangement whereby the Canadians would insist upon the American, who should have nothing to do with tax whatever, being relieved of any actual obligations. This course would seem but the part of ordinary patriotism and fair dealing.

Mesquite in Semi-Arid Regions

The American forests do not contain a more uncouth tree than mesquite when it stands bare of leaves on some sun-baked bluff overlooking the Rio Grande. When its foliage returns in early spring, the graceful, pale green compound leaves hide the ungainly trunk and branches, and what before was a personification of desolation becomes a thing of beauty. No tree undergoes a greater change when it passes from its leafless to its clothed condition. When its branches are bare, the crooked, sprawling trunk looks like a half-dead worm-eaten, moss-grown peach tree in an old pasture field in October. Six months later it is as graceful as the Australian pepper tree.

There are two species of mesquite in the United States, one commonly called the screwbean (*Prosopis odorata*), the other is variously called mesquite, algaroba, honey locust, or ironwood. The ordinary observer would note the principal difference between these two species in their fruit. Both bear pods, but those of the screwbean are twisted like a corkscrew. The ranges of both species lie largely in the same regions; that is, from a line drawn from Oklahoma to the mouth of the Rio Grande, thence westward and southwestward to the Pacific ocean, crossing arid and semi-arid regions, as well as some well-watered valley. In the present article, no distinction need be made between the two species of mesquite, though in some respects there is considerable difference.

The range of mesquite westward of Texas is about the same now as it always was, so far as history shows. Man's influence there has apparently neither increased nor diminished the range. But that is not the situation in Texas, and in that state the tree's habit is an interesting theme of study. With the white man's coming, say from fifty to seventy-five years ago, mesquite began to spread into vacant areas. In some places it has advanced forty or fifty miles into prairies and among hills where it formerly grew sparingly or not at all. Its new lease of life began when the Indians were driven out and civilized man took possession.

The cause is not far to seek. The Indians were incendiaries and burned the grassy hills and plains every year or two. Seedling mesquites and those springing up as sprouts were killed by fire, and the line of forest could not advance into the grass areas. The white men put a stop to this destructive burning, and mesquite began to advance into open spaces. Cattle, which fed on the pods, assisted in spreading seeds.

The principal primeval forests of mesquite in Texas were in the valley of the lower Rio Grande. There was mesquite in many other places, even on the high table lands, called "the staked plains," in the northwestern part of the state, but the largest trees and finest stands were in the southern region, particularly in Cameron, Hidalgo, Starr and Webb counties.

A few of the largest trunks in those primeval forests are three feet in diameter, but a person in walking through those forests would see a thousand trees less than a foot through for every one above three feet. The northern, eastern and western forests of the United States have no plentiful tree with trunk gnarled, deformed and misshapen enough to be compared with mesquite. It is doubtful if any man ever saw a large, straight pole of mesquite ten feet long. These cut for fence posts are generally so crooked that boards cannot be nailed on. The few sawlogs cut are usually from four to six feet long.

The wood's extreme hardness makes it difficult to work. High-class furniture is made of it, but not in large quantities. A few dealers in San Antonio, Texas, and elsewhere, handle mesquite furniture, but generally have it made by hand in cabinet shops, because the wood is so hard that factories do not care to work it. The furniture made of it bears some resemblance to mahogany, but there is no danger of mistaking one wood for the other. Mesquite is a little lighter in color and has a glow suggesting polished cherry. The chief figures are due to annual rings, and they are not pronounced. In San Antonio mesquite furniture sells at a higher price than plain mahogany. It may properly be classed as the highest priced furniture wood of the United States. At the same time it

should not be supposed that it would ever be of much importance because millable trunks are too scarce and the wood is too hard.

One of mesquite's important uses is as rollers for horse moving. It is not difficult to procure blocks of proper length and diameter, and these are shaped on the lathe. They are said to outlast every other wood that has ever been tried for such rollers in that region. Crushing weight sufficient to raise splinters on the hardest maple roller does not roughen one of mesquite. The wood is brittle, however, and a heavy blow may break a mesquite roller when one of maple will stand it.

Fence posts constitute a large use for mesquite in Texas. Boring insects soon riddle the thin, white sapwood, but their activities stop short when the heartwood is encountered. No beetle's proboscis was ever yet hard enough to make any impression on the heartwood of this tree. Neither can the insinuating threads of decay-producing fungus work their way in farther than the sapwood. Consequently, a row of mesquite fence posts, if cut from trunks of considerable size, will last, in the language of the southern Texans, "from everlasting unto everlasting." They say that no man has yet lived long enough to witness the setting and decay of a mesquite fence post.

They once paved a section of a San Antonio street with mesquite paving blocks. They stood while everything about them wore out. Even stone flags, subjected to similar wear, ground to dust and blew away under the wheels of traffic, but the mesquite blocks merely grew slick and polished, and years after the stone pavements were gone the wooden stulps might be seen protruding from the ground, looking for all the world like the black teeth of some prehistoric mastodon.

A mesquite beam was taken from the old fort, known as the Alamo, at San Antonio, in 1912 after it had stood 195 years of service, and decay had not touched it.

The largest use of mesquite has always been as fuel. That held true in early Indian times as well as at present. The Indians had few other uses, but the cliff dwellings in New Mexico contain a few mesquite beams that may be a thousand years old for all anyone knows to the contrary, and the Field Museum in Chicago has Indian bows and dishes made of this wood. Fuel, however, was and is the main article. In the lower Rio Grande valley, where rain is ample, the mesquite grows above ground like other trees, but in more arid regions westward the tree seems to turn upside down and the bulk of it is under the ground. Occasionally fifty times as much is beneath the surface as above. It is popularly supposed that the trunk grows underground, but generally such is not the case. That beneath the surface is enormously developed root. It is nature's method of providing a strong reservoir for water to keep the tree alive during long months of drought. The mesquite, in that respect, is a sort of vegetable camel that stores drinking water when there is plenty of it, and can then stand a long period of desert.

The roots of mesquite may descend forty or fifty feet to reach water. Well diggers take advantage of that knowledge. Where mesquite grows vigorously, water may be reached by digging.

The adage of the dry southwest, "dig for wood," has to do with mesquite roots. In some localities there is no wood but this, and campers and stockmen dig out roots as large as passable sawlogs. Oxen are employed and the roots are gaffed with hooks and pulled out until plentiful supplies are obtained where nothing was visible before. A scrubby stem not more than six feet high may have a root, resembling a sweet potato, fifteen feet long and as large as a stovepipe.

Americans fatten cattle and horses on mesquite beans, but the Indians and Mexicans have many ways to convert them into food for themselves. They grind the beans for bread, make vinegar and beer of the fermented juice, manufacture mucilage and gum of the same material, and by working it in a little different way make candy and gum drops. The parched pods are a substitute for coffee, ropes and baskets are made of the bark, and dyes of pleasing colors are used to decorate leather, dishes and cloth.

Cost of Wood and Concrete Compared

One of the topics discussed at the meeting of the Forest Products Federation in Chicago in February was the comparative prices of building materials, and a paper presented by J. Norman Jensen, an architectural engineer of Chicago, handled in an instructive way the comparative cost of certain types of buildings built of wood and of concrete. A general comparison applicable to all sizes and patterns of buildings was not attempted, because it was deemed impracticable to deal with the subject in so general a way. Comparisons were confined to two types of buildings, factories and small residences. Figures were taken from actual building operations in Chicago, and the showings are actual, not imaginary. These figures cannot fail to encourage lumber dealers who have feared that they would not be able to compete much longer with substitute building materials.

MILL CONSTRUCTION

Much lumber is used in the erection of mill constructed buildings. By "mill construction" is meant that type of construction in which every beam and girder is not less than 6"x12", every post not less than 10"x10", all floors at least 3 1/2", and all roofs at least 2 5/8" thick.

The advantages of a wooden factory over one of concrete, so far as comfort, convenience, and freedom from injurious dust are concerned, are passed over in the present discussion, and cost alone is considered.

Perhaps the best way to compare costs is to mention a number of actual bids on completed structures. In a certain large architect's office a design was prepared of a building which was to be erected in an old manufacturing district in Chicago. The building was five stories and basement high, 100x100 feet, and designed for 250 pounds live load. The panels in the standard mill design were 14x16 feet, and brick bearing walls were used throughout. The concrete building of the same height and size was designed in the most economical type of flat slab concrete skeleton construction. The actual bid for the mill constructed building was \$65,100, and for the concrete type \$72,200.

Another building was seven stories and basement high, 68x75 feet, and designed for 150 pounds live load. The panels in both designs in this case were 18x16 feet. The mill constructed building cost \$65,400, and the concrete building \$75,300.

If wood floors had been required in these buildings, the difference between the mill and the concrete prices would have been greater than ever.

The live load mentioned is the load per square foot which can be safely put on top of the floor. This live load is usually the weight of machinery, or goods placed on the floor. For most light manufacturing buildings a live load of 100 pounds per square foot is sufficient, and for 75 per cent of the buildings used for storage purposes 200 pounds per square foot is all that will ever be placed on the floors. So the column spacing and the loads cover most all the cases which may arise.

Another point which determines the adoption of mill constructed building in preference to concrete is the fact that in ordinary lines of business the rate of insurance on a sprinkled mill constructed building and contents runs about twenty-five cents, while the rate on a concrete building and contents, unsprinkled, runs about forty-five cents. The rate on both types of construction, sprinkled, is about the same, but the cost of installing the sprinkler system in the concrete building makes the total cost still higher in comparison with a mill building. A concrete building in which wooden floors are used cannot compete with mill construction.

With column spacings not exceeding sixteen feet, mill constructed buildings designed for 100 pounds live load cost twenty per cent less than concrete buildings; for 150 pounds live load fifteen per cent less; and 200 pounds live load, about ten per cent less. When the live load exceeds 350 pounds, the concrete building is cheaper.

COMPARATIVE COSTS OF RESIDENCES

It is an extremely difficult matter to give comparative costs between residences which are built of frame construction and those built of

other types. Mill buildings are standard compared with the variation of ideas as to how to build a residence.

In order to obtain a comparison between the cost of small frame and brick buildings as built in the city of Chicago, an architect prepared complete plans and specifications of a number of one and two-story buildings, and obtained bids. These buildings were typical of the low and medium priced cottages and small flats actually built in great numbers in Chicago. The bidders were responsible contractors.

In each case in which a frame building was compared with a similar brick building, the size of rooms, plumbing, trim, interior finish, etc., was identical. In all cases the frame building had a shingle roof, while the brick building was provided with a non-combustible roof.

The average of the bids on these buildings was as follows:

	Frame.	Brick.
One-story cottage, 22'x30'.....	\$1,719	\$1,823
One-story cottage, 20'x36'.....	2,394	2,684
One-story cottage, 21'x48'.....	3,419	3,906
Two-story flat, 24'x34'.....	4,185	4,564

From these figures it is seen that the cost of the frame building was about ten per cent less than a similar brick building.

Where Veneers Are Used

The relative quantities of veneer used by various industries are not shown in available statistics. The total annual production of all thickness is known, and the various thicknesses are segregated in a way to determine how much of each is produced. The amounts cut from various woods are tabulated, and there are separate figures for rotary cut, and sliced, and sawed. Beyond these points the records do not go.

The person who undertakes to state how much veneer goes to this industry or to that must indulge in guessing, but it is possible to secure much information so that the guesses may be brought within the range of probabilities. It is very commonly believed that furniture manufacturers are the largest users of veneers, and after that, according to popular opinion, come the musical instrument makers and the industry known as fixtures. The most common articles grouped in the fixture industry are store and bank counters, office partitions, and saloon bars. The total annual demand for wood in making furniture, including chairs, totals 1,250,000,000 feet, board measure, in the United States. Musical instruments call for 260,000,000 feet, and fixtures account for 187,000,000 feet. In making the articles included in the foregoing classes, there is no fixed ratio between the use of lumber and of veneer. It is certain that veneer lacks much of constituting one-fourth of all the wood reported for these three industries, but it is not possible to quote exact figures to show it.

There is little question that those who have given credit to furniture, fixtures, and musical instruments for the largest use of wood veneer, have overlooked the most important of all—the box. The combined use of wood by makers of musical instruments, fixtures, and furniture scarcely amounts to one-third of the demand by box makers. In the manufacture of shipping boxes, veneer is employed in large quantities. Some of the small shipping containers which are made in enormous numbers, are wholly veneer, while many large shipping cases have veneer sides, tops, and bottoms, with reinforced corners. In boxes of that kind, the veneer is usually three ply. The wire-bound box, which is principally of veneer, is in much use.

Just how thick a sheet of wood must be to pass out of the veneer class and become lumber, may be a subject of controversy. When the government compiles statistics it classes as veneer all lumber five-sixteenths of an inch in thickness and under. More veneer is of three-sixteenths inch thickness than of any other dimension, if all be reduced to a board-foot or a log measurement. About one-fifth of all veneer cut in the United States is of that thickness. If calculated by superficial measure, veneer one-sixteenth inch thick exceeds every other dimension.

The Prospect for Walnut Supply

The prominence which black walnut has lately attained has caused inquiries concerning supplies to meet present and future demand. There has not yet been any trouble in meeting demand as it has come; but persons who expect the call for this wood to increase in the future have been looking ahead to discover whether a larger demand could be met.

No one knows just how much standing walnut of merchantable size and grade is in the country. It is certain that this tree is much scarcer than it once was, though it is not certain that it is becoming scarcer from year to year, but such is probably the case. The tree is not marketable until it has attained considerable age, because its value lies in heartwood and this is poorly developed in trunks which have not a good many years to their credit. For that reason young walnuts of rapid growth are not an immediate asset, though size may be satisfactory.

Black walnut's natural range embraces not less than 600,000 square miles, from New York to Texas. The annual drain upon it is usually placed at 50,000,000 feet, including lumber, veneer, and export stuff; but it is difficult to show this by itemized figures, because it cannot be ascertained how much walnut is counted twice in reaching the fifty million total. The Forest Service was able to find only 23,988,346 feet of black walnut a year used for manufacturing purposes in the United States. This included veneer as well as lumber, but did not include any lumber used in its rough form. It is certain that not much is used as rough lumber.

WALNUT SEMI-DOMESTIC

Black walnut was once an absolutely wild tree, confined wholly to forests, but its habits underwent a modification as the country became settled. It was one of a few trees which showed a disposition to become domesticated. As fields replaced woods, the walnut became more and more conspicuous in the open ground, along fence rows, in the corners of pastures, and even in door yards. Some were wild trees left standing when the thickets were cleared, others were planted on purpose or by chance. The nuts which the tree bears have always been esteemed, and have been the saving grace in many instances which preserved it when forest associates of other species were destroyed.

A radical change in rate of growth occurs when the black walnut emerges from forest conditions and takes its place in open ground. When shaded and crowded, its rate is slow, and forest-grown trunks of large size are usually very old; but in the full light of open ground, where the roots are permitted to spread freely through good soil, the growth rate is rapid and trunks quickly increase to large size.

During early life, however, the tree in the open does not increase in value proportionately as it grows in diameter, because heartwood forms slowly, and the "sudden sawlog" of black walnut is apt to be principally sapwood which, on account of its white color, is not valued highly by the woodworking factory. Years are required to change the sapwood into heart, and when the transformation has finally occurred, the pasture field walnut is as valuable as that grown in the wilderness, except that it may be shorter of trunk, and that may be compensated for by more desirable figure.

HOW MAN PLANTS BLACK WALNUT. THE TALL SHAPELY TRUNKS PROMISE CLEAR LUMBER IN YEARS TO COME. FARM OF R. L. OGG, HANCOCK COUNTY, INDIANA.

PLANTED AND NATURAL TIMBER

Apparently no statistics are available which give the quantity of planted black walnut now growing in this country. The acreage is considerable and is dispersed through several states, some of which are not included in this tree's natural habitat. In California, for example, the tree grows rapidly in situations where the soil is sufficiently damp; but the nuts are so valuable, and the trees produce such abundant crops, that no one cuts the groves for lumber, and the grain, color, and figure of the wood have not been described in reports.

As the walnut shall become more domestic and less a product of the wild forest, it is not improbable that the desire to save it for its nuts will become a powerful factor in reducing the supply of walnut lumber. The fruit will be worth more than the sawlogs which may be cut from the trunk. Apparently, age sets no limit on the productiveness of the walnut tree. Of course, a time comes in the existence of all trees when they must cease their activities; and at that period the domestic black walnut may be expected to go to the sawmill. It should not be expected, however, that young walnut trees, with little heart and much sap, will be cut in large quantities, because it will not be profitable to do so. The black walnut is a tree which depends largely upon age for the value of its wood. Rapidity of growth, though in itself a desirable asset, cannot wholly take the place of the value due to age.

The Massachusetts Forestry Association offers as a prize the planting of fifty acres of white pine to the town which gains first place in a contest for town forests.

The Boise national forest in Idaho had thirty fires during the past summer, yet twenty-eight were held down to less than ten acres, and of these fifteen were less than one-quarter of an acre. The supervisor says this success was due to a lookout tower and to efficient telephone and heliograph service.

Pertinent Legal Findings

Sawmill Employee's Right to Lien

The statutes of North Carolina give a lien against lumber manufactured in a sawmill for services of an employe in taking lumber from the saw and placing it on a truck. (North Carolina supreme court, *Glazener vs. Gloucester Lumber Company*, 83 Southeastern Reporter 696.)

Time for Filing Freight Claims

Provision in a bill of lading declaring that the railway company shall not be liable for loss, damage or delay, unless written claim therefor is made within four months after delivery, or, in case of non-delivery, within four months after reasonable time for delivery, will be enforced by the courts. (North Carolina supreme court, *Forney vs. Seaboard Air Line Railway*, 83 Southeastern Reporter 686.)

Contractor's Right to Logger's Lien

One who undertakes to log timber and saw it into lumber for the owner at an agreed price per thousand feet is not entitled to a lien under the Virginia laws as a "laborer." (United States circuit court of appeals, fourth circuit; *Tucker vs. Bryan*; 217 Federal Reporter 576.)

Duty to Instruct Saw Operators

Where a foreman in a woodworking establishment set an unskilled workman at the task of operating a circular saw, it was his legal duty, as representative of the employer, to give the workman all instructions and warnings which were reasonably necessary to enable the latter to do his work without injury. Thus, if injury to the workman is attributable to negligent failure of the foreman to explain how a guard over the saw could be adjusted, the employer is liable in damages for consequent injury to the employe. (United States circuit court of appeals, third circuit; *Freedom Casket Company vs. McManus*, 218 Federal Reporter 323.)

Misunderstanding as to Price of Lumber

When the parties to a contract for sale of a quantity of lumber misunderstand the price to be charged, the buyer becomes liable for the invoice price by retaining the lumber after receiving the invoice. This rule was laid down by the Kentucky court of appeals the other day in the case of *Cunningham vs. Caldwell & Drake*, 172 Southwestern Reporter 498. Plaintiffs agreed to sell flooring for use by defendants in constructing a courthouse. Defendants, claiming that the agreed price was \$69 per thousand, refused to pay more, and plaintiff brought suit for the difference. In affirming judgment in plaintiff's favor, the court of appeals said, in part:

An issue was made by the evidence of Cunningham, upon the one hand, and Caldwell, upon the other, as to whether the price of the flooring was as claimed by Cunningham or as claimed by Caldwell & Drake, and it is evident from the testimony that Cunningham believed that they were to pay \$99 for the clear and \$69 for the select, and that Caldwell & Drake believed that they were getting all of it for \$69. There being this misunderstanding between the parties as to the terms of the contract before the flooring was shipped, the question for decision is, Did the acceptance and use of the flooring by Caldwell & Drake, after they knew from the invoice and the bills the price charged for it by Cunningham conclusively bind them to pay the price charged? If we should assume that Caldwell & Drake fairly understood that the price of the flooring was \$69, the letters that passed between the parties after the bill and invoice for the first car of flooring had been received and before it had been used put it beyond dispute that Caldwell & Drake knew that Cunningham's price was \$99 for the clear and \$69 for the select. With this knowledge before them at a time when none of the flooring had been used, we think that Caldwell & Drake, if they did not desire to pay the price charged by Cunningham, should have declined to use the flooring until the difference between them was adjusted in some satisfactory way, but that having used it, they must pay the price charged. * * * When there is a disagreement and misunderstanding, as in the case before us, between the seller and the buyer as to the terms of the contract, and the property is delivered before this is settled, the buyer has an election to reject or to accept and use it as he intended, but if he adopts this latter course with knowledge of the difference between himself and the seller as to the price, he must pay the price charged, and cannot defeat the claim of the seller by insisting that he bought the property on different terms or at a different price. He has made his election and is bound by it.

It is to be noted, however, that this decision proceeds upon the

ground that the minds of the parties did not actually meet on a price, and the court adds:

If Cunningham and Caldwell & Drake had entered into a contract as to the price at which the flooring was to be furnished, and the terms were understood and agreed to by both parties, we do not think that Caldwell & Drake would be obliged as a matter of law to pay a higher price than the contract price merely because they used the flooring after receiving the invoice accompanying the flooring, which showed that Cunningham was charging a higher price than the contract price.

Risk Assumed by Lumber Mill Employe

A lumber inspector employed in a sawmill assumed the risk of being injured or killed through accidentally slipping upon a floor and being carried by a moving platform to a revolving saw. There was no duty on the part of the lumber company to install a guard upon the saw to prevent such an accident. "A sawmill company engaged in converting timber into merchantable lumber is not under any legal duty either to its employees or the public generally, nor is it practically possible for them to keep all of the saws necessary to their business either covered in or guarded against cutting into an object that may accidentally come in contact with them." (Florida supreme court, *Perkins vs. Morgan Lumber Company*, 67 Southern Reporter 126.) But the Minnesota supreme court holds that an oiler of machinery in a sawmill was justified in assuming that a log carriage would not be moved without a customary warning being given by the head sawyer. (*Johnson vs. Sartell Brothers Company*, 150 Northwestern Reporter 784.)

Tie Trade Livening Up

One of the interesting items in the hardwood lumber world right now is that of railroad ties. It is interesting because the tie trade is showing signs of life and present conditions point toward a big year in the tie business, both in the domestic and in the export trade.

A recent railroad note in the *Saturday Evening Post* is authority for the statement that railroad construction in 1914 in the United States amounted to only a little more than 1,500 miles, which was the smallest mileage in any year since 1895 when the country was just recovering from the panic of 1893. It was also the first year in which more miles of railroad was built in Canada than in the United States. In other words, it was a poor year in railroad construction and in the sale of railroad lumber of all kinds, which contributed largely to the dullness in the lumber market.

Since the granting of increased freight rates and the general disposition to let the railroads live and thrive there has been quite an industrial revival in railway centers and this in turn has awakened the tie trade of the country to prospects of a lively business through the spring and summer months.

That is not all of it either. Even in the export trade ties are now showing signs of life and they constitute an item in the export lumber trade which stands out distinctively as having regained the lost volume of trade the past few months. The first pick-up in the export tie trade was noticeable in the export reports for November. In October the export in ties was not half that of October last year, but during November it revived and exceeded in quantity the exports for November 1913. This seems to mark the beginning of big times to come, for right along with this report of gains already made we have reports of big orders being placed by the warring nations, one specifically being an order for 50,000,000 feet for crossties by England. In fact, taking it all in all, the tie right now furnishes the brightest spot in the news of the hardwood lumber trade and if the signs read right the year as a whole should be a very busy one.

The Uinta mountains of Utah, included within the Wasatch, Uinta, and Ashley national forests, should become a favorite recreation region because of the many small lakes within depressions scooped out by glacial drifts. Seventy such lakes can be counted from Reid's peak, and one particular township, thirty-six miles square, contains more than a hundred.

Possibilities of Hardwood Distillation

Hardwood distillation is a subject that has been discussed in a more or less general and impersonal way with perhaps only a modicum of real interest on the part of hardwood sawmill men and others interested in the hardwood industry. Now, however, we are coming down to real facts in connection with hardwood distillation, and reaching the point where the interest of the average hardwood man should be both real and keen, and for the sake of better and closer utilization and more returns generally, every man in the trade, should study this subject and see just what are his possibilities to make wood distillation a factor in his business.

Wood distillation has been experimented with and practiced in this country more or less for about a generation. Authorities differ as to the exact days of the earliest efforts. Some carry it back as far as 1830 and others to 1852. Some valuable information on hardwood distillation was furnished at a recent meeting of the American Institute of Chemical Engineers in an elaborate paper by Edward H. French and James R. Withrow. From historical data gathered by these men it seems that among the pioneer efforts at distillation was what was known as the Scotch Works, built in 1852 by the Turnbull Company of Glasgow, Scotland, the location of this plant being known at that time as Milburn, N. Y. Quite a number of plants were developed along the methods followed by the Scotch Works, using cylinders for distillation and producing mainly acetate of lime. An interesting story is furnished of the early efforts and the gradual development of the industry. The matter of prime interest to the hardwood lumber fraternity today, however, is not so much the history of what has been done as the possibilities of what may be done, the methods followed, the cost of the work, and the possibilities in the way of returns.

In the matter of production cost and value Messrs. French and Withrow have covered the matter in detail and have tabulated production cost results as follows:

Fuel	\$1.15
Labor	1.25
Lime18
Bags14
Freight (acetate)35
Freight (alcohol)10
Selling Commission (acetate)11
Insurance, per cord.068
Taxes, per cord.112
General expense.57

Total operating expense.....\$3.85

They take \$5 as an average or maximum wood value, which makes a total cost per cord of \$8.85.

Compared with this they show a production value as follows:

Alcohol (82 per cent), 11 gal. at 25 cents.....	\$2.75
Acetate of lime, 216 lbs. at \$1.75.....	3.78
Charcoal, 52 bu., net 6 1/4 cents.....	3.38

Total crude value.....\$9.91

To quote from the paper in question: "This gives a production cost of \$8.85 and a sales value of \$9.91 per cord. It will be noted that no selling costs, except in the case of acetate of lime, have been included because in the works not refining or making the finished product, which are in number far in excess of those who do refine, the alcohol is sold under contract to the refiner and the charcoal as in the case of those plants in the lake district is either consumed at iron furnaces in connection with the plants, or, as in the eastern field, handled by a general sales agency controlled by the manufacturers."

The production costs in this case are based on what is called the eastern field, which, it is pointed out, gives a higher production than the lake district. They figure, however, that this discrepancy is compensated for by the fuel cost which is lower in the lake region where mill waste is available. There is room for inquiry here. Examination should be made into the subject of the relation of capacity to cost in the distilling plant, and the size or capacity of equipment necessary to get an average or minimum cost be determined. The relation of the size of the equipment to get efficiency to the possible

supply of raw material that might be available in the form of waste wood must also be taken into consideration.

Leaving out the cost of wood supply and equipment necessary to secure it regularly, it is estimated that the value of the equipment necessary for hardwood distillation will run approximately \$2,000 per cord per day of production. For instance, Mr. French says, that the cost of boiler, oven, cars, coolers, pumps, etc., is about \$650.00; copper work, including stills, condensers, piping, etc., approximately \$450, and brick work for ovens and boiler settings about \$190. These three general items would of course vary a little with location and other local conditions. However, the general figure of \$2,000 for equipment per cord, per day production is a reasonable estimate, though, of course, this cost might be varied more or less in equipping a plant, depending on the equipment, methods followed, and the extent to which the work of producing and refining is carried.

One of the interesting features of the treatment of the subject of hardwood distillation in the paper referred to is in the tabulation of the extent and distribution of hardwood distilling plants in the country at the present time. This is as follows:

Michigan.....	8 oven plants carbonizing.....	1,932 cords daily
	5 kiln plants carbonizing.....	1,050 cords daily or
	13 plants carbonizing.....	2,082 cords daily
Pennsylvania.....	33 oven plants carbonizing.....	1,424 cords daily
	13 retort plants carbonizing.....	215 cords daily or
	46 plants carbonizing.....	1,639 cords daily
New York.....	7 oven plants carbonizing.....	256 cords daily
	17 retort plants carbonizing.....	362 cords daily or
	24 plants carbonizing.....	618 cords daily
Wisconsin.....	2 oven plants carbonizing.....	96 cords daily
	1 oven-kiln plant carbonizing.....	250 cords daily or
	3 plants carbonizing.....	346 cords daily
Kentucky.....	1 oven plant carbonizing.....	20 cords daily
West Virginia.....	1 oven plant carbonizing.....	49 cords daily
Tennessee.....	1 oven plant carbonizing.....	32 cords daily
Vermont.....	1 retort plant carbonizing.....	16 cords daily

This makes a daily capacity in this country of 2,909 cords in 53 oven plants or a total of 4,802 in 90 plants. In Canada there are 9 oven plants charring 424 cords daily and one retort plant charring 48 cords, or a total of 472 cords in 10 plants. This makes a total for America of 5,274 cords per day in 100 plants.

This elaborate review of the hardwood distilling industry in America takes note among other things of efforts made in 1903 by a well-known lumber concern at Cincinnati to distill sawdust continuously by means of an endless belt carrying the sawdust through an oven. Mr. French says that it can be seen readily that sawdust cannot be destructively distilled in bulk because the insulating space between the particles prevents the heat from going through the mass. That was the reason for the endless belt. The pretentious effort along this line mentioned did not prove profitable, but it does not mean that some efforts may not prove successful, for it takes time and failures as well as experiments to develop an industry of this kind.

Hardwood distillation, especially distillation of the waste products of various kinds of the hardwood sawmill is a matter that seems to have reached the point where we can get down to real business and hope for actual returns, and it is therefore a subject which the large operators in the hardwood territory should study closely—not consider it as merely something distant and apart from them. It has possibilities in the way of personal returns and more profit out of hardwood holdings.

White pine and yellow pine are the woods most used for boxes, and each contributes more than 1,000,000,000 feet to the box industry annually.

The annual cut of British Columbia timber is approximately 2,000,000,000 feet. There are 420 mills and 790 logging camps in the province, employing about 60,000 men.

The Lumbermen's Round Table

Mechanical Handling Pays

There is no getting away from the fact that whenever you can substitute mechanical for manual handling, you are going to cut your costs. The fact that labor costs are constantly rising, while mechanical methods are stationary, if not actually showing reduced operating expenses, is a sufficient suggestion as to why this is so.

A visitor was recently in a large hardwood flooring factory, and noted that a mechanical system for selecting flooring as to length had been installed. This consists of a series of rolls through which the flooring is passed, the spaces between the rolls being progressively larger. Thus the smallest pieces drop through at the first interval, the next size at the next, and so on. The flooring drops through a slot into a bin in the basement of the mill, where boys handle it into bins arranged according to the dimensions of the stock.

Although cheap labor is used on this work, and though the opportunity to save would not seem to be large, this little device has cut the cost of handling this particular operation about fifty per cent.

A Question of Policy

A large hardwood man, who is one of the leaders in the field in a number of branches of the business, has recently adopted a new policy in connection with the erection of a large new plant. It is that competitors are not to be invited to go through his mill, as was the case with the former plant.

"We spend a lot of money for the purpose of working out new ideas," he said, "and we think that it is not good business to make these ideas public. The man who is not enterprising enough to study out these things for himself certainly has no reason to expect that his competitors will turn over to him the results of their efforts."

The largest box manufacturer in the country, if not in the world, has an iron-clad rule against allowing anyone not connected with the concern to go into his factory. Not long ago a belt manufacturer whose product is being used there came to investigate a report of trouble experienced in connection with a certain belt. He said that if he were to be permitted to see the machine on which it was used, he could make some suggestions of value. He was turned down, however, along with everybody else. The excuse in this case is that most of the machinery used in the plant is of special design, and is the product of the company's own mechanical engineers.

While an attitude of this kind is thoroughly defensible from this standpoint, it hardly seems to be in line with modern ideas on the subject of co-operation and general work for mutual advantage. Nobody knows it all—not even the largest and most powerful concern; and certainly combining forces and making nothing secret is the short-cut to advancement for the industry as a whole. Secretiveness seldom pays in the long run. It used to be favored with regard to the commercial and selling ends of business, but it has generally been thrown into the discard as far as manufacturing processes, excepting those which are really original and exclusive, are concerned.

Afraid of Competition?

"I'm not afraid of competition," said a hardwood manufacturer not long ago. "In fact, I'm perfectly willing to tell to whom I sell my lumber, and at what prices. I don't admit that this is information which will do anybody else any good. My competitors know that these concerns are buying lumber, and they know as well as I do about what the market prices are. I am certainly not selling for less than cost plus a reasonable profit. I find that letting other people know about this end of my business doesn't hurt me, and I keep right on selling my old customers. If anybody else can deliver a better proposition to the consumers that I have on my books, they are welcome to the business."

This is a rather advanced stand, and while the manufacturer is probably not as ingenuous as he seems, inasmuch as he has special facilities for making and marketing unusually high-grade stock, so that he can hold his customers largely on the basis of quality, he is really sincere in believing that there is no reason to keep a list of his customers under cover. As he suggests, every consuming factory

is listed, and is regularly solicited by others; so why should he conceal the fact that he is selling certain of them?

Mechanical Veneer Drying

Though some of the best known veneer manufacturers in the country do not use mechanical drying systems, it seems that the sentiment of most of the authorities is steadily growing stronger in favor of this kind of equipment. The difference in cost alone is a big figure; for when one considers the amount of handling, the amount of space and the amount of time required to dry veneers in the old way, and contrasts these factors with the brief time, minimum handling and small space required by the mechanical plants, there does not seem to be much argument that can be put forward in favor of the old-fashioned system.

But, as a matter of fact, there is a strong argument along the line of quality. Take a veneer which has been dried in racks. It is likely to be wrinkled and hard to flatten out, though this may be accomplished by weighting it down. It is likely to be drier or less dry than some other piece which was subjected to warm air circulation in the dry-house for the same length of time, but under different atmospheric conditions. Hence uniformity is almost out of the question.

The product of the mechanical drier is flat and good to look at. Consumers want this kind of stock. It is also exactly uniform, because conditions can be regulated in a machine, whereas they cannot be otherwise. Altogether, the manufacturer who is trying to get along without a mechanical system, either because of the expense or because the system he investigated in 1897 was not efficient, seems to be overlooking one of the big bets of the business.

The Man at the Edger

One of the most important men in the sawmill, second only, in fact, to the sawyer himself, is the edger. He is not usually given special consideration as to wages, nor is the job always dignified to the extent that the best men are placed there; yet anyone who has stood back of him and watched him run the boards through—particularly if high-priced lumber is being manufactured—can readily see just how much money he can save or throw away.

The efficient hardwood manufacturer will see that he has a good man at the edger, and that he understands exactly what he is trying to do, aside from the mechanical feature of getting the bark off the edges of the boards. How to do this so as to waste as little material as possible is something that not all mill employes seem to understand, and it is a feature to which attention could well be paid by the mill-owner.

Something Besides Grade

There are unfortunately too many price buyers in the country, who place their orders for lumber and veneers largely on the basis of the lowest quotation. There are some consuming markets which are famous for the high quality of their products, and yet are also known to lumbermen as hard markets to do business in, because of the fact that they buy the cheapest stock that is to be had. They may be getting good material at lower than market prices, of course, though the dictum that one usually gets just about what he pays for would seem to hold good here, as elsewhere. The chances are that they are not making so much of a saving as they think they are, and that they are losing advantages which would accrue were they to adopt a more liberal attitude—though "liberal" is hardly the word that should be used to express the idea. Broad-minded is more like it.

For instance, consider the fact that the biggest manufacturers, with the best facilities for good service, make a point of knowing what it costs them to produce material. They are, obviously, the ones who will ask a price that will net a reasonable profit. If they find that consumers are not willing to pay the price, then they go somewhere else to sell their products. The consumer is then forced to purchase from other concerns, possibly not so well qualified to insure satisfaction as to the character of the stock and the timeliness of deliveries.

The Drying of Glued-Up Stock

In doing veneered work the trade has learned among other things during the past few years that the way to obtain the best satisfaction and secure the highest order of work and finish is to take time enough to thoroughly dry out the work after the veneer has been applied. While it matters not that the veneer and the core stock when used has been thoroughly kiln-dried in preparation for the veneering, except that it is essential to secure good work, the fact remains that the moisture incident to gluing which is taken up by the wood should be dried out before the veneered work is put up and finished. This really applies to both face veneering on solid bodies, veneering on heavy cores, and the making up of panels. It is not considered so essential where heavy cores are used because the core body takes up and distributes the moisture through itself so that it is not so much in evidence. Yet the fact remains that proper drying should follow veneering even on heavy bodies and in the making of two, three and five-ply built-up panels it is one of the essentials of the work.

One reason all veneered work should be dried after gluing up is that if it is taken direct to the sander from the presses the warmth of sanding, with the moisture still remaining in the wood and in the glue, is likely to cause the glue joint to loosen in spots and cause blisters. It is found at times, too, that enough moisture remains in the face veneer to make it sand poorly.

In built-up panels drying after gluing up, while recognized as one of the essential steps to proper manufacture, is often a source of trouble because the man buying the panels wants quick shipment. Even where a man is making his own panels he is likely to wait until they are needed before making them up, and then there is more or less of a fight over the question of allowing time for proper drying after gluing.

Naturally all this has led to study and effort looking to ways and means for the rapid and proper drying of glued-up stock. Where there is plenty of time and where the panels can be made up ahead of needs, the usual practice is to pile them carefully on cross strips in a warehouse and let them stand, say for two or three weeks, before trimming and packing for shipment.

In drying panels one may to some extent follow the same principles that are resorted to in drying lumber but the extent is limited because high temperature is not permissible. For example, it would not be practical for one to put glued-up panels in a hot plate redrier, nor would it be practical to put them through one of those patent endless belt or roller driers because the excessive heat would do violence to the glue joint. What is needed for drying the glued-up stock is something to retain it flat and straight and permit free circulation of air with enough temperature in it to carry off moisture rapidly but not hot enough to damage the glue joint.

Special dry kilns may be arranged with trucks and piling strips or racks and the temperature carefully regulated and held down to whatever point it is determined will be safe, and in this way the glued-up stock put through a kiln pretty much as one would put the veneer through a kiln prior to gluing-up. It could not go through the same kiln, however, at least not with the same order of treatment. The proper drying of glued-up stock in this way would call for the building of a special kiln for this purpose, one with plenty of air circulation and the temperature limited to a point where it would not do violence to the glue joint.

Perhaps the simplest and most economical idea along the line of hastening the drying of glued-up stock is to provide the warehouse with a hot blast apparatus for winter use. With something of this kind arranged pretty much as one would arrange to keep a house comfortably warm to work in, there can be put into the air enough temperature to make it hungry for moisture so that it will dry out the glued-up stock in a fairly short time. Some ventilation must be provided but often if the overhead space is high the air will find enough escape and the drying in the warehouse in the winter would really just take on the form of heating the ware-

house to a comfortable working temperature or a little above. It has not been positively determined just what temperature ordinary glued-up stuff will stand, but it is perhaps safe to say that it will stand anywhere from 70 to 90 and possibly 100 degrees, and during cold weather with this much temperature in air blown into the building there will in most buildings be enough escape to provide the necessary ventilation.

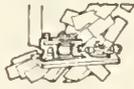

In the summer the same apparatus may be used with the heat omitted or just a small amount of heat used. In warm weather practically all that is needed to properly dry glued-up stock is air circulation. If it is properly piled on strips in a warehouse, the forcing of an air draft through it will carry off the moisture and dry it out in a much shorter time than if it is packed in an enclosed warehouse without any enforced circulation of air.

The circulation of air should be studied and made systematic so that it will circulate through the piles of built-up stock and not merely about and around it. Different plans and details may suggest themselves for this purpose. Usually where the air is heated it should come in through ducts underneath, and it is a good plan to have a series of ducts coming through underneath the rows of piled panels and other veneered work. No matter what details are applied the air must circulate through the piles of veneer and not merely around them. With plenty of air circulation, drying can be hastened either with or without temperature—unless, of course, it is damp drizzly weather and the air itself is heavily charged with moisture when it is blown in.

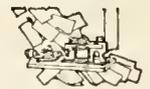

The moisture conditions of the air itself should always be taken into consideration. Air taken from the outside may vary considerably in moisture content from day to day and the right idea of systematic drying should take consideration of this, and the temperature be regulated accordingly. If it is a damp day and the air is already charged with moisture there should be more heat in the coils through which it passes than during the dry bright day to get the same efficiency in drying.

Fortunately for this work some new schemes are now being developed for regulating the moisture content of the air used in heating buildings. The blower people are making a study of heating and ventilating and have not only devised plans for washing air to purify it, but they have actually developed ideas along this line to the point where it is practical to regulate humidity as well as temperature, and they can add to or take from the moisture content of the air as it enters the building. When air has too much moisture in it they can reduce this moisture content, and where there is not enough it is added to. This is a part of scientific schemes for heating and ventilating factory and office buildings, and it is a thing being resorted to by certain lines of business which require air in certain specific condition as to humidity all the time. It is what is called "air conditioning" and since it is practical in other lines it should be comparatively easy to apply things of this kind to the storage warehouse for built-up veneer so that it may be dried out scientifically in the shortest period of time with every assurance of getting the best possible results.

Some day entirely new lines of veneer work may be developed. Every once in a while some one makes a strong appeal for us to take up the Russian method, which consists in gluing-up the veneer green and drying it out afterwards, so that one drying does it all. Sometimes we hear of experiments with glue that is used with heat as well as pressure, the heat setting the glue substance and drying the veneer in a short time, and various other new things of this kind may be developed. Meantime, the biggest possibilities seem to be along the line of making a study of air circulating apparatus that will enable the panel manufacturer and the furniture man to provide at all time the air conditions and the temperature necessary to facilitate the drying of veneered stock in a way that will give the most satisfactory results and reduce the time required to a minimum.

Interesting Traffic Developments

A fourth section order by the Interstate Commerce Commission last week is expected to be of decided advantage to lumber companies handling silo stock in Louisiana. The Texas & Pacific Company is authorized to establish rates on silo stock three cents higher than the rates in effect on lumber. The rate permits twenty per cent of the entire weight of the shipment to be composed of iron parts of the silo.

Proposed increases on wooden barrels between Memphis and Pensacola have been suspended until July 6. The present rate is twenty-five cents. The carriers propose to make the rate thirty-three cents.

In a decision handed down recently the Otis Manufacturing Company of New Orleans lost its case against the Texas & Pacific. Rates on mahogany between New Orleans and Texas points had been attacked as being unreasonable and unduly discriminatory. The commission held, however, that mahogany is an imported and valuable wood and that the carriers were justified in making rates higher than those in force on domestic woods such as walnut.

Authority has been granted by the commission to change the description of certain logs imported through Gulf ports to various destinations without regarding the fourth section. The logs on which this ruling applies are: bitterwood, cedar, cocobolo, ebony, fustic dye wood, lancewood, lignum-vitæ, logwood, mahogany, padouk, quassia, rosewood, sabieu, walnut and others.

Permission to include in the rate permission to stop at Bogalusa for creosoting without observing the fourth section has been granted to the New Orleans & Great Northern. This applies to shipments originating on the Gulf & Ship Island; Mississippi Central; Natchez Columbia & Mobile; Liberty-White; Ferwood & Gulf; Kentwood & Eastern; and destined to New Orleans or Bonfouca, La.

The fact that the Nashville, Chattanooga & St. Louis has discontinued the practice of charging more for dressed than for plain lumber is considered good proof that the claim of Krauss Brothers Lumber Company of New Orleans for reparation should be granted, according to a brief filed by the lumber company last week. No other line in the South has made a distinction of three or three and one-half cents in the rates charged on rough and dressed lumber, it is asserted.

The Hinton Brothers Lumber Company of Lumberton, Miss., set forth a peculiar situation in a brief filed last week. Due to the inability of the Gulf & Ship Island and the New Orleans & North-eastern to agree on divisions, two rates were being charged on shipments moving from the same depot to the same destination. The commission is asked to declare the higher of the two rates unreasonable.

The reduction of the rates on cypress between Florida producing points and Boston, Philadelphia and other eastern points is declared to have been caused by water competition in a brief submitted by the carriers in the case of the Florida Cypress Association versus the Louisville & Nashville. The cypress association asks reparation for shipments made before the decrease.

Unreasonable rates and failure to secure dunnage allowance are discussed in a brief submitted by the Indiana Veneer and Lumber Company in its case against the St. Louis, Iron Mountain & Southern. The company shipped logs from McGehee and Haynes, Ark., to Indianapolis.

Failure to allow dunnage on stakes and crating used on sawmill machinery shipments is the basis of an argument made in favor of reparation for the G. B. Merrill & Brother Lumber Company in a brief filed last week.

State regulation of rates in Arkansas is blamed for the condition complained of by the Memphis Band Mill Company and other companies. The carrier brief was submitted last week. The apparent discrimination in favor of the mills in Arkansas is due to the state made rates, the carriers maintain.

All issues arising from the collection of higher rates on coastwise than on export shipments have been decided by the commission, it is

said in a brief submitted by the carrier in the case of Gulf Lumber Company versus the Galveston, Harrisburg & San Antonio. It is claimed the previous decisions of the commission cover the case in hand. The decisions cited, if they apply, would lead to an adverse decision for the lumber company.

Oral argument will be heard by the commission in the following cases:

March 12.—Lumber transit privilege nt Buffalo; Buffalo Lumber Exchange versus the Alabama Central.

April 8.—Interior Lumber Company versus Northern Pacific Lumber Company versus Chicago, Milwaukee & St. Paul; Christenson Imes Lumber Company versus the Northern Pacific.

April 10.—VandenBoom-Stimson Lumber Company versus St. Louis, Iron Mountain & Southern; Memphis Band Mill Company versus the Chicago, Rock Island & Pacific; rates on lumber from points in Arkansas to Des Moines.

April 14.—Rates on lumber from southern points to Ohio river crossings and other points.

A Chance for Millwrights

Millwrighting as it once was has been somewhat disorganized. In the old times the millwright was architect, foreman and workman. He did everything from laying out the ground for a mill to installing boilers, engines, dry kilns, and their entire equipment. Now, however, this has all changed, because here the work is specialized—the architect and machinery man divide it up so that the millwright is nothing but a handy man to put the things together. There is a certain amount of millwrighting proper, and concerns that make a study of the sawmill lay-out and plan and erect mills do a very good business.

Right now though there seems to be a good opportunity for the millwright. This new opening has to do with the designing and erection of various by-product industries in connection with the sawmill. There are wood distilling plants and various scientific waste reducing propositions, but what is specifically in mind right now is the figuring out of certain combinations of other products that might be manufactured in connection with a given sawmill enterprise. In one case it might be one thing and in another another. The millwright should make a study of the conditions among the mills and the small articles it is possible to manufacture from timber, and make plans for various combination plants that can be handled successfully. Here is a chance to develop work, sell machinery, and help the millmen and themselves at the same time, provided the work is gone into thoroughly. There is room to combine other work with sawmilling, and much of this will be done in the future.

One of the assistant foresters at a meeting of the coöperage people urged the interdependence of the manufacturer of smaller wooden articles and the manufacture of lumber proper for the sake of economy in timber. Forest Service experiments are pointing the way toward the combination of sawmilling with other industries that will work up stock in smaller dimensions so as to refine the low grade and get out what good is in it. And if the way is pointed out, there will be need for men to devise and erect plants that will work properly in connection with the sawmilling enterprise and furnish a chance for profits as well as utility. It is a good chance for millwrights who have a knack for figuring out these things, but it will not be easy. Many such undertakings in the past have been failures financially. It is one thing to work out something that can be made in connection with sawmilling and another thing to make money out of such an enterprise. The job before the millwright is to devise plants which will make it practical to work a lot of timber that is now going to waste into some useful article and make a profit out of the business. Those that can do this successfully have a big work before them.

The Sihlwald, or city forest of Zurich, Switzerland, adds to the town's revenues \$7.20 per acre a year, reducing the amount needed to be raised through taxation by more than \$32,000.

Experience Talks on Woodworking

When a planer pulls hard and seems to take more power than it should, do not assume immediately that the knives are dull or that you have taken too heavy a cut, but investigate and analyze it.

If the knives are requiring too much power, this will generally manifest itself in a strain on the cutter-head belts. Even then, though it may not be due to dull knives or deep cutting, it may be due to tight journals or to any one of several causes. The knives may not be ground slender enough and the heel of the bevel may be striking. They may be too close to the lip for the kind of work they are doing, thus making the cutting unnecessarily heavy. In fact, there are a number of things that may use up power, and those suggested here are only a few of them.

There is really more unnecessary power used up in the feeding mechanism of the average planer than anywhere else. Sometimes this is hard to avoid because it is essential to hold the stock firmly as it passes through the machine to get good work. One can minimize the power required, though, by a careful analytical study of his machine and its adjustment and by proper lubrication. Sometimes the pressure bar may be unnecessarily tight, the feed rolls may be coming down heavier than is really necessary, or the stock may be running so flat on the bed plate that it drags hard. Possibly it can be improved with a little lubrication on the bed. Anyway, there is always room to study every detail of these things carefully. It will not only help save power, but is a great aid to understanding thoroughly the work of the machine, and frequently in the process of eliminating waste power one will also be led into doing better work with the machine.

Considering the question of motor drive, in the final analysis it would seem the question of using individual drives for all the small machines in a plant, as well as the large ones, is more a matter of motor cost than anything else. The best authorities on the subject seem to agree that there is hardly a thing, from the spindle of a boring machine up to the heaviest drive in the shop, that cannot be made with an individual motor. Whether or not it is always advisable to do this depends more on motor cost than on relative power cost.

It involves quite a sum of money to put individual motors on all machines. In some instances the cost of the motor would amount to more than the cost of the machine itself, and there are very likely many instances where this outlay in first cost would not be justified by the advantages gained.

It is noticeable that the man who gets individual motor drive seldom wants to change, but even the ardent advocates of electric drive seldom advise the provision of individual motors for all machines. Groups of light machines can be driven from one motor, and the investment in motors reduced without any great inconvenience and without impairing the efficiency of the driving system.

Perhaps, by and by, motor cost itself will be reduced. Anyway, with motor cost as it is at present, there is a strong inclination to go more and more toward individual motors, where electric transmission is used.

There is a strong tendency now to dispense with a lot of counter-shafting formerly used in driving woodworking machines, and the electric motor and the high-speed lineshaft are doing it. It is easy to understand the high speed and light sizes in connection with electric motors, but even among those not using motors there is the same tendency to use lighter shafting and run it at higher speed. It helps to reduce the friction load by making the shafting and pulleys lighter, the belts smaller, and the strain or pull less. With some machines there is still the need of the countershaft, no matter what the speed of the line (such machines as fourside moulders, for example), so as to get belting connections and pulley alignment for all heads. But there are many machines, like rip-saws, which may well be driven direct from the high-speed lineshaft, with a clutch pulley for cutting in and out, instead of the regulation counter, with its tight and loose pulley and the shifting belt. Indeed, there is room

for eliminating more of the counters than one would surmise at first glance, for the clutch pulley can easily take the place of the belt shifter, with a possible saving in both equipment and power.

Good machinery is not more essential to the success of a manufacturing enterprise than is a thoroughly modern office and factory system. Every machine in the plant may be of the latest and most expensive type, but if the system upon which the business is conducted is antiquated and inefficient, the organization is behind the leaders and in a fair way to meet with disaster.

Practice has disproved the predictions that band saws would not successfully saw yellow pine logs because of the resinous gums they contain. Predicting what machinery will not do is about as certain and satisfactory as predicting what the weather will be.

The cross-cut filer in the woods may not study the science of filing like the man in the mills, but he nubs after the knack of making his saws eat wood and pull light in a way that usually delivers the goods.

A tight belt to a pulley fastened to a shaft midway between bearings is likely to become a troublesome proposition, for the shaft is quite apt to spring.

It may be the number of feet going through the mill that makes the sawyer's tally, but it is the quantity and quality that he gets from each thousand feet of logs that finally makes his reputation—and is often a deciding factor in the mill's chance for profits.

Bright, clean machines may not do any more or better work than dirty, greasy machines, but they make one think that the mill in which they are operated is up to date and well managed. Then, too, the insurance man never fails to note the difference.

Elements Impair Strength of Wood

Little diagonal streaks or wrinkles across the grain of a piece of timber not only betray weakness, but sometimes indicate periods of stress through which the wood passed when it was growing. They may even be taken as a sort of check on the official record of wind storms, as in the case of some lumber tested at the Forest Service Laboratory at Madison, Wis.

The marks are caused by what are called "compression failures," which occur when the fibers bend or buckle under a too heavy strain. In cutting up logs collected for experiments at the laboratory, it was noticed that these compression failures appeared on the north side of a number of trees which came from the same locality in Florida. By counting the annual rings of the wood and from knowledge of the time when it was cut in the forest, it was decided that the compression failures must have been caused by a severe wind from the south about the year 1898. Inquiries were made in Florida and it was found that a hurricane had, in fact, swept over the region at the time indicated.

The experiments have determined that the strength of a piece of wood may be seriously impaired by slight compression failures due to rough handling. Dropping a beam across a skid may cause a compression failure at the point at which the beam strikes the skid and it will be at this point that the beam gives way when it breaks under a strain too severe for the weakened fibers to withstand. Hitherto unaccountable breakage in hickory wagon spokes and other presumably strong material is now attributed to compression failures caused by wind storms in the period of growth or by hard usage in lumbering and manufacturing processes.

Boxmakers in the United States use more than 4,500,000,000 board feet of lumber each year, or more than one-tenth of the entire lumber cut of the country.

In northern Idaho and Montana, which had many fires during the past summer, thirty-five per cent of the fires on national forests were caused by railroads, twenty-six per cent by lightning, and ten per cent by campers. The remainder were due to brush burning and other miscellaneous or unknown causes.

Meeting the Emergency

It has been said that the true test of happiness is the ability of the individual to adapt himself to his surroundings. The man who is superior to his environment and to circumstances is never unhappy, nor, in most cases, unsuccessful. In fact, adaptability on the part of a business man is even more necessary for the well being of his business than it is for the happiness of the individual.

Right now conditions are different from those which have been prevailing for several years. The war is the big factor which has been introduced, and which has brought into the situation entirely new problems in a great many directions. The hardwood man who is not adaptable is not capable of rising to the emergency. The man who is changing his business battlefield to accord with the necessities of the case is at least marking time, if not advancing. This article is intended to suggest how the lumberman who has perhaps been discouraged by inability to get business, using the same methods he did before, can make headway by adopting other methods which are more nearly suited to the requirements.

In the first place, it is obvious that competition is keener, and that it is harder to sell lumber. This results from two factors—increased supply and lessened demand. If the individual lumberman doesn't speed up his selling efforts, and doesn't work a little harder on each prospect, he is going to lose out, because there are lots of others who are fighting harder than ever before to get business.

And this suggests, by the way, the folly of adopting economies that are likely to lessen the effectiveness of the work that the salesmen are doing. Advertising is one form of selling, and good advertising helps to sell goods, lumber included. Some lumbermen have doubtless been tempted to reduce their advertising appropriations, which have been spent in the trade papers and elsewhere, following out the policy of retrenchment which seemed necessary. But now is the very time when publicity of the right kind is needed. It may be that the advertising itself must be radically changed, so as to make a stronger appeal to those who are reading it; but it is desirable to increase, rather than reduce, the number of points of contact.

More personal work is needed, too. The lumberman who has been getting business by mail, and who has not cultivated the personal feature of his relationships with consumers and others, is at a disadvantage. But he need not remain so. Instead of relying on a quotation by mail, he may, if the situation seems to warrant it, go direct to the buyer and put his proposition before him in person.

Few business men are such able letter writers that they can present their case as well on a sheet of paper as in person. Many a good salesman has said, "I could tell you more in fifteen minutes than I could write you in a year." This is due to lack of practice on the part of the salesman, as a rule; but even the office man, in most cases, has not cultivated the ability to put the "punch" in his letters, to give them the individuality which he personally possesses. Hence his letter often seems colorless to the man who gets it, whereas the lumberman, if he walked into the office of the prospective customer, would make a good impression and would receive consideration.

A big hardwood concern got an inquiry not long ago from a large corporation whose purchasing agent indicated that it might want several hundred thousand feet. The sales manager of the lumber company did not content himself with writing a letter setting forth the ability of the concern to deliver the lumber at the right price and just as needed, but promptly packed his grip and hied himself to the office of the purchasing agent. He "sat up" with this dignitary, going after him largely on the basis of the ability of the company to give the consumer just what he needed. It happened that the lumber wanted was a special proposition that not everybody could furnish, and this made the service argument more effective, perhaps, than it would have been if the purchaser were buying No. 1 common plain oak. He impressed the purchasing agent with the facilities of the lumber company, with the quality of its stock, and with the reasonableness of its prices, the other things considered.

When he got home he kept after the business, and though the purchasing agent had several quotations that were lower, some of them

suspiciously so, he finally gave the bulk of the business to the man whose personal solicitation had been so complete, so thorough and so satisfactory. The sales manager had told him the little things that can't go into a letter, but which fill out the skeleton of facts and give them life and reality. This demonstrated, too, that even a purchasing agent, supposed to be the impersonality personified, if one may use this expression, is human after all, and is affected by the same things that affect other human beings.

In fact, he admitted to the lumberman that the latter had demonstrated that his house was a leader in its field; and when the other quotations came in, some of them so much lower as to seem altogether out of line, the purchasing agent realized that to insure getting what his company needed, it would be better to "play it safe" and buy from the house which he had learned to have confidence in, because of the knowledge which had been imparted to him. From this standpoint, the higher prices were a kind of guarantee of quality, while the low ones eliminated the concerns quoting them by suggesting unreliability.

And all this happened, remember, at a time when lumbermen are saying that only low prices can get business.

Another hardwood concern that has been stirring up business in spite of adverse conditions has made good use of the wires. It has quoted on important orders by telegraph, and has followed up the telegraph by long distance telephone conversations, the latter being splendid for sales work, though less effective when it comes to collections. This system has resulted in some heavy tolls having to be paid, but the fact that the lumberman is continuing to pay the telegraph and telephone companies their regular rates has indicated that results are being secured.

The use of day letters and night letters has enabled more complete statements to be made than in an ordinary telegram, and has likewise reduced the cost, so that this lumberman is a strong advocate of the wire.

Despise not the day of small things; when business is slow, the little orders look good. Sometimes a lumberman who has been gunning for big game, and has found it scarce, can do better by getting a shotgun and substituting it for his rifle. Rabbits may not be attractive after a taste of venison—but they are just as nourishing.

These thoughts are suggested by the experience of a hardwood concern which has a big trade all over the consuming section of the country. It has a number of high-class salesmen out, and they have been able to get the big business, when any of that kind has been available. Now that conditions are not so favorable to big orders as they formerly were, the head of this concern has promptly made a change of plans and methods that is getting results.

He began by personally going after orders in his own town, where there are a lot of small users of hardwoods—furniture factories which don't consume much individually but use up a good deal in the long run; planing-mills which buy in wagonloads; store fixture concerns which use hardwoods only occasionally but have to have the material once in a while. He carefully cultivated this business, and found that he was getting enough to justify the efforts which he was putting forth to land it. After he had demonstrated that the small orders in the locality of the office were proving to be bread-and-butter business, and were at least helping to pay expenses, he instructed his salesmen to try to work up similar business in other sections.

This made it important to develop mixed earload business which, on account of the inconvenience of loading, he had not previously given much attention to. Small factories in towns not large enough to support wholesale yards were shown that it would pay them, instead of buying local shipments of hardwood lumber from the nearest market, to get the reduced rate involved in taking a full car containing numerous items, though not much of any one.

This resulted in some trade, and at the same time the local yardmen were cultivated more than before, these dealers in many cases controlling the less-than-earload business of consumers in their immediate territories.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 873—Wants to Buy Three-ply Veneers

Newport News, Va., March 6.—Editor HARDWOOD RECORD: Will you kindly give us the names of a few of the most up-to-date three-ply panel manufacturers? Thanking you in advance for this information, we are.

Those interested should write HARDWOOD RECORD.—EDITOR.

B 874—Wants to Sell Dimension Stock

Kilmichael, Miss., March 5.—Editor HARDWOOD RECORD: We have a list of sizes for sale and would like to hear from possible buyers. The sizes are: 600 tongues 2½x4 and 4x4 12"; 200 reaches 2x4-18; 1800 bolsters 3x4-4'6"; 3¼x1¼-4'6"; 3¼x4¾-4'"; 1700 pieces bone dry bolsters 3¼x4¼-4' and 4'2"; 3¼x5-4', 4'2"; 3¾x4¾-4' and 4'2"; 6,000 pieces 1¼x1½-48"; 2,000 pieces 1¼x1½-44"; 2,000 pieces 1½x2¼, 2¼x2¾-54"; 1,000 pieces 1½x2¼ and 2¼x2¾-48". The entire stock is for sale at a price that should be attractive.

HARDWOOD RECORD will supply interested parties with the address of the above correspondent.—EDITOR.

B 875—Wants to Buy Kiln-Dried Poplar

New York, March 5.—Editor HARDWOOD RECORD: Will you put us in touch with anyone who could furnish 4/4 and 5/4 poplar No. 1 common grade, and the same in 4/4 S2S to 7/8 and 5/4 S2S to 1½, length 18" to 30", kiln dried? Any information you can give us will be appreciated.

Poplar manufacturers in a position to supply this stock can have the information on addressing HARDWOOD RECORD.—EDITOR.

B 876—Wants to Sell Bending Stock

Bingham, Ky., March 2.—Editor HARDWOOD RECORD: Kindly give me the addresses of good, responsible parties who will be in the market for green beech and hard maple. Also someone who buys bending oak as I can furnish this stock green from the saw.

Interested parties should write HARDWOOD RECORD.—EDITOR.

B 877—Wants Market for Plain Oak Dimension

Dermott, Ark., March 3.—Editor HARDWOOD RECORD: We have nearly a million feet of regular lumber lengths and widths in 1" oak, red and white, which we are figuring on sawing up into plain oak dimensions. We would like to hear from any and all factories using rough plain oak dimensions of any kind 1" thick. We want to hear from table top users, filing cabinet manufacturers and makers of bookcases, desks, kitchen cabinets, users of plain oak strips from 1½ to 5" wide, regular lumber lengths, and from anyone who has use for any width or length of 1" oak. Our oak is of good mild texture, and if positively necessary, we might arrange to kiln dry it for those who need it so.

Anyone in the market for these varieties of stock should write HARDWOOD RECORD.—EDITOR.

B 878—Wants Information as to Black Gum

Grand Rapids, Wis., February 25. Editor HARDWOOD RECORD: We have had a number of comments made on black gum with which we are not familiar in detail. Can you tell us who is manufacturing this, and has a distributing point in Chicago or this vicinity, and where we might also get information regarding the quality of the lumber and its value?

This inquiry comes from a large furniture manufacturing institution. HARDWOOD RECORD has advised as follows:

Black gum is lumbered throughout the hardwood region from New England to Texas, but the trees do not occur in thick stands. They are scattered sparingly through forests of other timber, and logs go to sawmills a few at a time. It is doubtful if any mill makes a specialty of this lumber.

It is often marketed as tupelo or cotton gum, and the trees are closely related and their wood much alike. The best black gum grows among the mountains from Pennsylvania to Tennessee, but it occurs throughout the entire Ohio valley. In making inquiries of mills you should be explicit in stating that it is black and not tupelo gum that is wanted; otherwise you may get tupelo.—EDITOR.

Clubs and Associations

Manufacturers' Association Board Meets

Under the constitution of the Hardwood Manufacturers' Association of the United States, the executive board must meet not less than three times each year. The first of these meetings was held at Cincinnati on Thursday, March 4. A number of routine matters came up for consideration.

According to the report of Secretary W. H. Waller, the new board seems to be thoroughly interested in its work, and seventeen out of nineteen members were present.

Northern Fire Protective Association Meets

Seventy five timber owners in the upper peninsula, representatives of northern Michigan railroads, and railroad men from lower Michigan, attended the fourth annual meeting of the Northern Forest Fire Protective Association at Marquette, Mich., on March 2.

The discussion of fire prevention methods, such as use of locomotive spark arresters and devices used in fire-fighting, took up the greater part of the session. A number of the railroad men gave brief descriptions of the work their railroads are doing in fighting the fire hazard. Reports of the association show that more was done last year than ever before in educating the public in the prevention of forest fires, and also that the railroads are co-operating with the association in every way possible.

The association started in 1911 and at that time faced a very serious condition. The association employs cut out a fire line, figuratively speaking, from the Montreal river to Detour, running laterals into every county in the upper peninsula. Today the association has a membership of 175 corporations, firms, and individuals who realize that the work is productive of excellent results.

In his report Secretary Wyman said that the expenditures had increased from \$11,879.78 in 1911 to \$19,614.12 in 1914. The fact that all this money is raised on direct appropriation from firms and individuals gives evidence that the real value of the work is fully realized. The report goes on to tell of the season's work, which in the main was highly satisfactory, outlining the increased evidence of co-operation, and told of the enforcement of laws and forest education.

Others who spoke were representatives of spark arrester manufacturers, L. R. Pyle, fuel supervisor of the Soo line; E. E. Wells of Marquette, who spoke on the subject of oil fuel as a preventive of locomotive fires, and many other railroad men.

Final Plan for National Organization to Promote Use of Wood

The Forest Products Federation has just issued elaborated plans recommended by the special committee on organization as unanimously adopted by the federation of February 25. This committee is composed of A. T. Gerrans, chairman, Frederick Weyerhaeuser, F. A. Hofheins, H. C. Scaree and John L. Kaul.

After reviewing the function of the massmeeting and the need of the work, and the aim, the elaborated report outlines the organization and administration of plans.

The following plan of organization was proposed by the executive committee, approved by the special committee on organization and adopted by the convention:

(1) That the new organization be a department of the National Lumber Manufacturers' Association, known as the department of trade extension.

(2) That this department be administered by an advisory committee, composed of one wholesaler, one retailer, one timberland owner and two manufacturers, the number of members to be increased later if desired.

(3) That this advisory committee be given authority to act in all matters relating to the work of the proposed department.

(4) That this department have a separate executive head, with the title of manager.

(5) That the other officers consist of—
A construction engineer, who will compile engineering data regarding the use of wood as structural material, and appear before the city councils and legislative and engineering bodies in support of the rightful use of wood.

A statistician, who will compile figures on fire losses, insurance rates and all other activities outlined under field of work, and furnish figures for the use of the construction engineer and publicity representative.

A publicity expert on a consulting basis, to aid in preparing and editing publicity matter, and in procuring its proper distribution.

Consulting engineers in various cities to act as directed by the department in matters relating to its educational and legislative work.

The plan to centralize the promotion and educational efforts of the lumber trade under the direction of the National Lumber Manufacturers' Association is based on motives of efficiency and economy. It seems to avoid the many difficulties incident to the creation of an entirely new organization.

The initial field of activity will include the following:

(1) Compilation of full and reliable information upon: (a) fire losses; (b) insurance rates; (c) building codes; (d) uses of wood; (e) substitutes for wood; (f) anti-wood legislation; (g) wood preservation.

(2) To co-operate with and assist other organizations of woodworking and consuming interests.

(3) To disseminate information by speakers, bulletins, newspapers and magazine articles, exhibits, advertising, etc., upon the properties and uses of wood.

(4) To oppose unfair discrimination against wood in building codes, regulations, ordinances, legislation, etc.

(5) To conduct technical investigations of the properties of wood as a construction material.

(6) To develop and extend practical fire prevention methods and processes.

As previously reported, steps will be taken to raise \$200,000 a year for five years, work to be started when the minimum of \$50,000 per year for five years is guaranteed. According to the revised report, action taken after the close of the meeting practically assures sufficient funds for the starting of the work.

The report strongly emphasizes the fact that the plan does not take anything away from any existing organization. Instead it supplements and strengthens all publicity, educational and trade extension effort in promoting the use of forest products.

New Hemlock and Hardwood Secretary

The Northern Hemlock and Hardwood Manufacturers' Association, at a meeting in Chicago on February 23, elected O. T. Swan secretary to fill the vacancy caused by the resignation of R. S. Kellogg, who recently resigned to become secretary of the National Lumber Manufacturers' Association. Mr. Swan has accepted the position and will take charge of the office about the middle of March, as soon as he can close up his work with the Forest Service at Washington.

Mr. Swan brings abundance of experience to the office which he is about to assume. Following five years at the university in engineering and forestry courses, he passed the two severest examinations given by the Forest Service, namely, those for the position of forest assistant and for engineer in forest products. These examinations covered four days' written work under the Civil Service Commission, and a rating on certain reports and

experience. During his earlier years in the service he was employed in timber measurements, topographical surveys, and general forestry work in western states, and later, specialized in the preservative treatment of timber by creosoting and other commercial processes; eventually having charge of a large cooperative project in California to determine timber treating policies for the Pacific Electric Company of Los Angeles, and nine other California electric companies. This work resulted in the building of three wood preserving plants on the Pacific coast.

In 1908 he was in charge of an administrative office of the Forest Service at Albuquerque, N. M., developing wood utilization lines for the national forests of that region. In 1909-1910 he was sent to England,

O. T. SWAN, NEW SECRETARY NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS' ASSOCIATION.

France and Germany to investigate lumbering, wood utilization and chemical wood preservation treatments in those countries, and on his return he introduced into the United States the French Boucherle pole preserving process for use on the national forests, and on sap pines of the Southeast.

In 1910 he was placed in charge of the eastern division of the branch of products of the Forest Service, which work, upon the discontinuance of the Chicago office absorbed the latter, and the entire work is now given national scope and administrative direction, and is designated as the office of Industrial Investigations. As chief of the latter office Mr. Swan has organized lines of work dealing in commercial investigations of interest to the lumber and wood-using trades. He has followed the work of trade association secretaries through correspondence, reports, and personal acquaintance, and by frequent attendance at trade conventions. He has had the opportunity of meeting all of the lumber association secretaries and those of many other related trades in their home offices where their work and problems were reviewed and the work of the Forest Service correlated. He has had the opportunity of studying conditions through travel in every state in the Union, and of discussing with the leading men in the principal industries their various trade problems in their broader aspects.

Through annual details to the Forest Service Laboratory at Madison, Wis., and visits to other research laboratories in the eastern United States he has been in close touch with the latest research on wood problems.

He has prepared reports on timber treating policies for twelve different companies, including the Boston Elevated, the Pacific Light and Power Company, Los Angeles, Cal., and the San Joaquin Light and Power Company, Fresno, Cal., and certain railroad companies. He has been in charge of a detailed study at certain navy yards in order that reports might be prepared on methods of specifying purchasing and storing lumber, and on

the adaptability of the various kinds of lumber for the various purposes required at navy yards.

The duties of the branch of Industrial Investigations which has been in charge of Mr. Swan since its establishment in Washington are essentially commercial researches. The office is charged with investigating the methods, prices, products, waste, utilization, and other economies of the lumber industry and the several important wood-consuming industries.

The application of the results of the work of this office is brought about through cooperation in commercial demonstrations with the industries, trade associations, and government bureaus, through travel and public addresses, and conferences with influential men, through the publication of thirty bulletins annually with a combined circulation of approximately 250,000, and a large weekly correspondence on special problems.

Mr. Swan is a member of the Society of American Foresters, the committee of structural timbers of the American Society for Testing Materials, and the committee for the standardization of shipping containers.

With the Southern Pine Association

The Southern Pine Association surely seems to be getting busy in a hurry, and already has a full force of inspectors in the field both among the mills and on complaint work, who have been working for about thirty days. The inspection service will be extended to non-subscribers on the basis of \$10 per day for the service of the inspector, plus traveling expenses.

The most important development recently was the appointment of Andrew J. T. Moore of New Orleans as traffic manager. Mr. Moore took up his new duties on the first of March. He has been assistant commissioner of the transportation department of the New Orleans Board of Trade, and is well known in traffic circles in other parts of the South.

The board of directors of the association met in the Lumbermen's Club building at Memphis on Friday, February 26. A more complete report of this meeting is contained on another page of this issue.

One announcement which was made at the meeting is that the association is working with the committee on standard freight car designs of the American Railway Association subcommittee on designs and specifications, of which G. L. Wall is chairman. The purpose of the committee is the drawing up of designs for standard specifications for use in cutting yellow pine car material.

Other meetings referred to in the recent literature sent out by the association are the meetings of the Texas lumbermen at Beaumont, Saturday, March 6, and the Mississippi manufacturers at Laurel, February 19.

Nashville Club Presents Excellent Report at Commercial Club Annual Meeting

The Lumbermen's Club of Nashville, through President Henderson Baker and Secretary Cecil Ewing, submitted a report to the Commercial Club of Nashville, to be used in the annual report of that body for 1914. The Lumbermen's Club became affiliated with the Commercial Club of Nashville on its re-organization.

The meetings were held weekly during the past year with a full attendance at practically all meetings. The report called special attention to the work of the transportation committee, referring particularly to rates on lumber affecting Nashville shippers. It also called attention to the trading on the floor at the meetings, during which many cars of lumber have changed hands among the club membership, the result of this being that an order received locally by Nashville lumbermen does not go out of Nashville if any members of the club can furnish the stock at the price offered.

The report cited a complaint recently filed for the club by T. M. Henderson, commissioner of the Nashville Traffic Bureau, and several other rate matters, in which were the complaints against the N., C. & St. L. railroad on log rates from local stations and against proposed advances in rates on the same road from Nashville and Chattanooga. In both these cases the railroad was successful.

ANDREW G. T. MOORE, RECENTLY APPOINTED MANAGER OF THE SOUTHERN PINE ASSOCIATION.

Jackson Club Holds Meeting

The recently organized Lumbermen's Club of Jackson, Tenn., held its semi-monthly meeting on February 26, in the office of Fetterman & Richardson. It was attended by about thirty representatives of the following concerns: Weis & Lesh Manufacturing Company, Fetterman & Richardson, Ashby Veneer & Lumber Company, Harlan-Morris Manufacturing Company, Tennessee Oak Flooring Company, Bedna Young Lumber Company, Budde-Weis Manufacturing Company and the Southern Seating and Cabinet Company. The membership is made up of those engaged in lumber or woodworking industries in Jackson.

Secretary Richardson was not present owing to sickness, and J. L. Fetterman occupied his chair.

Several questions of importance were brought up and disposed of by President C. F. Rae; among these was the question of the acceptance of the invitation extended by the Merchants & Manufacturers' Association to affiliate with it and use its quarters. It was decided after discussion that the club will co-operate with the association in all matters of mutual interest, but will maintain separate quarters and continue to use space as before in the Cantrell building.

President Rae appointed a committee to secure the necessary furniture to equip the new quarters before the next meeting, which will occur two weeks hence. When the quarters have been equipped, the club will be open at all times to members and friends. Active plans were discussed for increasing the membership, as there are a large number of prospective members in nearby towns.

One object of the club is to advertise Jackson as a lumber and woodworking center, to manufacturers in surrounding territory and to the lumber industry as well. That Jackson's advantages are being recognized is evidenced by the large number of institutions which have located there during the last few years.

The reports of the activities of Jackson lumbermen in the last week or so show that C. F. Rae of the Tennessee Oak Flooring Company returned from a trip from Nashville and contingent points, and that F. L. Donnell, sales manager of the Bedna Young Lumber Company, who is located at Greensburg, Ind., spent a few days at the Jackson mill last week.

Manufacturers to Meet at San Francisco in May

The annual meeting of the National Lumber Manufacturers' Association will be held at San Francisco, May 11-13. The management of the Lumbermen's building and House of Hoo-Hoo have offered facilities for meeting on the exposition grounds that have been accepted by the board of governors of the National Lumber Manufacturers' Association, which will enable delegates to attend the meeting and visit the fair at the same time.

The program for the National meeting will be in the nature of a continuation of the program at Chicago in May, 1914, which was devoted to the merchandising of lumber. It is expected that the addresses and discussions will relate to such questions as trademarked lumber, educating the consumer, the cost and efficiency of production, trade extension, the function of manufacturers' associations and the public interest in the economics of production. Since the National association has not held a meeting on the Pacific coast since the one in Seattle in 1909, there will be especial features on the program at San Francisco which will appeal to the coast members of the association and also to visiting lumbermen from the East.

All lumbermen who are planning a visit to the West coast this year should plan their trips so that they can take in the San Francisco meeting. It will be an event which they cannot afford to miss.

Details of the program are being worked up and will be announced as soon as possible.

Baltimore Exchange Discusses Important Questions

The quarterly meeting of the Baltimore Lumber Exchange, which took place at the Merchants' Club on March 1, was more largely attended than usual, and exceptional interest was manifested in the proceedings. Robert E. Lee, Mayor Preston's secretary, made a brief address in which he sought the cooperation of the members in all matters tending to promote the welfare of the city, promising in turn that the mayor would aid in all endeavors which the lumbermen might make to advance the special interests of their business. Mr. Lee is the head of what is called the convention committee, which aims to bring national gatherings here, in pursuance of which aim, information relative to the advantages and progressiveness of Baltimore is sent out. He urged the members to assist him in this work.

Mr. Lee was followed by C. M. Rowe of the Heller Industrial Film Company which is engaged in bringing different industries before the eyes of the public through moving pictures. Mr. Rowe proceeded to point out that moving pictures were the latest and most effective means of advertising, and suggested that a film showing the progress of the lumber industry from the felling of the tree in the forest to the planing mill would not only be highly instructive, but would bring the utility of lumber more clearly to the notice of buyers than any other means. He said that he was prepared to confer at length with the exchange as a body or with individual firms and corporations which might desire to make use of moving pictures.

The minutes of the annual meeting last December were read and approved. The treasurer's quarterly report showed that the financial condi-

tion of the exchange is excellent. A proposal, notice of which had been previously given, to repeal several clauses of an article in the by-laws, relative to the division of the cost of inspection between buyer and seller, came up and was adopted. Under the change the cost will be equally divided, instead of as heretofore, the seller paying twenty-five cents and the buyer fifteen cents per 1,000 feet. This has been the actual practice in hardwoods for some time, as a matter of fact, and was merely extended to other woods. Of course, the rule does not prevent private agreements on a different basis.

The amendment to the by-laws, requiring that at the next annual meeting four members of the managing committee be elected for one year, four for two years and four for three years, four being elected thereafter annually, which would in effect have made the committee continuous, instead of electing all twelve members annually, was brought up but voted down. Some members felt that the change would be inadvisable, since it would prevent the getting rid of a member of the committee who might have become objectionable, except by requesting him to resign, which would be productive of ill-feeling.

After the business session the members sat down to an excellent luncheon.

Memphis Club Entertains Yellow Piners

The regular semi-monthly meeting of the Lumbermen's Club of Memphis, which is ordinarily held Saturday at noon, was held Friday evening, February 26, at the Hotel Gayoso. This change was made in order that the club might entertain the directors of the Southern Pine Association, who were in session here that day. A delightful dinner was served. About twenty members of the association were present. The banquet hall of the Hotel Gayoso was beautifully decorated for the occasion and the evening proved a very enjoyable one. President Kadel acted as toastmaster. Included in the guest list were Charles S. Keith, president of the association; M. H. Sullivan, Bogalusa Lumber Company, Bogalusa, La.; John H. Kirby of the Kirby Lumber Company, Houston, Tex., and J. E. Rhodes, secretary.

President Keith said that he could not see anything very brilliant in the present outlook and that he did not anticipate that there would be any decided revival in the lumber business until after the close of the European war, but that, with this over, there would be a substantial boom in which both the hardwood and yellow pine people would participate. He referred to the expansion in business which followed the Spanish-American war and believed that something similar would be seen at the conclusion of hostilities in Europe.

Both Mr. Sullivan and Mr. Keith spoke very briefly. J. E. Rhodes, who attended the recent meeting of the Forest Products Federation at Chicago, gave a very interesting account of the proceedings of that body. He thought the national movement in behalf of lumber as against substitutes launched at this meeting a step in the right direction and that everybody identified with the lumber trade should lend every possible aid. It will be recalled that, at the last meeting of the Lumbermen's Club, an appropriation to help defray the expenses of the federation was made.

The meeting of the directors of the Southern Pine Association was held in the rooms of the Lumbermen's Club in the Business Men's Club building. These gentlemen were assured that they were at perfect liberty to make use of these rooms whenever they met here. Subsequent to this meeting, it has been announced that, while the permanent headquarters of the association are at New Orleans, all directors' meetings will be held in Memphis because of its greater accessibility to the members.

All of the speakers were enthusiastic in their praise of the hospitality shown by the Lumbermen's Club of Memphis and expressed their appreciation not only of the use of the rooms in question but also of the excellent entertainment provided for them.

Practically no business was transacted aside from the election of three new active members, as follows: Horace F. Harwell, Geo. C. Brown & Co., Proctor, Ark.; Thomas R. Winfield, president of the Cole Manufacturing Company, and Paul Rush, secretary and treasurer of the Kiel-Kadel Lumber Company.

The membership committee also reported one new application for associate membership. This will be acted upon at the next regular meeting two weeks hence.

Southern Traffic Bureau Files Rate Protests

The Southern Hardwood Traffic Association has, through its governing board, decided to file a petition with the Interstate Commerce Commission against the advance of three cents per hundred pounds on shipments of hardwood lumber from Arkansas to all eastern points except New York. These higher rates became effective March 1, and the St. Louis, Iron Mountain & Southern, the Rock Island, the Frisco, and others are the roads against which the petition is directed.

The association a short time ago decided also to file a petition against existing rates from southern producing points to Texas common points. This decision was reached on the ground that rates from Texas common points eastward are measurably lower than those on west-bound shipments, according to a statement made by J. H. Townshend, general manager of the association.

The association has likewise filed a petition against rates from certain southern points to Sioux City, Ia.

Three new members have recently been elected by the association as follows: George C. Ehemann & Co., Memphis; Phil Ryan Lumber Company, Onalaska, Tex., and the Churchill-Milton Lumber Company, Louisville, Ky.

An active campaign for new members is being made to the end that the association may be increased in efficiency through larger support. The river and rail committee of the Memphis Lumbermen's Club is taking an active part in securing new members for the association which is doing the work formerly done by that committee and which is handling hardwood traffic matters in a larger way.

Club Protests Free Jap Oak

The importance of the Cincinnati Lumbermen's Club, as an organization of representative Cincinnati citizens and whose close affiliation with other industries is necessary to the benefit of the municipality, was recognized at a recent meeting of the organization at the Gibson hotel, when an invitation was extended to the members to become associated with the Chamber of Commerce of Cincinnati. This action was voiced and strongly advocated by W. C. Culkins, secretary of the Chamber of Commerce, and Guy M. Freer. The club membership as a body appeared strongly in favor of such a proceeding, when the mutual advantages were explained by the Chamber of Commerce committee. Henry J. Lewin, H. J. Pfister and J. W. Graham were appointed as a committee by the lumbermen to make further findings in the proposition and report the results of their efforts at the next regular meeting.

The most important business transacted was the adoption of resolutions protesting against the importation of Japanese and Siberian oak into the United States free of duty as is now the situation under the present tariff law. The club based its action upon the well-grounded theory that the importation of such lumber free of duty is a discrimination against the American manufacturer and laborer. It was decided to extend the protest throughout the Central West, and Secretary J. A. Bolser was authorized to organize the lumber clubs in this section as a unit in protesting against the continued operations of the existing oppressive tariff law.

With Guy M. Freer, head of the traffic department of the Chamber of Commerce, as their spokesman, a delegation of Cincinnati lumbermen appeared before the state senate committee on public utilities to urge a favorable report on proposal No. 43, which, if enacted into law, would empower the Public Utilities Commission to suspend the railroad tariffs throughout the state of Ohio. The arguments presented by these gentlemen were so convincing that the senate committee, by a unanimous vote, adopted a favorable report on the measure. Little opposition is expected to materialize in either of the two houses of the legislature, and the aims of the lumbermen will be realized soon. The passage of this measure is expected to act as the forerunner of considerable of a boom in the lumber business throughout the state. Similar legislation has been obtained or is now being agitated in many states of the Union.

Hoo-Hoo Quarters Formally Opened

The Lumbermen's building and House of Hoo-Hoo at the Panama-Pacific International Exposition was opened on March 5, a special festival day created for the occasion. The program included a reception given by the exposition officials, and a parade with band and military escort to forestry court, Horticultural South gardens.

The building was dedicated by F. W. Trower, past snark of the universe, assisted by R. A. Hiscox, and local Hoo-Hoo men. The dedication took place at 11:15 a. m.

A bronze plaque was presented by C. C. Moore, president of the exposition, to the board of governors of Hoo-Hoo as an evidence of appreciation of co-operation. The plaque was accepted by J. R. Hanify, first vice-president of the board of governors.

A public band concert took place in the forestry court in the evening, followed by a reception, house warming and informal dance.

The house and social committee was composed of W. A. Hammond, chairman; C. E. DeCamp and C. R. McCormick.

With the Trade

Not Intended as an Evolution in Sawmilling

The last issue of HARDWOOD RECORD contained an advertisement of the Wm. E. Hill Company, sawmill machinery manufacturer, Kalamazoo, Mich. In some way the cut illustrating an imaginary section showing the log deck of a sawmill, the steam nigger and similar equipment, got turned upside down so that the machinery seemed to be suspended from the ceiling and the log to be held on the carriage by some unseen force. Occasionally something of this sort does get by as it did in this case, and HARDWOOD RECORD hastens to correct any wrong impression that might have been created by the insertion of the ad in this manner. As the company states, it did not mean a machine for an overhead log turner, nor the carriage for a hanging one.

The Last Big Circassian Shipment Received

R. S. Bacon, president of the R. S. Bacon Veneer Company, Chicago, stated last week that he had just received word from New York that the Italian line steamer Orscola from Palermo was due at New York, and contained a large cargo of exceptionally high-grade Circassian walnut logs. These logs left the Black sea on a Hamburg-American steamer on August 1. This was the last German boat out of the Black sea. It passed through the Dardanelles on that date. It stopped at Barcelona and Syracuse, transferring the cargo at the latter point to the steamer

which carried the logs across the water. The boat left Palermo on February 10.

Considering the exceptional scarcity of Circassian walnut logs, due to the complete tying up of the usual means of transportation by which these timbers are brought to this country, the cargo should be worth almost its weight in gold. Mr. Bacon has made a very thorough study of the Circassian walnut situation and states decidedly that there cannot be other than a serious shortage of Circassian at a very near date. He considers himself to be exceptionally fortunate in having secured a shipment of logs which when originally described at the time it was started out, was said to be of exceptional merit. The logs have been held up some time on account of the difficulty in getting transportation. In fact, it was thought at one time that they were permanently lost. Their final arrival in this country is certainly a fortunate occurrence for the R. S. Bacon Veneer Company.

Changes in Evansville Firm

At a meeting of the stockholders of the Evansville Veneer Company at Evansville, Ind., held about a week ago, George O. Worland, Allen Gray and R. R. Williams, purchased a large block of stock that had been held by the Frosts' interests at Sheboygan, Wis., and also by interests in the northern part of Indiana. At the conclusion of the deal, Charles W. Talge of Evansville was elected president; R. R. Williams, vice-president and George O. Worland, secretary-treasurer, and Mr. Talge, Mr. Worland, Mr. Williams and Mr. Gray were elected directors.

The Evansville Veneer Company began business at Evansville ten years ago, and now operates one of the largest veneer plants in the United States. Mr. Talge has been secretary and treasurer of the company during this period.

Mr. Worland, the newly elected secretary and treasurer, has been in Evansville for nine years and has been associated with the Evansville Veneer Company for the last four or five years. He was secretary and treasurer of the Evansville Lumbermen's Club for many years. Both Mr. Talge and Mr. Worland are considered as authorities in the manufacture of plain and fancy wood veneers. The remarkable growth of the business of the Evansville Veneer Company is ample testimony of the truth of this belief.

Purchases Large Hardwood Stocks

The Maddox Table Company, Jamestown, N. Y., announces it has just purchased the entire stock of the Union Lumber Company at Jamestown, consisting of about 1,500,000 feet of hardwoods composed of ash, cypress, oak, maple, poplar, cherry and chestnut. The remarkable feature of this stock is that it contained at time of purchase over two cars of No. 2 common. Harry Krieger was personally responsible for the purchase. Mr. Krieger had been connected with the Maddox Table Company about fourteen years.

A great deal of the lumber will be used in the factory of the Maddox Table Company, and the rest such as ash, cherry and chestnut, will be disposed of by L. L. Amidon.

New Firm Buys Cincinnati Business

The Probst Lumber Company, organized by W. S. Probst, former secretary of The Prendergast Company, Cincinnati, and manager of the Cincinnati branch of The Prendergast Company, has taken over the business of the latter institution to maintain offices formerly occupied in the name of The Prendergast Company in the Third National Bank building, Cincinnati.

The Probst Company will specialize in hardwood lumber, car timbers, yellow pine, and will also do business in switch ties which it will handle on a wholesale basis. The company will also maintain offices at 747 Railway Exchange, Chicago, Ill.

Will Travel in Wisconsin for Goodman Interests

J. J. O'Brien of Oshkosh, Wis., formerly with the Payson Smith Lumber Company of Minneapolis, has been engaged by the Sawyer-Goodman Company and the Goodman Lumber Company of Marinette and Goodman, Wis., respectively. Mr. O'Brien will travel through Wisconsin selling hardwoods for these two institutions, and he will continue to make his home at Oshkosh.

Investigating Wood Utilization

C. S. Smith and C. A. Kuyper of the United States Forest Service office at San Francisco spent part of last week in Chicago. They are engaged in the government's study of wood utilization which has been in progress for several months, and is nearing completion. They came to Chicago from Minnesota, where they were at work, and will proceed to the South, where they expect to remain for some time.

Wisconsin State Forester to Resign

At a recent hearing on the much argued forestry question in Wisconsin, State Forester E. M. Griffith, who has had charge of Wisconsin forestry work for the past seventeen years, stated that he is going to resign at the end of the present legislative session. The hearing was being held before a special committee investigating the consolidation plans for the various state agencies. Mr. Griffith's step was taken probably on account of the fact that politicians have been endeavoring to mix up in the forestry work, and he has found that he cannot work effectively when confronted with unintelligent opposition.

Mr. Griffith is considered one of the leading American foresters. He took the present position during the administration of Governor LaFol-

lette, being recommended by Gifford Pinchot, at that time chief forester of the United States. He is a personal friend of both Gifford Pinchot and of the present chief forester, Henry S. Graves.

Mr. Griffith studied and practiced practical forestry in Germany, and at one time was in charge of forestry at the Biltmore estate of the late George W. Vanderbilt. He laid out the Black Hills National forest, and was second in rank on the forestry staff that went to the Philippines and established forestry there after the United States took possession of the islands.

Pertinent Information

Hearing on New York Lighterage

The whole matter of lighterage regulations and facilities for receiving and distributing freight in New York was aired at a hearing before Examiner Burnside held in New York on March 3. The lumber interests of the city are especially concerned because of the proposition to charge twelve cents per ton for loading and unloading over the stringpiece, a service heretofore required to effect delivery. It is held by receivers of freight that the staff must be placed at an accessible point for unloading—such as team tracks—and the three cents per one hundred pounds now charged for lighterage pays for this service. The roads opened by putting on the stand a number of witnesses to give expert testimony as to conditions in the city, and especially in Manhattan. They showed a surprising lack of knowledge and evaded many questions put by representatives of protesting consignees. The lack of facilities for making team track deliveries makes necessary the lighterage of by far the larger proportion of freight that comes to the city. The effect of the proposed regulation with its charge for unloading is virtually asking the consignees to do a service they are paying for in the freight rate. The National Wholesale Lumber Dealers' Association and the New York Lumber Trade Association are among those protesting.

Arguments Completed in Frisco Rate Case

The case of the St. Louis & San Francisco Railroad Company against the railroad commissioners of Arkansas, commonly referred to as the Frisco rate case, is now in the hands of the United States district court of Little Rock. The arguments in this case, which is one of the three remaining out of nineteen originally brought against the commissioners in 1908, were completed last week by Judge Joseph M. Hill of Fort Smith, representing the state and railroad commission, and Judge John M. Moore of Little Rock, representing the railroad, and the case submitted to Federal Judge Jacob Trieber. Owing to other regular and heavy work of the court, it is probable that this case will be kept under advisement for some time, as the voluminous character of the testimony and briefs will command long hours of reading and much consideration.

In 1908, during the month of September as above mentioned, nineteen of the railroads in Arkansas brought suits in the federal court, asking temporary restraining orders against the members of the Arkansas Railroad Commission to prevent their enforcing the rates as prescribed in standard freight distance tariff No. 3 and the two-cent passenger fare rate as fixed by the general assembly in 1907. Upon the showing made by the carriers, and the making of acceptable bonds, the federal court granted the temporary injunctions. By agreement of counsel only the Iron Mountain and Cotton Belt cases were proceeded with. These two cases were decided by the supreme court of the United States in July, 1913, the holding being that the railroads had failed to show by their evidence that the rates as fixed by standard freight distance tariff No. 3 and the two-cent passenger fare rate were too low, or confiscatory, as claimed by the railroads, and the lower court was directed to dismiss the injunctions.

After that was done the Rock Island and nearly all of the smaller roads agreed to put the commission's rates into effect and compromised the claims for refund against them with the shippers and consignees. This policy was not followed, however, by the Frisco and Kansas City Southern. They were not satisfied with the showing made by the Iron Mountain and Cotton Belt, and have been engaged, along with the attorneys for the commission, for some time in taking their testimony, using a new formula or different system of showing earnings, expenses and net income of the company from its Arkansas business. Considerable interest is being manifested in this matter, as the same kind of plan for making their showings before the courts will likely be adopted in other state rate cases. The taking of testimony in the Frisco case, which will by agreement determine that of the Kansas City Southern, was completed in November of last year, the intervening time being used by counsel in preparing their briefs and arguments for the court.

The Tap Line Case

In the fourth supplemental order in the tap line case the Interstate Commerce Commission has handed down an order of much interest to lumbermen. The ruling in full is as follows:

Upon further consideration of the above-entitled case, and, IT APPEARING, That since the original and supplemental reports and orders in the above-entitled proceeding certain of the tap lines named therein have surrendered their charters and discontinued operations as common carriers, and that in the third supplemental order entered in said proceeding certain other tap lines that had been previously dismissed as parties thereto were permitted to receive allowances or divisions from their

respective trunk line connections on shipments moving between May 1, 1912, and the effective date of the orders respectively dismissing them from the force and effect of the orders entered prior thereto:

IT FURTHER APPEARING, That since the original and supplemental reports and orders in this proceeding, and in conformity with the views of the commission as announced therein, applications have been made by carriers for permission to make allowances under section 15 to lumber companies for switching between their respective mills and the rails of the carriers:

IT FURTHER APPEARING, That carriers have heretofore been granted permission to pay to certain lumber companies allowances under section 15 for services in switching lumber from their respective mills to the trunk line connections, and that certain of these lumber companies have filed petitions for reparation in the amount of such allowances on shipments moving from May 1, 1912, to the date upon which such allowances were authorized:

IT IS ORDERED, That the maximum allowances or divisions fixed in the second supplemental report and order herein shall apply to tap lines which surrendered their charters and discontinued operations as common carriers prior to July 29, 1913, and that allowances and divisions in conformity therewith may be paid to such lines by their respective trunk line connections on shipments moving from May 1, 1912, to the date of discontinuing operations as common carriers; provided, that the amounts of allowances or divisions which have been paid on the same shipments under the terms of previous orders shall be deducted therefrom; and provided further, that each defendant carrier so adjusting a claim or claims for allowances or divisions hereunder shall file with the commission a detailed statement of all payments so made, each such statement to be certified to as complete and correct by the principal accounting officer of the carrier making the same, and to show as to each shipment the date, point of origin, junction point, weight as billed, amount of allowance, amount paid under previous orders of the commission and amount paid under this order.

IT IS FURTHER ORDERED, That allowances to lumber companies under section 15 for switching between the mill and the trunk line connection may be made on the basis of the maximum amounts fixed in the second supplemental report and order herein; namely, for switching a distance of one mile or less from the junction \$2.00 per car; over one mile and up to three miles from the junction \$3.00 per car; provided, that before such allowances may be made effective, applications therefor shall be submitted to and approved by the commission.

IT IS FURTHER ORDERED, That carriers which are granted permission under the terms of this order to make allowances under section 15, and carriers which, as hereinbefore stated, have on various dates been granted such permission, may make allowances not in excess of the amounts herein named; provided, that to lumber companies which had received allowances under section 15 from their respective trunk line connections prior to May 1, 1912, carriers may make allowances not in excess of the amounts herein named on shipments moving subsequent to May 1, 1912; and that to lumber companies which had not received allowances prior to May 1, 1912, but to which carriers have heretofore been granted permission to make allowances, carriers may make allowances not in excess of the amounts herein named on shipments moving from and after the date of the application upon which such permission was granted; and that carriers which have filed applications for permission to make allowances under section 15 which have not been acted upon, and those which may file such applications under the terms of this order, will, upon approval by the commission, be authorized to make allowances based on the amounts named herein from and after the respective dates of such applications; provided further, that the amounts of any allowances or divisions which may have been paid on the same shipments under the terms of previous authorizations by the commission shall be deducted therefrom, and that nothing in this order shall be construed as authorizing payment of allowances or divisions on traffic moving prior to May 1, 1912; and provided further, that each carrier adjusting claims for allowances hereunder shall file with the commission a detailed statement, properly certified to by its accounting officer, of all payments made under this or previous authorizations, each such statement to show as to each shipment the date, car number, amount of allowance, amount paid under previous authorizations, and amount paid under this order.

Missourians Protest Intrastate Increase

The Missouri Public Service Commission listened to objections of shippers of lumber Wednesday, February 24, at the Jefferson Hotel, in regard to the 2 to 3 cents per hundred increase in freight rates on lumber on intrastate shipments. Data had already been submitted by the railroads to the commission to prove their right to the increase.

The hardwood lumber interests were represented by Earl Kaufman, traffic manager of the Thomas & Proetz Lumber Company, Chas. L. Harrison of the Himmelberger-Harrison Lumber Company, Cape Girardeau, Mo., Charles E. Thomas of the Thomas & Proetz Lumber Company, St. Louis and president of the Lumbermen's Exchange of St. Louis, and George Funck of the Funck Lumber Company, St. Louis and representing the Lumber Dealers' Association of St. Louis.

They testified that owing to the bad condition of the lumber business, they could not stand an advance, that hardwood lumber would be most affected by the advance, owing to its being found in small parcels and cut by small mills which were not in a position to get the full value out of it as the larger mills did, and for that reason most of them would have to go out of business if the advance were made.

The expert testimony was given by Mr. Kaufman, who submitted to the commission a number of exhibits, tables, etc., which he explained in full. He showed the commission statistics concerning the lumber industry and the consumption of hardwood lumber in Missouri, comparisons with construction material past, present and future.

The resolutions of the Lumbermen's Exchange, protesting against the advance and quotations from the Interstate Commerce Commission's opinion in the W. H. Tift case, No. 398, which recognized the lumber industry had its troubles as well as the railroads, concluded the testimony.

Probable Extension of Chicago Fire Limits

The building committee of the city of Chicago gave final consideration to the hearing on the proposal to extend the fire limits. The hearing was held at the City Hall on Tuesday, March 2. The most important result of the meeting was to make a final draft describing the area to come under the proposed new limits, which draft was submitted to the corporation counsel for his guidance in framing the new ordinance sug-

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform. The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

gested. Those advocating fair treatment scored at least a partial victory in an ultimate recommendation to cut the proposed extension of about forty square miles to an area comprising only about twenty square miles.

On motion it was decided to consider the newly embraced area extending beyond the limits of the old fire lines and up to the newly described limits as a provisional fire area wherein the construction of frame houses would be allowed on the consent of the majority of property owners in any block in which such structure is proposed. This is in contradiction to the former provision covering this question, which specifically states that the consent must come only from the majority of those in a block on the same street as is the new structure.

A Typical Western Logging Train

On this page is shown a photographic reproduction of a logging train of the standard type of equipment used by northern lumber companies on the Pacific Coast. It will be seen in the exhibit by the Macloud River Railway Company at the Palace of Transportation at the Panama Exposition.

The locomotive was built by the Baldwin Locomotive Works of Philadelphia, Pa., especially for heavy logging service. The logs shown on the flat cars are fastened with chains and grab hooks just as they are

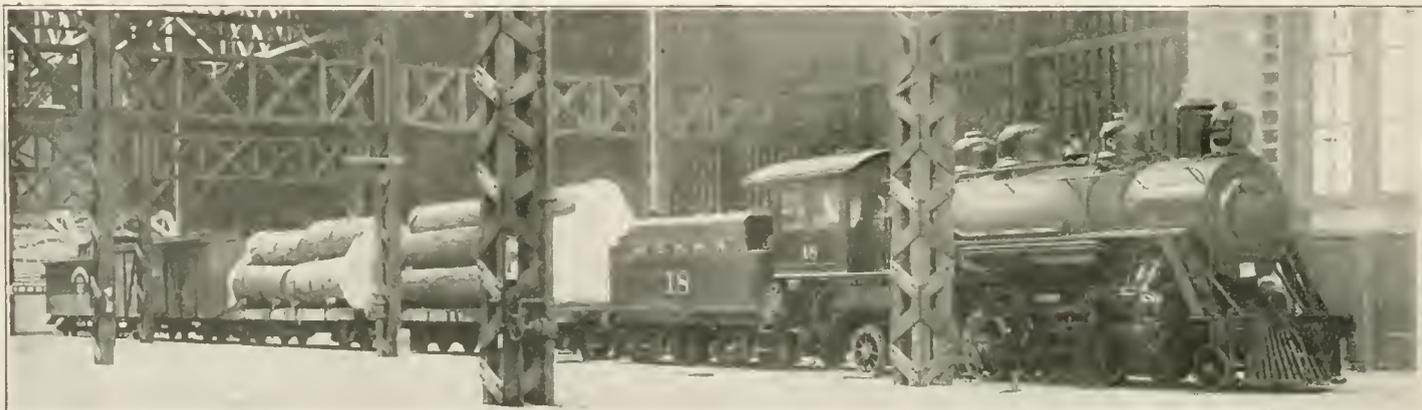

loaded in the woods for shipment to the mills to be sawed into lumber. They are sugar pine logs coming from the slopes of Mt. Shasta and designed to go into boxes, mouldings and various household building materials.

January Lumber Cut and Shipments

The National Lumber Manufacturers' Association's report which compares lumber cut and shipments in January of this year with those of 1914, shows a total cut this year of 459,600,000 feet, and 539,000,000 feet in January last year. The decrease amounts to 79,400,000 feet. In January, 1914, total shipments were 584,600,000 feet, and in the corresponding month this year 497,800,000 feet, a decrease of 86,800,000 feet. In 1914 the January cut was 45,600,000 less than shipments. For January of this year the cut was 38,200,000 feet below shipments.

Hamburg Market Report

The business situation in Germany may be described as extremely strong, it being now generally acknowledged that it has been a very wise policy not to declare a general moratorium, which would have brought business to a standstill and threatened the sound financial structure of commercial life, while by abstaining from such an unneces-

TYPICAL LOGGING LOCOMOTIVE USED IN PACIFIC OPERATIONS, MANUFACTURED BY THE BALDWIN LOCOMOTIVE WORKS OF PHILADELPHIA, PA.

sary measure, the activity in all quarters is constantly improving. Some industries, of course, are not running at full capacity owing to the war, but others are working day and night to execute orders. Plenty of money is available at a rate unknown for many years, notwithstanding the fact that over \$1,100,000,000 has been paid in on the big government loan only a comparatively short time ago.

Thus it may be expected that the large consumption power of this market for all kinds of American hardwoods will show a further advance as soon as peace has been restored and shipments will become possible.

Black walnut stock in first hands have been cleared entirely, except a few lots of common lumber. Firsts and seconds boards, especially 1 inch thick, will find a ready market after hostilities will have ceased. The demand for small (suitable for boards) and medium wood was very keen of late and no stocks are left in first hand. There are still a few hundred veneer logs, but these too will probably be sold before long. Prices obtained have gone up a good deal. All kinds of logs will be wanted after close of the war and shipments are strongly recommended to this port immediately shipping conditions will allow this.

White oak lumber was in good request, especially No. 1 common. Prices advanced steadily. There were no stocks of logs available at the beginning of the war and little demand for fine grained, mild white-colored wood.

Cottonwood stocks on hand have been cleared and prices increased. Sap as well as tupelo gum lumber will find buyers at satisfactory prices as soon as imports again can be made. No stocks are left.

All stocks of poplar logs have been sold at good prices and there was a fair demand. Imports especially of medium and large wood, suitable for veneer purposes, will fetch good prices as soon as normal conditions again prevail.

The few parcels of hickory logs left at the beginning of the war were sold almost immediately after the outbreak of the hostilities and very good prices were paid. Although this wood, as well as ash, is used to a very large extent for war purposes, new shipments would be very much appreciated after peace will again be in Europe.

Prices for ash logs have advanced more than one hundred per cent by now. Although the quality of the stocks still on hand at the end of July was rather inferior, same could be sold at high prices. The shipment of further parcels is recommended as soon as transport conditions will permit this and the season at that date will not be too advanced for this material.

Magazine Changes Name

The title of the official organ of the American Wood Preservers' Association has been changed to *Wood Preserving*. It will be published quarterly at Baltimore, Md., and is devoted to the industry set forth in its name. C. C. Schnatterbeck is managing editor of the publication. It has an important field to cover and is performing its task well.

Wooden Floors for Mills Advocated

The *Paper Mill*, a publication devoted to the paper industry, recently contained an article on the kinds of floors best suited to paper mills. Wood was given preference to all others. It is less dusty than concrete, is much easier on the feet of workmen, and in winter is warmer, and workmen are able to do more work, and with more comfort to themselves than when they work on hard concrete floors. The ideal floor for the paper mill is said to be that made from creosoted wooden blocks.

Walnut and Other Woods Wanted

An American consular officer in Russia reports that a business man in his district wishes to make a cash purchase of first-class mahogany boards of 1 to 4 inches in thickness, 7 inches wide, and 7 feet and up long; American walnut of the same dimensions and quality; square beams of mahogany not thinner than 28 inches for veneer; square beams of American walnut of the same dimensions; and blocks of rosewood of the East Indian variety, 18 inches wide, as well as blocks of amaranth, ebony, palm, lemon, etc. Correspondence should be in Russian. Persons in the United States who might want to look into this prospect can procure the name and address of the parties in Russia by writing to the Bureau of Foreign and Domestic Commerce, Washington, D. C., and giving the index number, "Lumber No. 15686."

Rattan Embargo

On February 22, 1915, the British government prohibited the exportation of rattan from the Straits Settlements to other than British ports. That will cut off the chief part of this article which has been reaching the United States. Large quantities of good grade rattan are available in the Philippines, but there is no present organization for exporting it. The Bureau of Foreign and Domestic Commerce at Washington has just published a report on Philippine rattan which contains valuable information.

Spain Selling Timber

Spain is one of the last countries from which timber exports would be expected. It is commonly reported to have been stripped of its forests three or four hundreds years ago. Yet it appears that some timber is still to be had in that country, and that the disorganization of trade on account of the war has brought this timber into notice. The London *Timber Trades Journal* recently stated that with the cutting off of supplies of foreign hick on account of the war, and the great demand of wood of all kinds

WE WANT WALNUT
 If you have Black Walnut Logs 14" and larger in diameter and 8' or longer in length, write us for prices and particulars. We are in the market now for two million feet.

at good prices, it is interesting to note that a concession is being offered of about fifty miles of forest in Spain consisting principally of beech, with some oak and spruce. The forest is well situated in regard to railways and shipping ports, freights even in these hard times would not be by any means excessive, while as an extra inducement large orders for timber are waiting.

Hardwood News Notes

MISCELLANEOUS

Receivers have been appointed for the Virginia Veneer Company at Jarrett, Va.
 William S. Whiting of Asheville, N. C., has opened up a hardwood office at Elizabethton, Tenn.
 The New Albany Cabinet Company has been incorporated with \$10,000 capital at New Albany, Ind.
 At St. Louis, the Rotary Washing Machine Company had increased its capital stock to \$125,000.
 The J. H. Allen Company, Cllo, Ark., manufacturer of hardwood lumber, is reported to have moved to St. Louis, Mo., and to have taken

offices in the Boatmen's Bank building. The mills are located at Junet, Ark., and Minter City.

The Saline River Lumber Company, a wholesale hardwood lumber institution, has started business at Minden, La.

The Foley & Williams Manufacturing Company of Chicago and Kankakee, Ill., has been placed in the hands of L. Small, trustee in bankruptcy.

The Mt. Vernon Woodworking Company has been incorporated at Mt. Vernon, N. Y., with an authorized capital stock of \$50,000.

At Pekin, Ill., the Pekin Cooperage Company has purchased six or eight smaller concerns and has raised its capital stock from \$500,000 to \$1,750,000.

It is reported from Wheeling, W. Va., that a newly organized firm known as the Wheeling Planing Mill Company has taken over the holdings of the W. W. Wood Planing Mill Company.

The American Thread Company, a large corporation in the East, is reported to be in correspondence with the Copper Country Commercial Club of the upper peninsula of Michigan regarding the possibility of locating a spool mill at that place. The requirement is a supply of white birch. It is said that a tract of 90,000 acres has been located at a convenient place.

CHICAGO

The Lurya Lumber Company of Chicago has increased its capital stock from \$10,000 to \$100,000.

The Probst Lumber Company is a newly organized institution taking over the business of the Prendergast Company of Cincinnati, which has opened an office at 747 Railway Exchange, Chicago.

The O'Neil Implement Company, La Salle, Ill., has moved to Marseilles.

The Globe Wrecking Company has been incorporated at Chicago with \$6,000 capital.

P. B. Raymond of the Knoxville Veneer Company, Knoxville, Tenn., passed through Chicago the early part of this week on his return to Knoxville after a successful business trip. Mr. Raymond says he has been getting some good orders.

C. L. Harrison, president of the Himmelberger-Harrison Lumber Company, Cape Girardeau, Mo., was in the city for several days last week on business having to do with his company.

C. R. Ransom of the Gayoso Lumber Company, Memphis, Tenn., was in Chicago on business during the greater part of last week.

J. B. Deutsch of the Lake Independence Lumber Company, Big Bay, Mich., was in Chicago on business the last few days of last week.

F. D. Beals, president of the Hardwood Products Company, Neenah, Wis., passed through Chicago on Friday of last week on his return from a trip to the company's operations in Mississippi.

NEW YORK

Wlster, Underhill & Nixon, wholesalers of Philadelphia and New York, have added to their selling force Harry I. Soble, for many years active in the local wholesale market. He will work in the Metropolitan district.

Lumbermen golfers of this city have organized the "Knot" Golf Club and it is planned to hold monthly tournaments beginning about the middle of May. Membership in the local club will be limited to those in this territory who are now members of or eligible for membership in the Lumber Trade Golf Association. The organization will be more informal than otherwise and will be conducted by the captain and a tournament and handicap committee of three. Henry Cape has been chosen captain and will appoint the committee in due time. Nine clubs in the district have already extended their privileges to the new organization and over a score of lumbermen golfers are already enrolled. There promise to be some regular times this summer for the local trade boasts of many enthusiasts of the game which "keeps one out in the open," as the humorists say.

DETROIT

The Ottawa Lumber Company has completed the erection of three new lumber sheds at Harbor Springs, giving it an additional floor space of 4,870 feet.

Fire destroyed a part of the Ranney Refrigerator Company's plant at Greenville and a considerable quantity of lumber. The plant will be rebuilt at Greenville.

Addison E. Barber, a prominent furniture manufacturer at Grand Rapids, died last week at Las Vegas, Cal., while on a business trip. He was taken suddenly ill with pneumonia. He was president of the Barber Brothers Chair Company of Hastings, Mich., and was interested in the Hastings Table Company. His widow and one son, Arthur E. Barber, are his immediate survivors.

Fire recently did about \$4,000 damage in the lumber yards of W. D. Young & Co, hardwood flooring manufacturers at Bay City.

The Pierce-Williams Basket Company has resumed operating its plant at South Haven. Among several other improvements which have been made was the installation of an automatic sprinkler system.

The name of the Kelly Chair Company at Hancock has been changed to the Hancock Chair Factory and control has been purchased from the founder, A. Kelly, Grand Rapids, by Hancock interests. The plant has not been operating but will resume at once.

W. T. Culver, vice-president and general manager of the Stearns Salt

& Lumber Company at Ludington, was elected vice-president of the Michigan Manufacturers' Association at the twelfth annual convention held at Detroit recently.

The Williams Brothers Company of Cadillac has shipped the last logs from its camp at Arcadia and lumbering in that section has ceased. The company has also completed its cut at Saunders, which completes the company's operations along the Ann Arbor railroad.

The Sagola Lumber Company at Sagola now has 1,500,000 feet of logs ahead of its mill, which is operating steadily, and if weather conditions remain favorable the company will bring in 1,000,000 feet more.

The Standard Hoop Company, Ltd., manufacturer of hoops and hardwood lumber at Bay City, has resumed operating its hoop mill. The sawmill has been in operation for some time. It has a fair supply of logs on hand.

ST. LOUIS

Quiet prevails in the hardwood market although the signs are good for a betterment very soon. The items best in demand are choice plain sawed and quartered red and white oak, and the furniture and implement concerns are the best buyers. Inquiries are coming in quite freely for poplar, ash and gum and there is a little activity in these items. Cottonwood of the better grade is showing more life. It is believed nearly all items on the hardwood list will soon be in good demand. Stocks in the local yards are in fairly good condition. Cypress is being called for fairly well from some parts of the nearby territory but the demand is not up to what has been expected. The general opinion among the leading cypress distributors is that as soon as weather conditions improve an active volume of business will be done.

There was an increase of 54 in the number of permits for February, but a falling off of \$207,021 in the valuation, as compared with that month last year. Last month 561 permits were issued for buildings and alterations, the estimated cost of which is \$908,083.

Receipts and shipments of lumber in St. Louis during February, as reported by the Merchants' Exchange, were 15,020 cars of lumber received, as against 14,378 cars during February last year, a gain of 642 cars this February. Shipments were 8,911 cars, against 9,803 cars February, 1914, a loss of 902 cars February, 1915.

The Southern Hardwood Company, with headquarters in Jacksonville, Tex., has opened up an office in room 1414 Wright building. It is in charge of B. B. Hall, sales manager of the company. He will be assisted by J. W. Shelton. The company will not only sell the output of its own mill, but will do a general hardwood business.

BUFFALO

Building operations in Buffalo have been on an unsatisfactory scale so far this year, the first two months showing a decline of 26 per cent from the corresponding period of last year. Two months of 1915 show a total cost of \$689,000, as compared with \$931,000 last year. March may show an improvement, but so far there is not much evidence of it.

Frank T. Sullivan, who was the Buffalo manager of the hardwood interests of Hamilton H. Salmon & Co., is retaining the yard on the Buffalo river in his own name, since that company became embarrassed. The plan is to handle hardwood lumber on a commission basis and he has already arranged to handle a lake cargo to be brought in some time next month. He has some stock in yard at present, most of it birch and maple, and will continue to make these two hardwoods his specialties.

W. K. Jackson of Jackson & Tindle has lately been looking after the firm's interests in Michigan and in upper Canada.

C. C. Slaght, a Buffalo lumberman who spends most of the year on a tract near his sawmill at Genesee, Pa., is shipping liberally of hardwoods from that mill and also from the mill of the C. C. Slaght Lumber Company at Coudersport. These mills have not run this winter, but will start up in the early spring.

G. Elias sustained a broken arm some days ago, while cranking his automobile, but the accident was not serious enough to keep him long from business. A. J. Elias was recently in Washington, a guest of Secretary of State Bryan.

The Buffalo Hardwood Lumber Company found February business about double that of January. Up to February 15 more lumber had been sold and shipped than during the whole of the preceding month.

Blakeslee, Perrin & Darling state that hardwood trade shows a noticeable improvement. Thick oak has been moving about as well as anything, though cypress is showing a larger sale.

O. E. Yeager is spending two weeks at Mt. Clemens, Mich. The Yeager Lumber Company finds trade holding about steady and pretty nearly up to normal. January was a much better month than expected.

The A. J. Chestnut Lumber Company still says "statu quo" when asked about its New England business. There is something doing there, but the company will not be eager to return to its old activity until the flooring trade improves.

The Hugh McLean Lumber Company reports the hardwood trade improved as compared with January, though not very active as yet. The mills of the company at Memphis and Birmingham are turning out a fair amount of stock.

The National Lumber Company notes an increase in flooring trade in this section, though sales are not brisk. A better building demand is looked for within the next few weeks.

The Standard Hardwood Lumber Company reports some oak and chestnut moving, though the quantity is not so large as usual at this season. Warm weather is expected to stimulate business soon.

T. Sullivan & Co.'s sales are largely of brown ash at present. While hardwood prices are somewhat unsatisfactory at present, a good deal of strength to northern hardwoods is looked for about the middle of the year.

PHILADELPHIA

J. H. Haines, manager of the Babcock Lumber Company, regards the sudden increase in building work as an indication of a developing healthy tone in trade. He reports a slight betterment in local trading, but in the suburban and smaller towns an increased activity since the first of the year.

Warren Ross, president of the Warren Ross Lumber Company, Jamestown, N. Y., and Mr. Edgecomb, sales manager of the Insular Lumber Company, Manila, Philippine Islands, were recent visitors to the local trade.

Ralph Souder of Hallowell & Souder, who returned recently from a tour of the southern mill districts, says that some of the mills are still shut down and there is only enough stock all told to cover immediate requirements. He does not anticipate a rush of business in the near future, but a gradual advance toward better times.

Herbert P. Robinson of Miller, Robinson & Co., with wife and son John, have just returned from a pleasure trip to Florida.

E. M. Bechtel, sales manager for William Whitmer & Sons, Inc., says there has been no appreciable change in trading since the first of the year. Collections are fair.

W. H. Wyatt of the Jackson-Wyatt Lumber Company says there is always a modicum of business to be obtained by hard hustling, but so far this year there has been a lack of ginger in buying. He is looking for a steady advance as the year grows older.

Currle & Campbell have moved from the eighth to the sixth floor of the Commonwealth building, where they have more room to conduct their increased business.

Schofield Bros. have secured E. B. Bartleson to succeed George Hagan as salesman.

The Smith Lumber Company, Boston, Mass., has opened an office in the Real Estate Trust building, this city.

Among the recent charters are the Continental Land and Lumber Company, capitalized at \$2,000,000, and the Cherokee Timber Company, \$300,000—both under Delaware laws.

Paul Ross Weitzel, father of P. Elmer, Herbert E. and E. Boyd Weitzel, who established the lumber business now known as the Weitzel Lumber Company, died on March 2, aged eighty-two years.

The steamship William O'Brien, built exclusively for the lumber trade for the Carpenter-O'Brien Company, Jacksonville, Fla., was launched at the New York Ship Building Company yard, Camden, N. J., on February 27. The vessel will ply between Jacksonville and New York, and will have a capacity of over 3,000,000 board feet of lumber.

The Keystone Planing Mill, Lancaster, Pa., owned by Himsforth & Son, formerly of Philadelphia, was visited by fire on February 27, causing a loss of \$25,000.

PITTSBURGH

The Henderson Lumber Company regards the outlook for mixed hardwoods as somewhat better and says that considerable good business is likely to be placed between now and April 1.

J. N. Wollett, president of the Aberdeen Lumber Company, thinks the situation has not improved since February 15. The spurt which was on during January and February has suddenly subsided.

James Miller of Miller Brothers Lumber Company is down East on a long trip among hardwood consuming plants.

G. C. Adams, sales manager of the Duquesne Lumber Company, reports that its business during January and February was very satisfactory indeed. Both months made big gains over 1914.

The Federal Lumber Company has been organized with E. E. Gregg, president and treasurer; J. K. Fawcett, vice-president; A. M. Bangert, secretary, and Charles A. Jamison of New York and C. P. Caughey of Pittsburgh as directors. The company has a capital of \$25,000 and has taken over the business of the old C. P. Caughey Lumber Company. It has offices at 704 Oliver building and mills in six counties of Pennsylvania with splendid mill connections in West Virginia and North Carolina also.

The Bartlett-Shotts-Wilson Company is a new wholesale concern at the foot of South Eighteenth street which will deal in doors, sash and millwork chiefly. The members are A. C. Bartlett, treasurer; T. R. Shotts, president, and R. H. Wilson, secretary. All of them have been connected for years with door and sash concerns in this city.

The Warren Axe & Tool Company at Warren, Pa., has let the contract for an addition 75x75 feet to its plant to cost about \$15,000.

BOSTON

The Massachusetts Wholesale Lumber Association, Inc., will hold a meeting March 18 at the City Club, Boston. Some important business matters will come up. The association filed a brief on March 1 with the Interstate Commerce Commission on docket No. 5518 in line with the principles advocated by other wholesale associations on the subject of freight receipts issued to receivers of lumber by railroads. The question

has created widespread interest on account of the tentative proposal to have all information pertaining to the origin, shipper and transit of every car placed on the freight receipt issued to the party paying the freight. In the business of the wholesalers, such a practice will manifestly disclose to all customers the source of supply and open up opportunity for the wholesaler's mills to select his customers for their own advantage and solicitation. The Massachusetts wholesalers take the position that every principle of equity and law would dictate no such confiscation of their private affairs.

A petition in bankruptcy has been filed by the B. F. Smith Construction Company of New Bedford with liabilities of \$179,575 and assets of \$88,418. The amount of credit to lumbermen evidences the difficulties the trade is meeting with.

Wm. H. Harlow, senior member of Wm. H. Harlow & Sons, died of pneumonia at Hyde Park, February 26. His sons, Wm. B. and Robert B., will continue active management of the old business.

— < BALTIMORE > —

O. C. Gates, a lumber operator at Rockwood, according to information received here from Cumberland, Md., has made application for the benefit of the bankruptcy laws. His assets are said to be \$6,625 and his liabilities \$20,081.

The plant of the Parsons Pulp and Lumber Company at Parsons, W. Va., has been closed for an indefinite period owing to a lack of demand for the company's products. The entire storage space has been filled, and the company will wait until some of the accumulations have been worked off before it resumes.

Much interest is manifested here in the report from Clarksburg, W. Va., that at a meeting of the stockholders of the E. Stringer Boggess Company, Inc., held there last month the resignation of E. Stringer Boggess as president and director was received and accepted. Mr. Boggess, who is well known here, is expected to resume activities after a much needed rest. He was succeeded as the head of the corporation by L. O. Smith.

— < CINCINNATI > —

An encouraging demand for maple and fair business in all departments is reported by the Atlas Lumber & Manufacturing Company. This concern is optimistic in discussing the outlook, predicting a complete resumption of trade within a reasonably short period.

A slow but noticeably steady improvement is noted by the Anchor Lumber Company. Business with these people has picked up steadily since the middle of January, maple and basswood being the centers of movement.

Richie, Halstead & Quick are optimistic in their views regarding the business outlook. They note an improved demand for southern hardwood and yellow pine. Inquiries are picking up, a fair demand giving a strengthening tone to the market. They are well employed.

There seems to be a general get-together movement among the hardwood men, with a view of giving the situation an optimistic air, even though conditions are not quite up to the desired standard. As is well known, pessimism and a disinclination to boost when business presents a rather discouraging outlook, can do more harm than an actual sluggish market. This view is taken by the Blackburn & Bolser Company, which professes to see the silver lining and asserts that business is all that could be expected. It sees better prospects in the near future.

C. Crane & Co. express only the most hopeful survey of the hardwood world. A factory trade increase of thirty-five per cent, steadily increasing orders for quick deliveries, heavy inquiries denoting big railroad improvements, and prices holding up well at a high level, giving no indications of a slump, is the rosate summary of the situation at this plant.

The Queen City Furniture Club held its monthly meeting Wednesday evening. The entertainment committee provided a pleasing program and tempting refreshments. The business session was devoted to matters pertaining chiefly to club affairs.

— < COLUMBUS > —

To make way for a large warehouse that is to be erected at an early date, the Springfield Planing Mill and Lumber Company of Springfield is arranging to remove five dwellings from lots owned adjoining its present plant.

The one-story frame building of the Gotshall Manufacturing Company of Toledo, manufacturer of hardwood lumber, was destroyed by fire recently entailing a loss of \$10,000.

According to the report of the Columbus building inspector for the month of February, there were 119 permits issued of a valuation of \$153,350 as compared with 108 permits and a valuation of \$225,915 in February, 1914. Since the first of the year the department has issued 208 permits of a valuation of \$238,150 as compared with 230 permits and a valuation of \$404,655 in the same period in 1914.

The Taylor Lumber Company has rented offices in the First National Bank building, Portsmouth.

The Broadway Lumber Company of Cleveland has increased its capital from \$40,000 to \$50,000.

The C. W. Meyers Lumber Company of Cleveland has been incorporated with a capital of \$25,000 to deal in lumber products, by I. W. Meyers, H. T. Flanagan, A. Cullen, Ray J. Miller and Frank X. Cull.

The Penn Square Lumber Company of Cleveland has been incorporated

with a capital of \$10,000 to deal in lumber and builders, materials by F. B. Fortune, F. F. Fisher, W. R. Walker, F. C. Maxwell and A. L. Ward.

The Greece County Lumber Company of Xenia, O., has been incorporated with a capital of \$10,000 to deal in lumber by Joseph Murphy, C. W. Murphy, Peter Kuntz, Jr., Martin Kuntz and J. R. Payne.

Fire completely destroyed the lumber yards of J. R. Raudabaugh, located on Forest avenue and the Erie tracks at Lima, O. The loss is about \$2,500.

The Central Lumber and Supply Company of Niles, O., has been incorporated with a capital of \$10,000 by Thomas H. Elwood, Mrs. Thomas H. Elwood, Edward Cunnick, Jr., Lillian Cunoick and Charles F. Mathias.

The Theodore Kundtz Company of Cleveland has been incorporated with a capital of \$2,000,000 to manufacture furniture, cabinets, auto bodies and other wooden articles by Theodore Kundtz, Theodore Kundtz, Jr., Nick Winkel, Joseph J. Gedeon, Frank Friedle and Bela Kennedy.

According to M. J. Caples, who is in charge of the construction of the new line of the Chesapeake & Ohio from Portsmouth to Columbus, the project has not been abandoned, but is held up because of the unsettled financial situation. Just as soon as the financing is completed the line will be built.

R. W. Horton of the W. M. Ritter Lumber Company reports a fair demand for hardwoods when existing business conditions are considered. Prices are rather firm at former levels. Some cutting is reported where stocks have accumulated. Yardmen are the better customers as compared with factories. Shipments are coming out promptly.

J. A. Ford of the Imperial Lumber Company reports a fair demand for hardwoods at this time with prices steady.

< INDIANAPOLIS >

The McGuire Handle Company has arranged to move its plant from Prospect, O., to Anderson.

The Batesville Furniture Manufacturing Company, Batesville, has received a \$100,000 order which will keep it busy for several months.

Building operations in the city last month amounted to \$307,750 as compared with \$292,469 for February, 1913, the first month to show an increase since last August.

With an authorized capitalization of \$15,000, Martin Cutsinger, Homer I. Cutsinger, Clarence D. Cutsinger and O. M. Mitchell have organized and incorporated the Diamond Veneer Company. A veneer manufacturing business will be conducted at Edinburg.

The Indiana legislature has passed a workman's compensation law which will become effective September 1. Unless notice of rejection of the law is filed at least thirty days prior to an accident, every employer is to be bound by the law and required to insure his risks or else give ample evidence to a state industrial board that he is financially able to pay his losses direct. Compensation is to be on a basis of fifty-five per cent of a workman's average weekly wage, with a minimum of \$5 a week and a maximum of \$12 a week. In case of death from injuries, the dependants are to be compensated for three hundred weeks.

< MEMPHIS >

Weather conditions have been rather more favorable in this section during the past fortnight, but still there have been both rain and snow in moderate quantity, with the result that there has been more or less interference with logging operations. There has been an increase in the movement of timber in this territory during the past two or three weeks, but it has been comparatively light for the reason that no large amount of timber has been offered to the logging companies or available for moving by firms which look after the handling of their own logs. There is no doubt that the shortage of log supply is still rather marked and the opinion still holds that there is no possibility of a very substantial increase in hardwood lumber output unless there is a decided change for the better in weather conditions. There have been few winters in the history of this territory when there has been as much precipitation in the form of rain, sleet or snow as during the one just ended, and this has proven a very restricting influence on work in the woods. Added to this is the shortage of timber growing out of the voluntary stoppage of all logging operations for several months during the late summer and autumn. The Valley Log Loading Company is loading only a small percentage of normal quantity of timber, and private firms that look after the handling of their own timber shipments are making only moderate progress. This scarcity of timber is regarded by members of the trade here as the most sustaining influence in the market aside from the increased demand which has recently made itself felt.

The Columbia Hardwood Lumber Company, at Pinckney, Crittenden county, Ark., has been granted a charter under the laws of that state. It has a capital stock of \$70,000. John, Edward and William Schoen, together with John C. Rogers, constitute the incorporators. This firm some time ago purchased extensive timberland holdings in Crittenden county, buying out for \$62,500 the holdings of one of the firms in that territory which went into the hands of receivers a few months ago.

The offices of Penrod-Jurden & McCowen have been opened here. They occupy the building in North Memphis which was formerly used by the Bennett Hardwood Lumber Company. They are in charge of R. L. Jurden and H. A. McCowen. These gentlemen are looking after the operations of the hardwood mill formerly run by the Bennett Hardwood Lumber Company and they are also taking care of the output of the other two

mills owned by the partnership, one at Helena and the other at Brasfield, Ark. All the hardwood business of these interests will be handled from Memphis while, as previously stated, the walnut business will be conducted from Kansas City, under the direction of J. N. Penrod. Readers of the HARDWOOD RECORD will recall that the firm of Penrod-Jurden & McCowen recently took out a charter here with a capital stock of \$350,000 and that all arrangements were perfected for opening here about the first of March.

The H. H. Hitt Lumber Company, which has headquarters at Decatur and which owns several mills in north Alabama, is arranging to resume operations and expects to have its saws going by the first of April. It will give employment to several hundred men. The Huntsville Lumber Company, which is allied with the H. H. Hitt Lumber Company, is operating its planing mill at Decatur and is shipping considerable quantities of dressed stock to the Pacific coast.

The Rex Planing Mill, which was recently destroyed by fire at Meridian, Miss., will be rebuilt at once, according to the management. The estimated loss was \$35,000, covered by insurance. New machinery will be installed on the old site and construction is actually already begun. Four new machines will be put in and the plant will have large capacity. R. C. Malone, general manager, says that the plant will be ready to run within sixty days.

Benjamin K. Nusbaum, secretary of the National Association of Builders' Exchanges, with headquarters at Philadelphia, is authority for the statement that there is decided improvement in building conditions all over the country. When in Memphis he had just completed a trip covering more than 5,000 miles and this statement was made as a result of what had been his personal observation. He said there was nothing suggestive of a boom in building lines but that very material improvement has taken place within the past two or three months, that this was very gratifying and that it formed the basis for optimistic views regarding the future. He thought that a considerable part of this building was due to the low price at which material of every kind could be bought, but he also expressed the view that, even though there was an advancing tendency in lumber and other materials, there was no sign of let up in activity. Mr. Nusbaum also said that the uniform plan of contracts which was being very generally adopted was proving quite a factor in increased building operations for the reason that the contractor, the architect, and the owner could figure under this system just what a building would cost.

S. F. Gilmore is nearing the completion of his sawmill at Swifton, Ark., which will be used for the manufacture of wagon and automobile dimension stock.

The Bedna Young Lumber Company has taken over the Jackson end of the business formerly operated by Young & Cutsinger, while F. M. Cutsinger has taken over the Evansville, Ind., end of the same firm. The Bedna Young Lumber Company will have its sales offices at Greensburg, Ind., in charge of Frank M. Dounell. However, its manufacturing operations will be at Jackson, where it owns a big band mill which will be used for cutting quartered oak and other hardwoods. The incorporators are F. M. Cutsinger, M. L. Young, Harry J. Schaefer, Thomas C. Hanley and Frank L. Donnell. Thomas C. Hanley will serve this firm in the capacity of office man and traffic manager.

The Southern Furniture Corporation, which is capitalized at \$100,000, has been granted a charter under the laws of this state. It proposes to own and operate furniture stores at Memphis, Chattanooga and several other important southern cities. The incorporators are M. M. Martin, Duncan Martin, S. W. Portlock, E. H. Catchings, W. B. Lipscomb, J. D. Bassett and F. B. Whitaker.

< NASHVILLE >

The most important business transacted at the meeting of the Nashville Lumbermen's Club, February 27, was the nomination of officers for the ensuing year, which are practically equivalent to election. The following were nominated: President, Charles E. Hunt, Hunt, Washington & Smith; first vice-president, W. M. Farris, Jr., Farris Hardwood Lumber Company; second vice-president, Harold M. Greene, Davidson, Hicks & Greene Company; secretary, Cecil Ewing, Southern Lumberman; directors, Charles M. Morford, Morford Lumber Company; P. J. Loevenhart, Loevenhart & Co.; A. B. Ransom, John B. Ransom & Co.; S. Lieberman, Lieberman, Loveman & O'Brien, and Henderson Baker, Baker, Jacobs & Co. Mr. Baker has been president the past year. The election will take place March 13.

Hugh Kyle of Kyle Bros., Celina, Tenn., was in Nashville recently to negotiate the sale of 500,000 feet of poplar, oak and ash logs. He reported general conditions in the upper Cumberland river section as satisfactory.

The Nashville Tie Company has filed a complaint with the Interstate Commerce Commission, seeking to recover reparation of \$478 on freight paid on crossties, and also seeking a readjustment of the rate.

Reports are received from Wayne county, one of the largest undeveloped timber counties in the state, that some half dozen sawmills have started operation.

< BRISTOL >

It is believed that a large majority of mills in this section will be in operation by April 15. Many have already resumed and others are preparing to do so as soon as possible.

The Kingsport Lumber Company last week put a large force of men to work to complete its logging road on Chestnut Ridge, and will put its new

mill in operation in a few days. The new mill will employ about two hundred men.

The Dunganon Lumber Company will resume operation of its band mill at Clinchport, Va., within the next few days.

The Pittsburgh Lumber Company last week resumed operation of its band mill at Hampton, Carter county, Tenn. The company is shipping out a large amount of stock from its yards at Hampton.

The H. P. Wyman Lumber Company of Bristol will soon begin the construction of a logging road in Lee county, Virginia, preparatory to the immediate installation of a new mill. The company acquired a boundary of timber in Lee county last year.

Several owners of mountain lands in this section, who have contracted with the federal government for the sale of their lands for the Appalachian Forest Reserve, are now anxious to have the contracts cancelled because of what they consider unreasonable delay in the payment by the government for the lands. As yet very few of the landowners whose property has been accepted have received any part of the consideration. They not only lose the interest but are compelled to keep up the state and county taxes.

< LOUISVILLE >

J. O. Stewart of the Stewart Lumber Company, New York, was in Louisville recently, and talked encouragingly of conditions in that section, which he said are improving.

John Smith, the Dickson, Tenn., hardwood manufacturer who was in this market a few weeks ago, is optimistic regarding business. Railroad trade especially, he said, is looking better to him.

T. Smith Milton of the Churchill-Milton Lumber Company has returned from a trip to Louisiana, where the mill of the company is located. He visited New Orleans, Memphis and other southern points while he was away.

The new log grading rules of the Southern Loggers' Association have been up for discussion regularly at meetings of the Louisville Hardwood Club, and the general sentiment is very favorable to them. The chances are that they will be formally adopted, with possibly a few slight changes to meet local conditions, by the club in the near future.

The Parkland Sawmill Company has been formed by Olaf Anderson of the Louisville Planing Mill Company; Charles Talbot, log buyer for the North Vernon Lumber Company, and Roscoe Willett of the Willett Lumber Company, and has leased the sawmill of the Anderson Veneer and Sawmill Company, which is headed by Mr. Anderson. The mill will be put in operation about April 1. Mr. Talbot will run the mill and Mr. Willett, who has been gradually working into the hardwood business for some time, will handle the selling end.

Hardwood men have spoken with great satisfaction of the agreement which has been made by the National Hardwood Lumber Association with the Federation of Furniture and Fixture Manufacturers whereby the 1913 rules of the former will be accepted by the members of the latter pending the working out of the grading question by means of test inspections. The arrangement, it is figured, will benefit everybody, and will enable the whole proposition to be threshed out on a business basis.

Sawmill men and lumber buyers operating in southern Indiana, in the vicinity of Louisville, are fighting the effort of the Southern Railway to collect rental for the use of its right of way for storing logs and lumber prior to shipment. The railroad, it is said, is trying to discourage the practice of holding the material for an indefinite period, and to require immediate movement of the stock.

The problem raised by the institution of the seven and one-half per cent war tax by the Canadian government is being met by hardwood concerns that ship into that territory by invoicing all lumber f. o. b. shipping point. The customer pays the duty, and as the tax is based on the invoice value of the lumber, this is made net, instead of including freight to point of destination.

The Louisville Hardwood Club is planning to have a series of talks on salesmanship in the near future. Frank Cassell, sales manager of the Belknap Hardware and Manufacturing Company, the largest commercial house in Louisville, has been invited to make an address some time this month.

Following the action of creditors who filed suit for a receivership at Mt. Sterling, Ky., against the Roper-Reese Lumber Company of Morgan county, Kentucky, which got into financial difficulties trying to build a railway to connect its operations with the market, a petition in involuntary bankruptcy was filed against it in the federal court at Covington, Ky. W. A. Duncan, a Liberty, Ky., banker, was named receiver, and will act until the bankruptcy petition is passed on. It is said that outside interests are endeavoring to purchase the property in toto, and to settle most of the claims on an equitable basis. The obligations amount to a considerable sum, though the schedule of liabilities has not yet been filed.

The John Wacker Cooperage Company at Paducah, Ky., which recently went into bankruptcy, has been reorganized, and will resume operations.

The inactive condition of the whisky market has resulted in the cooperage situation being very quiet. This probably means that timber which would ordinarily be worked into staves will be made into crossties or lumber, or else will be allowed to remain in the tree.

The Mowbray & Robinson Company of Cincinnati has completed and put in operation its big flooring factory at Quicksand, Ky., which is being operated in connection with its sawmill. The flooring business is one of the

largest in the South. The students of the Pennsylvania School of Forestry will visit this and other big operations in eastern Kentucky in April and May, and plan to camp out during their stay in the mountains.

◀ **LITTLE ROCK** ▶

The Columbia Hardwood Lumber Company of Pinekney, Crittenden county, Ark., on February 26 filed articles of incorporation with the secretary of state of Arkansas. The capital stock is fixed at \$70,000 and the incorporators are John Schoen, Edward C. Schoen, William C. Schoen, and John C. Rogers.

The Allen Lumber and Box Company is the name of the new Nashville, Ark., concern organized recently by J. H. Allen and W. J. Lockwood, formerly of Pine Bluff, and incorporated under the laws of the state with a capital stock of \$120,000. This company acquired the holdings of the Graysonia Nashville Lumber Company of Nashville, Ark., including 16,000 acres of timberlands in Hempstead, Little River and Sevier counties, on which are said to stand 70,000,000 feet of white oak and hickory timber. A new mill is being erected at Nashville to manufacture this timber, the site of the new plant being in the eastern part of the town of Nashville. When completed the mill will have an annual pay roll of about \$90,000.

The Pine Lumber and Box Company was incorporated under the laws of the state on February 25, with a capital stock of \$25,000. Edgar Brewster, F. A. Brewster, T. W. Brewster and A. Brewster, Jr., are the incorporators. Edgar Brewster, who is at the head of the new concern which has acquired control of the old Triangle Lumber Company's plant and holdings at Clio, Ark., says that the plant which is being erected in Pine Bluff will be completed and ready to begin operations in a short time. When completed and running at full time the plant will employ about fifty men.

The Poinsett Lumber and Manufacturing Company, which is owned by the Singer Sewing Machine Company, has its surveyors at work seeking the best route across Crowley's Ridge for its tramroad to connect Truman, Ark., with the Iron Mountain railroad at Harrisburg. The Poinsett company has large mills and veneer factories at Truman, and its present logging road extends to within eight miles of Harrisburg. At present the company has only one outlet for Gulf coast shipments—over the Frisco from Truman—but the new tramroad extension will enable the company to ship some of its products to the Gulf coast directly over the Iron Mountain from Harrisburg. When the road is completed a daily passenger train will be operated over it between Truman and Harrisburg, which accommodation will be welcomed by the farmers along the line as well as the residents of the two towns. It is expected also that the company will erect large drying yards at Harrisburg for use in stacking material that is to be sun-dried. There is also some talk of the company's establishing general offices at Harrisburg.

◀ **MILWAUKEE** ▶

The Anderson & Lillie Lumber Company has been incorporated at Wausau with a capital stock of \$25,000 by I. L. and J. C. Anderson, W. R. and Ruby Lillie, and N. W. Sweet.

The Rockwell Manufacturing Company of Milwaukee is installing about \$50,000 worth of new equipment, practically all motor-driven. Most of the equipment purchased was manufactured in Milwaukee.

The Fish Lumber Company of Elcho has five camps of its own in operation, while five jobbers' camps are also logging for the concern. It is expected that the season's cut will exceed 20,000,000 feet.

The Roddis Lumber and Veneer Company of Marshfield is busy filling a large order which it received recently for equipping the new William Penn hotel at Pittsburg with 3,240 birch doors and 952 transoms. It will require ten cars to transport the stock.

Dennis Druley and J. L. Thorington are in Shawano preparing to open a new hoop plant in that city. Black ash will be used and a stock of this wood is now being secured.

The plant of the Park Falls Lumber Company of Park Falls is being thoroughly overhauled and will be put in operation about April 1. A new electric trolley system has been installed in the yards, a new 750-horse-power turbine has been placed in power department of the planing mill and will generate electric power to operate the machinery in the lath mill, box factory and other branches of the plant. About fifty electric motors will be installed in the by-products branches of the plant.

The John Strange Pail Company of Menasha has been incorporated with a capital stock of \$50,000 by John Strange, Paul Strange and Hugh Strange.

The Kinzel Lumber Company, which took over the sawmill plant of the H. W. Wright Lumber Company at Merrill some time ago, has completed the work of remodelling the plant and installing new equipment and has placed the mill in operation. The sawmill proper has been fitted with a band mill and two resaws, which will have a capacity of approximately 55,000 feet of lumber daily. It is understood that a new planing mill will be erected this spring. C. J. Kinzel is in active charge, assisted by J. E. Lambert.

Judge Geiger in the United States federal court in Milwaukee has dismissed a temporary injunction obtained by the government to prevent the Holt Lumber Company of Oconto from cutting timber on the land of John Cook, a Pottawatomie Indian. The case in question is the outgrowth of an interesting action started by the government some time ago regarding the status of timber lands held by the Indians. The federal authorities maintain that the lands were only held in trust by the Indians and that they had no right to sell them or dispose of the timber.

ARPIN HARDWOOD LUMBER COMPANY
Grand Rapids, Wis. ATLANTA, WIS.
Saw mills and planing mill at Atlanta, Wisconsin.

The land and lumber interests of Wisconsin are strongly opposing a measure introduced in the state legislature aiming to amend the state constitution and allow home rule in taxation, a measure which would allow the legislature at its discretion to permit localities to adopt the single tax. At a recent hearing before the assembly committee on taxation, representatives from many of the leading lumber concerns and organizations of the state appeared in opposition to the bill. O. L. Osborn, Oshkosh, representing the Northern Hemlock and Hardwood Manufacturers' Association; E. L. Ainsworth, Chippewa Falls, representing the Weyerhaeuser interests, and M. A. Hudson, Chicago, representing the Edward Hines Lumber Company, were among those who appeared before the committee.

The Hardwood Market

< CHICAGO >

There has been a slight return of winter weather locally during the last week or so that has had a certain measure of effect upon building operations in the city, but not enough to cause any noticeable decrease in this work. All evidence seems to presage that the forecasted active building campaign to be carried on this spring is becoming more and more of an assured fact as each week sees further advances in plans for all characters of structures. There are more or less vague threats as to labor difficulties, but it is hardly probable, in view of the extremely rigorous winter that the laboring class has gone through, that there will be any undue activity in this direction. In fact, there seems hardly any chance that there will be any other result than that all classes will work together to stimulate the interest in building construction. The comparatively lower level of building materials and of labor as well, even though the city operates on a union scale, has unquestionably had some little effect in hastening the beginning of operations, which might otherwise have been held off.

There are some pretty definite reports of substantial sales of hardwoods in the city, and sales aggregating large quantities have been made at considerably advanced figures. There is no reason for doubting the truth of the majority of these reports granting which, the predicted stiffening in markets for hardwood lumber, especially for oak, seems to have begun to materialize. Considering the extremely broken condition of yard and factory stocks throughout the city, there is surely no reason why the tendency of hardwood values should not be upward. It is a reasonably safe belief that those wholesalers who are counting upon filling orders for quantities of stock in the open market during the next few months are going to be up against it in a good many cases. The man who has an assured supply of hardwood lumber and will continue to have it, is the man who is going to profit by conditions during the spring.

< NEW YORK >

The local hardwood market is about the same now as it was a month ago when wholesalers reported a rather fair inquiry and demand for many items. The blue feeling in the trade two weeks ago has been somewhat dissipated and now there is some talk of a cheerful nature. Prices generally have not advanced and some stocks are offered at very low figures.

There has been a real improvement in the demand for mahogany with signs of continued activity. It is said that carload orders are more numerous than for the past half year and prices are about to go up. There are obvious reasons for such advances in view of the situation abroad and the unsettled condition in ocean transportation. Unprecedented prices for mahogany are predicted should the present demand continue for any time.

< BUFFALO >

A more hopeful tone is expressed at the hardwood yards than for several weeks, and while business is by no means on a satisfactory basis, either as to prices or volume, there is generally a feeling that business is slowly on the mend. Satisfaction is felt at the extent of February business, which in almost every instance is reported as having been on a larger scale than that of January. Where trade fell off in the past month it was usually because there was especial good fortune in finding a larger amount of business in January than had been looked for.

The price situation has become a little better. It is stated that southern mills have been sticking to a higher range of quotations and getting them. A lack of export movement keeps the mills from getting as much for stock as they expect to do a little later on. Tonnage is still scarce and ocean freight rates are high, according to local lumberman interested in the South. Northern hardwoods seem bound to rise within a short time because of the extensive curtailment of production.

Plain oak, maple and chestnut are among the chief woods in demand. The lower grades of chestnut are said to be showing more strength than formerly. A little birch is moving, and ash is doing fairly well. Cypress shows some increased sales.

< PHILADELPHIA >

Although no marked change has developed in the hardwood situation during the last fortnight, a firmer tone is recognizable, with prices steady and a buoyant optimism as to outlook. The monthly report on building

The Tegge Lumber Co.

Specialties

OAK, MAPLE, CYPRESS, POPLAR

Milwaukee, Wisconsin

work is most encouraging, as it promises steady progress in this line from now on. Money for its advancement is apparently more easily procured from the banks and trust companies, and building lumber, supplies and interior finish material will be in a much increased demand. This will mean a large volume of business for the yards which handle this material, and already there is felt a stiffening in certain grades. The increase of building work for which permits have been issued over the total of January shows \$1,663,925, the biggest record for new buildings since 1906. The total amount of work in this line applied for in February is \$2,574,730, which is \$779,825 over February, 1914. This great stride in building work is looked upon as a potent sign of confidence.

The buying of hardwoods is still lacking the desired snap, but the stock situation at the mills is such that it is confidently believed that the first move forward in the buying market will mean the beginning of an upward move in values. This condition is realized by the far-seeing dealers, who are quietly getting in their stuff, which they feel is now at rock bottom prices. In the general business world there are signs of improvement in many lines, and on the whole everything looks as promising as could be expected, considering the various handicaps to a progressive prosperity.

← **PITTSBURGH** →

Hardwood men are pleased over the larger volume of business the past few weeks with the automobile and implement concerns. Automobile buyers especially have been more active in the market. There has also been more lumber sold to the big industrial concerns throughout this district which are arranging for extensive improvements this spring. Railroad buying is not much in evidence. The policy of the railroads seems to be to wait, and meanwhile they are buying only as they actually must have the lumber. Yard trade is slow in starting. Many dealers bought a good stock of lumber in December and have not felt the need of purchasing their year's supply as yet. Prices are no higher, and, in fact, are being cut badly in most cases. The window glass situation is very satisfactory, considering general business conditions. The outlook is the best it has been for years in this district.

← **BOSTON** →

Reports from the trade indicate relatively satisfactory conditions. No spring boom was expected, but a certain demand is constantly in evidence for current wants. With prices practically stable for the time, contract buying is almost wholly absent, but depleted stocks with the factories and yards call for continuous inquiry and a comparatively good volume of orders largely characterized by quick delivery requirements and mixed contents. Business of this kind occupies about all the field that the dealers have to handle, but there is a noticeable recognition that when the corrective factors get in full swing there will be a certain improvement.

← **BALTIMORE** →

The belief is becoming more pronounced among hardwood men that a better feeling exists in the trade. So far the improvement has not caused any actual advance in the quotations, but values have gained in steadiness and the fluctuations between the figures named by different sellers are smaller than they were not long ago. For a time the hardwood men could not say what any kind of lumber would sell for, one man having a certain price and another a figure that made it appear as though he were quoting on something entirely different. A material narrowing of the range has taken place since then, and while more or less pressure to sell still prevails, the trade seems to be getting nearer to the point where something like a standard is being reestablished. It must be stated, however, that in certain aspects the situation causes disappointment. The hope had been entertained that the railroads and other big consumers would before now have become important factors in the market, but such does not appear to be the case. While the transportation lines have employed a large number of additional men, their needs in the way of hardwoods are as yet very much restricted, and the yards have thus far made no signal efforts to fill out the breaks in their assortments. No one attempts to deny that the yard stocks are by no means as complete as they should be to insure prompt delivery, but the dealers are still disposed to proceed with caution and to adhere closely to current needs. The furniture manufacturers have not up to this time shown any particular freedom in placing orders, and it is much the same with other buyers. On the other hand, some of the hardwood men feel that they have positive reason for being appreciably encouraged, their business showing a decided expansion. Wholesalers must be careful at what prices they buy, but they express themselves as confident that a measure of recovery has taken place, and that the outlook is better. This applies especially to the lower grades of some woods, like poplar and chestnut, which were for a time very quiet, but are being called for in increasing quantities, with the returns more acceptable.

The export situation is still very unsatisfactory, but mainly from the transportation and freight rate standpoints. Foreign buyers show a disposition to meet the figures of the exporters, and orders can be had at fairly attractive prices. The difficulties of making shipment, however, are such that exporters hesitate to book commitments. They encounter trouble in getting stocks to terminals, but far more in having them put aboard of

vessels. These latter are able to get so much other freight that they are wholly indifferent with regard to lumber, and sidetrack it whenever they can. Of course, every day of this state of affairs tends to improve the situation abroad and makes the needs of the foreign buyers more imperative, so that when the embargo is raised a rush of lumber may be expected. But for the present the situation has its embarrassments, leaving the shippers in a rather helpless position.

← COLUMBUS →

The hardwood trade in Columbus and central Ohio has been fairly active during the past fortnight, when the unsettled business conditions are taken into consideration. Demand is best among the retailers, as purchasing agents for manufacturing establishments are going a little slow in placing orders. The tone of the market is fair and future prospects are not considered bad.

One of the best features of the trade is the rather bright prospects for building in the spring. Architects and contractors have been busy preparing plans and specifications and the indications are good for a considerable amount of building. This will take the form of dwellings, apartments and business blocks. In addition quite a few public buildings will be constructed. Building will probably be active, not only in Columbus but in the smaller cities and towns in the central part of the state.

Factories engaged in making vehicles and implements are the best customers. Concerns making furniture are also buying in small quantities, but they are loath to increase their stocks under the circumstances. Prices generally are steady at the levels which have prevailed for some time. Some cutting is reported and this is having its effect on the stability of the market.

Shipments are coming out steadily all along the line. Dry stocks in the hands of mill owners are increasing. Dealers' stocks are generally small, but they are still following the policy of buying only what they need for the present. Collections are bad all along the line. Quartered and plain oak are both rather strong and the volume of business is considerable. Poplar is rather slow, but prices are still steady. Chestnut is one of the strongest points in the market. Ash is rather slow, but basswood is in fair demand. Other hardwoods are unchanged.

← CINCINNATI →

Improved conditions were reflected in no slight degree upon the hardwood industry in Cincinnati during the past week. The consensus of opinion is that the situation has undergone a marked improvement and the more optimistic dealers predict a steady resumption of business from now on until normal again has been reached. A few assert that the market has regained its former strength, the factory trade having picked up steadily during the past month, showing a gain of thirty-five per cent in four weeks. Since the first of the year the market has bettered itself thirty per cent. Unseasonably fine weather has had much to do with this sudden regaining of strength. A few students of the market are inclined toward a more pessimistic view that a sudden turn of winter weather, which is always to be expected during March and early April, will send the market down to its former stagnation of a few weeks ago. This view, however, happily is not shared by many of the leading hardwood men in the Queen City.

There is some little inquiry which tends to give a line on building prospects, although the season still is too early to form any definite conclusion in this respect. But, judging from early indication, an unusually brisk movement in the building line is sure to come within a few weeks.

Furniture requirements are increasing in an appreciably steady manner.

Prices are apparently ruling as high as ever, showing little tendency toward slumping, millmen in general not holding out stock against a possible further rise, although the stocks on hand are not large. In fact this latter situation appears to be the most troublesome one which confronts the hardwood men. Orders are increasing on hurry jobs, a number of the large concerns being hard pressed to insure deliveries on telegraph and local telephone orders. Few are carrying large supplies and the stock back of the factories is very light.

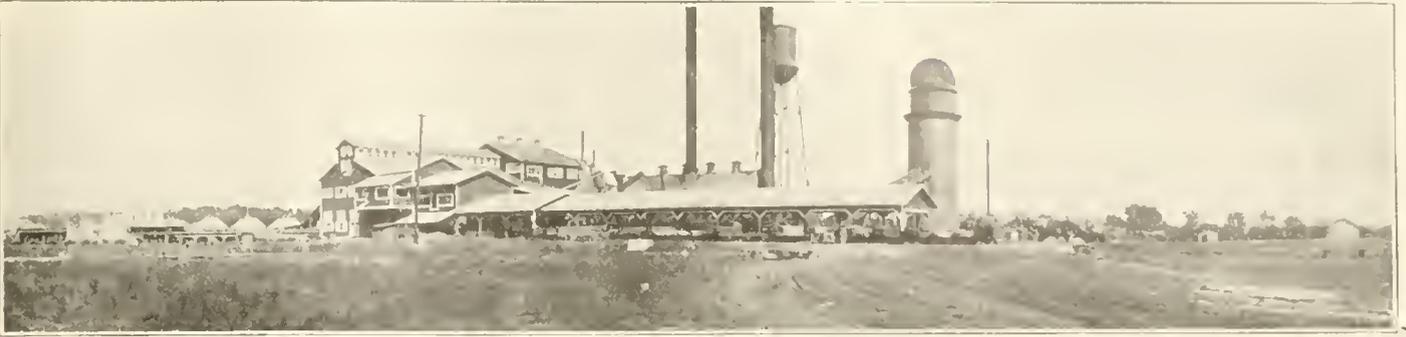

The demand for crating lumber is fair, considering the season which is early for this line, while there is considerable inquiry for ceiling and siding for the May and June trade. The heaviest local demand is centering upon maple and basswood, although chestnut, oak, poplar and ash hold up fairly well.

The big early business which is expected to lift the business situation entirely out of its lethargy will no doubt come from the railroads, from which heavy inquiries are coming daily. It is predicted that improvements will be carried on by the larger trunk lines to a greater extent this year than for many seasons back.

On the whole, the situation is much improved; this fact cannot be gainsaid, although there are still complaints to be heard from some millmen. The automobile industry has opened up considerably and these manufacturers are buying much lumber, both for body work and wheels.

← TOLEDO →

The prospects for a good call from the building trades before long are bright. The factory demand is fair at present. The lumber business generally, however, is not showing much activity and seems to be largely

An Increasing **Population**
An Increasing **Demand**
A Decreasing **Supply**

Emphasize current timber investment opportunities.

In a few years buyers will look back at the "good old days of 1915," when good timber could have been picked up at bargain prices. This is 1915.

Buy now and forestall future regrets.

We offer bargains in northern hemlock and hardwoods; southern hardwoods and southern pine, western pine, fir, spruce and cedar—also British Columbia timber.

Find out what they are and where they are.

James D. Lacey & Co.

Timber Land Factors

CHICAGO, ILL. 1750 McCormick Bldg.
PORTLAND, ORE. 1313 Northwestern Bank Bldg.
SEATTLE, WASH. 1009 White Bldg.

a waiting market. There is some demand for hardwood crating and boxing materials. Lumber dealers generally are quite optimistic and are confident that there will be a good demand later on. Money in Toledo has been looser and the manufacturing plants seem to have been in better shape than in most cities. Building records show as much or more building than was going on at this time last year. Prices are being regulated more or less by the law of supply and demand. Yards have a fair supply of stocks on hand and are not inclined to buy for future use.

INDIANAPOLIS

Hardwood lumbermen are receiving a number of inquiries, but actual buying has not improved much. There is some business, but it is far below normal. Any improvement in the hardwood trade, it is said, will come very gradually. Consumers of hardwoods are buying very cautiously and largely to meet immediate needs. It is thought the opening of the building season may develop a little more business.

Vehicle factories are having a little more business on account of orders for war equipment, but other hardwood using concerns are increasing their activities slowly. There has been no material change in hardwood prices during the past two weeks.

NASHVILLE

Hardwood dealers of this city report that business continues of light volume, though some of the companies report gradual improvement. No material change is noted in the tone of prices. Several manufacturing plants in middle Tennessee have resumed operation the past two weeks, and altogether the signs are getting better. The local trade is quiet, but dealers are looking for more activity when weather becomes more favorable for outside operations. Inquiries are reported from both England and Germany in this territory. It is thought that considerably more business will be transacted with England in the South on account of that country being cut off from the Baltic supplies.

LOUISVILLE

Some improvement in hardwood conditions can be seen, even though the situation is not so good as some of the optimists had hoped it would be at this time. The furniture business is still dull, but ought to be considerably stimulated by the regular spring trade, and the crop of June brides will doubtless be as large as usual, which will help the retail and hence the manufacturing situation. Building has not yet opened up, but promises big, and 1915 may make up for the poor results in this field during most of last year. The railroads are buying again in fairly large volume, and this is in contrast with the situation heretofore. Manufacturers of store fixtures are finding business good, and demand from the East for material to be used in this character of work has been opening up considerably of late. The movement of lumber is undoubtedly larger than it has been until recently, and prices are expected to respond to this condition, though most staple items are still selling at unsatisfactory figures. There is a shortage of a good many kinds of lumber, and advances are being put into effect on these, including thick stock in walnut, oak, and ash.

MILWAUKEE

Judging from the amount of new building which is being launched in Milwaukee there ought to be plenty of activity in the lumber trade in the near future. Figures prepared by the building inspector show that 124 permits were issued during the month of February for buildings to cost \$409,056, as compared with 75 permits and an investment of \$203,649 during the month of January. During February, 1914, there were 128 permits granted for structures to cost \$577,148. Building Inspector Harper says that many large building projects have been carried over from last fall and that unless something unforeseen happens, there ought to be a record amount of building carried on in Milwaukee this season.

Trade in the hardwood market seems to be picking up gradually. Some wholesalers complain that business is quiet, while there are others who report some exceptionally fine orders. Dealers about the state seem to be carrying rather light stocks, but most of the retailers are inclined to buy rather carefully as yet. The local factory trade continues to show improvement. Stocks on hand at the sash and door and general interior finishing plants are light and the time is not far off when these concerns will have to begin buying more freely if they intend to be in readiness for the coming spring trade. The furniture manufacturing concerns are taking a little more interest in the hardwood market. The implement manufacturers in this city and about the state are buying fairly well, as most of these concerns are looking forward to a busy season.

The recent snow all over Wisconsin has dispelled all fear that the logging season might be brought to an early close. Hauling and skidding is going on at a good rate and logs are being rushed to the mills. Manufacturers say that the cut will be much larger than had been planned on earlier in the season.

Northern hardwoods are holding firm, as stocks in some lines, particularly in birch, are getting low and will probably be unequal to requirements when once the spring trade gets under way. There is some movement of low-grade hardwood.

537 S. Dearborn St., CHICAGO

Advertising Yellow Strand Powersteel

has not been the cause of its wide-spread popularity among hardwood lumbermen. They prefer this excellent wire rope because of its wonderful strength and elasticity. It gives maximum service at minimum cost.

Yellow Strand Powersteel is made of specially drawn steel wire. This wire has a tested tensile strength of 240,000 to 260,000 pounds to the square inch. It will satisfactorily withstand the severest strains to which logging lines are submitted.

We believe Yellow Strand Powersteel is the best and most economical of all logging lines. Hundreds of voluntary letters from prominent lumbermen in all parts of the U. S. confirm that belief.

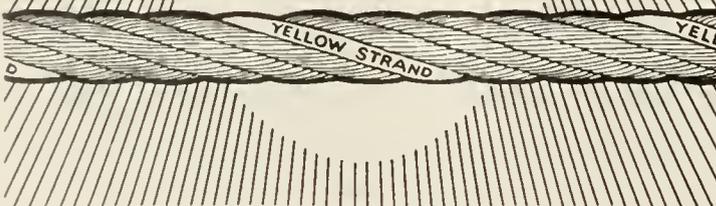

We made it good—its friends made it famous

Why don't you economize by using Yellow Strand Powersteel? Write for copy of catalog No. 50.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Gentlemen—Our Plant

But what's inside of those walls is what really counts. Everything to provide for service. And the quality idea is instilled in all our force, from the highest to the lowest.

POTI CIRCASSIAN WALNUT

During the Russian-Japanese war shipments of Circassian walnut were stopped for 18 months. The present European war is likely to interfere with shipments for a much longer period.

We have 250 Fancy Logs

They are the last of the available supply—of very fine texture and figure. The world supply is limited. Get your order in early for lumber or veneers.

THE GALLOWAY-PEASE KIND

‡ It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

‡ Kiln dries without checking. No honey-combing, and minimum shrinkage.

‡ Total absence of injurious insects insures sturdy, clean growth.

‡ Our band mills cut oak only—hence filer and sawyer get best possible results.

What Veneer and Panel Consumers Will Use in 1915

This information is shown in our service of veneer and panel consumers' requirements lists—complete according to 1915 requirements.

The information contained is all first hand and guaranteed to be authentic. It gives all details that you want to know on which to base an intelligent quotation.

It would cost you thousands of dollars and years of work to compile the same information—we know because that is what it cost us. You can have it for 1% of its real cost.

As its best use is while it is fresh and it costs only two cents to write, drop us a line today and let us give you the details.

SALES DEPARTMENT

**ARE YOU USING
FIGURED RED GUM?**

The Cabinet Wood "De Luxe"

On account of its beautiful figure and color, extreme soundness, easy working and finishing characteristics, and reasonableness in price, it is being used very extensively for furniture, interior trim, doors and kindred lines.

Figured Red Gum possesses the substantial qualities that make for permanent satisfaction, and has "made good" strictly on its merits.

Why not try out a sample lot? We know that the result will be most satisfactory and pleasing and that Figured Gum will obtain your permanent adoption.

We can supply Sliced Veneers, 1/40" to 1/8" thick; Sawn Veneers, 1/20" to 1/4"; veneered or built-up panel stock, three and five ply, 1/2" to 2 inches thick; and Quartered and Plain Red Gum Lumber.

Write for Booklet G-7. Free for the asking.

"A Word to the Wise" About Walnut

One of the biggest furniture manufacturers in the United States was among the few leaders who did not show American Black Walnut numbers at the January exhibitions. He said he would wait until there was a demand for walnut furniture. This concern has within the past few weeks announced that it will put out a line of American Black Walnut immediately. The demand has arrived! Manufacturers of furniture, interior finish and others, who want to keep abreast of the times, will find it to their advantage to investigate walnut. Meanwhile, note the stocks, ready for immediate shipment, carried by the leaders of the trade:

A floor to adore

 For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.
Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

Review and Outlook

General Market Conditions

A SLIGHT CHECKING UP IN DEMAND for various kinds of stock seems to mark the situation pretty generally during the last couple of weeks. Two or three weeks ago there seemed to be a little better tone to the situation, but conditions would indicate that the progress of trades toward more normal times will be fluctuating and on a steady climb. However, the less unfavorable conditions of the last couple of weeks should not be taken as a criterion of what could be expected as a regular development, as the rapidly changing conditions surrounding the progress of the war make fluctuations in the country a certainty. As the war goes on it is altogether likely there will be considerably more of a settling down, and less attention will be given to the constant changes on the other side. Expressions of confidence emanating from big men in governing industries of the country are backed up by what has actually been accomplished, and even in the face of sales conditions that are not to say the least encouraging these should be given due weight. It would appear as though there had been a slight slacking up in confidence more than anything else during the last couple of weeks, as this condition has developed in the face of a concrete evidence of good conditions in the building trade. Spring weather is about upon us and there is nothing that seems to offer a check to the probable opening up of things.

There is some encouragement in what seems to have become a general tendency. While the actual use of hardwood lumber has probably not increased remarkably, quite a number of the large buyers seem to have sized up the situation and are making it their policy to purchase in slightly larger blocks. Unquestionably, this policy is based on the belief that present values are not here to stay and that purchases can be made more profitably now than later. Of course many concerns are willing to forego this saving for the sake of not investing money under present circumstances, but others are showing the opposite tendency, and there have actually been quite a number of sales of more substantial size in the last few weeks. Whether this will develop into a country-wide condition is difficult to state, and it is even impossible to know whether it will be permanent as far as it has gone. However, there are unmistakable signs that this condition has actually developed in certain quarters, and this significance should not be underestimated.

Confidence is, of course, the keynote in shaping this tendency of the trade, and the continued adherence on the part of substantial hardwood institutions of following the plan of holding stocks for prices within the realm of reason shows that confidence is everywhere maintained. It should be the duty of everyone to preach this

doctrine and to follow it, for if a sufficient number of large holders of hardwood stocks should insistently and persistently hold out for better prices it will be impossible for the buying trade to purchase enough stock at a ridiculous level from those concerns which are willing to make such unnecessary sacrifices, and they will ultimately be compelled to seek their lumber at more remunerative figures from the handlers of hardwoods.

There has been an additional tendency on the part of the yard trade to fill out their lines of stock in anticipation of quite a little building activity with the actual opening up of spring building, but the factory trade is still pretty slack. However, if building work progresses as satisfactorily in the next few months as it appears to have progressed, there will be a real call for hardwoods from those lines of manufacturing institutions which are constructing furnishings for dwellings and other structures.

There has been some little piling up of stocks in the South, but not anything to cause any real anxiety and nothing that would indicate there is any wisdom in the policy of holding off for still further breaks in the price levels. The respective woods are holding their positions as they relatively appeared for the past few months, with a possible strengthening in certain items of oak and a continued good call for box lumber.

The situation is still very spotty, with optimism predominating in one place and pessimism in another. However, that confidence which has prompted the steel companies to continue to increase their forces, and reports to this effect have been pretty consistent, will unquestionably have a bearing on the whole fabric of American business.

The Cover Picture

UNLESS A TRICK WAS PLAYED on the camera and unless the photographer was imposed upon by erroneous information, the cover picture which illustrates this issue of HARDWOOD RECORD depicts one of the most remarkable scenes to be found anywhere. It is a log cabin of one room and a loft that provides a home for twenty two people. An important part of the evidence in the case is furnished by the pictures of the family posing in the parking. So far as numbers are concerned, the family would do credit to old King Abimelech himself.

The habitation of this interesting family is located on a stream known as Dry Fork in the mountains of West Virginia. It is needless to say that a hardy class of mountaineers is produced in that region, although in cases like that shown in the picture, the conditions of living are far from ideal. None but the strongest survive the hardships under such circumstances.

It would be an injustice to a region of great natural wealth, and of

considerable development, and of many progressive people, to suppose that the picture represents a typical home of that country. It is rather an extraordinary and unusual layout, one of the poorest in surroundings and richest in population. It is a type occasionally met with in the remote mountains, removed from highways and buried in the wilderness. Civilization's hand has not yet been laid very heavily upon some of those sequestered corners of the wild and free mountain fastnesses. Appearances indicate that domestic industry is somewhat neglected. Probably there is not a scrap of sawed lumber in that cabin or in its surroundings. The broadax, frow, and mallet, aided by a chopping axe and perhaps a crosscut saw, were the tools which wrought the woodwork of that house and fence. Happiness and shiftlessness reign there supreme. What do those contented people care for business depression, national politics, or international war? What does intervention in Mexico mean for them?

In spite of unfavorable surroundings, those people are not stupid, dull, or criminal. The traveler in those remote retreats is often surprised to hear words which became obsolete in the English language one or two hundred years ago. The ancestors of people like those in the picture brought the words from England before the days of Bishop Asbury. They settled in these mountains, drove the Indians out, and there they have lived, secluded from the rest of the world, ever since. Some of the culture brought with them has remained with their descendants as a sort of tradition. A century and a half of isolation narrowed their view of the world, but it intensified their character. They are descended from the best stock of Europe, and they show it in spite of the adverse conditions under which they have lived so long.

The cavalry under General Averell in the Civil war was largely made up of men from this region, and it became justly famous for rapidity of movement among the mountains and tireless perseverance. When the Confederates burned Chambersburg, Pa., these were the men sent in pursuit, and though they rode their horses to death, they overtook McCausland's army after chasing it through three states, and cut it to pieces at Moorefield. Later, when Burnside's was besieged at Knoxville, Tenn., and it was believed that the only way to save him was to cut the enemy's line of communications, it was Averell's cavalry that was sent on the forlorn hope. Never was a feat more courageously performed. Starting from the Maryland border on the upper Potomac river, the cavalry rode four hundred miles, crossing the whole range of the Appalachian mountains in dead of winter with cold so intense that cattle froze to death in the fields, and struck the railroad at Salem, Va., burnt bridges and tore up sixteen miles of track, and escaped across the mountains in spite of four armies maneuvered to effect its capture. Knoxville's siege was raised.

Off the subject, perhaps; but the picture of the uncouth mountain cabin and its family of twenty-two very naturally serves as a reminder of the historical associations centering round these people and their English, Scotch and German ancestors.

The Value of Confidence

A CONCRETE EXAMPLE of the value of confidence as a means of stimulating business has been furnished in the last few months on the island of Cyprus in the Mediterranean sea. That island was famous for its copper mines in ancient times. In fact, our word copper is derived from the ancient name of that island, as is likewise the word cypress, applied to a tree.

The non-progressive Turks came into possession of the island more than four hundred years ago, and during the whole period of their ownership, the copper mines remained idle. Men who would have developed them were afraid to make the necessary investment, because no investment was safe where the Turks were in control.

A few days after Turkey joined in the present war, Great Britain took formal possession of Cyprus and announced that the occupation was to be permanent. Results followed almost immediately. A few days ago a consular report announced that an American company was landing machinery on the island preparatory to developing the copper resources.

Confidence did it. Nobody had any confidence in the Turks, and investors kept clear of the island during four hundred years; but

within four months after the British annexed the island, arrangements have been perfected and mining machinery is on the ground. It is because experience has always shown that investments are safe where the British are in control, and experience had also shown that no investment was safe where the Turks were in power.

This might be taken as a text for a sermon on the value of confidence in general on business. There is about as much money in this country at one time as at another; as many natural resources; as much labor; but the amount of confidence varies enormously at different times. When it is plentiful, business booms; when it is slack, capital holds back, just as copper miners kept away from Cyprus while the proximity of the Turk made the future uncertain. Banish business uncertainty from this country, as Great Britain bounced the Turk out of Cyprus, and capital will immediately come out of its hiding, and the wheels of industry will begin to turn immediately. But how is it to be done? The American people seem to fear that there is a "Turk" (a sort of phantom Turk under no particular name) prowling around somewhere, and they hesitate to take chances.

Looks for Peace in Chicago Strike

IT IS ANNOUNCED that on Monday, March 22, an important step was taken toward peace in the building industry in Chicago. The Lumber Wagon Drivers' Union signed a truce with the employers, members of the Lumbermen's Association of Chicago, thus eliminating 1,000 union teamsters as a possible factor in the threatened tie-up. Officials of the painters' district council, whose contracts expire April 1, state that the strike will be necessary to gain their demands from contractors allied with the Construction Employers' Association. They say they expect 11,000 men to walk out April 1 where employers refuse to sign an agreement ratified last week. The big contractors insist the mandate of the association and of the building trades council shall be obeyed, and that the three year no-strike agreement shall be accepted by the painters.

So far no progress seems to be made toward a settlement of the differences between 16,000 carpenters on structural work and their employers, members of the Carpenter Contractors' Association. Negotiations have not been renewed since the union by an almost unanimous vote rejected the employers' terms of a three-year peace without increase in pay under the uniform agreement for arbitration of all differences. The union is renewing its demand for seventy cents an hour. The men have been getting sixty-five cents.

Two Methods of Gaining

GAINS IN LUMBER SELLING may be attained in two ways: by selling more without increase of price, or by selling the same quantity at a better price. Cypress is usually considered the most advertised wood in America, and advertising must be profitable, or the cypress people would not keep at it. The cut of cypress lumber has not increased much in recent years, and the profit which encourages the advertisers to keep on advertising must come from increased prices. It is better to realize more money without increasing the sales than to take in the same amount of money by selling more lumber. By so doing, the supply will last longer and bring more money.

It may not be easy to prove just what effect the vigorous campaign of advertising has had on the sales and prices of cypress, because it cannot be positively affirmed what that wood's status on the market would now be if no advertising had been done; but it is a significant fact that cypress rates higher in millyard value than any other softwoods in America, and it is worth more in the yard than most hardwoods. It may be that advertising did not give it this value, but it looks very much as if it did.

It might be supposed that extensive advertising would cause a larger output of a wood, but that has not been the result with cypress. Higher value without increased output has been the visible result—more money for the same amount of lumber. In other words, the effect of advertising seems to show itself in price rather than in quantity.

Most probably a radical change has taken place in the use of this wood, as a result of the wide publicity given it. It is likely that the

use of rough lumber for common purposes has decreased, and more of it now goes to factories for further manufacture. That would account for the high price at which it is sold at the millyard. This can be stated only as a probable result. Unfortunately, no complete statistics exist for proving or disproving it. It is not known how much of this lumber was used in the rough and how much was further manufactured five, ten, or twenty years ago; consequently, the extent of the change in use, if there has been a change, can not be stated on the authority of statistics. The probability that a decided change has taken place must impress any one who looks into the matter and discovers that at this time nearly twice as much cypress goes to factories as reaches its final use in its rough form.

These facts may furnish food for thought to all who manufacture lumber or deal in it. Without increasing the cut of lumber and the drain upon the forest, the value of the product may be increased by educating the public to use wood to better advantage. It has been proved that this is practicable. What the manufacturers of cypress and birch have done so successfully, others can do with other fine woods—increase the value at the millyard, whether the total output is increased or not. It is not good business to throw enormous quantities on the market at a low price if it is possible to sell smaller quantities for as much money by increasing factory use and lessening in a corresponding degree the demand for rough lumber at a low price.

Spirit of the Times

THE COUNTRY-WIDE TENDENCY to arbitrate and the desire to know the other man's viewpoint shows itself in the plans for a meeting to be held in Memphis on April 7. The meeting has been arranged under the auspices of the Southern Hardwood Traffic Association, and according to late reports there will be over 300 hardwood lumber manufacturers and distributors in attendance. There will also be present traffic managers and presidents of practically every railroad operating through the southern hardwood producing territory.

The conference has been called for the express purpose of bringing railroad men and lumbermen together in order that an understanding may be reached in connection with the general subject of freight rates on lumber and forest products.

The litigation on all sorts of controversies that have come up in the necessity for some such general understanding as this which is the last few years has been demonstrating more and more forcibly proposed by the Southern traffic association. As a matter of immediate consideration there are several important contests pending before the Interstate Commerce Commission, and it is planned the conference will endeavor to arrange a common ground on which some sort of an adjustment can be effected.

With frank statements on the part of both contending factors that they are frankly willing to lay all the cards on the table and to make a genuine effort to get at the root of the trouble, the prospects are bright for accomplishments of great importance. Surely if the spirit in which the conference is proposed is carried out, the results will be of far-reaching importance to the railroads and to the shippers and tremendous sums in litigation will be saved in addition to the great saving in annoyance and unnecessary time spent in contesting claims.

More detailed report of the plan is contained elsewhere in this issue, and shows that the idea as it is being carried out is altogether feasible, and that it bids fair to have tremendous weight on future questions involved in shipments of hardwood lumber in the South.

A Case of Red Tape

RED TAPE STILL GETS IN its deadly work.

Ten thousand tons of merchandise are rotting or in danger of rotting on the wharves of Manila for the want of ships to carry it to the United States, and at the same time government colliers are about to sail empty from that port to America, but they must not bring the merchandise because there is no law specifying that a government collier may carry a cargo of that kind.

A plainer case of strangulation from red tape has not come to the notice of the public for a long time. On February 16 Governor Har-

ison of the Philippines cabled the War Department at Washington, asking that arrangements be made to have colliers then at Manila, or soon to arrive there, take cargoes on their return trip to the United States. It was explained that ships were inadequate, that freight rates had doubled in the past ten days, and as a consequence the prices of Philippine products were greatly depressed. The cargoes consisted principally of hemp, sugar, copra, and cigars.

At that very time three colliers were en route to Manila. The Secretary of the Navy was unable to find any law authorizing colliers to carry such return cargoes, and he refused to order it done.

On March 3 Governor Harrison cabled again, stating that the prices of staples in the Philippines were falling on account of lack of ships to take cargoes to market, and asked if the United States Government could do anything to relieve the situation. Upon receipt of that cablegram, the Department of Commerce was consulted, and the following quotation is from the secretary's reply:

"The situation as outlined by Governor Harrison is, I am sure, not exaggerated, but, to speak frankly, we are helpless so long as no power exists under the law to utilize the three naval colliers now on the way to the islands to carry goods on their return trip. So long as there is no law giving us any power over any shipping, the government is powerless in the matter. Private and corporate interests are in control of the situation, and we can do nothing."

Even so! The three colliers will return empty to the United States, and leave the merchandise spoiling at Manila because "private and corporate interests are in control of the situation, and we [the United States of America] can do nothing." Angels and ministers of grace, defend us!

Fifty-four years ago a somewhat similar case became prominent, in which the most urgent necessity demanded immediate action, but red tape stood in the way—but did not stand long. At the outbreak of the Civil war the Confederates made a dash for the Baltimore & Ohio Railroad, between the Alleghany mountains and the Ohio river. That railroad was then the principal line between Washington and the West, and to have it fall into the hands of the Confederates would have been a disaster to the National Government. There were plenty of militia, volunteers, and other willing fighters ready to defend the railroad, but they had no guns. There were plenty of muskets in a nearby arsenal, but when an appeal was made for the use of them to arm the men who were willing to fight, the reply came from an official at Washington that there might not be any law authorizing such disposition of arms. Fortunately, there was then a man at Washington who did not balk at formalities, and the order came, "Give them the guns; look up the law afterwards." The railroad was saved from capture.

There are emergencies when trifles and formalities ought not be permitted to defeat the main chance. Alexander cut the Gordian knot when he could not untie it. He did not let the chance pass because the law did not particularly state that a knot that could not be untied might be cut.

There seems to be no law for untying the red tape which hinders the loading of merchandise on empty government colliers returning from the Philippines; consequently the value of commodities there must fall, industries must decline or be paralyzed, business must suffer and business men must see their prospects vanish. This may all take place, but there must be no irregularities permitted.

Apparently Hope for Hoo-Hoo

IT WAS NOT GENERALLY KNOWN just how seriously the long illness of retired scrivener, W. M. Stephenson had militated against the interests of Hoo-Hoo until the order was faced with the necessity of checking up its affairs. The recent joint meeting of the supreme nine and the house of ancients at Chicago disclosed a rather startling condition of affairs. The prompt and able action immediately taken has already given the order a tremendous boost ahead, and it is hoped that it will be in such shape as to be handed over to the permanent organization by the first of April. The affairs have been handled by volunteers who have entered into the work with supreme energy and the results of their efforts have been consistent and extremely gratifying. A complete story appears on a later page.

Forest Products Federation Work

The movement for the organization of the Forest Products Federation, which was inaugurated at the recent mass meeting in Chicago, is proceeding along the lines laid down in the working plan, and has advanced far enough to assure success. The special committee on organization consists of A. T. Gerrans, chairman, Frederick Weyerhaeuser, F. A. Hofheins, H. C. Seearce, and John H. Kaul.

The practical work of placing the organization on a permanent footing consists in securing enough signatures, with annual subscriptions, to guarantee for five years the means of carrying on the work. More than one-fourth of the subscriptions necessary to begin the work have been secured. The signers represent some of the strongest lumber firms of the country, and the progress thus far made is accepted as a guarantee that the necessary working organization will soon be complete.

The list that is being signed at the office of R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, contains the proviso that the annual payments named shall not be binding unless a sufficient sum is pledged to guarantee \$50,000 a year. There no longer seems to be any doubt that enough will be pledged to assure that yearly sum. Of course, it does not stop at that. It is intended and expected that the full \$200,000 a year will be provided; but when the fifty-thousand mark has been reached, the actual work of the Forest Products Federation will begin.

The organization will be a part of the National Lumber Manufacturers' Association. On account of that arrangement it will not be necessary to form a new body, but present equipment can be used to a considerable extent in putting the business on a working basis. The list now being signed pledges the signer to pay \$1,000 a year for a period of five years. The working capital will come from that source. Of the many thousand lumber companies and large timber owners in the country, there is no question that a sufficient number will lend their active support to assure the success of the movement.

It cannot be too strongly emphasized that the plan adopted does not take anything away from any existing organization. Instead it supplements and strengthens all publicity, educational and trade extension effort in promoting the use of forest products. Its function is to broaden the field of consumption, and to help or initiate wherever the uses, merits, or good name of wood are at stake.

The need is apparent, since the lumber industry is suffering for want of a national champion of its interests in matters of trade extension. Neither the manufacturers nor distributors have told the consumers how, when, and where the wood may best be used, nor have they aggressively met competition, but instead have allowed other building materials to beat wood out on its own ground. This supine acceptance of what comes in the way of orders, with no attempt to fight for business or to promote grades and kinds of woods to meet specific service requirements, simply gives the other fellow an open field. Not only are the other materials sold for purposes where lumber would be as good or better, but they are constantly improved and made to serve the consumers' needs more perfectly. Such methods win permanent trade, and the materials thus perfected and adapted to specific uses become so firmly entrenched that wood will never get back its lost ground. In fact, the existing information regarding the best use of wood in relation to service requirements has not even been compiled, much less made available to either the consumer or the lumbermen themselves. Much prejudice against wood exists because its merits have not been convincingly presented, its uses wisely advocated, nor its availability explained. This lack of knowledge has been increased and misconceptions created by the active propaganda for other materials, which in many cases are not so economical or desirable as wood.

The belief that the resources of the forests are nearing exhaustion needs correction. While it is well known that the country does not contain so much timber as it contained a century ago, there is still a great deal, and it will last a long time yet. The contrary opinion is general, and the competitors of wood have not been backward about taking advantage of that erroneous belief in order to procure

a foothold for substitutes. A remarkable case to the point was cited at the recent Forest Products Federation mass meeting, when the statement was made that many of the architects and construction engineers of New York and other eastern cities actually believed that heavy dimension stock, suitable for large building frames, is no longer procurable. Yet there is enough of that kind of timber to supply every city in America, and the rest of the world, too, for that matter.

In cases of lack of information like that, and of deliberate misinformation also, competent and reliable work such as is contemplated by the new organization, must be of inestimable value. In the past, every person who had some substitute for lumber was free to knock lumber whenever and wherever he could do so; and too often there was no one to take the part of wood. The Forest Products Federation will change that. Where wood may need defending, it will be defended, and where it may need pushing, it will be pushed. It is admitted, however, by pretty common consent that it is pushing more than defending that wood stands in need of.

Logging Conditions Around Memphis

There has been little change in conditions affecting logging in Memphis and surrounding territory during the past fortnight. There has probably not been so much rain in this immediate territory as for the last half of February but there has been enough to keep the ground pretty wet and to prevent the pushing of timber cutting or hauling. Where logging operations are under way they are being conducted at somewhat expensive rates. Teams are able to haul very little at one time and it is necessary to use lizards and various other appliances for getting timber out of the lowlands. Where railroads run into timberlands the work of moving logs is very greatly facilitated but where they have to be hauled any distance by a team it is almost impossible to make headway. It is conceded by most members of the trade that the supply of logs offering is comparatively small and there is confirmatory evidence of this fact in the shape of reports from the Valley Log Loading Company regarding the small amount of timber being loaded at present. This is perhaps less than twenty-five per cent of the average for this time of the year. It has not been necessary in but a few instances for the mills here and in the Memphis territory to close down on account of lack of timber but it is pointed out that manufacturing operations are steadily increasing at a time when the amount of timber on hand is exceptionally small, with the result that the pinch may be felt somewhat later.

Practically every member of the hardwood trade here says that the hardwood business is increasing somewhat and there is striking evidence on this point furnished by the reports of several of the railroads operating through the Memphis gateway. They point out that there has been a steady increase in the movement of lumber during the past sixty days and that, while shipments are still somewhat below normal, the increased movement of lumber has added appreciably to the revenues of the roads in question. These statements have been made by the Frisco System, the Rock Island System, the Illinois Central and Yazoo & Mississippi Valley roads. There are certain features of the market which are quite active, including plain oak in both red and white, sap gum and gum box boards. In other items there is a reasonably active call and, altogether, the manufacturers and wholesalers alike are feeling a little more cheerful regarding the domestic situation. There is no doubt that more inquiries are being received from Europe for southern hardwoods. In fact one exporter is authority for the statement that he could dispose of at least 100 cars immediately if it were possible for him to secure reasonable ocean rates or war risk insurance. As it is, however, there is almost nothing doing with Europe at the present time and the outlook will not be particularly encouraging until there is a readjustment of ocean freight and insurance charges.

Easy office chairs are often expensive luxuries. Better do as the old wood chopper did—sit down on the slivers in the center of the stump, for fear that he might sit too long.

National Wholesalers' Meeting

The annual meeting of the board of trustees of the National Wholesale Lumber Dealers' Association was held March 9, at the association offices, 66 Broadway, New York. The trustees present were: G. C. Edwards, Ottawa, Ont.; F. E. Parker, Saginaw, Mich.; Chas. Hill, New York City; T. M. Brown, Louisville, Ky.; M. M. Wall, Buffalo, N. Y.; F. R. Babcock, Pittsburgh, Pa.; N. H. Waleott, Providence, R. I.; F. B. Robertson, Memphis, Tenn.; J. Randall Williams, Philadelphia, Pa.; M. E. Preisch, North Tonawanda, N. Y.; B. F. Betts, Philadelphia, Pa.; C. F. Treadway, New Haven, Conn.; A. L. Stone, Cleveland, Ohio.

A number of important matters were discussed and annual reports presented for the consideration of the board.

The reports of the treasurer and membership in the association and bureau of information showed the organization to be in good shape. Indications point to a substantial increase in membership during the year, a number of well-known firms having been added to the roll the past few months.

REPORT OF SECRETARY

The report of the secretary, E. F. Perry, stated that because of general business conditions the association had been called upon to a greater extent than ever before for information and help from the active departments, such as the bureau of information, collection department and transportation bureau; that the visits by the members to the office increased fully a third the past year.

Mr. Perry had attended fifteen conventions and conferences with other associations and attended the conferences at Chicago in connection with the organization of the Forest Products Federation, which matter was fully discussed by the trustees.

Mr. Perry's report referred to his work in connection with co-operation with officers and other associations on various transportation problems which the National association had taken up and considered through its transportation bureau, and also as to the suggestion emanating from the railroad and transportation committee regarding using the National Wholesale Lumber Dealers' Association as a clearing house for handling railroad and transportation matters of general interest to the lumber trade and thereby avoiding a large duplication of work which now occurred and as was evident in several hearings where different organizations had undertaken to handle the same problem along the same lines. If the one organization could undertake these matters much time, effort and money would be saved.

Henry Cape, treasurer, presented the financial report and the report of the auditing committee, showing the books had closed with a balance on the right side of the ledger.

R. R. Griswold, Binghamton, N. Y., chairman of the fire insurance committee, reported for his committee that while very little had been referred to it, the committee was watching several matters that would undoubtedly later on be of material interest.

BUREAU OF INFORMATION

The report of W. W. Schupner, department manager of the bureau of information, was presented and showed that \$,338 formal inquiries for special reports were received, an increase of 350 over previous year, that 891 original new reports were added, making a total of over 35,000 reports; 746 names appearing on the weekly sheet warning members of impending trouble, judgments, protested notes, etc.; 75 numbers on the tracer system had been used containing 1,950 names of parties on whom reports are revised, the average daily revisions amounting to 25 reports; 26 new lists of customers were received during the year and instances were referred to, showing actual saving to members by their having placed this information in the hands of the association.

The collection department of the bureau of information handled claims aggregating \$485,495, of which \$291,437 had been settled, netting the association \$5,000 in fees. This report referred to the numerous conferences held at the office between debtors and creditors, the avoidance of bankruptcy proceedings, and the co-operation between buyer and seller in working through their embarrassing situations.

Two further numbers on the pamphlet of "Lumber Legal Opinions" were issued and as further information was received additional numbers would be distributed to the members.

The report of Fred S. Underhill, Philadelphia, chairman of the committee on terms of sale and trade ethics, was read and filed.

REPORT OF THE FORESTRY COMMITTEE

J. R. Williams, Jr., Philadelphia, chairman of the forestry committee, read a report which referred to the connection with the work of the annual meeting of the American Forestry Association, and the papers which were read at that meeting. Mr. Williams stated: "Undoubtedly there should be an effort on the part of manufacturers and wholesalers of lumber to see that their product was sold more intelligently, that is, that a man selling a product should study carefully to see what uses the particular product of his forest could be put to and further learn to educate his salesmen so that he or they could tell how the product can be used." Mr. Williams suggested a greater interest be stimulated in the American Forestry magazine, and he also included a lengthy reference and communication received from E. A. Selfridge, Jr., Willits, Cal., a member of the National association forestry committee and also president of the California Forest Protective Association.

REPORT OF THE TRANSPORTATION BUREAU

The report of W. S. Phippen, traffic manager, covered in detail many activities of the railroad and transportation committee including the appearance before the Interstate Commerce Commission and argument of the brief filed by the association in the Southern Railway rate case on which the commission rendered a decision ordering the Southern Railway to cancel proposed advances.

A review of the work done in connection with the Southern Railway milling in transit rules, also on the question of spotting cars on private sidetracks referred to the briefs which had been prepared and filed on these questions.

At the present time the department was attending hearings before the Interstate Commerce examiner on the terminal regulations in New York harbor, the association being opposed to the proposed charge of twelve cents per ton additional for handling lumber.

The traffic manager had spent considerable time on the five per cent rate advance from intercoloual points.

Extended reference was made to Mr. Phippen's appearance before the Southern Classification Committee at Atlanta, Ga., where he argued for the incorporation of the southern classification on a rule providing for an allowance of 500 pounds for car stakes and on which an early decision is looked for.

The report also referred to the brief filed before the Interstate Commerce Commission regarding the disclosure of names by lumber shippers on freight bills.

Two numbers of the pamphlet mentioned as "Freight Bulletins" has been distributed and eleven formal complaints have been filed before the Interstate Commerce Commission on claims for members.

A number of rate adjustments had been obtained and the general work of this department far exceeded that of the previous year.

WORKMEN'S COMPENSATION

The report of B. F. Jackson, Buffalo, N. Y., chairman of the special committee on workmen's compensation laws, stated that twenty-eight states now have workmen's compensation laws in effect and that other states are falling into line, leading to the opinion that all states will eventually enact such legislation. At the present time some states have laws which are so much more favorable to the employe than in other states that the committee recommended that the association should favor making these laws as nearly uniform as possible and absolutely just to both employer and employe.

A number of other questions were considered and plans laid for association activity during the year. The work indicates a healthy growth in the organization and a standard of efficiency which makes membership in the National Wholesale Lumber Dealers' Association so highly regarded by its members.

The Wood-Using Industries of Georgia

The report of the wood-using industries of Georgia, which the United States Forest Service completed some time ago, has been published in full through the New Orleans *Lumber Trade Journal*.

This investigation was not concerned with sawmills or the quantity of lumber produced by them, but gave consideration only to the use of wood in shops and factories. Except that rough lumber was employed as raw material, it was not considered in the report. The figures collected and used in the totals all belonged to the year 1911. The total factory consumption of wood in Georgia that year was 556,938,926 feet, while the output of lumber by sawmills in the state totaled 801,611,000 feet. This considerably exceeds the factory use; yet in spite of that, the manufacturers found it necessary to bring into the state from outside regions nearly 94,000,000 feet to meet demands. The meaning of that is that while lumber was being sent out of the state, other was coming in. That happens with nearly all states. No matter how much they produce from their own forests, their factories must procure some from the outside, and the imported lumber does not always consist of kinds not produced in the state. For example, Georgia factories bought 33,000,000 feet of longleaf pine away from home, though the finest grades and plenty of them are produced in the state.

The following table lists the different kinds of woods used, and gives the annual consumption of each, with the average cost per thousand feet delivered at the factories. Only thirty-four species are listed. Some states report twice that many. Two of the woods, mahogany and padouk (often called vermillion) are foreign and are more expensive than the most costly of the home woods.

SUMMARY OF KINDS OF WOOD USED IN GEORGIA

Common name	Botanical name	Quantity used annually Feet B. M.	Average cost per 1,000 ft. factory	Total cost f. o. b.
Longleaf pine.....	<i>Pinus palustris</i>	289,743,356	\$13.30	\$3,854,838
Shortleaf pine.....	<i>Pinus echinata</i>	192,248,357	13.03	2,504,759
Bald cypress.....	<i>Taxodium distichum</i> ..	16,467,000	19.31	317,963
White oak.....	<i>Quercus sp.</i>	10,777,636	27.08	291,899
Red oak.....	<i>Quercus sp.</i>	9,083,330	37.20	337,892
Loblolly pine.....	<i>Pinus taeda</i>	7,630,000	10.63	76,535
Yellow poplar.....	<i>Liriodendron tulipifera</i>	7,378,680	24.04	177,399
Red gum.....	<i>Liquidambar styraciflua</i>	6,671,500	14.04	93,680
Cuban pine.....	<i>Pinus heterophylla</i>	2,800,000	8.07	22,600
Chestnut.....	<i>Castanea dentata</i>	2,284,000	15.21	34,740
Ash.....	<i>Fraxinus sp.</i>	2,236,877	20.83	46,605
Sugar maple.....	<i>Acer saccharum</i>	1,983,500	16.01	31,757
Hickory.....	<i>Hicoria sp.</i>	1,453,750	29.36	42,678
Cottonwood.....	<i>Populus deltoides</i>	1,275,000	12.22	15,575
White pine.....	<i>Pinus strobus</i>	1,246,269	13.53	16,857
Cotton gum (tupelo)	<i>Nyssa aquatica</i>	875,000	15.24	13,337
Birch.....	<i>Betula sp.</i>	630,711	53.44	33,705
Beech.....	<i>Fagus atrapunicca</i>	605,000	9.74	5,895
Water oak.....	<i>Quercus nigra</i>	500,000	27.00	13,500
Pond pine.....	<i>Pinus serotina</i>	250,000	11.20	2,800
Sweet magnolia.....	<i>Magnolia glauca</i>	231,000	11.51	2,659
Mahogany.....	<i>Swietenia mahagoni</i> ..	218,500	127.58	27,877
Soft maple.....	<i>Acer sp.</i>	120,000	22.50	2,700
Hemlock.....	<i>Tsuga canadensis</i>	50,000	24.40	1,220
Cherry.....	<i>Prunus serotina</i>	46,253	80.62	4,504
Basswood.....	<i>Tilia americana</i>	45,000	30.00	1,350
White elm.....	<i>Ulmus americana</i>	38,000	26.71	1,015
Hackberry.....	<i>Celtis occidentalis</i> ..	10,000	18.00	180
Sycamore.....	<i>Platanus occidentalis</i> .	10,000	20.00	200
Padouk.....	<i>Pterocarpus indicus</i> ..	8,000	500.00	4,000
Black walnut.....	<i>Juglans nigra</i>	7,000	53.57	375
Red cedar.....	<i>Juniperus virginiana</i> ..	5,000	60.00	300
Black locust.....	<i>Robinia pseudacacia</i> ..	5,000	25.00	125
Spanish oak.....	<i>Quercus digitata</i>	5,000	20.00	100
		556,938,926	\$14.33	\$7,981,679

USES BY INDUSTRIES

The wood-using industries of Georgia are less diversified than in many other states. There are only fifteen industries in all, and four of these consume less than 1,000,000 feet of lumber each per annum. The largest industry is that which makes planing mill products, the principal items of which consist of flooring, ceiling, and siding. This industry consumes more rough lumber than all the other wood-using

industries in the state combined. As might be supposed, longleaf pine is the chief wood demanded for that industry.

The making of sash, doors, blinds, and general millwork constitutes the second largest of the fifteen industries, but here shortleaf pine is ahead of longleaf. The following table gives the industries and shows how much lumber each uses a year, with the average price paid for it at the factory:

SUMMARY OF WOODS USED BY INDUSTRIES

Industries	Quantity used annually Feet B. M.	Average cost per 1,000 ft. factory	Total cost f. o. b.
Planing mill products.....	596,903,714	\$12.45	\$4,940,173
Sash, doors, blinds and general millwork	73,130,500	18.74	1,370,626
Boxes and crates.....	24,373,409	11.65	284,002
Car construction.....	21,769,025	24.13	525,357
Furniture.....	16,253,607	19.22	312,470
Vehicles and vehicle parts.....	4,845,250	31.44	152,326
Agricultural implements.....	4,572,421	22.51	102,913
Miscellaneous.....	4,220,000	16.77	70,750
Caskets and coffins.....	4,088,500	13.39	54,760
Fixtures.....	2,755,000	39.70	109,387
Excelsior.....	1,993,500	8.35	16,645
Handles.....	760,000	18.18	13,820
Refrigerators and kitchen cabinets.....	723,000	20.57	14,875
Trunks and valises.....	476,000	25.89	12,325
Porch swings.....	75,000	15.15	1,250
Total.....	556,938,926	\$14.33	\$7,981,679

HARDWOODS IN GEORGIA

Georgia is not usually classed as a hardwood state, though it is by no means destitute of valuable hardwoods. In view of this, it is interesting to note what the factories are doing with hardwoods, and where they are procuring them. The report shows the annual use of only 45,000,000 feet of such, compared with 511,000,000 feet of pine, cypress, hemlock, and cedar. It must be confessed that the showing is not very good from the hardwood standpoint.

White oak leads the hardwoods and red oak is second. About half of the former grows in the state, the other half comes from surrounding states. Considerably more than half of the red oak is drawn from outside regions. What is classed as white oak is made up of several species of the white oak group, and the same holds for red oak. The true red oak—the northern red oak—is little used in Georgia, and what passes as red oak at the sawmill and factory is usually willow oak, yellow oak, or Texas red oak. Much of that which passes as white oak is overcup or forked leaf, or cow oak, though considerable true white oak is mixed with it.

Next after oak, the hardwood which meets the largest demand is yellow poplar, and about three-fourths of it grows in Georgia forests. Following poplar is red gum which grows abundantly in the state, yet it was found convenient to send beyond the borders for one-third of what the factories used. Chestnut is next in quantity among the hardwoods. It has frequently been asserted that chestnut is practically extinct in Georgia, and that it has totally disappeared from large regions since the Civil war. However that may be, the report shows that nearly half of the chestnut used was cut in the forests of the state. It comes principally from the mountainous district of the Northwest.

The state supplies considerably more than half of the ash reported, which consists of several species. The showing is not so favorable with sugar maple which is brought into the state, except a moderate quantity that is cut in the high region in the northern part. The soft maples do well in Georgia, but hard maple is a more northern tree which has followed the mountains southward. Nearly half of the hickory comes from other states, and cottonwood is likewise divided about half and half, while all of the birch and most of the beech is brought in from outside regions. The use of the other hardwoods is quite limited in the Georgia factories and shops.

A summing up of the statistics of different hardwoods reveals the fact that not more than 25,000,000 feet a year are supplied from Georgia's own forests.

RAW MATERIAL COST

The wood-using industries of Georgia pay an average price of \$14.33 for all wood that reaches the factories. That price includes free delivery at the factory. There are great differences, as the accompanying table shows. Excluding foreign woods, the highest in price is cherry, the lowest Cuban pine. The industry that pays the highest average price is fixtures, that which pays the lowest is excelsior. The one is nearly five times as much as the other.

The southern wood-using industries obtain their raw material more cheaply than those in the northern states. Following are average prices paid for wood f. o. b. factory in certain southern states:

	Average factory cost
South Carolina	\$14.80
North Carolina	14.60
Georgia	14.33
Texas	13.30
Florida	12.41
Alabama	12.24
Mississippi	12.22
Louisiana	11.64
Arkansas	11.49

For purposes of comparison, the corresponding average cost is given for certain northern states:

	Average factory cost
Iowa	\$30.92
Ohio	30.47
Illinois	28.76

New York	27.30
Michigan	23.12
Massachusetts	21.29

Industries are more diversified in the northern states than in the South. More kinds of wood are used and a greater diversity of articles is manufactured. Large amounts of raw material are cut in southern forests and shipped to northern states to be manufactured. That is due partly to the fact that better markets for finished products are to be found in the North, but is due more to the higher development of northern manufacturing facilities. In the case of lumber, as with many other natural resources, the raw material seeks the factory rather than the factory seeking the raw material. But for that economic law, the diversified manufacture of forest resources would be much further developed in the South than it is, and the owners of southern timber might be getting as much for it as northern owners get for theirs.

The collection of statistics and publication of reports, state by state, of wood-using industries have done much to throw light on forest utilization in the different parts of this country. The output of lumber, year by year, has been known and published for a considerable number of years; but there was a sad lack of information as to what was done with the lumber after it was sawed. The investigation of utilization by states has supplied a vast amount of information on this subject, and has furnished the means of comparing the manufactures of different sections of the country.

Thank the Thousand-Legged Worm

The lumberman or timber owner who finds the familiar thousand-legged worm by his path in the woods should hesitate if the impulse comes to him to put his foot on the creature which may be scurrying out of his way, or if overtaken, may curl up like a spiral watch spring and lie as if dead. If the lumberman will make the acquaintance of the somewhat unprepossessing little reptile, he will thank it instead of putting his foot on it. It has done a mighty work for the American forests. Few persons realize—in fact, few have the means of knowing—how enormous that work has been, or how poor our forests would be but for the activities of this ungainly creature which does most of its work at night while everything is still.

Charles Darwin's investigation of the activity of the earthworm as a soil builder proved a revelation in its day. No one had even thought of the earthworm as being of any importance, though Darwin showed that it had done much to make the earth habitable.

The thousand-legged worm was a long time in falling under the eye of a competent investigator, but its work finally attracted the notice of Frederick V. Coville, one of the foremost scientists of today. He is a botanist, and a good many other things thrown in. There are few nooks or corners of the United States with which he is not personally acquainted. He has done much work for the government, especially along the line of investigating forage plants in the national forests and on other public lands. Many persons who have seen a suntanned man, with sleeves rolled up, digging around among rocks and in ravines, have supposed that a herb doctor was collecting snake-root or sarsaparilla; but, if it was Coville, he was digging for the purpose of solving some botanical or biological problem which had baffled other scientists.

The activities of the thousand-legged worm (*spirobolus marginatus*) attracted his attention. This worm attains a length of three inches and a diameter of a quarter of an inch. Its legs are supposed to number 1,000, but they fall short of that number. Its food consists of decaying leaves, though it may feed on other diet. Its teeth cut the leaves into fine pieces, and prepare them for soil formation, through the intermediate stage of leaf mold. Otherwise, decay would act more slowly, and the layer of leaves might be lost, so far as enriching the soil is concerned.

A single thousand-legged worm would make a small impression on a forest's leaf carpet. Its day's work consists of masticating and

preparing a mass about as large as a small bean. But the worm does not work alone. Mr. Coville gives figures from which it appears that an acre of leaf-covered ground, like the areas investigated, supports a population of about 180,000 of these worms. Though the mass of a bean a day represents the work of a single individual, the combined work of the acre's population during a season prepares about 4,000 pounds of the finest soil-building material.

If this material is spread over an acre, the accumulation of a single season makes a rather insignificant showing; but the worms have been chewing leaves during the past centuries, and the soil has been enriched thereby. Forests have been supported on soil already prepared before they came into existence; and in time they have contributed their leaves to make soil for future forests; and the worms have always been ready to do their part of the work.

The thousand-legged worm is largely nocturnal in its habits. It hides by day and crawls forth to its feast of decaying vegetation at night. Its habits of concealment by day account for the relatively small number seen. However, an observant person will see considerable numbers in cool, shady places, even by day.

It is easy to understand how much damage a moderate forest fire may do, if it runs through a forest only once in ten years, and does no more than consume the carpet of leaves. Not only is the layer of leaves lost, but the millions of worms are destroyed. None will be on hand to attack the next crop of leaves that falls. Many years must elapse before the worm population can come back, particularly where fire bares extensive areas; and meanwhile the layer of leaf mold is thin and poor. Fungi and bacteria, borne on the wind, may return quickly to a burned area, but the thousand-legged worm must crawl in from distant, unburned areas, and during the period between its destruction and its return, its work remains undone, for fungi and bacteria alone are not equal to the task of manufacturing the mold which the soil needs.

Mr. Coville sums up a portion of the subject in these words:

“Were Solomon to write a new edition of the Proverbs today, I am sure that he would tell us: ‘There be four things which are little upon the earth, but they are exceeding strong,’ and that among them he would include: ‘The little brothers of the forest, they seek not the light but the leafy earth; they prepare for the oak the strength that is his.’”

Experience Talks on Woodworking

It has been the experience of the writer to come in contact with owners or managers of concerns in the furniture and planing mill industries, whose first question concerning a new piece of machinery is, "How much does it cost?" They are greatly concerned with initial cost, and, without investigating the merits of the machine in question, will almost invariably refuse to consider it after they have once heard the price. It is not so much what a machine costs that should determine its value, but what it can do. Whether planer, surfacer, molder or tenoner, the durability of the machine and its freedom from repairs should be considered above all else. The cost price is a minor detail.

It is natural enough for men in business these days to be lured away from common sense by lower cost. When they see a machine which purports to do just as good work as another, and for half the cost, the dollar mark seems to take precedence. The woodworking man, however, who is versed in mechanics, by thoroughly examining a machine, can tell whether or not it will turn out a good quality of work in sufficient quantities to warrant the expenditure of the required money for its installation. Nine times out of ten he will not sacrifice the efficiency of his establishment in the slightest degree by the "penny-wise and pound-foolish" idea.

It should be the aim of all workers in wood, and especially in hardwoods, to study machinery as well as grades of lumber; to be competent inspectors of the knife-grinder, band saw or planing machine, as well as of firsts and seconds. Too much time has been expended in the past on the lumber end of the business, leaving the machinery to take care of itself. Until methods of measuring values and of keeping records that enable one to obtain real values, are adopted, he will never be able to purchase saws, surfacers, etc., with intelligence. Men in other lines of business display knowledge in the machinery end of their calling, with the result that their proficiency in manufacturing a product is brought up to a high standard. Furniture and lumber manufacturers should get busy and follow the good example set by others.

When a machine, a group of machines, or an entire plant, shows annoying vibration, the cause therefor and the source thereof may be entirely different things. The source of most machine vibrations is lack of balance and uneven loads, which latter is merely lack of balance in another form. But the things that cause most of the vibration in machinery are belts. The belts may not always originate the vibrations, but they pass them along, add to them, and sometimes create them. To get an object lesson on this point, one has but to go into a shop or factory electrically driven, with individual motors throughout, then into a belt-driven plant of some magnitude, where there are lots of heavy belts. The belts are the medium of transmission, and acceleration in the factory, like the strings on a violin, are the medium of sound transmission and creation. Individual machines may show jerky vibrations when electrically driven, but the disturbance is localized, whereas if numbers of belts are coupled up into a great system the vibrations are distributed, joined into others so that all machines are affected by both their own and the troubles of others. It is not electricity that does away with this, but the separating and isolating of the sources of vibrations. Vibrations originating in the different machines are like small sticks, in that they are comparatively easy to break up singly, but hitch them all together with a system of belts and they are like a bundle of sticks firmly bound together—a pretty tough proposition to break up. If the belting is uneven in weight or lacking in balance in any way, it adds materially to the source of vibration itself.

Rust spots on a saw are signs of neglect, and burnt spots are a sign of abuse.

Oak, whether plain or quartered, is a comparatively easy wood to work smooth. It is not a soft wood, but what is meant is that oak can be worked on the planer and get a smooth finish with knives that are

a little dull. The same thing is true in working it with saws. In sawing gum and some of the other woods, the knives and saws must be perfectly keen to give good results. But when it comes to sanding, it is the other way. You may sand gum or some other even-grained wood with comparatively smooth or even slick sandpaper and get fair results, but in sanding oak, to get a good finish, the sandpaper should be fresh and sharp. This is because of the unevenness in the texture of the wood. If it is plain oak, there are the hard streaks and the soft streaks of the annual rings of growth and if they are sanded over with dull paper, it will cut down into the soft streaks and the hard ridges be all right for a certain kind of finish, but where a perfectly smooth face is wanted, one should sand oak with a sharp, clean paper. If it is quartered oak, it is the same thing in a different way. There is a hard film which makes the splash line which nothing but sharp paper will touch. If the wood is sanded over with dull or slick paper it will simply dig down between the splash lines and leave them standing up in waves. To get good results, you should not only have sharp paper, but you should get the sanding across the grain or splash line to reduce the tendency to cut down the soft places between.

If insurance has to be carried at all (and it looks like an attempt to throw money away not to carry it) it is best to get it at once, for you do not know when the fire fiend will take a notion to visit you. In other words, get ready for a fire when there is no fire. The insurance people never relax their vigilance, as one often finds to his discomfort. One sometimes doubts the wisdom of having insurance, once he has the details of prevention according to the insurance requirements. If all would take the same care of plants as individuals as they are compelled to do as possible beneficiaries of an insurance company, there would be less fires and less expense. It is an axiom that insurance is a necessary part of every business.

After all is said and done on the subject of the best methods of shop lighting, the fact remains that the best light of all is daylight and plenty of it. If you can so design your shop or factory to secure this, you are all right, and the lighting for the dark part of the short days is only a minor matter.

This country employs labor-saving machinery to a greater extent than any other, yet laboring men and mechanics here get better wages and work steadier than in any other country.

A board thick at one end and thin at the other won't average up right—it makes too much shavings and not enough lumber.

Blessed is the filer that maintains a perfect tooth for he shall save hammer marks and elbow grease.

A medicine chest in a woodworking industry should be one of the requirements, for in a large plant scarcely a day passes without someone being more or less seriously hurt, and wounds have to be plastered and bandaged by rough hands and in a crude way. Mill men know how frequent and severe many of these accidents are. Lint, bandages and rolls of surgeon's plaster should always be kept in stock and convenient for these emergencies. Laws of many states require that "first aid" supplies always be on hand, but common sense should not make such legislation necessary.

Come to think of it, the band saw comes pretty near being the whole thing now. Even for work for which a few years ago it was thought nothing but the circular would ever be satisfactory, the band has proved itself efficient. The good old circular, however, will always have plenty to do.

One can test the metal of saws by running them into spikes, but that is not the right way to do it. The real test is the amount of good wood sawing it will do day after day.

A. B. M.

H. A. McCOWEN, PRESIDENT PENROD-JURDEN & McCOWEN, MEMPHIS, TENN.

R. L. JURDEN, VICE-PRESIDENT PENROD-JURDEN & McCOWEN, MEMPHIS, TENN.

J. N. PENROD, TREASURER PENROD-JURDEN & McCOWEN, MEMPHIS, TENN.

Important Hardwood Development

One of the most important changes that have taken place in the hardwood manufacturing field in a long while, briefly noted in the last issue, is the organization of Penrod-Jurden & McCowen of Memphis, Tenn., which has been incorporated there with \$350,000 capital stock. H. A. McCowen, president of H. A. McCowen & Co., of Louisville, heads the new company of which R. L. Jurden, vice-president of the Penrod Walnut and Veneer Company of Kansas City, Mo., is vice-president and secretary, while J. N. Penrod, president of the Penrod Walnut and Veneer Company, is treasurer.

The new company, which has leased the yard and offices formerly used by the Bennett Hardwood Lumber Company of Memphis, has purchased the sawmill, timber, timberlands, lumber and all other holdings of the Penrod-Jurden-McCowan Lumber Company at Brasfield, Ark., and has also purchased the veneer mill of the Penrod Walnut and Veneer Company at Helena, Ark. With these mills in operation and the Memphis facilities, which will enable mixed cars of lumber and veneers to be handled conveniently, the company is in a position to take care of a wide range of consumers' requirements.

The Brasfield mill, which was completed last August, took the place of the plant which was destroyed by fire in April, 1914. It is a large and modern plant, being equipped with an S' Filer & Stowell band-mill, an S' McDonough resaw, Allis-Chalmers rope set works, and other up-to-date machinery. It has a capacity of 18,000,000 feet of hardwoods a year, its output consisting of oak, gum, ash and elm.

The Helena veneer mill is considered one of the most complete and modern plants of its kind in the country. It produces rotary cut white and red oak, gum, poplar, cypress, yellow pine, basswood cottonwood and other southern woods. Great stress has been laid upon correct manufacture and handling, features being the use of a 150-foot Philadelphia Textile drier and a 150-foot Smith plate roller drier, insuring all stock being flat and uniformly dried. The rotary machines in this plant include some of the largest ever manufactured, giving the concern a wide range of sizes.

H. A. McCowen, president of the new company, has long been a prominent figure in the hardwood business. He started manufacturing lumber at Salem, Ind., in 1892, and is president of the East St Louis Walnut Company, as well as that which bears his name. These enterprises will, of course, be continued without change. J. N. Penrod, treasurer of the company, is also a veteran of the Indiana hardwood field, the firm of Lesh, Penrod & Co. having been a prominent factor at Goshen for many years. He took control of the Des Moines Sawmill Company of Kansas City in 1896, the name being changed to the

Penrod Walnut and Veneer Company, of which he is president and general manager. Mr. Jurden has been in active charge of manufacture and sales for this company at Kansas City and Helena, and is widely known in the veneer trade. He is now president of the Commercial Gum Rotary Association, and has been prominent in the walnut promotion campaign.

Mr. McCowen and Mr. Jurden will be actively engaged in the conduct of the new company and will make their homes in Memphis. Mr. Jurden will be particularly concerned with the operation of the veneer mill at Helena, while Mr. McCowen will devote himself largely to the Brasfield operation. Mr. Penrod will continue to give all of his time to the business of the Penrod Walnut and Veneer Company in Kansas City.

Boston Underwriting Expert Against Limiting Use of Wood

The Massachusetts Wholesale Lumber Association, Inc., held its meeting on March 19 at the Boston City Club. The principal business was consideration of the numerous drastic laws enacted and proposed with the object of decreasing the use of wood in building in order to diminish fire loss. Fred J. Hoxie, the noted underwriting authority and engineering specialist, was guest of the association and presented a paper on the subject, based on twenty-five years' experience in insurance inspection. The principles maintained comprise a systematic campaign on the prevention and extinguishing of fires, holding that wood, like many other articles of domestic and industrial use, is dangerous only when insufficiently guarded and protected; that the safe and economical course to reduce loss was to compensate for the combustibility of so many materials necessarily used in every community by careful development of proper means of promptly and effectually putting out unavoidable fires and reducing the causes of origin and that any practice of substituting fire retardant and resisting materials for the cheaper and more adaptable materials in common use was not only uneconomic but unsafe. He contends that the interest of the community as well as the lumbermen would be best served by advocating in public such safeguarding factors as can be established from time to time and thus allow the rent and tax payer and the general consumer to use whatever is best suited to his conditions. Such views originated by an expert should have a good effect in relieving the public as well as the lumbermen of much unnecessary adversity and still gain added and genuine security.

Pertinent Legal Findings

Measuring Damages Under Broken Contracts

The reports of the appellate courts contain almost innumerable decisions on questions relating to the amount which may be recovered for breach of a contract to sell and deliver lumber or other products of timber. A correspondent has looked over many of these as a basis for submitting the following observations for the interest of readers of *HARDWOOD RECORD*:

Broadly stated, the buyer's rights in such a case are restricted to such damages as have resulted to him as a direct and natural consequence of the seller's default. But, as a general rule, no recovery can be had for loss to the buyer which would not have been foreseen by the seller at the time the agreement for sale was entered into. Another cardinal principle which governs these cases is that the buyer must use a reasonable degree of diligence to minimize any loss resulting to him from the seller's breach. For instance, if a hardwood lumber company contracts to deliver a quantity of certain described material to a furniture manufacturing company, and fails to fulfill the agreement, the buying concern has no right to claim substantial damages against the seller, if it appears that, when the contract was broken, the buyer could have readily purchased the lumber elsewhere at a price which would have protected it against actual loss. This rule is based upon the well settled principle that mere invasion of a legal right does not give a right of action for substantial damages, unless there has been an unavoidable substantial loss to the party aggrieved.

It follows that, as a general rule, the damages which can be recovered for such a breach of agreement are to be measured by the excess of the market value of lumber contracted to be sold, at the agreed time and place for delivery, above the contract price. If, on such a breach of contract, the buyer can make a ready purchase in the same, or a nearby, market at the same cost as the contract price, including transportation charges, he will not be permitted to recover more than nominal damages. Sometimes, of course, the buyer finds it impossible to procure the same grade of lumber elsewhere that he has contracted for. In such case, it has been held that, if he is compelled to buy a better grade by inability to obtain the grade contracted for, he can recover the excess of the enhanced price paid on his actual purchase above the price at which the defaulting seller agreed to sell. (91 *Northwestern Reporter* 137.)

When a company, in making a contract to sell, is advised that the buyer is purchasing for some specific purpose, such as resale or use in a particular building, the buyer, on breach of the agreement, may recover the loss sustained by him as a direct consequence of being prevented from devoting the materials to such use, if he could not obtain lumber to fill his needs elsewhere. In such cases, the seller may become liable for the amount of profits lost by the buyer through non-fulfillment of the contract on the seller's part.

Since damages are computed with reference to the date when the breach occurs, if a contract of sale called for deliveries in installments at different times, the damages must be assessed with regard to the market value of the lumber at those various times. (*Minnesota supreme court*, 57 *Northwestern Reporter* 129.)

If the seller makes delivery within the stipulated time, but the shipment proves to be of inferior quality, the buyer, on choosing to retain the lumber and use it, instead of exercising his alternative right to reject the delivery, may enforce a claim for the excess of the market value of the lumber called for by the contract over the value of the lumber delivered. If the buyer rejects the delivery on account of inferiority in grade, his damages are measurable, of course, on the same basis as if there had been no delivery.

And when there is no total failure to make delivery, but merely a delay, the usual standard for recovery is the difference between the value of the lumber when actually delivered and its value when it should have been delivered, subject to application of the rule concerning special damages above mentioned.

In an eastern case it was agreed that logs should be delivered at a certain boom at prevailing market prices. On breach of the agree-

ment on the part of the seller, it appeared that there had been no sales of logs at that place, and that, therefore, there was no market price there. In this situation it was held by a court that the damages should be assessed with reference to the market value of logs at the nearest neighboring boom, plus the cost of transportation to the particular boom. (53 *Atlantic Reporter* 1110.)

Applying the rule above stated that a person aggrieved through breach of an agreement must take reasonable steps to purchase elsewhere to minimize his damage, it has been judicially declared that where there was a shortage in standing timber contracted to be sold, the buyer could not recover substantial damages without showing that he was unable to buy other timber to take the place of the shortage in the same neighborhood at an equally favorable price.

To meet the common case where an agreement of sale gives the seller latitude in the matter of selecting grades or quantities to be shipped, it has been decided by a southwestern court that damages assessed for his failure to make any delivery must be based upon the smallest quantity of lumber which he could tender in performance of the contract, of the grade on which the loss sustained by the buyer would be the least. That is, it must be presumed that the seller would have chosen to make delivery of grades and quantities which would have been most favorable to himself.

In a southern lawsuit, it appeared that when defendant agreed to sell logs to a sawmill company, knowing that they were to be sawed into lumber for sale on the market, and that the company would thereby derive a certain profit. In this situation it was decided that the seller, on failing to make the agreed deliveries, was liable to the company for consequent loss of profits. But, of course, there could be no such recovery, if the sawmill company could have readily supplied itself with logs from another source.

A builder who has relied upon an agreement for delivery of lumber for use by him in constructing a certain building, and, on breach of the agreement by the seller, is delayed in procuring substitute materials elsewhere, can recover, as an element of his damage, for loss through his employes being idle awaiting delivery, and other items of damage naturally flowing from the breach on the seller's part.

Reclaiming Lumber on Buyer's Insolvency

According to the decision of the United States circuit court of appeals for the second circuit, handed down in the bankruptcy case of *K. Marks & Co.*, 218 *Federal Reporter* 453, when a person purchases lumber on credit the seller is entitled to reclaim the lumber on discovering that the buyer was insolvent when he ordered the lumber, fraudulently concealed the fact of insolvency, and did not intend to pay the agreed price.

The Kentucky Compensation Act

The recent decision of the court of appeals of Kentucky holding that certain features of the workmen's compensation act are unconstitutional having created some misapprehension as to the effect of the decision, the court has just handed down a supplemental opinion making the decision more explicit (*State Journal Company vs. Workmen's Compensation Board*, 172 *Southwestern Reporter* 674). The court adheres to its decision that the law is invalid so far as it purports to limit the amount which may be recovered by an employe who has not expressly elected to be governed by the terms of the act, and so far as it provides for the payment into the compensation fund of awards for death of men who leave no dependent relatives. The supplemental opinion says:

"First, the provisions of the present compensation act, as far as they affect the employer, are unobjectionable, as they do not conflict with any provisions of the constitution. Second, any employe coming within the provisions of the act may voluntarily agree to accept its provisions fixing and limiting his recovery in case of injury. Third, he may likewise voluntarily accept the provisions of the act fixing the amount that shall be recovered in the event of his death, and said sum should be paid to his dependents, if he leaves any, and, if not, to his personal representatives."

The Lumbermen's Round Table

"Poplar All Gone"

One often wonders how public misimpressions on the subject of lumber become current. Very frequently it is because it is to the interest of somebody or other to spread the tidings, regardless of their truth. An instance of this came to notice recently.

A home was to be equipped with fly-screens. It was a rather large house, and the order amounted to something. There was considerable competition for the business among the various local screen concerns. One, which happened to be the largest and best known of all, quoted on cypress frames, while the others specified poplar.

The housewife was told by the glib salesman who represented the big concern that the only reason his house was using cypress was because the poplar was all gone! She repeated this to her husband, who happened to be sufficiently familiar with the lumber business to know that there is quite a little jag of poplar scattered about the country yet, and who consequently laughed when he heard what the salesman had said.

"Any concern which misrepresents in that way," he suggested, "is likely to be unreliable in other respects. I think we had better do business with somebody else."

So the order went to the other screen man, not because he specified poplar, but because the competing house lied about its reason for using another wood. Now, as a matter of fact, cypress may be just as good, or even better than poplar for this particular work; but instead of telling the consumer the wherefores and the whys, the salesman followed the line of least resistance: "The poplar's all gone!"

If there are many other screen manufacturers using a similar plan, don't be surprised to see this statement given credence in many quarters in the near future.

Why Dimension Is Unpopular

Those who believe that the theory of dimension stock in the hardwood lumber business is correct, and who wonder why it is not making greater headway, may find a solution of the problem in the character of material that is often furnished under the guise of dimension.

"Give a dog a bad name," and it is the same way in the lumber business. One trial that happens to be unsatisfactory because of the inability of the dimension man to produce good material will spoil the consumer for a long time to come.

"I used to think that dimension stock was a good thing," said a prominent buyer not long ago. "I even went so far as to place orders for it. But I'm cured; never again. The material came in here miscut, twisted and warped out of shape and in such bad condition generally that it had to be remanufactured, and much of it could not be used at all. The next time anybody suggests buying dimension stock to me, I am going to change the subject quickly before the impulse to rise and smite overcomes me."

Of course, the argument on the other hand is frequently heard that the buyer of dimension isn't willing to pay the price, and that if he gets stung in the quality of the material he gets, he oughtn't to kick; he should have expected it. However, that doesn't help the general proposition any, and the fact remains that if headway is to be made for the idea of using lumber cut to size, it must be properly manufactured so that it will really serve the purpose for which it was intended.

Keep Your Eyes Peeled

"Sermons in stones, books in the running brooks," can be translated to mean that the lumberman or veneer manufacturer or any other business man who keeps his eyes open can find suggestions all around him that he can use in his work.

The hardwood man who goes into a building and sees a new and unfamiliar finish ought to investigate. He may find that a wood which he has not been able to sell for interior trim is actually being consumed, and that he ought to get busy. Or if he has occasion to look into a furniture store window, he ought to consider the furniture with reference to the material as well as to the finished product.

A well-known manufacturer of built-up material said not long ago that he gets a lot of good suggestions by wandering through the furniture stocks in the retail stores, and noting how the work has been handled. He has made it a point to cultivate the acquaintance of the furniture merchants and their clerks, and he is given the right of way whenever he wants to investigate.

It may seem hardly worth while, to some people, to go to the trouble of looking into hardwood products long after they have ceased to be lumber or veneers or panels, but the wise business man wants to know what his goods look like when they reach the consumer.

The Purchase of Logs

In some parts of the country it has become the custom to pay two-thirds of the price of good logs for common. Yet experience has demonstrated that a common log seldom cuts out to as good advantage as this proportion would indicate. It is the good logs that the sawmill man can make money on. The poorer grade is often a losing venture.

"My plan has always been," said a successful log buyer recently, "to pay only half of the top price for common logs. I know that our mill can't saw up the common and make as much money, even at half price, as it does on good, and consequently I keep that proportion in mind. Sometimes it is necessary to offer a little more for the good in order to overcome this disadvantage, but the thing can usually be done if an effort is made in that direction. If the log owner refuses to take a price of that kind, I can often get the logs by naming a round price for the lot. Then it is a question of my judgment against his, of course, but experience is in my favor."

Speaking of log buying, the use of the rules proposed by the Southern Logging Association ought to help matters considerably, and reduce the troubles which are inherent in this end of the work. While it has been suggested that the farmer or other owner of timber will not consider himself bound by these rules, he is sure to be impressed by the fact that the rules are down in black and white, and the moral effect will be good. At any rate, the universal application of the rules will make it incumbent upon the man who has logs to sell to accept them.

Hauling Costs Rising

Sawmill men in the central part of the country report that the cost of hauling is getting to be almost prohibitive. The farmers seem to think that they have been doing the work too cheaply, and are putting up their prices right along. In a number of instances the mills have found it to their advantage to put their own teams in the field and do the work themselves, rather than submit to the exorbitant demands of the farmers.

In sections where the logs are brought in scattered lots, and must be hauled to the railroad, the latter item is an important one, and the log buyer should know something about these conditions when he makes his prices. A quotation which sounds good may be so much higher by the time the logs are laid down at the mill that a good buy may have been turned into one of doubtful value. The cost of hauling is naturally affected by the increased cost of feed and labor, but the general impression prevails that the farmer is merely asking more because he thinks he can get it. Hence driving a bargain for hauling is getting to be almost as important as buying the logs themselves.

A great deal of the oak used on the Pacific coast comes from the eastern part of Asia.

Forest fires in British Columbia covered more than 300,000 acres during the past year.

A mountain lion recently killed in the Grand Canyon game preserve, which adjoins the Tusayan national forest, measured ten feet from nose to tail. Mountain lions and other beasts of prey, such as wolves, coyotes, and wild cats, are killed by forest officers and game wardens because they are a menace to stock and to tame animals.

Wood and Water

It is well known that all wood contains more or less water. Absolutely dry wood is unknown in practice. If all the water should be expelled, so much heat would be required to do it that it would distil the wood—turn it into gas and charcoal. One hundred pounds of the driest wood that any man ever saw contained two or three pounds of water; and there that water will stay in spite of all the dry kilns that have ever been built and in spite of all the sun, wind, and time that may be brought to act upon it.

Just what would happen, speaking theoretically, if all the water could be extracted from a block of wood, no man can say. There are some theories on the subject. One of the greatest wood technologists the world has yet produced believed that if a sufficiently powerful and perfect microscope could be used, it would show that a piece of wood—the ultimate wood cell—is composed of crystals like grains of sugar or salt, and that thin films of water hold the crystals apart, yet bind them in a mass. The microscope shows the wood cell, and reveals its spiral bandages, and its openings and cavities; but no instrument has yet been made of sufficient power and perfection to reveal the ultimate crystals which the Swiss scientist believed are actually in existence and furnish the explanation of the impossibility of expelling all water from wood, without destroying the wood in the process.

HOW MUCH MOISTURE

That theorizing concerns the last remnant of water remaining in seasoned wood; but when the investigation turns to the other extreme of the question, and takes up the largest quantity of water which wood is capable of containing, theories may be left behind, and facts can be dealt with. Instruments have been perfected for measuring the amount of moisture in wood, and expressing it in percentages.

This is of practical value to everybody who deals in lumber, either in its manufacture or its use. It vitally concerns shippers of lumber; for who would not feel an interest in the subject, who has paid a freight bill of \$1,000 on a lumber shipment, and is then informed that perhaps \$300 of it was for water which might have been left behind by getting it out of the lumber before the shipment was made? It is safe to say that in the last ten years lumber dealers have paid enough freight charges on water to have built a considerable section of the Panama canal. Railroads and mining companies are not the only ones with water in their stock; lumbermen have a good deal of the genuine article in theirs on which they pay freight every day.

A thousand pounds of green lumber, fresh from the saw, and cut from green logs, contain from 400 to 500 pounds of water. The amount is far from constant. The average lies between the figures given. Some woods have twice as much as others, and the same species varies from ten to twenty per cent in practice. The trees of some regions hold more water than those from other regions, but in rare cases is a wood less than one-third water when it is freshly cut. The following table has been published as an example of the varying moisture content of different woods as well as the same wood growing in different regions:

PERCENTAGE OF MOISTURE IN WOODS GREEN FROM THE SAW

Species	Where From	Percentage of Moisture
Ash Black	Michigan	47.7
Ash White	Arkansas	28.0
Ash White	New York	28.6
Basswood (Linden)	Pennsylvania	49.7
Basswood (Linden)	Wisconsin	52.3
Beech	Indiana	37.9
Beech	Pennsylvania	39.0
Birch Sweet	Pennsylvania	37.3
Birch Yellow	Pennsylvania	37.0
Birch Yellow	Wisconsin	41.8
Buckeye Yellow	Tennessee	58.5
Butternut	Tennessee	51.6
Cherry Black	Pennsylvania	35.5
Chestnut	Tennessee	57.0
Cypress	Louisiana	44.0
Elm Rock	Wisconsin	31.2

Elm White	Pennsylvania	48.0
Gum Black	Tennessee	35.5
Gum Red	Missouri	41.6
Gum Tupelo	Louisiana	54.7
Hemlock	Tennessee	45.0
Hemlock	Wisconsin	56.3
Hickory Mockernut	Mississippi	41.0
Hickory Shagbark	Ohio	36.7
Mahogany	Mexican	36.0
Mahogany	Cuban	39.0
Mahogany	African	39.0
Maple Silver	Wisconsin	40.0
Maple Sugar	Indiana	36.4
Maple Sugar	Pennsylvania	40.0
Maple Sugar	Wisconsin	36.0
Oak Red	Arkansas	45.4
Oak Red	Indiana	44.5
Oak Red	Tennessee	46.0
Oak Swamp	Indiana	41.5
Oak White	Arkansas	36.7
Oak White	Indiana	38.0
Oak White	Louisiana	43.0
Oak Yellow	Wisconsin	44.4
Pine Long Leaf	Louisiana	48.5
Pine Norway	Wisconsin	47.0
Pine White	Wisconsin	42.5
Poplar (Aspen)	Wisconsin	49.0
Sycamore	Indiana	45.0
Sycamore	Tennessee	46.0

Different parts of the same trunk may show as much difference in moisture contents as is shown by trees growing a hundred miles apart.

The amount of water in a growing tree does not vary much with the seasons. If any difference, there is more water in winter than in summer, notwithstanding a common erroneous belief to the contrary.

After logs have been cut, if they remain a long time before being converted into lumber, the tendency is to become drier; but that is not a necessary result. They may absorb more water. That is nearly certain to happen if they lie in a very damp situation. If they remain for a time in a pond or a river they may soak up water enough to sink them, and that has happened many times. There is not a wood in the world that will float after it has become thoroughly soaked. All wood—absolute wood without air spaces—is heavier than water. Consequently, when all air spaces become filled by absorption and soaking, the wood will sink, no matter what species it may be or how dry it may once have been.

The Possibilities of Elm

There has never been in this country enough appreciation of or enough effort to develop the possibilities of good elm in cabinet work and interior trim. Elm has been extensively used in the furniture trade for many years but generally in the making of cheap furniture in which no effort is made to finish it to bring out the native beauty of the elm. Usually the efforts to finish consist of using a heavy paint-like stain so as to make it look as nearly as practical like oak or something else. Now and then one comes across an instance where some one has made good use of elm in a piece of furniture, where it is properly finished off. Also one now and then finds it used with the same care and appreciation in house trim. These instances are rare, however, and as a general thing there is but little appreciation of the possibilities of elm for face work. Right now there should be a splendid opportunity to develop the use of good elm. Popular taste is turning toward the softer tones in brown and gray, and here elm should enter readily. It has no distinctive figure but it has a soft color. Some gray elm when polished and finished as it should be presents a beautiful appearance and the red elm properly finished should find favor along with the softer tones in brown. It is a wood that has strength and body and will take a good finish, and something more should be made of it than just a material to use for cheap furniture. Elm has possibilities if it were but given anything like the attention and finish that is bestowed upon other woods, and then properly exploited.

Interesting Traffic Developments

In justification of the proposed increases on lumber from southern points to Ohio river crossings and other points, the Southern Railway in Mississippi has submitted a brief to the Interstate Commerce Commission. One of its main contentions is the need of the company for increased revenues. The brief points out that the company never has paid a dividend. It calls attention to the fact that the average freight revenue per mile in the southern district is \$7,246 and the net operating revenue per mile is \$2,962. In contrast to this, the freight revenue per mile on the Southern Railway in Mississippi is \$2,290 and the net operating revenue is \$554. Other facts are introduced to show that the financial condition of the road is far below that of other roads in the same section and throughout the southern district.

The testimony brought out the fact that seventy-five per cent of the lumber handled by the Southern Railway in Mississippi is gum and cottonwood. The remainder consists principally of ash, oak, cypress and elm.

It is also argued that the following language of the commission in the Chattanooga-Nashville lumber case is applicable in this case: "Protestants rely mainly upon the long continued maintenance of the seven cent rate from Nashville to Chattanooga and the nine cent rate from Chattanooga to Nashville. They say that the present rate from Chattanooga is so high that they can do but little business in Nashville, and that the eleven cent rate would be practically prohibitive. ('It is not clear, however,' the commission observes at this point, 'that their inability to sell in the Nashville market is due to the freight rate.')

In this connection respondent shows that Nashville is the second largest hardwood lumber market in the world. ('It appears,' in the opinion of the commission, 'that the difficulties which protestants meet in Nashville are largely due to commercial conditions at that point.')

One of the important decisions in the past two weeks is that in which the commission held that the Louisville & Nashville should permit reconsignment and diversions of earload shipments of lumber in transit from River Falls to Milwaukee, at Nashville and other points on its line, to Dubuque, Ia., on the basis of the joint rate from River Falls to Dubuque plus a maximum charge of \$5 per car from the extra service incident to the diversion.

Proportional rates charged on lumber in earloads from Texas points to Eagle Pass and Laredo destined to points in Mexico are not unreasonable or prejudicial, according to a decision of the commission in the case of the Tilford-Hunt Lumber Company of Nacogdoches versus the St. Louis & Southernwestern.

Complaints of the Gulf Lumber Company, alleging unreasonable rates from Fullerton, La., to various interstate destinations, have been dismissed by the commission. In its decision the commission states that all questions involved have been disposed of in the tap line cases.

In the case of D. S. Pate versus the Southern Railway, in which interest on reparation was demanded, the commission has upheld the lumber company and has ordered the payment of the reparation of \$961.17 together with interest from January 1, 1912.

An effort to obtain the reopening of its case against the Louisville & Nashville has been denied the Stearns & Culver Lumber Company.

A fourth section order concerning rates on lumber in earloads on the Nashville, Chattanooga & St. Louis, changes the effective date to April 15 instead of March 15.

A brief for the respondents has been submitted in the matter of rates on logs, rough staves and stave boards manufactured in transit

at Alexandria and other stations in Louisiana. Morgan's Louisiana & Texas Railroad and Steamship Company and the Louisiana Western Railroad, the respondents, ask in their brief if carriers against their will are to be required to maintain transit privileges upon logs in this territory. They say the issue is clear cut and a just decision in the matter is obvious.

Proposed increases in the rates on logs, earloads, from Stuttgart and other points in Arkansas to Memphis has been suspended further until September 27. A previous suspension order withheld the rates from November 27 till March 27.

A complaint has been submitted to the commission by the Clark-Danforth Handle Company, Cairo, Ill., against the Mobile & Ohio. It has to do with the question of manufacturing in transit.

Misrouting and overcharge are alleged in a complaint submitted by the Ozark Cooperage and Lumber Company against the Yazoo & Mississippi Valley. Numerous shipments of ash staves from Mississippi points are involved.

Rates on veneer to eastern and middle western points are attacked in a complaint submitted by the Augusta Veneer Company, Augusta, Ga.

Baltimore Exports for February

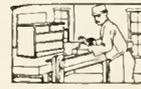

While the export trade continues to be very much restricted there is encouragement in the statement of the forwardings from this port for February as compared with the same month in 1914. A decline is to be recorded as against January of some \$6,000 in value, but the exhibit, when contrasted with the corresponding month of last year, is highly favorable for the reason that February, 1914, showed an incomparably greater reduction, the figures for January of that year having been \$190,196 against \$91,447 for January, 1915, while the value of the shipments made in February was \$65,987 last year as against \$59,806 this year. In other words, while the shipments in February, 1914, were valued at not more than about one-third those of the previous January, the proportion this year is approximately three-fifths, which must be regarded as a great gain relatively. Some of the items, like hickory logs and short leaf pine, made an actual advance, and there would be every reason to expect a continuance of the increase but for the almost insuperable obstacles that confront the exporters, among them the jumps in the ocean freight rates and the actual embargoes placed on the receipt of stocks by the steamship companies. The comparative statement of exports is as follows:

	1915,		February,		1914,	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Logs, hickory.....	70,000 ft.	\$ 2,510	40,000 ft.	\$ 1,422	40,000 ft.	\$ 6,867
Walnut	10,000 ft.	500	120,000 ft.	6,867	50,000 ft.	1,964
All others.....			50,000 ft.	1,964		
Lumber, oak.....	587,000 ft.	20,910	\$07,000 ft.	26,482		
White pine.....			3,000 ft.	116		
Shortleaf pine.....	188,000 ft.	6,746	121,000 ft.	3,920		
Poplar	105,000 ft.	3,830	155,000 ft.	8,056		
All others.....	162,000 ft.	7,480	137,000 ft.	6,894		
Shooks, all others.....			1,504	1,654		
Staves	11,359	1,375	3,953	415		
All other mfrs. of lumber.....		1,300		12,025		
Doors		3,613		1,118		
Furniture		3,473		1,118		
All other mfrs. of wood.....		8,069		20,514		
Total		\$59,806		\$91,447		

The Forest Service is co-operating with fifty-four railroads, mining companies, pole companies, and cities in making tests of wooden ties, timbers, poles, piling, and paving blocks which have been given preservative treatments.

Pipe Stems of Bird Cherry

The pipe stem is one of the smallest articles made of wood, and has attracted no particular attention from those who make a business of compiling statistics to show how much and what kinds of wood are used in the country. Consequently, there seem to be no available statistics showing how much or what kinds of wood are made into pipe stems.

A common material for that purpose is a species of wild cherry that grows throughout half of the United States and in nearly half of Canada. It has a long list of names, some applied locally and others are quite general. The most common of the names are bird cherry and fire cherry; but it has other titles, among them wild red cherry, pin cherry, pigeon cherry, and simply wild cherry.

The name "wild red cherry" is not an inappropriate name for this bush or tree, because it is the only wild cherry, of the eight or nine species in the United States, that is red when fully ripe, though two others are red before ripe but change to purple or black afterwards.

No lumberman ever struck an axe into the trunk of this cherry for business purposes; because not one trunk, probably, in a million ever attains a diameter of one foot. Enormous numbers spring up in regions bared by fire, but they die young. Most of them begin to die within four or five years after they spring up; a smaller number survive fifteen or twenty years; and only in rare cases does one attain pole size. The extreme size is stated to be eighteen inches in diameter; but it is doubtful if any man in his whole life ever saw two of the trees that large.

The forester concedes that the wild red cherry (which he calls *Prunus pennsylvanica*) is a good thing in its place. Its dense thickets provide protection to areas which otherwise would be barren. Under this protection, trees more valuable are able to secure a foothold, and when the cherry bushes die, which takes place speedily, the better trees hold the ground.

As far as can be ascertained, the pipe stem maker is the only person who has ever found a use for the wood of this cherry. When the bush is small, say four or five years old, the central stem and the branches are long and smooth, with bright bark, decorated with markings running a fourth or a third of the way round the stems at frequent intervals, and giving a pleasing figure. These markings are lenticel scars—as botanists call them. They are holes in the bark, and through them the growing wood gets rid of some of the water or sap which it no longer needs. Nearly all kinds of cherry trees have these markings, and they are prominent also on certain birches and other trees.

The pipe stem maker values these decorations highly. Aside from these ornamental markings it is not apparent that the cherry stem has any particular value over many other woods. The pipe stems are made in all sizes from nearly an inch in diameter down to a quarter of an inch, and in length from three or four inches up to two feet, and a few are still longer. A hole is bored lengthwise through the stem, and three or four scallops and trimmings with a knife complete the process of manufacture, ready for the stem's attachment to the bowl. Occasionally a varnish or filler of some sort is used, but most have no artificial finish after the desired shape has been given.

There appears to be no particular time or place of cutting the stock, but winter cutting is preferred because the bark is

then tight and is less liable to injury in handling. The probability that the supply will become scarce is remote, as any person will speedily conclude who has ever seen a thicket of this cherry and noted the number of thickets in a region. It is a thinly-stocked acre which will not easily yield ten thousand first-class pipe stems. A single ridge on some of the spurs of the Alleghany mountains contains enough of this cherry to supply stems for all the pipes of earth, from the creation of Adam till the last human footprint fades from the sands of time at the end of the world.

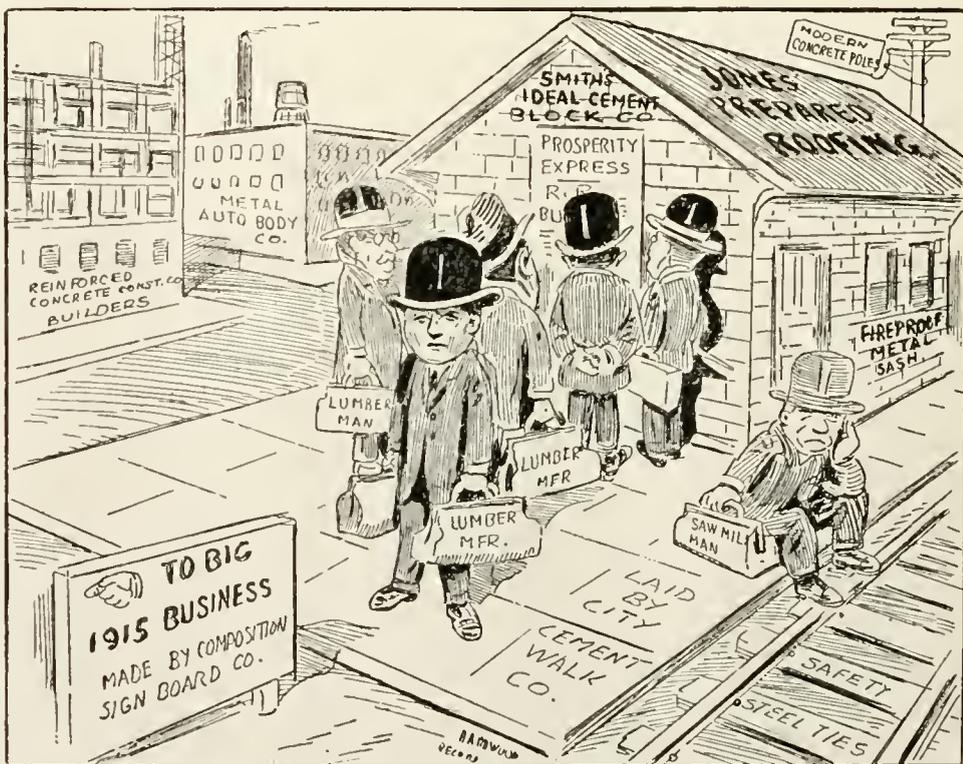

Sometimes the pipe's bowl as well as the stem is of this wood, with the bark still on. The effect is rustic, but such a pipe is not of high grade. The bowl is inclined to burn, and when it escapes that mishap, the heat from the burning tobacco causes the bowl to check and split in a short time.

Chicago Council Adopts Increased Fire Limits

At a meeting of the council of the city of Chicago, held at the council chamber on March 22, it was decided by vote of thirty-nine to six to adopt the recommendations for enlarging the fire limits of the city, whereunder they are increased some twenty square miles in area. For a time it looked as though there would be an effort to extend the limits twenty square miles further than the district described in the provision adopted, but this provisional fire limit plan was unfavorably received.

There have been rather vague charges raised against lumbermen to the effect that they had provided \$1,000,000 at a recent meeting to fight the measure. The ridiculousness of the charges are, of course, shown on the face of them, but there are plenty of people in Chicago who have been willing to give the charge credence in spite of very forceful and convincing denials of any such action and of grounds for even suspecting anything of this sort of the lumbermen of this city.

All the honor is not in the work of the big saws; the little ones cut wood, too.

THE HANDWRITING ON THE WALL, AND YET THEY WONDER WHY THE TRAIN IS LATE.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 879—In the Market for Cottonwood

Louisville, Ky., March 9.—Editor HARDWOOD RECORD: We are wanting several carloads of 4/4 panel and wide No. 1 cottonwood, to be 21" and up wide. Can you put us in touch with concerns that produce or have in stock cottonwood of these dimensions?

A list has been supplied the above correspondent. Those interested will be given the address upon application.—EDITOR.

B 880—Wants Oak Sawdust

New York, N. Y., March 12.—Editor HARDWOOD RECORD: We are in the market for dry oak sawdust which we would buy in carload lots, delivered on a Boston rate of freight. If you could put us in touch with anyone who could furnish this, we would appreciate it.

Those within convenient shipping distance desirous of getting in touch with this prospective customer will be supplied the address upon request.—EDITOR.

B 881—In the Market for Red Gum

San Francisco, Cal., March 12.—Editor HARDWOOD RECORD: We are in the market for a car containing about even quantities of 2 1/2", 3" and 4" firsts and seconds red gum, either plain or quartered, dry stock, suitable for retail yard trade.

Can you put us into communication with anyone who can furnish this stock?

The above has been referred to sources of supply for red gum desired. Those interested may have the address upon request.—EDITOR.

B 882—In Need of Hardwood Squares

Amsterdam, N. Y., March 10.—Editor HARDWOOD RECORD: We have been referred to you in regard to putting us in touch with someone who can supply us with 1 1/2 x 1 1/2 x 42", and 1 1/4 x 1 1/4 x 42" hardwood, air dried or kiln dried, squares.

Those having this line of dimension stock and desiring to dispose of it will be placed in communication with this prospective customer by addressing HARDWOOD RECORD.—EDITOR.

B 883—Dimension Stock

Muskegon, Mich., March 13.—Editor HARDWOOD RECORD: Can you furnish us with a list of hardwood mills who cut dimension stock? If you can we would appreciate it very much.

This inquiry comes from a well-known furniture manufacturer. Any readers desirous of corresponding with the writer will be forwarded the address.—EDITOR.

B 884—Regarding Quarter-sawing Oak

Brooklyn, N. Y., March 13.—Editor HARDWOOD RECORD: Will you please send me information on how quartered oak is cut? Also approximate percentage of waste in both plain sawing and quarter sawing.

HARDWOOD RECORD has advised that quarter-sawing is done by first quartering the log, and then sawing each board from heart to bark. The medullary rays, which are the bright streaks in wood, run from the center to the bark of a log, like spokes of a wheel. Quarter-sawing is done for the purpose of exposing as much of these bright streaks to view as possible. In sawing, the piece on the mill carriage is turned after a few boards are cut, so that the saw will constantly cut along radial lines, that is, from heart to sap.

There is more waste in this method than in plain sawing, because several pieces, thick on one edge and thin on the other, must be thrown away. It is not easy to say what this average waste is, because it varies with the size of the log and for other reasons; but it is safe to say that it is never less than ten per cent in excess of plain sawing. The waste in plain sawing also varies greatly, but usually runs from twenty to thirty per cent of the log, if slabs, sawdust, trimmings and defects are counted.

Any wood may be quarter-sawed, but only a few are so worked in practice, because most woods are not improved in appearance by the method of conversion. Quartered oak exceeds all other quartered woods combined; but some sycamore, beech, red gum, yellow poplar and others are occasionally worked in that way.—EDITOR.

B 885—Method for Figuring Small Dimension

Aurora, Ind., March 16.—Editor HARDWOOD RECORD: Have you ever come across anyone among your many correspondents who has a short and quick method of figuring board measure feet in small dimension stock, say like 1 1/2" x 1 1/2" x 19", 3 1/4" x 3" x 13", 3 1/4" x 27" x 21"? We sometimes have a good deal of this to do and want to learn the best and shortest method. There are such a variety of sizes that it would be impossible to figure out a table that would be of any use. Will thank you for any information.

This concern has been informed that in view of the fact that its dimension stock comes in such a variety of sizes, rendering the use of a table impossible in calculating the board feet, it is doubtful if any short method has ever been or can ever be devised for doing it if each size is separately measured.

A method that has proved satisfactory where small pieces in large quantity have been bought by measurement, is to pile them solid in a rectangular rick, measure its cubic contents and reduce that to board feet. The piling, of course, entails considerable work, but a boy can do it, and the cost is far less than it would be to figure each separate piece. It is necessary that no vacant spaces be left, otherwise you will be paying for wood which you are not getting.

A rectangular pile of any size can be measured and reduced to board feet in ten minutes, and it will take no longer to measure 100,000 feet than 100, after the stuff is properly piled. Possibly this suggestion will help you out.

Will be pleased to have suggestions on this subject from readers.—EDITOR.

B 886—Wants to Buy Quantities of Northern Woods and Special Stock

New York, N. Y., March 19.—Editor HARDWOOD RECORD: We have an inquiry from abroad for beach, birch and maple to be used in the manufacture of cheap chairs. On account of the high duty now in force on the manufactured product, our clients are anticipating manufacturing these chairs themselves. They do not specify the dimensions they require, but we presume that they will take about the same stock as is used by the chair manufacturers in this country for this purpose. We would be pleased to get in touch with concerns able to give us the necessary information and prices in this regard.

We also have an inquiry from abroad for chair rockers. This stock has been heretofore manufactured out of oative woods, but our clients are desirous of replacing same with cheap American wood. These rockers would have to be made to pattern, which we will furnish any interested parties. Deliveries on both these items require F. O. B. New York for export in carload lots.

Concerns interested in this inquiry can have the necessary information by writing HARDWOOD RECORD.—EDITOR.

B 887—Wants to Buy Basswood Logs

Liverpool, England, February 26.—Editor HARDWOOD RECORD: Looking back through your issue of October 25, 1914, we observe an inquiry for basswood logs. We are also open for this stock, and shall be much obliged if you are in a position to give us the names of any firms on your side who can supply them.

This inquiry speaks for itself.—EDITOR.

B 888—Wants to Buy Prime Hickory Logs

A prominent firm in England has written us under date of March 11 stating it wanted to receive regular shipments of prime hickory logs, and asks that interested parties state sizes and earliest shipment that could be made.

B 889—Wants to Make Connection for Glued-up Dimension Stock

The following letter has been received by a manufacturer of glue jointing machines:

South Bend, Ind., March 1.—Some of our customers have recently made inquiry for glued dimension in oak. We do not operate machinery, but we would like to have you put us in touch with some manufacturing institutions who have a glue jointer and who would, in your opinion, consider supplying glued-up dimension. This dimension runs in quartered and plain white and red oak 1" and 1 1/4" stock and size about 12 x 12" and 21" or multiples. Stock to be surfaced one side.

This offers an opportunity for manufacturers of built up dimension. Interested parties can have the necessary information by writing HARDWOOD RECORD.—EDITOR.

B 890—Wants to Buy Redwood Veneers

A large veneer concern in the Middle West has written HARDWOOD RECORD that one of its customers wants to buy large quantities of

redwood veneers, either sawed or rotary, in 1/15 and 3/32" thicknesses. This concern states that there is an order in prospect for about ten cars if the stock can be secured.

Readers of HARDWOOD RECORD who happen to be manufacturing redwood veneers, or are in touch with people who do, will probably find this a profitable line to follow up.—EDITOR.

B 891—Corrects News Item

In a recent issue of HARDWOOD RECORD there appeared an item to the effect that the Williams Brothers Company, Cadillac, Mich., had cut out all its timber on the Ann Arbor road. Readers of HARDWOOD RECORD will be interested to know that according to a postal from the Williams Brothers Company it still has a three years' cut on the Ann Arbor road at Saunders Siding. It has merely finished there this season.

Clubs and Associations

Buffalo Exchange Elects New Officers

William P. Betts was elected president of the Buffalo Lumber Exchange at the annual meeting this month, succeeding A. W. Kreinheder, whose term had expired. Horace P. Taylor was chosen vice-president, and John S. Tyler re-elected secretary and treasurer. The following directors were chosen: A. W. Kreinheder, W. P. Betts, H. P. Taylor, J. S. Tyler, O. E. Yeager, C. N. Perrin, H. I. Abbott, T. H. Wall, C. W. Hurd, A. A. Mason and P. M. Sullivan.

A matter taken up at this meeting was the brief of the National Wholesale Lumber Dealers' Association before the Interstate Commerce Commission in the matter of freight bills. It is contended that the carrier should not disclose the name of the original shipper or point of shipment of lumber where the original consignee has diverted or reconsigned a shipment, or where he gives the delivering carrier an order to deliver it to his customer and specifies on that order that the carrier shall not disclose the name of the original shipper or point of shipment.

Philadelphia Exchange Meets

The regular monthly meeting of the Philadelphia Lumbermen's Exchange was held on March 4. At this meeting President Fritz, who represented the exchange at the third annual convention of the Chamber of Commerce of the United States of America, held at the New Willard Hotel, Washington, D. C., on March 2, 3, 4 and 5, read an interesting detailed report of the work done at the convention. He spoke of the get-together luncheon held at the Ebbett House and the interesting addresses made by President Wilson, Secretary Bryan, Secretary McAdoo and Senator Thomas E. Burton of Ohio. Mr. Fritz stated that the organization is doing great work and carries much weight in Washington and elsewhere.

B. Franklin Betts, Benjamin Stoker and Omen M. Bruner were appointed delegates to represent the exchange at the next convention of the American Academy of Political and Social Science, to be held on April 30 and May 1.

Eugene W. Fry, Robert B. Rayner and W. H. Smedley, were appointed a committee to meet with delegates of other commercial organizations of Philadelphia to consider the question of legislation relating to the regulation of transportation matters and with a view of organizing a joint executive

committee on the improvement of the harbor of Philadelphia and the Delaware and Schuylkill rivers. A committee was also appointed to study Governor Brumbaugh's compensation bill and communicate opinion to the governor.

The office and entertainment committee of the exchange was instructed to arrange for the annual banquet which will be held on April 8, following the annual meeting.

The exchange endorsed the A. Merritt Taylor Rapid Transit Bill for efficient rapid transit at this meeting. At the next monthly meeting of the exchange, which will be held on April 1, directors for 1915, will be nominated.

Nashville Club Elects New Officers

The annual meeting of the Nashville Lumbermen's Club took place in the Commercial Club rooms on Saturday, March 13. Vice-president Charles E. Hunt, of Hunt, Washington & Smith, presided in the absence of President Henderson Baker, and as at the previous meeting the secretary was instructed to cast the ballot at this meeting for the ticket as proposed by the nominating committee, this was carried out on due motion.

The new officers and directors are: Charles E. Hunt, president; William M. Farris, Jr., and Harold Greene, vice-presidents; Sam K. Cowen, treasurer; Cecl Ewing, secretary; directors, A. B. Ransom, C. M. Morford, P. J. Loevenhart, S. Lieberman and Henderson Baker.

The report of Secretary Greene showed that the club is in excellent shape financially and still retains a balance in the treasury.

President Hunt, on taking the chair, made the usual speech of appreciation, asking for the co-operation of the club members in carrying out any policies he might be able to put into effect.

A call was made for a report from the committee on the constitution and by-laws, which submitted a new constitution and by-laws to be used in connection with the application for a charter which will be applied for in the near future.

Important Conference to Be Held in Memphis

One of the most unique conferences in the history of the lumber and railroad business in the South will be held at Memphis April 7. It has been arranged under the auspices of the Southern Hardwood Traffic Association and it is expected that presidents and traffic managers of practically every railroad operating through the southern hardwood producing territory will be present. It is also expected that over 300 hardwood lumber manufacturers and distributors will be in attendance. This conference has been called for the specific purpose of bringing railroad and lumbermen together in order that an understanding may be reached in connection with the general subject of freight rates on lumber and forest products. A number of railroad men have already signified their intention of being present and it is known that the lumbermen will take quite an active interest in the conference and will lend their presence and support thereto.

A great deal of litigation has been connected with the subject of lumber rates from almost every point in the South to almost every destination in America within the past two or three years. A number of important contests, involving lumber rates, are at present pending before the Interstate Commerce Commission and this conference has been arranged to see if common ground cannot be reached whereby some sort of adjustment can be effected. John W. McClure, president of the Southern Hardwood Traffic Association, is authority for the statement that the lumber people are ready to lay their cards upon the table and they are going to ask that the railroad men do the same thing. The former are willing to bring their records to the conference and show just exactly what sort of profits they are making out

WILLIAM P. BETTS, PRESIDENT BUFFALO LUMBER EXCHANGE.

HORACE P. TAYLOR, VICE-PRESIDENT BUFFALO LUMBER EXCHANGE.

JOHN S. TYLER, SECRETARY-TREASURER BUFFALO LUMBER EXCHANGE.

of their lumber business and what will be the result if some of the rates now in controversy are actually put into effect. They are going to ask that the railroads be equally frank with them in the hope that an adjustment may be brought about which will make it possible for the railroads to enjoy a reasonable rate and at the same time give the lumbermen a chance to continue their business successfully.

It has been known for some time that the Southern Hardwood Traffic Association was planning this conference, but it had to feel its way. It sent out invitations to railroad presidents, traffic managers and others connected with the handling of freight. It also sent out invitations to about 1,000 manufacturers and distributors of hardwood lumber throughout the South. Within the past few days a number of acceptances have been received from the railroad men and fully 300 manufacturers and distributors of lumber have signified their intention of being present. With this encouragement, the association has made definite announcement of the date and place of the meeting, as already given, Hotel Gayoso, Memphis, April 7.

A spirit of harmony between the railroad men and representatives of the lumber industry will be sought through this conference and it is emphasized by some members of the trade that the consequences may be of the most far-reaching importance, both to the railroads and the hardwood lumber industry. There has been entirely too much antagonism between the carriers and the lumber people, in the opinion of some members of the trade, and it is hoped to bring about such relations that both will deal with each other in a more friendly spirit. There are questions about the operation of railroads and difficulties which the carrier must overcome of which the average shipper is entirely ignorant. On the other hand it is felt that there are many phases of the hardwood lumber industry, from the time the tree is cut in the woods until the product is finally marketed, regarding which there is sad lack of knowledge on the part of the traffic heads of the railroad systems. It is believed that an interchange of views on these subjects and mutual enlightenment regarding the railroad and lumber business must necessarily prove of vast benefit all around.

The committee in whose hands plans for the meeting have been placed is composed of the following: George D. Burgess, Rusee & Burgess, Inc., Memphis, chairman; W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss.; James E. Stark, James E. Stark & Co., Memphis; Frank F. Fee, the Fee-Crayton Hardwood Lumber Company, Dermott, Ark.; Frank B. Robertson, the Anderson-Tully Company, Memphis, and F. R. Gadd, the Wisconsin Lumber Company, Chicago.

Chairman Interstate Commerce Commission

The new chairman for the Interstate Commerce Commission elected at Washington on March 17 is C. C. McChord, formerly of Louisville. Mr. McChord has served as a commissioner in this work for some time past.

Organization of Western Veneer Men

The Pacific Coast Veneer Association is the style of an organization, the initial plans of which were launched at a meeting held a short time ago at Tacoma, Wash. The association will embrace manufacturers of veneers and veneered boxes in the West, and will take in practically all of the leading manufacturers in this line.

Efforts to Revivify Hoo-Hoo

E. D. Tennant, snark of the universe, has had active charge of the scrivener's office at St. Louis since his appointment at the joint meeting at the house of ancients and the supreme nine at Chicago a few weeks ago. Mr. Tennant has sent out the following appeal, giving a summary of the conditions of the organization:

Believing that the members of the order are entitled to know why the executive officers have had to make an assessment of \$2 per member, I submit the following:

Owing to Scrivener Stephenson's condition being such that he cannot come to the office and straighten out his records, I am unable to give a correct statement of receipts and expenditures for all the year. I am, however, making a careful audit and hope to have the records straightened up at an early date. We will require about \$5,250 to take care of present existing death emergency claims, and we need as much more for current liabilities, also funds for the carrying on of the regular business affairs of the order. The supreme nine will install a system with a view to preventing future mistakes.

Our records show an active membership of over 11,000. Our liability, divided amongst this number, is small. Two dollars per member will pay all liabilities and leave a surplus sufficient, with the raised dues next year, to put the order on a sound financial basis and keep it there. Our records show that practically all of our active members have paid 1915 dues. This means that Hoo-Hoo is alive and that, in spite of the strenuous times, its members have not lost interest. But our dues have been too small to avoid going behind.

Regarding the deficit contribution asked for in December, the amount collected was insufficient to relieve our present condition. Receipts on this call were to be acknowledged only under the roll of honor in the bulletin. However, the scrivener's ill-health has prevented the bulletin being published since November. It was decided at the Chicago meeting to defer future publications until our finances would permit.

The hand book has not been mailed out owing to the cost of postage. This book has cost the order, including printing and cost of labor, about seventy-five cents per copy. It was decided at the meeting that vicegerent snarks would be supplied with copies, but that members who desire them would be charged a nominal fee of fifty cents each. If you wish to secure a copy, kindly include fifty cents in your assessment remittance and advise this office.

I personally believe in Hoo-Hoo. It could not have lived this long if the idea were not right. Judging from the numerous personal letters and messages I have lately received, I am certain that the members want the order perpetuated, and are willing to help do it. Now, do your share: put Hoo-Hoo on a solid, permanent basis. Mistakes made in the past will be avoided and the business affairs of the order handled in a manner that will win the approval and support of the entire membership.

In addition to the appeal, the following facts are outlined in Snark Tennant's statement:

Supreme Snark E. D. Tennant and Supreme Gordon G. H. Grayson had charge of the scrivener's office since appointment at the recent conference, and will be in active charge until a competent man can be employed. The scrivener will hereafter be elected and will serve without salary.

The supreme nine will be empowered to employ a competent manager to handle the business of Hoo-Hoo under supervision of that body.

The annual dues will be increased to \$3.65, effective September 9 on present members. An immediate assessment of two dollars per member was levied to raise necessary funds immediately.

Memphis Club Appoints Inspection Committee

The Lumbermen's Club of Memphis, at its regular semi-monthly meeting, held at the Hotel Gayoso Saturday, March 13, decided upon the creation of an inspection committee which will make investigations from time to time in connection with the subject of inspection and inspection rules and report its findings to the club in order that this body may act as a unit on matters relating to this subject. It was made quite clear that this committee is to be entirely independent and wholly impartial. The reason for this will be readily understood when it is stated that there are a number of members of the Lumbermen's Club who are identified with the National Hardwood Lumber Association and also quite a goodly number connected with the Hardwood Manufacturers' Association and still other organizations which maintain inspection bureaus and promulgate inspection rules. This committee, which is regarded as by far the most important created in a long while by this organization, is composed of John W. Welsh, chairman; R. H. Darnell of R. J. Darnell, Inc.; Edgar Lehr, Green River Lumber Company; W. L. Crenshaw, Crenshaw-Gary Lumber Company, and F. W. Dugan, Dugan Lumber Company.

The entertainment committee was authorized to make the necessary arrangements for another dinner dance to be given under the auspices of the club. The entertainment committee stated that a number of members had requested that another one of these informal affairs be arranged, and this was all that was required to bring forth the necessary authorization. The expenses of these dances are borne by the members of the club who actually attend.

Fred Conn of the Bayou Land and Lumber Company, Cincinnati and Yazoo City, Miss., was elected an associate member.

This meeting was exceptionally well attended, there being sixty-eight members and guests present. The usual luncheon was served. C. G. Kadel was in the chair. Among the visitors was Earl Palmer, Paducah, Ky., a former president of the National Hardwood Lumber Association. Mr. Palmer is well known in Memphis, having been in close touch with the trade of this city and section for a number of years.

Cypress in the Year 1914

George E. Watson, secretary of the Southern Cypress Manufacturers' Association, has given out figures on the cypress business for the calendar year 1914. He said that business was relatively better for cypress than for any other wood. Mills ran on nearly full time, except in December, and sales were good. Stocks on hand January 1 were only four per cent larger than for the corresponding date a year before.

National Lumber Manufacturers' New Quarters

On May 1 the offices of the National Lumber Manufacturers' Association will be moved from present quarters on the sixteenth floor of the Otis building, LaSalle and Madison streets, to new offices on the ninth floor of the Lumbermen's and Manufacturers' building now nearing completion directly across LaSalle street from the Otis building. The new quarters will include rooms 923-932, and will furnish ample room for transacting all the association's business.

Board of Directors of the National Chamber of Commerce Meets

Many matters of importance were taken up at the two days' session of the board of directors of the Chamber of Commerce of the United States held at Washington a short time ago. Foremost among these was the appointment of a federal trade committee which will act in co-operation with the new Federal Trade Commission. It is composed of nine members.

The board decided to test in the courts the correctness of the regulations of the Treasury Department which for the purpose of the law taxing net incomes, requires business men to account for gains from all of their transactions, but permits them to deduct only such losses as are incurred in their regular occupations. The directors are anxious not to provoke a controversy in the matter in an antagonistic spirit, but felt that it was important to have it settled.

Further effort was in the direction of co-operation with a national system of labor exchanges to deal with questions of unemployment. The board voted to appoint a committee to study these plans.

Regarding the tariff commission, the board voted to appoint a special committee to consider the present status of the situation. Similar action was also taken regarding the National budget.

Other important questions coming up for consideration were rural credits, pure fabric law and new members. The directors voted to appoint a special committee to make a study of the first two subjects.

Samuel McRoberts of New York and Joseph H. DeForest of Chicago were elected vice-presidents. President Fahey, in commenting on business conditions, spoke with a great deal of optimism and assurance as to future developments.

With the Trade

Columbia Hardwood Lumber Company Buys New Property

The Columbia Hardwood Lumber Company of Memphis has taken over the properties of the Peniscot Lumber Company, purchased some time ago. The consideration was \$60,500 and the financial end of the transaction has been completed. Included in the property, aside from the timberlands, are five sawmills and two railroads. The new owners have begun overhauling the sawmills and repairing the railroad tracks with a view to beginning operations in the near future. It is estimated that about \$25,000 will be spent in these improvements. John Schoen, Chicago, is president of the Columbia Hardwood Lumber Company, while Ed. Schoen is vice-president. These gentlemen have spent some time in Memphis recently in closing up the negotiations which were conducted through their attorney, L. T. Fitzhugh.

J. M. English & Co. Lose Lumber by Fire

About 500,000 feet of lumber, the property of J. M. English & Co., Asheville, N. C., which was stacked at Yellow Creek, was destroyed by fire on March 14. It is stated the loss approximates \$20,000 and was partially covered by insurance.

The lumber was stacked at the company's mill, which, however, was saved by the energetic work of men around the plant. Also 500,000 feet of lumber stacked in another yard remained untouched.

Change in Norman

Operations

The Holly Ridge Lumber Company has been incorporated in Louisville with \$150,000 capital stock, and the Norman Lumber Company of Louisville has decreased its capitalization from \$150,000 to \$75,000. This action indicates a marked change in the policy of the Norman Lumber Company, which has been operating a mill at Holly Ridge, La., taking the timber, other than white oak, off the 35,000-acre tract of the Chess & Wymond Company, Louisville coopers. The Norman company has sold its mill to the Holly Ridge concern, E. B. Normann, vice-president of the Norman Lumber Company, becoming its vice-president and general manager. He will be in charge of the mill operation. It will now have access to more of the timber of the Chess & Wymond Company, which controls the Holly Ridge concern, and will probably enlarge its operation. On the other hand, the Norman Lumber Company, whose business will now be concentrated in Louisville, plans to enlarge, and especially to develop the manufacture of poplar bevel siding and interior finish.

Large Timber Sale

Recent reports from Marinette, Wis., say that one of the largest lumber deals of recent years in that locality was completed recently. The Peshtigo Lumber Company of Peshtigo, Wis., sold to the J. W. Wells Lumber Company of Menominee from 20,000,000 to 40,000,000 feet of timber located in Marinette county near Taylor Rapids. The consideration is more than \$100,000. It is understood that the Wells company will take all this timber to Menominee and it will add several years to the life of the big sawmill owned by that company there.

Traffic Expert Talks on War End

J. H. Townshend, manager of the Southern Hardwood Traffic Association, recently returned to Memphis from a trip to Washington. He said that the opinion seems to be everywhere that the war will be ended during the fall. He said this opinion emanates from all quarters and seems to have a pretty sound basis as coming from people higher up in the capital. Mr. Townshend says that officials who are in close touch with the situation do not think that it will be possible for the war to continue much longer than the fall on account of the growing sentiment against it among the warring nations, and the tremendous expense.

Vestal-Frantz

HARDWOOD RECORD is in receipt of an announcement of the approaching marriage of E. M. Vestal of the Vestal Lumber & Manufacturing Company, Knoxville, Tenn., to Miss Dorothy Jean Frantz, daughter of Mr. and Mrs. Robert Lee Frantz, 2969 Poppleton avenue, Omaha, Neb., on Tuesday afternoon, April 6. The couple will be at home at 1801 Washington avenue, Knoxville, after May 1.

Bankruptcy Sale of Pittsburgh Company's Assets

W. B. Fell, receiver in bankruptcy of the estate of The Western Lumber Company, bankrupt, will offer for sale at public auction on Monday, March 29, at 11:00 o'clock, in the company's offices in the Oliver building, the entire personal property of the bankrupt on the premises, consisting of office furniture, fixtures, etc. The terms of sale are twenty-five per cent of amount bid at time of public auction, balance upon confirmation of sale by United States district court.

Regarding the Pine Bluff Lumber and Box Company

The Pine Bluff Lumber & Box Company, Clio, Ark., announces that it has leased the hardwood flooring plant, planing mill and box plant formerly owned by the Triangle Lumber Company of Clio. The Pine Bluff Lumber & Box Company will operate the plant, the output being 10,000 feet of flooring and 25,000 feet of box material a day. Edgar Brewster is president and A. V. Brewster, secretary.

W. W. Brown to Go with Park Falls Lumber Company

W. W. Brown, who for the last two years has been lumber buyer for the Hamilton Manufacturing Company, Two Rivers, Wis., will sever

his connection with that institution on April 15 in order to become manager of the hardwood department of the Park Falls Lumber Company, Park Falls, Wis. This company is pretty well known as an important factor in the extensive Hines' interests and has heretofore been run directly from the Chicago offices and the hardwood sales made in connection with the sales of other Hines' lumber. Mr. Brown, as manager of the hardwood end, will handle the sale of the entire hardwood cut, which will run from 15,000,000 to 25,000,000 feet a year.

The company has been busy the last few months remodeling the mill with a double band and gang resaw. When it is in operation, which will be about the middle of April, it will have an immense capacity. Birch

will make up about seventy-five per cent of the company's cut in hardwoods.

Mr. Brown is planning to have his hardwood piled according to lengths and grades, from 4 to 16 feet long. He says that consumers will be able to buy any length and width of hardwood lumber that might be required. Mr. Brown states that for the benefit of the interior finish trade he will also assort stock for 8-inch and wider in No. 1 common and better.

The Park Falls Lumber Company is a big institution that was formerly operated by F. H. Atwood of the Atwood Lumber & Manufacturing Company. It was purchased by the Hines' interests some time ago and since that time has been materially improved and enlarged. The company owns 116,000 acres of timberland, and also has thirty-five miles of railroad for logging.

Mr. Brown has an exceptional experience in hardwoods, having been in that field for a long time. As stated, he has been with the Hamilton Manufacturing Company for the past two years and before then was with the G. W. Jones Lumber Company, Appleton, Wis., for four years in buying and taking up stock. Prior to that time he had charge of the yard and mill of the John Kaufman Lumber Company at Phlox, Wis. Mr. Brown will take with him the good wishes of a great many friends in the hardwood producing and purchasing field.

A Valuable Walnut Stump

The Cable-Nelson Piano Company recently received at its factory in South Haven, Mich., the veneer cut from one of the most valuable black walnut stumps on record. The price paid is not stated as a fact, but it is intimated that it exceeded \$5,000, which was the highest price ever before paid for a

E. B. NORMAN, VICE-PRESIDENT AND MANAGER HOLLY RIDGE LUMBER COMPANY, HOLLY RIDGE, LA., AND LOUISVILLE, KY.

A. E. NORMAN, PRESIDENT NORMAN LUMBER COMPANY, LOUISVILLE, KY., AND STOCKHOLDER IN HOLLY RIDGE LUMBER COMPANY.

walnut stump. The one recently purchased was grubbed near Centerville, Md., and rings indicate an age of 200 years. That was not a great age for a tree so large. The diameter is stated to have been eight and a half feet, at the stump's largest part. Its weight was 15,000 pounds. The wood is finely figured, and its high value is due to that fact. A pretty general notion prevails that all large walnut stumps are valuable. Such is not the case. Not one in a dozen is worth digging out of the ground.

New Expansion Steam Trap

The Automatic Steam Trap & Specialty Company of Detroit, Mich., has issued catalogue No. 8 describing the Barton expansion automatic steam trap. The booklet carries a complete description, photographically and otherwise, of the many features which it contends should recommend this steam trap to the careful attention of buyers in every line.

HARDWOOD RECORD suggests that those interested in such appliances might find investigation in this proposition profitable.

West Virginia Firm Changes Name

The Lewis Doster Lumber Company of Bluefield, W. Va., announces that since the fifteenth of March the company has been known as the McClellan-West Lumber Company. The personnel and management will remain the same.

This company is one of the newer organizations in West Virginia hardwood producing territory and has made a success of its work so far. It has as its principals men who are young and energetic and altogether familiar with hardwood conditions in all of its branches.

Refrigerator Sale Unsuccessful

The trustees' sale of the assets of the United Refrigerator & Ice Machine Company, Kenosha, Wis., which took place on March 17 was decidedly unsuccessful. The sale was made for the purpose of settling claims of more than \$50,000 against the company. After an all day's effort to stir up a little interest there was not a single bid made on the plant in bulk. Parcels of property were sold for \$18,000.

Trustee John D. Rowland will make a report to the United States court of the failure of the sale and a resale will probably be ordered.

James H. Baird

On Tuesday, March 16, James H. Baird, president of the Southern Lumberman of Nashville, and one of the leading factors in civic life in Nashville, died as a result of being struck by a train in the yards of one of the roads centering in Nashville. The accident occurred at eight o'clock on Tuesday morning just as Mr. Baird stepped from a train on his return from Montgomery, Ala. The sleeper in which he had been riding had been side-tracked and Mr. Baird was crossing the tracks after leaving it when he was struck. He was immediately taken to the hospital, where every effort was made to save his life, but he died shortly after. He suffered a fractured left arm, a crushed side and internal injuries.

Mr. Baird had been publisher of the Southern Lumberman for a good many years. For sixteen years he was connected with the Hoo-Hoo as scrivener, being one of the first members and a prime mover in this organization.

Mr. Baird was born in the little town of Baird's Mill, Wilson county, Tenn., August 18, 1866. His father, D. W. Baird, was editor of the Wilson County News, and it was in the office of the News that J. H. Baird got his first training in publishing and newspaper work.

The Southern Lumberman was founded in Lebanon in 1881 by Mr. Baird's father and a cousin. Shortly afterwards it was moved to Nash-

ville and has been there since. About three years after it was moved to Nashville, A. E. Baird sold out his interest to the late Col. Roberts and Mr. Baird, and Mr. Baird became secretary and treasurer in 1889. The company then became known as the Baird Roberts Publishing Company. Mr. Baird recently started the automobile paper known as the Southern Automobile & Garage.

Mr. Baird was a member of the Old Oak Club and of the board of trustees of the University of Tennessee. He was also associated with his brother-in-law in the Baird Freeman Company, tobacco factors. He was a man of winning, but forceful personality and has a great many close friends in the lumber trade, and his death is everywhere considered as a genuine loss. He is survived by one brother, Edward M. Baird of Mt. Joliet, Tenn., and two sisters, Miss Ann Sherrill Baird and Mrs. Luke Russell of Paducah, Ky. Mr. Baird was a member of the First Presbyterian Church of Nashville.

Prominent Chattanooga Lumberman Dies

J. F. Loomis, well-known citizen and pioneer resident of Chattanooga, Tenn., died at his home in Chattanooga a couple of weeks ago after an illness of several weeks. The funeral was held from the Chattanooga residence, Rev. R. L. Lambert officiating.

Mr. Loomis went to Chattanooga in 1865, first engaging in the sawmill business with F. J. Bennett under the firm name Loomis & Bennett. This was one of the first sawmills built in Chattanooga after the war and was located on the grounds on which the sawmill of the Loomis & Hart Furniture Company now stands. In 1879 Mr. Bennett sold out his interests to J. H. Hart, who was one of the leaders in Chattanooga business affairs up to the time of his death.

Moore-Galloway Company Starts Present Cut

Repairs and general overhauling are in progress to make the Moore-Galloway Company's mill at Fond du Lac ready for this season's cut. The mill will start up between the first and fifteenth of April, dependent on the weather. The company expects to make a full season's cut, having employed its full force and many new hands, thus giving many who are out of work an opportunity to secure positions.

Leaves Employ of Mason-Donaldson Lumber Company

The Mason-Donaldson Lumber Company, Rhinelander, Wis., advised HARDWOOD RECORD that T. A. Packer of Sharpsburg, Pa., is no longer in the employ of that concern in the Indiana and Ohio territory. He started to work February 1, 1915, but resigned within a month. His successor will be chosen promptly.

Bruce Odell Goes with Consolidated Lumber Company

Bruce Odell, formerly sales manager and manager of the office of the Cummer-Diggins Company, Cadillac, Mich., has become secretary, treasurer and general manager of the Consolidated Lumber Company, Manistique, Mich. Mr. Odell is associated with W. T. Culver, Ludington, Mich., who is president of the new company, and L. C. Harmon, vice-president.

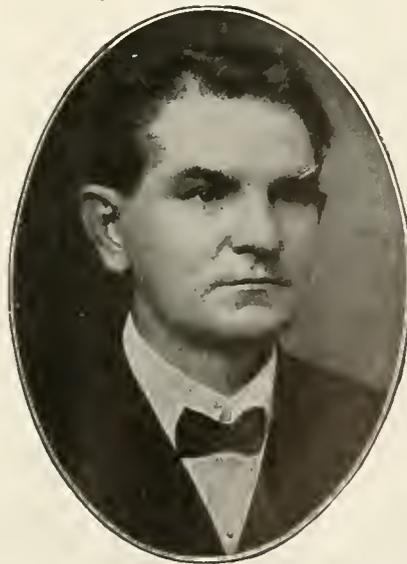

The Consolidated Lumber Company has been purchased from W. S. Crowe of Manistique. The business was started by Mr. Crowe in 1912, and at that time succeeded the Chicago Lumbering Company and the Weston Lumber Company, two pioneers in the upper peninsula.

The principals in the company are especially well-known throughout northern manufacturing circles, Mr. Culver being vice-president and general manager of the Stearns interests at Ludington.

Mr. Odell has gained a wide reputation for his close grasp of marketing.

THE LATE JAMES H. BAIRD OF NASHVILLE, TENN.

BRUCE ODELL, SECRETARY, TREASURER AND MANAGER CONSOLIDATED LUMBER COMPANY, MANISTIQUE, MICH.

W. T. CULVER, LUDINGTON, PRESIDENT CONSOLIDATED LUMBER COMPANY.

Pertinent Information

This Speaks for Itself

R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, has sent out the following copy of a letter which recently came to his attention. No comment is necessary.

WORTHLESS LUMBER ON THE MARKET

To the Editor of The Modern Hospital:

We have had occasion to buy a lot of lumber recently, for shelves, for benches, for partitions, and some for flooring. The lumber seems to warp badly after it is on for a time; rosin or some discoloring substance comes through the paint; the floors and the tongue-and-grooved partitions open up and the whole result is bad everywhere. Is there no good lumber to be had, and if so, where can we buy it? Someone has suggested that we can buy good second-hand lumber from the wreckers in the large cities, and that it is the best because it is well seasoned.

AN IOWA TAUSTEE.

Lumber has jumped in price until it is almost prohibitive now. Good, well-seasoned lumber that will not contract under the heat of a hospital costs from \$60 to \$100 a thousand feet. Such prices are certainly prohibitive. The trouble is that lumber is rapidly disappearing and those who have it to sell find a ready market at exorbitant prices; consequently lumber mills are working overtime and nearly all of them have equipped great drying kilns where they wheel in carloads at a time. The physical conditions are not good for drying under such circumstances, and the result is that the pieces are dried only on the outside. As soon as the lumber is laid in place in the hospital it begins to dry naturally, by the evaporation of its native water, and there can be only one outcome, the discoloration of the paint, of which you write, and the warping of the timbers. No doubt the wreckers of old buildings take out lumber that, under ordinary conditions, would be ideal for building operations, but the trouble is that this second-hand lumber is full of nails and therefore difficult to handle. Old buildings used to have very heavy sleepers and studdings, two by eights and two by twelves, and a good deal of excellent flooring can be picked up from the second-hand dealers. If you could take this two-inch stuff and have it sawed again and planed, it would make the best possible lumber you could get hold of, but the sawmills will not saw it for you, because of the nails, and it really cannot be handled unless you can use it just as the pieces come. Your alternative is to do the best you can with the poorly dried stuff on the market or pay the exorbitant prices for thoroughly dried lumber.

Reduces Rates Between Northern Points

Railroads in northern Minnesota have just issued a new tariff announcement reducing lumber rates to competitive water ports on Lake Michigan one cent a hundred pounds. The rates became effective March 15. It is stated that the reduction came as a result of action by the Interstate Commerce Commission last November when the railroads were given the alternative of reducing rates in the interior of the state, including some 1,400 points in northern Wisconsin and northern Michigan, or of increasing the tariffs from ports on Lake Superior to Milwaukee and other Lake Michigan points.

The rate from Wausau to the latter points has always been ten cents a hundred pounds. However, the rate from Rhinelander and other cities north of the Soo line has been eleven cents per hundred pounds, whereas the rates from Lake Superior ports have been ten cents in order to meet with water competition in spite of the fact that the distance by rail was greater than from interior points.

The fourth section of the Interstate Commerce Commission act prohibited higher rates from interior than from more distant points, except where ruling to the contrary is made by the commission.

The commission's decision handed down last November decided that the railroads must either increase their lake port rate or reduce their rates for 325 miles distance to ten cents a hundred pounds. The reduction of rates from interior points would greatly have exceeded whatever loss the railroads could have sustained from water competition from ports on the Wisconsin and Michigan fronts on Lake Superior.

The reduction in rates from northern Minnesota points was made, however, to offset this increase in rates from Ashland and Duluth. Thus a shipment of lumber from Virginia, Minn., to Duluth would cost four and a half cents per hundred, while the same shipment destined for points where the former competitive lake and rail rate of ten cents was in force from Lake Superior points, would cost but three and one-half cents per hundred.

There seems to be a question as to whether the reduction of rates from Minnesota points to Milwaukee and Chicago will cause an appeal to the Interstate Commerce Commission.

The Freight Difficulty and a Remedy

It is not surprising that American lumber exporters feel that the steamship companies are not treating them in the proper spirit by refusing to accept lumber for United Kingdom ports, says the London *Timber Trades Journal*. It has put them in a position of shutting off their business whilst the steamship lines are able to fill their steamers with other commodities. It is not at all improbable that, on account of the position taken up by the steamship companies, the hardwood lumber interests in the southern states will charter at the first opportunity steamers for London and Liverpool; and should they do this, and it proves satisfactory, it is more than likely they would keep these steamers going continually in order to protect themselves against a similar position in the future. It seems a pity that a regular steamship line cannot be started and maintained with New Orleans, London and Liverpool for the carrying of lumber almost exclusively; if this could be done the present situation would not be likely to be repeated. It is

strange that the large lumber exporters of the southern states do not combine and secure a few steamers on long-time charter for the exclusive transport of their goods. At present we believe a fair amount of business could be obtained from New Orleans to London and Liverpool on a basis of an ocean rate of sixty-five cents per one hundred pounds, but for reasons best known to themselves the steamship lines are not disposed to give shippers of lumber any room, and where they have quoted the rate has been arbitrarily high, so as to make business impossible. Exporters of lumber are very indignant, and prophesy that the time will come when the steamship lines will be very pleased to have lumber shipments from New Orleans to the United Kingdom, as well as from the North Atlantic ports in the United States to the United Kingdom; and should the lumber exporters pool their shipments and charter a few boats to take care of their foreign business, the steamship lines may be very sorry that they declined to give the lumber shippers facilities to carry on their trade during these trying times.

Veneers Used in Piano Making

It is somewhat difficult to determine just where all the veneer goes. While furniture manufacturers and door and millwork people now use much more of the figured and the finer qualities of veneer than formerly, the piano trade, it is said, still ranks conspicuously in the first place as a consumer of the very finest veneer, especially in mahogany, rosewood and other of the conspicuously figured veneer products. At least this is the opinion expressed by a prominent mahogany manufacturer who was asked recently if the furniture trade had attained to equal prominence with the piano trade in the demand for the finest figured wood. He said that while the furniture trade uses much more highly figured wood than formerly in veneer, it is the piano trade that is looked to today as the principal market for the extremely valuable and highly figured veneer in mahogany, rosewood, curls and other veneer products of conspicuous beauty and high value. In fact, the piano and piano-player trade of today is a much larger consumer of finely figured wood than ever before, because there is a larger quantity of instruments produced.

Minnesota's Forestry Fight

The advocates of progressive forestry in Minnesota have a severe fight on their hands. The state forest service asked for \$300,000 for the next two years, and the appropriation was making headway through the legislature when the senate finance committee cut it to \$80,000. Friends of forestry are now trying to restore the appropriation to its original size. The cause of the opposition seems to center round the fact that public money has been spent, or is likely to be spent, in extinguishing fires on privately owned forest lands. The opposition wants state money spent for state lands only. The answer to this is that the people of the state are interested in the preservation of all the forests; that the private owners are often unable to stop fires on their own lands; and that such fires in spreading from tract to tract will often reach state lands and by that time will have gained so much headway that the state wardens will have great difficulty in obtaining the mastery. In other words, the place to begin the fight against forest fires is at the beginning while they are small, no matter whether the fire originates on private or public land. The spirit of economy in the Minnesota legislature goes so far as to ask that twenty-five per cent of the salary of Forester William T. Cox be cut off.

American Lumber in England

Reports from the other side of the sea say that stocks of American hardwood lumber in London are very light. Sap gum is in good demand, especially 1"x13" to 17"; prime ash is also in good request, as also is yellow poplar. There is very little call for red gum, but 1" oak boards are in good demand, especially in the lower grades, and there is also a fair inquiry for thin plain oak, mostly of medium quality. Oak, 3" and thicker is also in great request. Generally speaking, there is an excellent all-round demand for yarded stocks, and that prices for these must increase, so long as freight rates remain at the present level, is assured—in fact, at the moment it is impossible to get the steamship lines to take lumber, and therefore importation is practically suspended. The trade does not seem inclined to make forward contracts on the basis of the higher rates of freight that were obtainable before the steamship companies declined to take lumber. It is only a question of time when stocks in buyers' yards will become exhausted, and must be replaced; and with these conditions existing, there should be a reasonable amount of forward business going on on a basis of current freight rates, provided these are not absolutely prohibitive.

Changes in Japanese Forestry

It is said that the Japanese are not planting hardwoods to take the place of hardwood forests which have been cut to supply the market, but are planting Norway spruce instead. This tree grows more rapidly than most hardwoods, but it has not yet passed its experimental stages in Japan, and it is questionable whether too much ought to be risked on it. In some countries it does well while young, but declines in vigor as maturity is approached.

Wooden Shoes in Mexico

A recent consular report from Vera Cruz, Mexico, states that leather is becoming so costly and scarce in that country that the people are wearing wooden shoes. These are described as "sandals," and the published description leaves it uncertain whether the whole article is of wood, or only the sole. The wood used is Spanish cedar—the wood of which cigar boxes are made in this country. It is said to cost \$350 per 1,000 feet, Mexican money, which is equivalent to \$175 American money. That seems wholly improbable. Spanish cedar logs are landed at Tampa, Fla., for less than \$30

a thousand, and since this wood grows in Mexico it should sell there for much less than \$175. The finest veneer, sliced ready for the cigar box maker, can be bought in this country for less than that per 1,000 board feet. The average cost in the state of New York is \$113.11.

The shoes or sandals sell in Mexico at from 40 to 90 cents, Mexican money, per pair, retail, and there is no discount if they are bought by the dozen.

It may not be generally known that wooden shoe dealers in the United States have been selling shoes in Mexico for years. A Chicago dealer on Randolph street ships them by the cord. If the war has made the wearing of leather shoes a luxury in that country, there might be an opening for the manufacturers of wooden shoes in the United States to increase their business in that direction. Cottonwood, including aspen and balsam of gilead, is the most satisfactory wooden shoe material east of the Rocky mountains, though the Pacific coast alder is said to be still better. Many of the wooden shoes and clogs of Europe are of alder. Willow, basswood, and yellow poplar are quite satisfactory. Maple and beech wear well, but are rather too heavy. One pair of wooden shoes will outwear four pairs of leather.

Lumbermen's Underwriting Statement

The tenth annual statement of the Lumbermen's Underwriting Alliance shows a very gratifying condition surrounding the financial affairs of the alliance. Ready resources consist of cash in banks, \$520,100.89, high grade bonds, \$256,301.37, accounts receivable, premium deposits in course of collection, etc., \$149,344.43, making a total of ready resources \$925,845.69. Deducting losses of \$40,240.38 and amounts due U. S. Epperson & Co., attorneys, \$28,970.39, leaves a surplus and re-insurance reserve of \$856,634.92.

The item of surplus and re-insurance reserve amounting to \$856,634.92 if handled according to the methods used by the stock companies would be divided into re-insurance reserve \$364,557.58 and surplus to the credit of alliance policy carriers \$492,077.34.

The total net increase in surplus and re-insurance reserve for the period was \$199,562.48, from which dividends were paid amounting to \$155,634.60.

The alliance, according to the statement, has increased the insurance in force by nearly \$5,000,000, and losses for the period amounted to \$13,000 less than the total for the previous year. During the past year the alliance has added ninety-three new subscribers and dropped thirty-four, making a net gain of fifty-nine.

At the close of the fiscal year the insurance in force showed an increase of \$4,879,317.71, the total amount in force being \$34,491,471.79.

During the past year the alliance received an unusual number of appreciative expressions in connection with its inspection and bulletin service, which seems to have become recognized by lumbermen as a strong influence in the prevention of the loss of their properties by fire. The force of inspectors is greater in numbers and efficiency than ever before and inspections have been made frequently and regularly. The recommendations of inspectors for the installation of improvements and the removal of hazards have been acted upon in a very gratifying manner.

Atkins at the Panama Exposition

Another demonstration of "Atkins Always Ahead" is shown in the splendid exhibit of E. C. Atkins & Co. the silver steel saw people at the Panama Pacific Exposition. When the gates of the exposition were thrown open, the Atkins display was fully installed and every detail was complete. The space occupies a frontage of 50 feet; depth of 30 feet and a height of 18 feet, and is located in one of the main aisles of the Manufacturers' building and is proving the center of attraction for all visitors.

In this connection is shown a picture of the display, which cannot do the exhibit justice, as it is impossible to show the color effects in black and white. The color scheme is royal purple and white, the entire display boards at the back and sides being covered with royal purple velvet. The mammoth circular saws at the rear are in motion and shown on the various display boards is included everything in the way of saws for all purposes, from the small jeweler's coping saw, 1/8 of an inch in width, to the 20-inch band saw, 75 feet long, and circular saws for all purposes from 1 to 38 inches in diameter.

In cross-cut saws, the company shows an interesting exhibit of the various styles of teeth in general usage in all the different woods of the United States as well as those best adapted for logging in the black forests of Russia, the jungles of Africa, the timbered sections of Australasia, the Philippine Islands, Hawaii, and all quarters of the civilized world.

A feature is made of the display of various saws in common usage in carpentry, such as hand, rip, panel, compass, keyhole, back and other types of saws. The importance of saws in the metal working industries is shown in

their display of circular, band and hack saw blades for cutting hot and cold metal of all kinds.

Forest Products Exports for January

A comparison of the exports of lumber and other forest products in January, 1915, compared with the corresponding month last year, is shown as follows:

Hewed and sawed timber, January, 1914, 24,483,000 feet; 1915, 10,721,000 feet; a decline of 13,762,000 feet.

Lumber, January, 1914, 188,413,000 feet; 1915, 57,138,000 feet; a decline of 131,275,000 feet.

Furniture, January, 1914, \$463,665; 1915, \$167,283; a decline of \$296,382.

During January of the present year no exports of logs or lumber went to France, Germany, Belgium, or Holland. There was a falling off in every country in Europe, while the only gain anywhere was in logs sent to Mexico.

Cedar Pencil Wood Wanted

The war practically killed for the time being the pencil wood industry in Tennessee and other southern states where pencil slats for export were formerly obtained. It was recently reported that the cedar cutters have suspended operations and had gone home. Germany and Austria had been the principal buyers. It now appears Russians are trying to get hold of that trade. An American consular officer in Russia reports to the Bureau of Foreign and Domestic Commerce at Washington that a business man in his district is desirous of communicating with American exporters of high-class cedar wood in blocks and prepared cedar tablets to be used in the manufacture of pencils. It is stated that this commodity was formerly purchased through European agencies. Samples and prices should be sent at once. Prices are desired c. i. f. nearest port in the Baltic Sea, but if this is not possible, quotations should be f. o. b. New York. Those who want further information should write to the bureau above named, referring to "No. 15950."

Private Trees May Be Publicly Trimmed

The city government of St. Paul, Minn., does not intend to put up longer with the indifference or laziness of lot owners who neglect their trees and permit dead limbs and spike tops to furnish breeding places for fungus and insects. Those who will not trim their own trees must pay for having it done, and there will be no dickering about the price. The city government will send men to do the work without asking leave of anybody, and when it has been done, the bill will be sent to the owner for payment, and it will remain as a lien on the property until paid. It is expected that this order will result in a recrudescence of activity among the tree owners of St. Paul; because most of them will prefer to trim their own trees and not wait for strangers to begin cutting and slashing over lawns and back yards.

Building Operations for February

Building operations for February are decidedly less unfavorable than for January. During the first month of the calendar year the total building permits issued in 75 cities decreased 25 per cent, as compared with January, last year. During February the permits issued in 78 cities decreased only 14 per cent, as compared with February last year. If this trend continues, actual construction work, when spring opens, will be on a better basis than a year ago. One interesting fact is that improvement is showing among the larger cities. New York City makes a gain of 38 per cent. The Chicago loss

ATKINS' EXHIBIT AT SAN FRANCISCO

is only 8 per cent, much below the average. Philadelphia shows a gain of 43 per cent.

Official reports received of the building permits issued during February in 78 cities, received by "The American Contractor," Chicago, total \$40,872,773, as compared with \$47,351,171 for February, last year. Unlike the showing made in January, when losses were general, a considerable number of cities show gains in February, 29 out of the 78. Among those making notable gains with percentages of increase are the following: Baltimore, 134; East Orange, 328; New Haven, 131; Manhattan, New York City, 114; Bronx, New York City, 107; Oklahoma, 250; St. Paul, 114; Springfield, Ill., 135; Syracuse, 111. A detailed statement for February and for two months follows:

	February, 1915	February, 1914	Per Cent Gain	Loss

Valuable Trees

The government has received \$99.40 in settlement for a single sugar pine tree which was cut in trespass in the Stanislaus National Forest, in California, and which yielded more than enough actual lumber to build a good-sized suburban frame house. The tree scaled 18,933 board feet and was valued at \$5.25 per thousand feet. That was a good-sized tree and a respectable price, but no records were broken. There is now, or was recently, a yellow poplar tree in Indiana for which \$200 was refused, according to a report which seemed to be authentic. A dealer a few years ago paid \$3,000 for a walnut tree in Kentucky; but that was figured stock. A black walnut once stood on Long Island which was said to have measured over 25,000 feet, log scale; but it was never made into lumber. It was cut, the butt log was hollowed, and it was set up in New York as a museum, and was afterwards used as a restaurant. That was about ninety years ago. The tree was said to have been twelve feet in diameter. The sugar pine above referred to grew in California. While going to California, why not pick a really big tree? One that is good for 18,933 feet is only a good, healthy pole in some of the forests out there. If you want to interest a Californian or Washingtonian on the subject of big trees, you must not mention anything much below 100,000 feet. A short time ago a redwood was cut near

Eureka, Cal., which was 380 feet high, 26 feet in diameter, seven feet from the ground, 261 feet to the first limb, at which point the diameter was eleven feet. The tree scaled 344,000 feet of lumber and was valued at \$9,000. There are single acres in that vicinity that will cruise 1,000,000 feet, and tracts of 100 acres which will average 750,000 feet per acre.

Bell Telephone Statistics

The report of the Bell telephone system for 1914 contains many interesting figures. During the year 515,976 stations were added, bringing the total to 8,700,000, or one station for every eleven persons in the United States. There are now in use 9,760,165 miles of underground wire, 35,809 miles of undersea wire, and 7,679,620 miles in the air, a total of 17,475,594 miles. The total pole line length is 326,168 miles; number of employes, 142,527; number of connecting systems, 27,210; number of exchange connections daily, 27,049,225. The company's assets total \$1,019,774,080. The employes' benefit fund amounts to \$8,889,750. Last year the company paid in dividends \$27,572,675, which was the largest sum ever paid by the company as dividends in one year.

Hardwood News Notes

MISCELLANEOUS

The Salamanca Furniture Works recently organized at Salamanca, N. Y. The Bloomfield Woodworking Company recently organized at Bloomfield, Ind.

The Robert Essex Incubator Company has started business at Buffalo, N. Y.

Frederick Busch of the Busch Box Factory, New Orleans, La., died a short time ago.

At Cohasset, Minn., the Superior Woodenware Company has become a voluntary bankrupt.

J. H. Brown has been appointed receiver for the Barlow & Kent Company of Urbana, Ohio.

The Cromwell Hardwood Lumber Company, Montgomery, Ala., recently suffered a loss by fire.

Alfred A. Barber, president of the Grand Rapids Bookcase and Chair Company, died recently.

Carl R. Green has been appointed receiver of the Speedwell Motor Car Company of Dayton, Ohio.

The Green Brier Lumber Company has been incorporated at Frankfort, Ky., with \$20,000 capital stock.

The Western Lumber Company, Pittsburgh, Pa., has become involved in an involuntary bankruptcy petition.

At Ironton, Ohio, the Anchor Lumber Company has been incorporated with an authorized capital stock of \$25,000.

H. H. Foster of the Arkansas Land & Lumber Company and the Wisconsin Lumber Company of Malvern, Ark., died recently.

The Queen City Lumber Company, Beaumont, Tex., has changed its name to the Beaumont Hardwood Manufacturing Company.

It is rumored that the Mann Brothers Furniture Manufacturing Company, New York City, is looking for a factory site at St. Louis, Mo.

The Schoolcraft Lumber Company is the style of a recently incorporated concern which will operate at Schoolcraft, Mich., with \$10,000 capital.

It is reported that the Clever Piano Company has been incorporated at New York to manufacture pianos. The company has \$25,000 capital stock.

The Kenbridge Manufacturing Company has started business at Kenbridge, Va. The company has an authorized capital stock of \$5,000 and is incorporated.

The Success Lumber Company has started business at Statesville, N. C., with \$10,000 capital.

At Traverse City, Mich., the Traverse City Chair Company and the J. E. Grellick Company have been consolidated and are now known as the Grellick Manufacturing Company.

The Southern Hardwood Company has started a wholesale hardwood lumber office at St. Louis, Mo., in the Wright building. The company's headquarters are at Jacksonville, Tex.

Plans have been announced for the reconstruction of the sawmill plant of the Gotshall Manufacturing Company, Toledo, Ohio. This company will invest about \$10,000 in a modern sawmill.

It is rumored at Little Rock, Ark., that plans have been completed by a representative of a hardwood flooring plant at Los Angeles, Cal., for the purchase of a site at Little Rock where a mill for manufacturing hardwood flooring will be erected.

CHICAGO

The A. Peterson Desk Company has been incorporated at Chicago with \$15,000.

E. C. Emerson, treasurer of the A. J. Johnson & Sons Furniture Company, Chicago, died a short time ago.

The Hammer Furniture Company has been incorporated at La Salle, Ill., with \$10,000 capital stock.

HARDWOOD RECORD acknowledges receipt of Volume 2, No. 10 of the official bulletin of the National Hardwood Lumber Association. This bulletin contains the usual valuable information.

James E. Stark of James E. Stark & Co., Memphis, Tenn., spent several days of last week with the Chicago trade on business.

R. J. Lockwood, secretary and general manager of the Memphis Hardwood Flooring Company, Memphis, Tenn., made one of his frequent visits to Chicago during the past week.

C. A. Goodman of the Sawyer-Goodman Company, Marinette, Wis., was in the city the greater part of last week.

Otis A. Felger of the Felger Lumber & Timber Company, Grand Rapids, Mich., has been in Chicago a good part of the time during the past couple of weeks on business in connection with his Chicago interests.

T. M. Brown of the W. P. Brown & Sons Lumber Company, Louisville, Ky., was in Chicago for a day last week on business in connection with the National Hardwood Lumber Association.

B. W. Lord, Chicago Veneer Company, Danville, Ky., spent a few days in Chicago on one of his frequent visits the early part of last week.

W. A. McLean of the Wood-Mosaic Company, New Albany, Ind., passed through Chicago last week on his way from a visit to Canadian points.

Sam Burkholder, head of the S. Burkholder Lumber Company, Crawfordsville, Ind., stopped in at HARDWOOD RECORD offices as the paper was going to press, and states he has just returned from quite a stay at the company's mill at Homer, La.

C. H. Barnaby of Greencastle, Ind., passed through the city this week. He is taking his daughter home from the school she is attending in this vicinity.

W. W. Brown, lumber buyer of the Hamilton Manufacturing Company, Two Rivers, Wis., was in Chicago on Wednesday. Mr. Brown had just come from Louisville, where he purchased a good block of mahogany. He says he is getting the Hamilton company's stocks in good shape in anticipation of leaving on April 15 to take charge of the hardwood department of the Park Falls Lumber Company at Park Falls, Wis.

← NEW YORK →

Sam E. Barr, the hardwood flooring specialist, has just returned from a trip to the South, where he spent some time at oak flooring mills in Tennessee and Virginia, whose output he handles in this market. He reports complete stocks and a surplus of some 12x2 1/4-inch plain and quartered oak flooring, on which he is ready to quote attractive prices for April and May delivery, during which time it will be necessary to move about 1,200,000 feet of clear and selects. He is shipping clear flooring with sap and select with "not a knot."

Harry Magovern, who for a year has been with his father in the wholesale hardwood flooring business at 11 Broadway, is now about ready to make the circuit of the trade. Mr. Magovern reports a gradual improvement in business and looks for a fair amount of spring and summer trading.

F. C. Hooton of the Strable Manufacturing Company, Saginaw, Mich., recently spent some time at the local office of the company. Mr. Hooton is manager of the lumber department of the business. He was accompanied by Mrs. Hooton.

Col. John M. Woods, the venerable hardwood manufacturer and wholesaler of Boston, Mass., was a visitor in New York on March 19. He was on his return home from a vacation spent at Pinehurst and his countenance showed the benefits of his stay in the South.

← BUFFALO →

The hardwood business of Davenport & Ridley has been incorporated with capital stock of \$25,000. The company's yard is at 1146 Seneca street. Directors are A. E. and Ella S. Davenport and R. F. Ridley.

The Standard Hardwood Lumber Company finds plain oak, ash and poplar in the largest demand among hardwoods at present, though trade is still reported to be rather quiet.

The McLean Lumber Company states that the hardwood trade is about the same as for a number of weeks. Plain oak holds steady in price. The yard is getting in new stocks as needed.

Miller, Sturm & Miller are selling principally oak, maple and ash. They state that there is a slightly improved volume of business, though not up to the ordinary season's sales.

Blakeslee, Perrin & Darling are shipping out a steady amount of hardwoods and getting in new stocks as well. Oak and maple are leading, though cypress shows improvement.

G. Elias & Bro. report the building trade as improved. Flooring is now selling in fairly good shape. The firm has received a permit from the city to enlarge its mill at a cost of \$1,800.

The Yeager Lumber Company has been increasing its stocks of cypress lately, owing to a larger demand for this wood. There is a fair demand also for plain oak and ash.

The Erwin Lumber Company is finding a better market for hardwoods in the South and is turning out quite an amount of stock at its two mills at Erwin, Tenn. The market is stronger than some weeks ago.

T. Sullivan & Co. report the hardwood trade as holding up about steady, with a good demand for low-grade stocks. Brown ash is selling in larger volume than earlier in the year.

The National Lumber Company reports that maple flooring is selling more readily at present than for some time and that a larger sale exists also for oak flooring.

The Buffalo Hardwood Lumber Company states that birch is moving fairly well at present and that plain oak is in fair sale.

← PHILADELPHIA →

The New York Shipbuilding Company, Camden, N. J., has booked contract for two large oil conveying steamers for the Standard Oil Company. They will be the largest vessels of their type ever constructed and will be used for the coastwise trade. This concern also has secured contract for the building of five colliers for the Atlantic Coastwise Company of Boston, Mass.

The William Cramp & Sons Ship and Engine Building Company has booked a contract for the building of a large-sized modern liner for the W. R. Grace Company of New York.

The J. G. Brill Company is manufacturing trolley cars at its local shops, which will be the first installment of Philadelphia-made cars to be shipped to South American ports. The first lot will go on the steamship Royal Sceptre, a South American packet, and are intended for San Paulo, Brazil. Others will soon be sent to Bogota. Columbia-Four cars are being built for government railways in Venezuela, and two for the trolley service in Quito, Ecuador.

The Baldwin Locomotive Works have just closed a contract for fifty freight locomotives for the Chicago, Burlington & Quincy Railroad Company at a cost of over \$1,600,000. The order calls for twenty locomotives of the Mikado type, fifteen of the Pacific type and fifteen of the Santa Fe type. The company is now busy on the construction of one hundred small locomotives for the French government for use in Morocco.

John A. Calhoun and C. E. Gordon, both formerly associated with George F. Craig, have formed the Calhoun-Gordon Company, wholesale lumber, with office at 1433 Commercial Trust building.

← PITTSBURGH →

John C. Donges, president of the J. C. Donges Lumber Company, was recently elected president of the Pittsburgh Wholesale Lumber Dealers' Association. Mr. Donges is the youngest man ever elected to that office. The other officers chosen are: J. T. Montgomery, vice-president, and J. G. Criste, secretary and treasurer; W. H. Schuette, O. H. Babcock, Alexander Willson, A. J. Diebold of the Forest Lumber Company and E. S. Dun, directors.

The Standard Lumber and Supply Company is a new concern in Pittsburgh organized by A. B. Morris, G. F. Pollock and W. C. Johnston.

The Germain Company recently received an order for 50,000 standard railroad ties to be shipped to Greece. The ties were sold on American specifications and will be loaded from the company's ports at Tampa, Fla., as fast as possible.

The Aberdeen Lumber Company is not making any disturbance on account of hard times. On the contrary President J. N. Woollett announces that this month is the best month he ever had in business. A good reason for this is the fact that he is shipping a nice lot of ash, cottonwood, and gum to Liverpool, England, to be cut up into stretcher handles, coffin boxes, gun carriages, etc. Business so far has been very satisfactory with this firm.

The American Lumber and Manufacturing Company has taken over the H. K. Morse Lumber Company of New York City. Mr. Morse is largely interested in the American and represented that concern in the Metropolis.

Garling & Splane will move their offices from the House building to the Arrott building in the near future. Mr. Garling spent all his early years in the lumber business and in that building as a member of the force of the Empire Lumber Company.

The Johnston-Davies Lumber Company, a leading hardwood concern, has moved its office from the Union Bank building to the eleventh floor of the Benedum-Trees building on Fourth avenue.

The Acorn Lumber Company has been getting a good lot of business down East and finds that by hard plugging an order list can still be kept up to a fairly satisfactory point. President H. F. Dombhoff has added some to his force of salesmen this year and is well prepared to handle the wholesale hardwood business in any part of the country.

The Western Lumber Company, which has been in business about five years, filed a voluntary petition in bankruptcy following the failure of the German National Bank, in which its loans were carried. President W. W. Wilson, Jr., also filed a similar petition. The company was doing a good business at its offices in the Oliver building and has the sincere sympathy of the lumber public.

← BOSTON →

Clifton F. Leatherbee, who has long been identified with the trade of Boston and until recently with the Boston Lumber Company, has entered the wholesale business on his own account with his office at 70 Kilby street.

The Vermont Valley Lumber Company, with offices at 1026 Old South building, Boston, has been incorporated with capital of \$50,000. Frank W. Wood is president and W. A. Carpenter treasurer.

At Lynn the Wm. A. Fay Lumber Company has been incorporated. Wm. A. Fay, president, has been in the lumber business in that city for many years.

Two large creditors of the Boston & Maine Lumber Company allege that certain parties having property of that firm in their name have sought to gain possession of equities, etc., of the corporation worth about \$180,000.

WE WANT WALNUT

If you have Black Walnut Logs 14" and larger in diameter and 8' or longer in length, write us for prices and particulars. We are in the market now for two million feet.

PICKREL WALNUT CO., 4025 Clara Avenue, ST. LOUIS

without reasonable consideration, and on such basis seek to restrain such action and to have an accounting.

← BALTIMORE →

The troubles of the exporters are strikingly shown by the experience of a Baltimore shipper who asked the representatives here of the Holland-American line to quote a rate on a shipment to Rotterdam, and was told that it would be around 45 cents per 100 pounds. The exporter promptly cabled the information to the foreign correspondent and after five days received a reply to ship. By that time, however, the steamship agents had marked up the rate to 75 cents or so, and more cabling was resorted to, with a prospect that when the exporter got the second reply the charge would have been marked up to 90 cents per 100 pounds. Under such conditions, of course, it is wellnigh impossible to do business.

The Citizens' Lumber Company and the Southern Lumber Company of Parkersburg, W. Va., have been consolidated under the name of the Citizens' Company, the purchase price being \$20,000 in the stock of the Citizens' Company. H. C. Crawford, the former manager of the Southern Company, will be connected with the purchasing concern as the representative of H. B. Harson, to whom the \$20,000 of stock was issued, Mr. Harson being extensively engaged in the lumber business of the South. Comprehensive improvements are to be made at the Citizens' Company's plant.

The West Virginia Lumber and Builders' Supply Dealers' Association, at the second annual meeting held in Parkersburg March 10 and 11, elected the following officers: President, W. E. Minter, Huntington, re-elected; vice-president, George M. West, Charlestown, re-elected; secretary-treasurer, G. J. Dickerson, Huntington, re-elected; board of directors, F. L. Davidson, Parkersburg; A. M. Finney, Charleston; W. H. Evans, Parkersburg; G. J. Dickerson; G. A. Grishaber, Charleston; W. E. Minter; G. M. Mossman, Huntington; Walter Perkins, Bluefield, and G. M. West.

Wheeling was tentatively selected as the place for the next annual meeting. A number of topics of interest to the supply men were discussed, and the visitors were entertained with an automobile ride, a performance at the Camden theater and a dinner at the armory. Resolutions thanking the local members for their hospitality were adopted with much enthusiasm.

Eberhard T. Hayen, formerly engaged in the exporting of lumber and logs and wellknown in the trade at the time, but who had been living in retirement for ten years, recently died at his home, Mount Vernon and Cedar avenues, after a prolonged illness of heart trouble. Mr. Hayen was born in Germany seventy-six years ago, and came to the United States in 1859. He is survived by his wife, a son, Eberhard Hayen of Chihuahua, Mexico, and five daughters.

← COLUMBUS →

R. W. Horton, sales manager for the central division of the W. M. Ritter Lumber Company, reports a slight improvement in the demand for hardwood stocks. The best buying is being done by yardmen, although factories making vehicles, implements and furniture are also in the market. Prices are fairly steady at former levels. Dealers' stocks are generally light.

J. A. Ford of the Imperial Lumber Company reports a fairly good demand for hardwoods with prices much better maintained than formerly. Shipments are coming out promptly.

John R. Gobey of John R. Gobey & Co. says there is a better feeling in hardwood circles, and the volume of business is generally increasing.

Papers have been filed increasing the capital of the Buckeye Box Company of Cleveland from \$10,000 to \$25,000.

The Anchor Lumber Company of Ironton, Ohio, has been incorporated with a capital of \$25,000 by A. W. Abele, Charles Abele, J. Frank Kimmel, E. F. Myers and C. H. Schweikart. The company will take over the business and plants of the Abele & Kimmel Lumber Company and also the Schweikart and Turley plant. Extensive improvements will be made at both plants.

A barge load of 600,000 feet of oak lumber was brought up from Arkansas City, Ark., to the D. T. & I. docks at Ironton, Ohio, on the Ohio river. The lumber will be shipped to the East and to foreign countries.

Dice Bros. of Xenia, Ohio, are preparing to build a planing mill 50 by 100 feet.

At Troy, Ohio, the Francis & Clemm Company has been succeeded by Francis & Montross.

Word comes from Columbiana, Ohio, to the effect that the Columbiana Lumber Company is closing out.

The Brumbaugh Lumber Company has taken over the lumber business formerly operated by Samuel Brumbaugh at Canton, Ohio.

← CINCINNATI →

The only complaint to be heard around C. Crane & Co.'s yards is that the supply is inadequate to the demand. Mr. Crane reports business all that

could be wished for and steadily improving. The woodworking plants are buying heavily. Wholesalers are taking all that is offered and prices are on an encouraging high level. Oak is moving rapidly and the demand for basswood is brisk. The small supply of ash back of the mills naturally has a deteriorating effect on that lumber. Poplar is in demand. Mr. Crane summarizes the situation with the terse remark that "all dry lumber is selling well," and asserts that inquiries are exceptionally heavy and the demand so great that a complete rejuvenation of the hardwood business must surely take place within the next thirty or sixty days. The mill is working full up in all departments.

A fair call for basswood and maple is reported by the Anchor Lumber Company. Oak and poplar is somewhat off, but prices are holding up steadily under adverse conditions.

Charles C. Boyd of Charles C. Boyd & Co. left early last week for a trip through the East, where he will visit the principal hardwood points in an effort to ascertain eastern conditions first hand. Before leaving, he expressed satisfaction with the trade in general and predicts a fair revival within a short time. Mr. Boyd will be gone ten days or two weeks.

All high grades are standing up under depressing surroundings is the expression of the Atlas Lumber and Manufacturing Company. A slight, although steady enough to be marked, picking up in all branches of the business is noted by this concern, which reports maple and basswood as the best sellers.

Oak, common and better, is showing renewed life with the opening up of the mills, while poplar continues to move quickly for Harry F. Hendy & Co.

Mr. Richey of Richey, Halsted & Quick has just returned from an extended trip through the Southwest, where he delved deep into the situation, but professes that he was unable to find anything encouraging. Evidently conditions in that section of the country have been much worse than those experienced in the Middle West a while back. Here a return to normal seems to be but a matter of a short time, while the outlook in the Southwest is dismal at the best, according to Mr. Richey. The firm, while satisfied with the local situation, considering the poor outlook during the winter, would welcome a still further improvement and until this comes cannot class the market as good.

"Slightly better, but still much to be desired," is the opinion of J. A. Bolser of Blackburn & Bolser. Gum and ash are moving fairly well, but there is little on hand. The yellow pine market is unsteady.

Mr. Graham of the Graham Lumber Company, Ltd., does not believe in allowing good or bad business conditions to affect one's state of mind, but does believe in keeping right at it when things are at the lowest ebb and in that manner remedying all defects. Mr. Graham can see little basis of price in the present market, but observes a steady, although slight, general improvement and asserts that if all keep plugging away normal soon will be reached. A fair demand for plain and quartered oak is reported by this concern.

In the mahogany field, the Freiberg Lumber Company reports a rather depressing market, but like practically all the lumbermen in Cincinnati is optimistic and can discern in the future a substantial picking up. The manufacturing end is busy, while shipping is light.

Inquiries are heavy for oak in various grades with W. B. Woodward, while poplar is moving slow. Mr. Woodward is confident of a general business revival in April, particularly in the hardwood line.

← TOLEDO →

The Skinner Bending Company reports a slight improvement in business and for the present the factory is running full capacity on a ten-hour schedule. The management seems to be undecided whether the present line of orders simply represents a spurt or whether it is the forerunner of returning prosperity.

The Kensey Pulley Company is arranging to move its plant to Fostoria, Ohio, the first of April. A bonus of \$10,000 was given the concern by the Fostoria Chamber of Commerce.

The Booth Column Company is running at half capacity on an eight-hour schedule, which is considerable improvement over what conditions have been for some time past. There is a noticeable improvement in orders from Ohio and from the East. Orders are about equally divided between interior and exterior columns. The new line which has recently been taken up by this concern seems on the high road to success. This is the new automobile bumper, put out by this concern under special patents. Rock maple, steamed and bent, is the material used in making the bumpers. President Booth is very enthusiastic over the bumper end of the business.

The Gotshall Manufacturing Company expects to build a new plant costing several thousand dollars.

← INDIANAPOLIS →

St. Clair Parry, president of the Parry Manufacturing Company, is spending several weeks in Florida.

John Morner has bought a factory building at Shelbyville and will engage in the manufacture of bentwood and hardwoods. Mr. Morner has bought from the Citizens' Industrial Club a plant formerly occupied by an automobile company.

Albert D. Palmer, Charles Palmer and John W. Romlek have organized the Fort Wayne Ironing Board Company at Fort Wayne to manufacture

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform.
The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

ironing boards. The company is incorporated with an authorized capitalization of \$10,000.

Noble R. Streeter died recently at his home in Brooklyn, N. Y., at the age of sixty-eight. He was born in Terre Haute, Ind., and for many years was identified with the Adams-Mansur Lumber Company of this city.

With an authorized capitalization of \$5,000 the Richland Handle Company has been organized and incorporated at Bloomfield to manufacture tool handles. Those interested in the company are J. W. Cushman, F. M. Dugger and R. R. Eveleigh.

The H. F. Reis Lumber and Material Company of St. Louis has brought suit in the United States Court here against the Talge Mahogany Company of this city asking \$10,000 damages for alleged breach of contract. It is alleged the Talge Mahogany Company agreed to sell 1,000,000 feet of lumber to be delivered on or before August 1, 1914, but that only 300,000 feet were delivered.

MEMPHIS

The Memphis Hardwood Flooring Company has acquired five acres of land adjoining its manufacturing plant in North Memphis from the Memphis Steel Construction Company. The consideration was \$2,500 per acre. This property will be used to give the purchasing company increased storage and yarding facilities. The Memphis Steel Construction Company had a plant on the premises before it was decided to remove headquarters to Pittsburgh, Pa. The buildings have been razed and the property is now ready for its new use.

A party of Chicago capitalists, including former Senator William Lorimer of Illinois and his son, have been spending some time recently inspecting the plant and holdings of the old Triangle Lumber Company, Clio, Ark., recently acquired by a syndicate consisting of A. B. Newman and others. In the party was J. H. Allen, former head of the Virgin Timber Company, from whom the Newman syndicate acquired the sawmill and about 46,000 acres of land being inspected on the present trip. It is understood that the members of this syndicate have formed a holding company under the laws of Rhode Island and that they have proposed that Mr. Lorimer and his associates take over manufacturing operations at the Clio plant. Mr. Lorimer owns a hardwood mill at Monroe, La., and is not unfamiliar with manufacturing conditions in the South. However, he has given no intimation as to whether or not he will accept this proposition.

W. O. Nelson, W. B. Hillman and A. W. Lucas are establishing a plant at Waverly, Tenn., for the manufacture of spokes. They will make a specialty of automobile stock. It is also understood that they will put in a planing mill.

The shops of the St. Louis-Southwestern (Cotton Belt) Railway Company at Pine Bluff, Ark., have been closed down within the past few days and

about 600 men have been thrown out of employment. The company is maintaining only a small roundhouse force. This step is understood to have been taken because of the unsatisfactory financial situation and because of the necessity for curtailing expenses. It is said that the shops may be closed down until practically the end of the present fiscal year.

James E. Stark, accompanied by his bride, returned home last Saturday from a delightful honeymoon trip to Florida and the West Indies. Very few of Mr. Stark's friends in the lumber fraternity here were fortunate enough to be able to attend his wedding in Chicago several weeks ago, but they remembered him in a most substantial manner on his homecoming, when they presented him with a handsome solid silver icewater service consisting of four pieces—tray, pitcher and two goblets. The jewelers through whom this service was purchased said that it was an exact duplicate of the one which was presented to former President Taft on the occasion of his twenty-fifth wedding anniversary. The gift was made by individual members of the Lumbermen's Club of Memphis and one of its most prized features is the fact that the names of everyone who took part in the purchase of this token are engraved on the bottom of the tray.

NASHVILLE

There are numerous reports of lumber activities in middle Tennessee. Chattanooga dealers report the sale of fifty carloads of hardwood lumber to be shipped to England by way of Savannah. The Chattanooga dealers received orders for sixty-three carloads from British buyers last month.

The plant of the Adams Manufacturing Company at Adams, Tenn., was recently sold at auction to R. E. Qualls for \$500.

Advice has been received at Johnson City, Tenn., for the destruction by fire of one of the plants of the Seaman Lumber Company, near Marion, N. C., the dry kiln plants, the mills and a large supply of lumber being burned. The loss is reported at \$45,000, with partial insurance. It is said the company will rebuild.

The shuttle plant at McEwen, Tenn., operated by I. D. Chronister, has resumed operation.

The heading mill owned by J. H. Watts at Harriman, Tenn., destroyed by fire two years ago, is to be rebuilt.

W. P. Parker & Son announce that they will remove their stave mill from Craggie Hope, Tenn., to Hohenwald, Tenn.

The plant of the Mitchell Wheel Company at Hohenwald is expected to resume business shortly.

BRISTOL

J. W. Heniger has started two new mills near Chilhowie, Va., in addition to two mills he has been running through the winter. Mr. Heniger says he

is confident that by the time lumber now being cut can be gotten ready for the market, conditions will be far more favorable.

The advent of favorable weather in this section has had a stimulating effect upon manufacturers. Conditions have been more favorable to logging and as a result the mills are being stocked.

The Kingsport Lumber Company will start its new mill near Kingsport, Tenn., in a few days. The company has about completed its logging road. The mill was completed some time ago.

Some of the larger mills report that a little more business is coming in and that they expect to keep busy through the spring. Shipments during the present month have been a little heavier than during February, but the increase in volume has been by no means as much as was expected.

George E. Davis & Co. report a better outlook for business. The company is operating its mills and will probably install additional operations during the year.

Considerable activity in manufacturing is reported along the Virginia division of the Virginia & Southwestern and particularly in Scott and Wise counties, where several large new mills have recently begun operations and where other new mills are being installed.

The Paxton Lumber Company is operating its mills and reports a better outlook for business during the spring and summer.

—< KNOXVILLE >—

M. R. Silber of Nashville was a recent visitor in Knoxville, looking up a few specialties in hardwoods.

I. M. Asher and John D. Serena, manager and cashier respectively of J. M. Logan Lumber Company's branch at Cincinnati, spent a few days here last week.

J. C. Kinball has just returned to the city from points in North Carolina, looking after interests of his firm.

Among the lumber buyers here this week was Mr. Reynolds of Geo. C. Brown & Co. of Cincinnati and J. R. Marley of Thomasville, N. C.

Mr. Tucker, formerly with the Giant Furniture Company of High Point, N. C., has purchased an interest and will be connected with the Loudon Chair Company of Loudon, Tenn. Additional machinery will be installed and the output increased.

R. A. Hoffstetler, the new salesman for the Little River Lumber Company at Townsend, reports some increase in orders.

Tellico Plains, Tenn., suffered quite a disastrous fire on March 13, the entire business section having been destroyed except two buildings—one of which was the store of the Tellico River Lumber Company.

J. P. Fort, the hustling salesman for the J. M. Logan Lumber Company in the South, was in for a few days this week. He reports a fair business on last trip.

—< LOUISVILLE >—

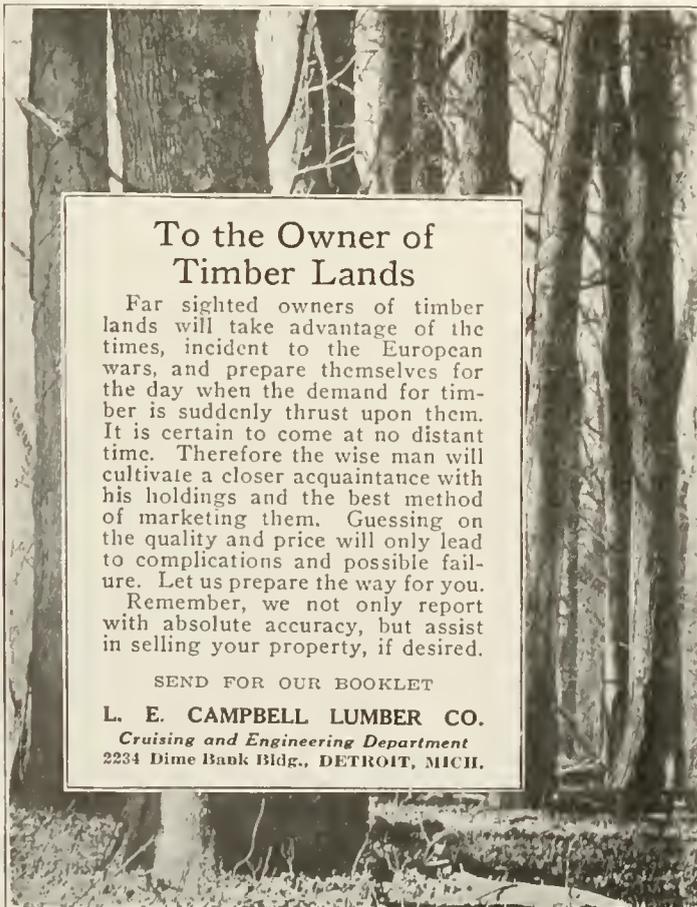

Frank Cassell, sales director of the Belknap Hardware and Manufacturing Company, was the guest of honor at the meeting of the Louisville Hardwood Club, March 16. He spoke on salesmanship, and gave the lumbermen something to think about in the matter of approaching the customer. He was very witty and effective in his talk, and told a number of stories illustrative of the kind of obstacles the salesman must overcome. Some of the epigrammatic statements he made were: "There is so little dishonesty in business that you can practically disregard it. A real salesman must know his goods, study his customer and hang on until he wins. While one salesman is finding excuses for not doing the thing, another is going out and doing it. The liar and the rounder have no place in salesmanship. The salesman who builds permanent trade must have quality and value back of him. Confidence in himself and his house is part of the necessary equipment of the salesman."

Lewis Doster, former secretary of the Hardwood Manufacturers' Association of the United States, and now an exponent of Atkins saws, was the chief speaker at the March 9 meeting of the Hardwood Club. He was very optimistic, telling the lumbermen that he thought good business is just around the corner. He predicted that the beginning of the end of the war will be here by July, as the spring campaigns are expected to develop a decision, and that when peace is declared the first thing that will be bought is lumber. He said eighty per cent of the hardwood mills in the mountains of Kentucky and West Virginia are running, most of them on specialties like bill oak, that can be shipped green. They have gotten a good deal of the war trade on account of the fact that all shipments are being made from the Atlantic Seaboard.

A mild sensation was caused recently when the Federal grand jury returned two indictments against the Jefferson Woodworking Company of Louisville, charging it with underbilling as a means of avoiding the payment of the legal rate on its shipments. It was charged that the company, in eleven cases which are indicated by the bills of lading attached to the indictment, shipped goods with the minimum carload weight indicated, when as a matter of fact the weights were considerably greater. The company has explained that it had no weighing devices, and merely approximated the weights, and had no intention of violating the law. The company operates a large plant for the manufacture of table slides, table rims and other furniture specialties.

T. M. Brown of the W. P. Brown & Sons Lumber Company, attended the annual meeting of the board of trustees of the National Wholesale Lumber Dealers' Association in New York last week.

The Ford Motor Company has started work on its new assembling plant

To the Owner of Timber Lands

Far sighted owners of timber lands will take advantage of the times, incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. It is certain to come at no distant time. Therefore the wise man will cultivate a closer acquaintance with his holdings and the best method of marketing them. Guessing on the quality and price will only lead to complications and possible failure. Let us prepare the way for you.

Remember, we not only report with absolute accuracy, but assist in selling your property, if desired.

in Louisville, occupying a site formerly used as part of the lumber yard of the Edw. L. Davis Lumber Company.

The rules of the Southern Logging Association have been secured by local log buyers, and it is expected that they will be adopted for use in that connection.

The Kentucky court of appeals has held that the city cannot exempt new industries from paying the school tax, which is a state levy, though collected by the municipality. The decision was rendered in the case of the North Vernon Lumber Company, whose Louisville sawmill was exempted from city taxation under the ordinance intended to attract new plants.

The Parkland Sawmill Company expects to have its mill at Beech and Woodland avenues running by April 1. Charles Talbot is now busy putting it in shape and getting logs for its operations. Manufacturing flitches for the veneer trade will probably be a specialty.

Forest fires in Pike county, Kentucky, last week did considerable damage, but were finally extinguished without spreading beyond the area where they first originated. The fire wardens of the state forestry department did good work in fighting the flames.

— < MILWAUKEE > —

The John Schroeder Lumber Company of Milwaukee, operating a large sawmill at Ashland, Wis., expects to put in approximately 10,000,000 feet of hardwood and hemlock on Stockton island this winter. It has had three camps in operation on the island since last fall, employing about 300 men.

The Morgan Lumber Company, well-known sash and door and lumber manufacturing concern of Oshkosh, Wis., has completed plans for the erection of another new factory building. The structure will be fireproof, three stories high, 80x194 feet in dimensions, and will cost about \$25,000.

The Phoenix Manufacturing Company of Eau Claire, Wis., manufacturer of sawmill equipment, has increased its capital stock from \$200,000 to \$250,000.

The Shawanee Lumber Company has been incorporated at Randolph, Wis., with a capital stock of \$4,100 by Milan R. Sutliff, Jennie B. Sutliff, S. O. Jones and Ralph E. Wagner.

The Faust Lumber Company of Aotigo, Wis., has increased its capital stock from \$100,000 to \$125,000.

The Schmidt & Stork Wagon Company of West Bend, Wis., has been incorporated with a capital stock of \$55,000 by Fred Schmidt, Fred Stork and August C. Fuge. The business was formerly conducted under the firm name of Schmidt & Stork.

The N. Ludington Company of Marinette, Wis., recently cut six Norway pine poles, each 72 feet long with a 27-inch butt and 19-inch top, to be used at the plant of the Pike River Granite Company. The strip of timber near Wausaukee, from which the poles were cut, is considered one of the finest pieces of Norway pine in the country.

John P. Ross and M. P. McCullough, two well-known Wisconsin lumbermen, officials of the Brooks & Ross Lumber Company of Schofield, Wis., were among the incorporators of the Builders' Lumber Company, just launched at Wausau, Wis., with a capital stock of \$25,000, to conduct a lumber and general building material business. Officers have been elected as follows: President, W. H. Thom; vice-president, John F. Ross; secretary and treasurer, M. P. McCullough.

Kopplin & Kopplin of Iron River, Wis., are erecting a new sawmill, adjoining their planing mill and power house. The company has a large supply of logs on hand and expects to have the new plant ready for operation by May 1.

William Marik, operating a woodenware and furniture plant at Sturgeon Bay, Wis., has completed plans for erecting an addition, 30x40 feet, to his factory next spring.

It is reported from Peshtigo, Wis., that the Peshtigo Lumber Company has sold 40,000,000 feet of standing timber to the J. W. Wells Lumber Company of Menominee, Mich. The timber, which will be sawed at the Wells mill in Menominee, will prolong the operation of the plant for several years.

The general offices of the H. S. Thompson Lumber Company have been moved to New Richmond, Wis., where the company operates a yard. The concern has another yard at Mondovi, Wis. H. S. Thompson will move from Minneapolis to New Richmond.

The Arpin Lumber Company of Grand Rapids, Wis., is branching out in the retail lumber business and has established yards at Bruce, Exeland, Glen Flora and Tony, Wis. D. J. Arpin, Jr., is the active manager of this phase of the company's business.

Nathan Paine, vice-president of the Paine Lumber Company of Oshkosh, Wis., operating one of the largest sash and door plants in the world, has denied the rumor that the company contemplates selling its output or its plant to Sears, Roebuck & Co. of Chicago. He says that no change in the company will be made, and that it will continue to manufacture its goods as in the past.

Fred A. Diekmann, president of the Diekmann Manufacturing Company, Green Bay, Wis., died on March 5, following an operation, at the age of sixty-two years. Mr. Diekmann was born in Germany in 1853 and emigrated to the United States in 1870. He is survived by his widow and three daughters.

Senator Isaac Stephenson, prominent lumberman of Marinette, Wis., received the greatest ovation in his life on March 9, when he returned to Marinette after the adjournment of Congress, which marked the end of his term as senator. The whole city turned out to meet him and conducted the

senator to the Hotel Marinette, where Attorney H. R. Goldman delivered the address of the day, recounting various events in Senator Stephenson's life and welcoming him back to Marinette. This was followed by a reception.

Leading manufacturers of Milwaukee, following action taken at the headquarters of the Merchants' and Manufacturers' Association of Milwaukee, recently appeared before the Wisconsin legislature and strongly opposed the proposed amendments to the workmen's compensation law. The amendment receiving the bulk of the consideration was the one which provides for an average increase of twenty-five per cent in compensation allowed during periods of disability. Wisconsin pays sixty-five percent of the compensation, which is higher than that paid in all other states, except Ohio and New York.

< DETROIT >

The Fred Hanna Lumber Company of Detroit, capital stock \$25,000, has lately filed articles of incorporation. The stockholders are Fred Hanna, Albert LaVeque, Charles R. Roche and John E. Roche.

Another recent incorporation in Detroit is the Cadillac Cigar Box Company with a capital stock of \$10,000. Interested in it are Louis and T. F. Fitzmonns, Charles and William Rider and Thomas Faust.

Two Saginaw companies have filed petitions in bankruptcy in the United States district court at Bay City. They are the Feige Desk Company and McCandless Brothers, dealers in lumber and railroad ties. The former company gives business depression resultant to the war as the cause of its failure. Assets are \$97,043 as against liabilities of \$101,186. McCandless Brothers place their assets at \$4,979 and liabilities at \$14,963.

The Bradford Lumber and Planing Mill Company of Alpena has been awarded a contract to furnish lumber for two barns near Alpena, which will be the largest in northern Michigan. They will require 150,000 feet of lumber.

The Manistique Handle Company of Manistique during February manufactured on an average of 15,000 handles a day, or a total of 375,000 handles for the month. March will probably equal the record of February.

J. S. Weidman of Mount Pleasant is conducting lumbering operations in Iron county. The timber will be taken to the Weidman mill at Trout Creek.

The Grand Rapids Lumbermen's Association has appointed committees to investigate traffic problems, among them the use of the Grand Rapids Association of Commerce transportation department in the interests of the lumbermen.

William Chesbrough, who with his brother is constructing a new mill at Trout Lake in the upper peninsula, reports the erection of the plant as progressing rapidly. It will be ready for operation in a short time.

The Freeman Lumber Company of Engadine, near St. Ignace, has completed its hauling for this season and is ready to place its mill in operation.

The Stack Lumber Company's new mill at Masonville is almost completed and will be in operation within a few days. It is believed that two shifts will be operated. With the near completion of the mill empty houses in the village are filling rapidly.

The Baraga Lumber Company has completed its operations at Point Abbaye, where it cut 3,500,000 feet of logs this year. The original tract was 4,000 acres and from this the company in the last eight years has cut all hardwood, hemlock and cedar.

The Howell & Johnson crate mill at Greenville is unable to continue full force operations owing to a dearth of timber that is being felt in Montcalm and surrounding counties. The demand for crates is reported excellent.

The J. W. Wells Lumber Company of Menominee has closed a deal for the purchase of timber from the Peshtigo Lumber Company of Peshtigo, Wis., that involves several million feet of logs.

Clarence T. Morris of Ludington at the receivers' sale at Grand Rapids purchased the Ludington Manufacturing Company, piano manufacturer recently declared bankrupt, and will place the plant in operation at once. Unfinished stock will be worked up.

The American Showcase and Manufacturing Company of Detroit has been formed with a capital stock of \$10,000. Ira Cohen and Jacob Kaufman are the principal stockholders.

O. C. Curtis, accountant for the Marshall Butters Lumber Company of L'Anse before its failure, has become manager of the McGills & Gibbs Cedar Company of Escanaba.

The Hardwood Market

< CHICAGO >

Prospects for an early opening of spring weather rather indicate greater prosperity for handlers of building lumber as the tendency seems to be toward better conditions in construction work. This has been promised for some time past and already a good deal of building has gotten under way in different classes of structures. A few new office buildings are actually started and the call for the ordinary run of rough lumber commonly used in the initial construction will be followed by the purchase of more finished product and noticeably by the demand for interior finish, doors and other hardwood furnishings.

There have been enough purchases of fairly good size recently to give reason to believe that there is a promise of an increase in the size of orders

actually placed. This condition is probably brought about by the continued insistent holding out for better prices on the part of the most substantial institutions in the city, and those selling qualities of stock in this market. The fact that this class of concerns is following such a policy proves that there is a substantial confidence in the final readjustment of price conditions on a more satisfactory basis, and the wiser buyers have seemingly come to appreciate that this general demand for better prices for lumber will have a concrete bearing on the purchase price in the near future. As a consequence, some manufacturers are purchasing their requirements in larger blocks at prevailing figures.

This is not meant to convey the idea that there is a firmer price level prevailing in Chicago, as there is not. However, there really does seem to be a slightly accelerated movement presaging a gradual settling down of values to a more stable basis.

In the various hardwoods, quartered oak and the lower grades of such species as go into box lumber continue to be the best sellers, with those grades of wood which are going into flooring following fairly closely. Local lumbermen still continue to have the situation fairly well in hand and while none of them are unduly elated over business, they continue to show confidence in the future condition surrounding the hardwood trade.

← NEW YORK →

Whatever the present volume may be there is a strong opinion that better times are on the way and the lumber market will soon shake off the dull period and experience something like normal activity. Some very encouraging orders have been placed recently, which leads to believe that buyers are taking less chances on securing future supplies and are doing a little stocking up at the very favorable—for them—prices now going. There has been some talk of a pending advance for hardwoods generally, but so far this has failed to appear, and unsteady and varying quotations are about as common now as six months ago. Rough lumber is subject to keen competition, while hardwood flooring is moving in good volume at firmer prices. The local retail trade reports an increase in inquiry and it may be that the spring season will develop better than is now expected.

← BUFFALO →

The hardwood trade is holding steady and is better than a month or two ago, although it has not shown quite so much improvement recently as many have looked for. Prices are holding about as they have been, although considerable weakness is reported in some lines. A gradual improvement is looked for, however, as the market seems to be on the upturn as to volume of business. More building work is likely to develop from now on, though there is a notable absence of large operations.

The outlook for lake hardwoods is uncertain this season. Not much business has been placed as yet, though prices are reported to be more favorable than at the time navigation closed last year. Lake lumber vessels may make a late start this year, from lack of interest in new cargoes, but ice conditions will warrant an early sailing.

Plain oak and maple are being sold to the largest extent among hardwoods. Only a little poplar is moving, users of panel stock not taking much of it at present. Cypress shows more activity than some weeks ago. Low grades are being used to a pretty good extent and prices are holding firm. The flooring trade has shown up better lately, both oak and maple flooring being in fair demand, with prices showing more firmness.

← PHILADELPHIA →

The steady increase of volume in new building work, both in the local and suburban field, promises a vigorous activity in that line. Prices in special grades have stiffened somewhat, but in general the hardwood market has not changed from a fortnight ago. Orders are spotty and trading lacks snap. In many of the other industries there are signs of material improvement, the reflex of which will undoubtedly soon be felt in the lumber business. Large orders for locomotives have been booked recently. A number of large textile mills have been erected in the recent past in anticipation of better times in the near future, and Philadelphia-made electric cars are being shipped direct to South American ports for the first time. Work on the rearranging of sewer, gas and water pipes as the first step toward carrying out the plans for a subway loop in the business section, for which \$500,000 has been appropriated, is to be started at once. The \$6,000,000 for new rapid transit subway and elevated will be voted on at a special election April 29, and \$1,000,000 for docks, wharves, ferries, etc., it is believed will be furnished by the state legislature at this session, all of which improvements will give work to thousands of mechanics and laborers and conduce to a revived prosperity all along the line.

The strong sustaining optimistic feeling that has prevailed among the tradesmen has not diminished in the least, as a gradual but sure betterment is sure to arrive as the year grows older. The various woods show but little change from a fortnight ago. Chestnut is fairly active, with varying prices; beech, maple and birch are running along easy grooves; ash and oak are holding steady, and basswood is a little stronger.

← PITTSBURGH →

Prices on hardwoods have been badly rattled the past few weeks. In fact, there is almost no boom at present. Some requisitions are coming forward, but every chance for bidding brings out a new low record in prices.

DRIER DEPARTMENT

The A. H. Andrews Co.

115-117 S. Wabash Avenue
CHICAGO, ILLINOIS

The only exception to this is for dry hardwood stocks to be shipped abroad. For this a high price is paid. The industrial situation in the Pittsburgh district is so much better that manufacturers are placing orders for some hardwood, but only for early needs. Few contracts for a year's supply have been placed. Yard trade is increasing slowly, but is not very encouraging as yet.

< BOSTON >

The dealers in New England report in general a low volume of business and small but fairly numerous inquiries. A number of large furniture companies have reduced working time to four days per week, with only a partial complement of hands. This course is undoubtedly for the best interest of all, preserving a fair use of stock, preventing overproduction of manufactured goods and at the same time saving total loss to labor. Similar decrease in many lines seem to have relieved the money situation so that the ability to finance and hence general credits are favorably affected. Legislative action to benefit the local railroads has greatly increased the confidence in the future from the transportation standpoint as well as the financial, as evidenced by the first important rise in securities for a long time. The hardwood trade, like most other branches, is obliged to look to improved commercial conditions for a resumption of normal demands, as there seems no development, excepting possibly the use of Pacific coast woods which are receiving much notice.

< BALTIMORE >

While the hardwood situation shows some improvement, no such gains as had been expected some time ago are to be noted. Here and there hardwood men report that they are getting more orders and that the volume of business is quite satisfactory, but others have so far failed to experience such an increase as would cause them to feel especially encouraged. There seems to be no doubt, however, that a better feeling prevails and that the general situation is stronger. The upward trend has not yet attained the force of an actual advance in prices, but the range of the quotations is firmer, and the sellers are more disposed to hold out for figures that afford a margin of profit. For a time it was chiefly a question of getting orders, and anyone who indicated a willingness to buy was almost in a position to name any price. Now there is much more bottom to values, and the market is no longer completely dominated by the buyers. This condition has been brought about in large part by the curtailment of production, many of the mills being still shut down and in no hurry to resume operations. Some expansion in the requirements has also taken place, and while many of the big concerns, such as the railroads, are not yet entering into commitments with any sort of freedom, the inquiry is none the less more active and interest in the offerings on the rise. This applies to practically the entire list, with certain exceptions where stocks are overshadowingly affected by the state of the export trade, such, for instance, as the low grades of chestnut. These grades have been used extensively for crating for agricultural machinery and other boxes for other export articles, and since the movement of these commodities has been greatly cut down or wholly stopped by the war, there is no need for the lumber to make crating.

The chief drawback in the hardwood business at the present time is the exports. Shippers can get plenty of orders, but find it impossible to make shipment, the rates being prohibitive or the steamship lines having such heavy offerings of other freight that an actual embargo is put upon lumber. The foreign business could be done on a very satisfactory basis, the buyers being ready to pay attractive prices, but the obstacles in the way of making shipments are well nigh insuperable, and as a result the movement is so small as to cut no considerable figure in the total. The foreign outlets are so narrowed that the effect upon the domestic situation of the export movement amounts to very little, which is one of the main causes of the pressure experienced and serves to keep down the quotations to the present level. The trade, however, is not entirely without its promising features, and a steady, if slow, gain seems to be in progress.

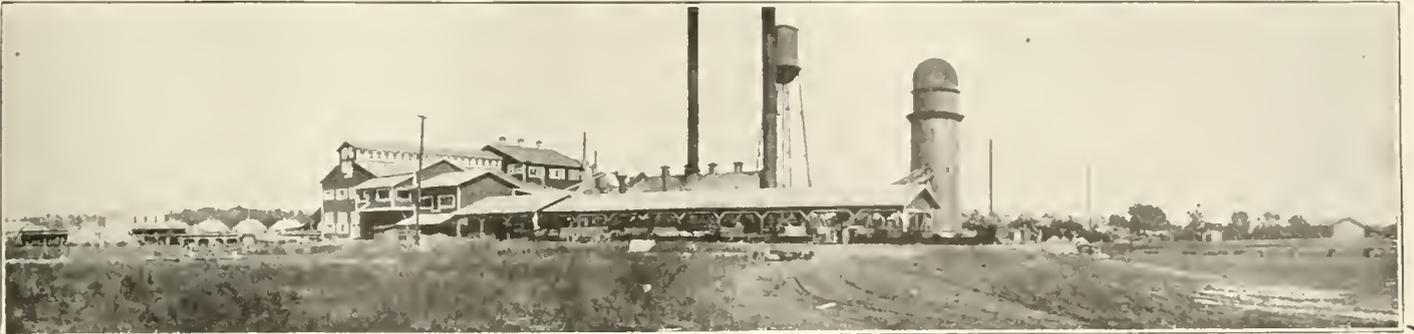

< COLUMBUS >

Hardwood trade in Columbus and vicinity has been fairly active during the past fortnight, when industrial conditions are considered. The volume of business is larger and better feeling is shown in retail and wholesale circles. While the trade is not all that might be desired, still it is better than a few months ago. Future prospects are considered brighter.

The best feature is the buying on the part of retailers. Dealer's stocks are light and consequently they are compelled to place orders to be in position to take care of spring building when it comes. Buying on the part of retailers is not done on a liberal scale and they are buying only what they need for the immediate future. Indications are rather bright for an active building season as soon as favorable weather arrives.

Trade from factories is not very active. Some buying is being done by concerns making vehicles, implements and furniture, but they are following the policy of buying from hand to mouth, as it were. Improvement in manufacturing circles is slow in appearing and in some lines it is apparently getting worse. Shipments are coming out promptly in all localities. Dry stocks in mill owners' hands are getting larger. Collections are still bad.

Demand for quartered and plain oak is fair and prices are unchanged from the previous fortnight. Chestnut is also fairly active and the demand for sound wormy is steady. Poplar is in fair demand at unchanged prices. Ash is slow, while basswood is holding up well. Other hardwoods are unchanged.

< TOLEDO >

Toledo continues to grow. With this remarkable growth comes a prosperity which is not equalled by every city. *The first week in March, for instance, gives an estimated valuation of building permits issued at \$304,063 as compared with \$71,955 for the same week a year ago. Toledo is to have a good many large investment buildings this season. While thousands of new homes have been built here in the past two or three years the demand for homes continues and at present it would seem that the erection of residence structures will continue. The factory orders are coming in better than for some time past and the building trades will soon provide a ready market for considerable hardwood. The principal demand thus far has been for plain oak. Prices are fairly firm. Yards are pretty well filled, but there is some tendency to buy, although very little of a speculative nature. Hardwood crating is in pretty heavy demand just now, in the lower grades.

< INDIANAPOLIS >

While the hardwood market is gradually taking on a firmer tone, the situation still is far from satisfactory. Business has been at a low ebb for several months and it is having great difficulty in regaining lost ground.

Many inquiries are being received, but these are not developing any very large sales. Buying is cautious and apparently for current needs. Occasionally some hardwood user, with a fair volume of orders ahead, places a substantial order.

Prices continue to hold their own and it is not believed there will be any substantial advance soon. Considering the state of the market there is naturally a sufficient supply of all grades of hardwoods and this fact coupled with light buying does not seem to justify an advance soon.

The veneer trade seems to be gaining a little ground. In some parts of the state veneer companies are reported to have an increased business.

< CINCINNATI >

An unsteady market, a trifle less optimistic than two weeks ago, featured the hardwood situation in Cincinnati during the past fortnight. This slight depression, while quite general in its scope, proved hard to trace to its origin, unless it can be attributed to overconfidence. A week or so back, the breath of optimism was apparent in practically all branches of the business, notwithstanding the widespread apathy in all other lines of business, and, as expressed by one prominent local hardwood dealer, just when business was beginning to again reach the surface level, too much was expected in a short time. Thus, the failure to regain former strength within a comparatively short time just when the silver lining began to glow, was taken by many to be an omen of evil again. It cannot be denied that the market has suffered considerable of a slump recently, but when analyzed in the aggregate, a steady, though to be sure slow, improvement is marked.

It appears that some business men are wont to count and tally by the week as against the cumulative market situation. While the last week or two shows a retrograde movement when balanced off with the showing of a month, the situation is encouraging and strong enough upon which to base future hopes. Near normal conditions are confidently expected within the next thirty days by those who choose to look upon the brighter side of all things. Unmistakable signs of an early and open spring is a grand stimulus, and already the inquiries from the builders is exceptionally strong. Judging from the inquiries coming in from this end, Cincinnati is about to witness one of its greatest building booms. Some of the larger mills report an unprecedented number of inquiries, while the actual demand keeps them working full up, and in divers instances concerns are found hard pressed to meet the demand. As is usual, the material back of the mills is limited, this being the chief and apparently only cause of complaint to be heard in this direction. Naturally, the millmen are jubilant with the opening of spring and welcome resumption of business after a long winter of comparative idleness.

Woodworking plants are reported in full operation and buying heavily, and wholesalers are ready to snap up all that is available.

Prices are holding up well, being backed by the increased demand and steady flow of inquirers from certain quarters. Heavy oak and basswood is being moved rapidly and probably constitutes the best seller of the week. There is little ash on hand and undergoing an insistent demand, while chestnut is moving well for some concerns. Poplar had undergone a slight backward movement recently and in some quarters is selling considerably under market. An explanation of the latter is given by some as that those who have a fair supply in the yards are anxious to move it at even almost sacrificing figures in order to do some business, but this view is not shared generally. Surely, however, there appears to be no basis of price in many grades, the market fluctuating day by day. An instance is cited where a considerable quantity of poplar was moved at a fifty per cent increase of last quotations, while the same day another concern accepted a figure of nearly fifty per cent below current quotations. However, it is said that conditions other than the market played a prominent part in the latter transaction.

What on the surface recently was taken to be a big movement by the railroad toward improvements on account of the large volume of inquiries and unseasonably heavy orders, has dwindled down considerably this week and the demand is rather quiet in this direction.

Inquiries from the furniture houses continue brisk, giving evidence of a renewed activity in this line. Vehicle and implement manufacturers are

inquiring with a volume that gives unmistakable signs of a general improvement.

Ash is selling nicely, while plain and quartered oak is on a steady upward trend. Yellow pine continues to be in mild demand, but not quite up to the usual standard, considering the Queen City as a center for this.

With the building trade again reaching out with its now fast approaching seasonable activity, the demand for hardwood flooring is of sizable proportions.

All told, there is a better feeling throughout all branches of the business, the manufacturer, dealer and consumer apparently realizing that a general improvement is bound to set in with spring weather. Thus, the situation can be sized up as a seasonable expansion, when viewed with the past month or so and not week by week, wherein so many false opinions get their origin.

◀ KNOXVILLE ▶

Inquiry among the mills and yards through this section reveals the fact that business is not very brisk, although some say there is a very marked improvement. Stocks are fair, but there is very little stock being manufactured.

◀ MEMPHIS ▶

There has been further improvement in the hardwood situation in this section. Both manufacturers and wholesale handlers of lumber report somewhat more general inquiry and reports issued by some of the railroads operating through the Memphis gateway show that there has recently been a steady gain in the amount of lumber handled by them. This latter is regarded as the most tangible evidence so far obtainable regarding the showing with respect to the movement of lumber. The improvement applies very largely to the domestic situation. The foreign demand is fairly active, but conditions affecting the movement of lumber to Europe are so unfavorable that it is not anticipated that anything can or will be accomplished in the near future.

There is a particularly good call for plain red oak and there is also a reasonably good call for plain white oak. Stock from $\frac{3}{4}$ to $\frac{1}{4}$ is preferred. Prices have advanced probably \$2 per thousand on plain oak within the past sixty days and a similar advance is reported on quartered oak, which is in good demand in all grades in both red and white. Ash continues to be readily absorbed at full quotations and there is a good movement reported in sap gum, though prices are still considered somewhat low. As recently noted, there has been a sufficient demand to take up practically all the gum box boards offering in this immediate section. Prices thereon are quite firm, with an advancing tendency. The lower grades of cottonwood and gum are still moving at a very good rate and prices are quite as good as they have been recently. The box people are doing a more irregular business than a short time ago, but most of them are keeping their plants in operation, with the result that their consumption is quite full. Red gum is in only moderate request, though it is pointed out that there is a little more activity now than a short time ago. Reports are received every now and then of new buildings which will be finished in red gum. Cypress is in fairly active demand and a good business is expected in this lumber as soon as the threatened labor troubles at Chicago, affecting the building trades, have been settled. There is no doubt that this has been a somewhat disturbing influence so far as cypress and some other items on the hardwood list are concerned.

◀ NASHVILLE ▶

There has been little change in the lumber situation in this market the past two weeks. Manufacturers think that there is slow improvement in conditions. Weather has been cold, and not entirely favorable for renewed local activity. There has been no material change in values.

◀ BRISTOL ▶

Slight improvement in the lumber business is noted in this section, but conditions are still far from satisfactory. However, the lumbermen are more encouraged by the prospects for business and the manufacturers are going ahead with operations, feeling confident that by the time the lumber now being cut can be prepared for market, conditions will be far more favorable. Yard stocks in this section continue very low, which is a strong incentive for mills to start. As a result of this situation many mills have already resumed and others will do so at once. Better weather conditions have had a stimulating effect upon business in this territory.

◀ LOUISVILLE ▶

A better outlook in the hardwood field is generally reported, though conditions are somewhat irregular. That is to say, trade seems to pick up and be about normal for a time, only to have a relapse. But the general run of business is ahead of what it has been, and operators are consequently encouraged by the situation. Factory men are now compelled to buy, the policy of using up reserve stocks having been abandoned for the excellent reason that there are no more reserves, in many cases. This is indicated by the fact that purchases are being followed by telegrams asking that the shipments be traced, so that evidently the material was needed at the time the order was placed. Inquiries are more numerous, and cover a wider range of material, showing that the consumers have been going ahead on a basis calculated to require general replacements, even if their consumption had not been up to normal in every respect. The building trade looks better, and hardwood flooring concerns are encouraged. Demand for high-

grade glued-up stock is quiet, indicating a similar condition in the furniture trade. The demand for low grade hardwoods for box manufacture is good, however. Quartered oak is in good demand. Plain oak is not so active, though a better movement is reported. Poplar is waking up. Cottonwood is rather dull. Hickory, except in dimension sizes, is also dull.

◀ MILWAUKEE ▶

While improvement is taking place slowly in the local hardwood market, there is a feeling in the trade that better things may be expected within the next few weeks, when the building season becomes more active. The amount of new building which is being launched in Milwaukee, while hardly equal to that of a year ago, is showing steady increase. W. D. Harper, building inspector, says that with the building carried over from last fall, there will be plenty of activity and he has made a conservative estimate that the total building investment in Milwaukee during 1915 will amount to at least \$12,463,000.

Large consumers of hardwood in Milwaukee are still buying rather conservatively. Wholesalers are naturally finding it rather difficult to adjust themselves to the situation. The mills are demanding pretty stiff prices, while the demand in Milwaukee and other Wisconsin centers hardly warrants as yet these firm quotations. Northern hardwoods are holding especially firm, as the indications are that there will be a shortage experienced in this line later in the season, judging from the present low supply of dry hardwoods. Birch, in particular, is getting low at most points. The sash and door concerns are not buying so freely as might be wished for, but stocks at these plants seem to be low and a better demand is anticipated within the near future. The farm implement concerns here and about the state are buying fairly well. There seems to be a slight improvement in the demand from the furniture manufacturing concerns, although it is hardly so strong as at this time a year ago.

Weather conditions in the northern Wisconsin lumber country have been favorable for logging operations and it is freely predicted that the cut in most sections will be much larger than had been anticipated earlier in this season. This ought to relieve the shortage of hardwood later in the season, when the new cut gets into condition to use. The greatest shortage is expected along in May, when the building season will be at its height and the new cut, with the possible exception of basswood, will hardly be in condition to use.

◀ DETROIT ▶

The hardwood trade in February was better than that of January, and it is expected March will show a slight improvement over February. This is especially so in the retail yard demand, increased building operations having aided the demand for interior finish.

Wholesalers generally do not regard the situation as sufficiently clear to base a prediction for future trade. The manufacturing companies are not increasing production, although flooring and interior finish plants are running better than a few months ago. The watchful-waiting policy is prevalent still.

◀ GLASGOW ▶

Business in this section is fair, and quite a number of the wood consuming industries are for the time busy with government work, so that in a good many instances the demand is steady, the result being that some of the stocks are becoming rapidly exhausted. This is what is wanted, of course, but when these commodities are not being replaced with fresh supplies, the outlook is not too bright. Taken all over business, despite the many difficulties, is proceeding on a far more extensive scale than many are inclined to admit. Everything is being hampered by uncertain tonnage, record freights, and transport delays, but as regards congestion Glasgow is one of the few ports which is remarkably free from congestion. Quite a number of vessels are being sent round to Glasgow for discharge, because of the congestion elsewhere. Several shipments of spruce deals have arrived at this port, and record prices are being obtained. Government requirements have taken up quite a large proportion of each shipment. However, the supplies are not nearly sufficient to meet this market's demands. The various stores are beginning to present an empty appearance, and stocks of everything are commanding higher values. Of birch planks the market is bare, practically all the available stocks being bought up a few weeks ago. Forward buying is naturally slow, no one being inclined to commit themselves while everything is at such an abnormal height. Contracting for Quebec goods has been sparse so far, and the few that have been made are on an F. O. B. basis, which is perhaps the safest. Yellow pine stocks are practically depleted, brokers holding very little with the exception of sidings. The demand for Pacific coast spruce has been very great, and all available stocks are being eagerly snapped up. The same applies to silver pine.

Among the more recent arrivals are the steamships "Lakonia" and "Athena," from Baltimore and Newport News with the usual assortment of hard and softwoods, oak and whitewood predominating.

Wagon oak planks on consignment have done remarkably well, and as regards the other items, there is no doubt that they will be disposed of ex quay at enhanced prices. The advices from shippers point to higher values being required for future shipments.

The steamship "Kyleness" from Mobile has just arrived and discharges at Glasgow ash boards and logs, staves, pitch pine lumber and oak boards, while at Greenock she will discharge about 2,000 logs sawn pitch pine for different merchants.

Hardwood Consumers' Requirements for 1915

The business depression of the past year has compelled the woodworker to economize wherever possible. He has tried to save money by looking for the cheapest raw material that would meet his requirements. As a result, changes in kinds, grades and dimensions of hardwoods used for 1915 will be more marked and widespread than ever.

The most effective sales corps is the one which has most complete knowledge of customers' needs — a mediocre salesman with this information can make a better showing than the class A man who hasn't it.

A \$40,000 investment in collecting and compiling just this information proves to us that no company can afford to individually maintain such a service on a thoroughly effective basis. We offer you the opportunity of protecting your selling investment by providing it for you — all filed for quick reference and instant use.

It is now being corrected throughout for 1915 changes and will be ready for use in revised form in a couple of weeks.

Don't overlook this chance of making the work of your sales department more effective at very little cost.

WRITE FOR PARTICULARS

Hardwood Record, Chicago, Ill.

20 YEARS' SERVICE

A Specialty Not a Side Line
BAND RESAWS

Saginaw Band Resaw

Ludington, Mich.
 Feb. 18, 1914.

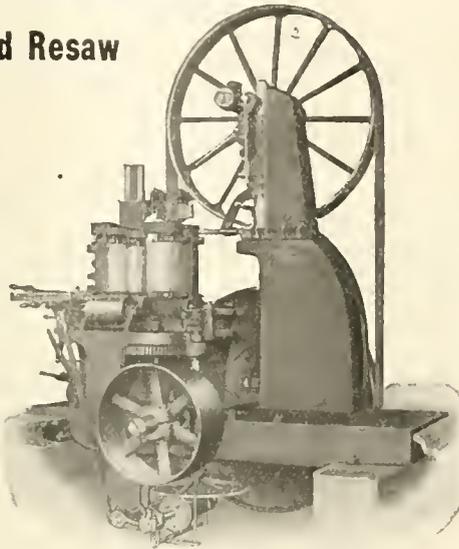

Gentlemen:—

We purchased a Saginaw Band Resaw in 1895, which has been in continuous use ever since. Out of over 500,000,000 feet of lumber, all that was suitable for resawing has been put through this machine.

We have twelve years' cut ahead of us, and this machine will outlast our timber.

Yours truly,

Stearns Salt & Lbr. Co.

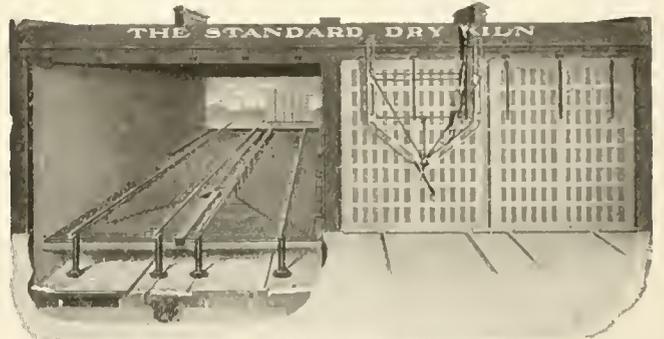

WM. B. MERSHON & Co.
SAGINAW MICHIGAN

Absolute Control

ADAPTING the drying conditions to suit fine hardwoods is easy with The Standard Moist Air Drying System. Because the drying elements—heat, humidity and circulation of air—are always under perfect control.

Write for the catalog and our 64-page list of Standard Dry Kiln users in every branch of the lumber industry. Address: The Standard Dry Kiln Co., 1559 McCarty St., Indianapolis, Ind.

Phoenix 6 ft. Pony Band Mill

Will cut 30,000 feet of 1" lumber in 10 hours and cut it good.

Nearly 200 of these mills sawing wood in the U. S. A.

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

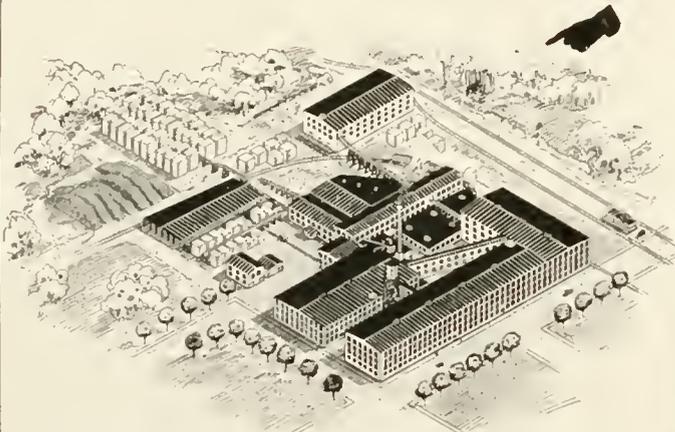

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Gentlemen—Our Plant

But what's inside of those walls is what really counts. Everything to provide for service. And the quality idea is instilled in all our force, from the highest to the lowest.

THE GALLOWAY-PEASE KIND

It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

Kiln dries without checking. No honey-combing, and minimum shrinkage.

Total absence of injurious insects insures sturdy, clean growth.

Our band mills cut oak only—hence filer and sawyer get best possible results.

What Veneer and Panel Consumers Will Use in 1915

This information is shown in our service of veneer and panel consumers' requirements lists—complete according to 1915 requirements.

The information contained is all first hand and guaranteed to be authentic. It gives all details that you want to know on which to base an intelligent quotation.

It would cost you thousands of dollars and years of work to compile the same information—we know because that is what it cost us. You can have it for 1% of its real cost.

As its best use is while it is fresh and it costs only two cents to write, drop us a line today and let us give you the details.

Hardwood Record's

strongest circulation is in the region where things are made of wood—WISCONSIN, MICHIGAN, ILLINOIS, INDIANA, OHIO, PENNSYLVANIA, NEW YORK and the East. **It's the BEST sales medium for hardwood lumber.**

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the line it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

NEW YORK CITY

NASHVILLE

THE LOGICAL PLACE TO BUY HARDWOODS

THE following is a list of stocks offered to the consuming trade by the hardwood lumbermen of Nashville. The character of the timber from which Nashville hardwood men secure their stocks places them in a peculiarly strong position as far as quality of lumber is concerned. Nashville lumbermen have always been noted for their strict adherence to all terms of sale, and in short have an enviable reputation for making good both as to the quality of lumber and as to grading.

The members of the Nashville hardwood trade solicit your attention to these facts and an opportunity of demonstrating their truthfulness.

**The easiest and quickest way to bankrupt
the United States is to *burn to ashes*
*every vestige of oak***

Man can no more escape contact with oak, than he can escape breathing. It is the only wood of which it can be truthfully said:

"It is of direct use and benefit to every man, woman and child in America."

There is not a structure in all this country free from the influences of oak. If not used in its flooring or other finish, it is apt to be found in the furnishings, and if by any freak of circumstance other woods have been employed for these purposes, then oak-bark will have been used in the soles of all shoes that tread its halls.

Nature has been particularly partial to oak,—and the fact that the combined totals of all other hardwoods in this country do not equal the uncut oak in our forests proves that nature reposes unusual confidence in oak's ability to fill civilization's wants.

Why not make it your personal business to help create a more wholesome respect for oak among its millions of unconscious users? Such activities will precipitate more oak products,—which means

Review and Outlook

General Market Conditions

THE PAST WEEK HAS DEVELOPED features all over the country which cannot but be considered as indicating a strengthening optimism. These developments are not confined to lumbering and allied trades, but are seen in connection with other important industries, chief of which is the increase in forces employed by steel plants in different parts of the steel producing sections. These reports have been insistent for some time past, but at no time have they been so general as during the past two weeks, and this in spite of the fact that the railroads are still purchasing very modestly.

Of course no one can reasonably expect real business activity until the close of the present upheaval abroad, but business men in this country can justifiably expect a much nearer approach to normal times, and the increasing confidence with which big business men view the situation shows that those times are rapidly approaching.

The development of increased trade in steel and other products would not necessarily, of course, mean an immediate improvement in the lumber business, but it surely does indicate that the business situation of the country as a whole is on the mend. Most important of all, it shows that the captains of industry, so-called, as governing the affairs of the steel business, have greater confidence in the situation, and no one will deny that confidence is all that is needed.

There is still a good deal to be desired as far as the consumption of lumber is concerned, but now that the spring months are actually here it can reasonably be expected that we are going to get more action, especially in the building lines, which continue to show increases in extent in practically all important cities of the country.

As far as the hardwood trade is concerned there has been very little in the way of new developments to talk about in the last couple of weeks, with the exception of the number of orders of considerable size, which have continued to increase, and that there really seems to be a growing appreciation on the part of both producers and buyers of the fact that lumber is worth a certain amount of money and should be sold at a figure which will at least bring back the actual value of the stock. In other words, the scale of prices is very slowly but at the same time surely getting to a point where it shows a better level. There is an increasing number of companies which are showing confidence in the situation by holding their stock for better prices. The fact that this is a country-wide policy certainly should have significance.

A measure of hope is seen in the Lloyd's transactions involving the date of the closing of the war, and these shrewd insurance people surely should have enough inside information to be able to form a moderately comprehensive and authoritative idea as to when the hostilities should cease. The odds they are offering, while not to be

taken as official in any sense of the word, and not to be banked on unduly, can be given credence to a measure at least. In fact, they are being given credence in some quarters, with the result that some hardwood men are making lumber in anticipation of a tremendous demand as soon as the war comes to an end.

As far as the different stocks are concerned, they continue on about the same basis as they have been selling for some time past, with very little change in demand.

The vehicle, implement and box trades seem to be in the lead as far as purchases of lumber are concerned, with the continued policy on the part of furniture, cabinet and woodworkers in different consuming states to buy to meet actual requirements.

Cover Picture

AGRICULTURAL MACHINERY of the latest patterns and stumpy fields do not go well together. Stumps and tillage were not necessarily antagonistic in the days when the farmer scratched his ground with a shovel-plow, harrowed it with a thorn brush, planted it with hand and hoe, worked it (if in corn) three times during the early summer, and "laid it by." At any rate, most of the pioneers east of the Mississippi river, and a considerable number west of the Father of Waters, did their farming in that way during the long period required for the stumps to disappear by decay from tracts where primeval forests once stood. The most pretentious agricultural implements in use at that time were sickles, scythes, flails, hoes, hand rakes, and plows. Even the "groundhog"—the prototype of the modern thrasher—was just making its first appearance.

Today the farmers use mowers, reapers, tedders, root diggers, hay haulers, gang plows, and any other machines to save time and elbow grease. These machines do poorly in negotiating stumpy land, and are unprofitable unless the ground is open and clear of obstacles.

The cover picture illustrating this issue of HARDWOOD RECORD shows a piece of land in a northern state, in process of transformation from forest to farm. The lumberman has come and gone. He took all the timber the sawmill wanted, and left the ground shoulder deep with trash. That is not an inviting situation for the farmer, because the amount of work required to put such land in shape for the mowing machine or the cultivator is so great that no lazy man will tackle it. During the first stages of the operation the most powerful agent is fire. That usually bares the ground, except the larger logs and the stumps. The clearing of logs is not so serious; but the stump proposition is another matter. To leave them until decay does the clearing, involves a delay of many years; to grub them out may cost as much as the land is worth; to burn them out requires much labor and lots of time; and to pull them from the ground calls for powerful machines.

The Railroads and the Shippers

NOTHING HAS HAPPENED in recent years of more portent to shippers than the gathering of prominent railroad officials and lumbermen which took place at Memphis on April 7. The meeting means not only that manufacturers of southern lumber have made the justice of their case clear (and in the face of the evidence presented it is but a policy of ordinary business judgment to surround them with more favorable shipping conditions), but that there is a more receptive spirit apparent on the part of the railroads towards the other fellow's side.

A perusal of the proceedings of the meeting as given on page 22 will reveal the spirit of the meeting—a spirit fair in the extreme but on the part of the lumbermen a spirit portentous of a genuine concern for the life of their industry.

The singular moment of the meeting is given evidence by the big attendance of railroad officials—their realization of its significance to them was shown by their close attention to the proceedings.

It is impossible to forecast results, but to one having been present there is only one possible outcome, the readjustment of rates to intelligently meet actual shipping conditions; the almost complete cessation of manufacture and shipment of certain kinds of southern lumber. The lumbermen expressed themselves as having their books open to substantiate the exhibits made of their operations.

A Look Into the Future

IT IS A PRETTY GOOD RULE not to cross the river until we reach it, yet when we know that we are bound to come to the ford sooner or later, it is not a bad policy to make inquiry concerning the chances of getting across.

The exhaustion of the existing forest resources of the United States lies ahead, and it will be reached at some future time, but, fortunately, the day is not immediately at hand. There are a few figures on the subject which are worth thinking over. According to the inventory of forests by the Bureau of Corporations, there are 2,826,000,000,000 feet of standing timber, suitable for lumber, in the United States at this time. The annual cut for lumber is approximately 40,000,000,000 feet. If no growth should take place, and the present rate of cutting should continue, a very simple sum of long division shows that the last tree will be reached in about seventy years.

However, the problem is not quite so simple. During that seventy years, some wood will grow, and some timber now standing will fall of its own accord and decay without reaching a sawmill. While the mills are sawing 40,000,000,000 feet a year, the cordwood cutters, crosscut hewers, pole contractors, and other users are taking from the forest another 40,000,000,000 feet a year. That is the lowest estimate which has been made of this drain, exclusive of lumber. Some insist that it will amount to not less than 60,000,000,000 feet a year. The fact is, no one knows this drain with anything like the accuracy with which the sawmill cut is known, but all admit that it is very large.

If this drain is added to the lumber cut, it would appear that the supply will last only thirty-five years, instead of seventy; but an examination of the facts somewhat modifies that conclusion. The Bureau of Corporations' estimate included saw timber only, and not the tree tops, limbs, and small stuff; and it is of this latter that most of the poles, ties and cordwood are cut. In other words, they are made from what the sawmills don't want, and for that reason they don't much increase the drain on the saw timber at present, though the cutting of small stuff results in lessening the future supply of sawlogs.

The United States contains a little more than 500,000,000 acres of forest land. This means land which now has timber, or such as once had it and ought to have it again. It does not include any arid regions too dry or poor to grow trees. The present supply is on these 500,000,000 acres, and the future supply must come from there. The present average stand per acre, for the whole area, is approximately 5,650 feet—a rather thin stand, considered as a whole.

The average annual growth of a good hardwood forest in the southern Appalachians is about forty cubic feet or three hundred

board feet (feet of boards) a year. Good softwood forests will do a little better. Suppose that the whole of the 500,000,000 acres of woodland in the United States grows trees at that rate. The problem of future supply is solved at once; for, at 300 board feet per acre a year, the annual total is 150,000,000,000 board feet, or nearly twice the present cut of lumber, poles, ties, fuel and pulpwood.

Unfortunately, the weak place in this argument and conclusion is that the present forests are not producing new wood at anything like the rate of 300 board feet a year per acre. Enormous tracts are not producing a thing of value, because fires kill the young trees and leave the land barren. Most of the broadleaf forests will sprout from the stumps and roots after the old trees are cut, and thus restore themselves. They may survive after one or two crops of sprouts have been killed by fire, provided no more fires occur. But the needle-leaf forests—except redwood—do not restore themselves by sprouts. After the trees are cut, if a fire runs through the slashings and destroys the seedlings and the seeds that are on the ground, that tract is done for as a producer of timber, until some means are found to start a new growth from outside sources.

The future of the timber supply need not be dark or doubtful; but it must be confessed with sorrow that at present the prospect is somewhat gloomy. In so many parts of the country the efforts to protect and restore the tree growth are feeble, half-hearted, and inadequate. In too many instances the timber owner, with indifference for the future, and looking only at present profit, skins his tract and passes on. The people generally have not responded to the need of preparing for the future. Some states have taken forward steps in conserving their timber resources, but others, acting through ignorance or indifference, have adopted half-cooked excuses for forest policies, even going to the extreme of placing their forests in the keeping of game wardens, or some moss-grown commission.

Their Efforts "To Pull Together"

HARDWOOD RECORD HAS MENTIONED in past issues the efforts now being promulgated by members of St. Louis' lumber and allied trades to form a large comprehensive organization whereby all of the industries directly interested in the production, sale and remanufacture of lumber products may be formed into one organization for the general good of all. They have felt that the trend of the times makes necessary unified movement and as great an organization as possible in order to insure maximum prestige to effect such action as will be necessary for the interests of all.

The Lumbermen's Association of Chicago is the model on which the St. Louis lumbermen are planning their new organization. In fact, Chicago men prominent in the local organization have given their advice on invitation from the St. Louis lumbermen, in order that the St. Louis organization may be gotten up along as comprehensive and effective lines as possible.

All this goes to show that the idea of getting together and overlooking the barriers raised in the past by diversion of interests in the minor details is becoming year after year more generally accepted as the important theme of business. The essential to the success of an organization such as the Lumbermen's Association of Chicago is harmony throughout. The individual divisions have their respective questions to solve among themselves, but in the broader issues in which the trade as a whole is involved, the entire organization works without jealousy or regard for any individual interests, and the result has been giving to Chicago lumbermen and industries closely allied with lumbering in the city, a prestige never before been enjoyed.

The plans in this direction as worked out by St. Louis lumbermen and others in similar lines are indeed to be commended. This idea of getting together to work for the common good will spread without a doubt, and it will do so logically as certainly those interested in selling things made from wood are just as vitally interested in the broader questions surrounding their industry as are the lumbermen producing raw material from which to make these articles. Perpetuation of demand and continuance of business along the most favorable lines are questions which can be solved only by the consolidation of combined action on the part of all. These plans give the desired momentum, and can very well be taken as models for similar organizations where the extent of the industries is great enough to warrant.

What Becomes of Oak Lumber

The latest published statistics show that the annual cut of oak lumber in the United States totals 3,318,952,000 feet. That which is used in its rough form, added to exports and sawed railroad ties, amounts to 1,335,367,000 feet. The remainder, which is 1,983,584,000 feet, is worked in shops and factories and is made into numerous articles. These belong to different industries. The following table apportioned the oak among forty-eight wood-using industries, shows the amount consumed by each of them, and the average price paid for oak by the different industries.

Industries	Quantity used annually feet h. m.	Average cost per 1,000 ft.
General mill work.....	501,367,772	\$35.70
Furniture	431,053,289	34.11
Car construction	305,276,814	26.81
Vehicles and vehicle parts.....	212,918,361	34.92
Chairs	135,269,118	28.93
Agricultural implements	69,346,130	35.51
Fixtures	62,681,744	49.50
Boxes and crates.....	56,362,111	13.08
Ship and boat building.....	32,382,311	42.65
Refrigerators and kitchen cabinets.....	31,351,521	31.27
Instruments, musical	20,638,480	48.39
Sewing machines	19,106,250	45.70
Picture frames and moulding.....	16,043,423	42.12
Plumbers' woodwork	14,031,200	36.31
Handles	12,458,472	25.86
Machine construction	8,295,864	29.16
Woodenware, novelties, etc.....	7,716,860	25.77
Caskets and coffins.....	7,544,255	47.24
Pulleys and conveyors.....	7,343,500	27.99
Tanks and silos.....	5,042,401	57.45
Electrical machinery and apparatus.....	4,936,000	41.79
Mine equipment	4,826,472	17.54
Gates and fencing.....	2,640,700	15.20
Clocks	2,637,927	35.62
Equipment playground	2,576,800	20.84
Sporting and athletic goods.....	2,497,559	57.96
Toys	1,444,057	24.56
Saddles and harness.....	1,248,000	36.55
Elevators	956,200	43.20
Pumps and wood pipe.....	565,800	44.98
Laundry appliances	427,500	32.04
Brooms and carpet sweepers.....	405,000	39.04
Boxes, tobacco	403,200	33.87
Professional and scientific instruments.....	372,100	32.73
Rollers, shade and map.....	294,000	24.31
Printing material	272,100	36.02
Bungs and faucets	250,000	17.52
Patterns and flasks.....	182,200	41.17
Weighing apparatus	158,000	43.13
Brushes	90,900	27.11
Dowels	77,000	17.40
Shuttles, spools and bobbins.....	39,000	47.44
Whips, canes, and umbrella sticks.....	20,000	65.00
Butchers' blocks and skewers.....	12,000	30.00
Signs and supplies.....	12,000	52.08
Trunks and valises.....	4,500	42.22
Aeroplanes	3,500	42.20
Boot and shoe findings.....	3,000	8.00
Total.....	1,983,584,491	\$33.48

The first and largest industry is general millwork which includes flooring, ceiling, doors, sash, blinds, stair material, and many other articles of a similar kind. Furniture is somewhat smaller in quantity of wood consumed, but it is very large. The manufacturers of railway cars also make enormous demands upon oak supplies. It will be noticed that furniture and chairs are considered to be separate, under the schedule of industries adopted by the Forest Service where the foregoing table was compiled. The reason for classifying them as separate industries is that chairs are frequently the product of factories which make nothing else, and the method of manufacturing chairs differs from that employed in making general furniture. If chairs and furniture are counted as one industry it exceeds general millwork in volume of wood used.

COST OF MATERIAL

The different industries do not pay the same price for the oak

they use. The average cost at the factories is \$33.48. The lowest price is paid for the small quantity made into shoe shanks, which are thin pieces, cut from rotary veneer, and placed between the soles of shoes, under the arch of the foot. This material reaches the factory in the form of logs, to which fact its low price is due.

The highest price is paid for stock to be made into whip handles. It reaches the factory in the form of squares, and is already partly manufactured. That explains its high price. The price next to the lowest is paid by makers of boxes and crates who use low grades of lumber.

The total sum paid for oak by all the industries in the United States that use it is \$66,405,069 a year. The price paid by a particular industry is governed largely by the grade of material bought, but other things have something to do with price, especially the distance of the supply from the place where it is to be used. In some cases, part of the manufacturing is done before the stuff reaches the factory which completes the article. This increases the cost at the finishing or assembling factory. Chairs and vehicles belong in this class.

The table of industries and prices make no distinction between white oak and red oak. Grade for grade, there is not much difference in cost. If the whole country is included, white oak is employed in larger quantity than red oak.

The foregoing table does not include any of the oak that is used in the cooperage business. To include this would add many million feet to the total given. This wood is employed by the makers of both tight and slack cooperage. Tight cooperage includes barrels for liquids, and white oak is chiefly employed; while slack cooperage embraces barrels and kegs for dry articles, and for this red oak is as serviceable as white.

The Scene Shift in the Spoke Trade

Changes come to all branches of the hardwood business from time to time, but no other branch of it reflects at present so radical a shift in the scenes as the spoke branch of the trade, especially in the manufacture and sale of hickory spokes. The shift is due to the introduction and rapid development of the automobile and the motor truck. These call for spokes in enormous quantities, but the call is entirely different and has been the means of replacing what was formerly the cream of the hickory spoke trade.

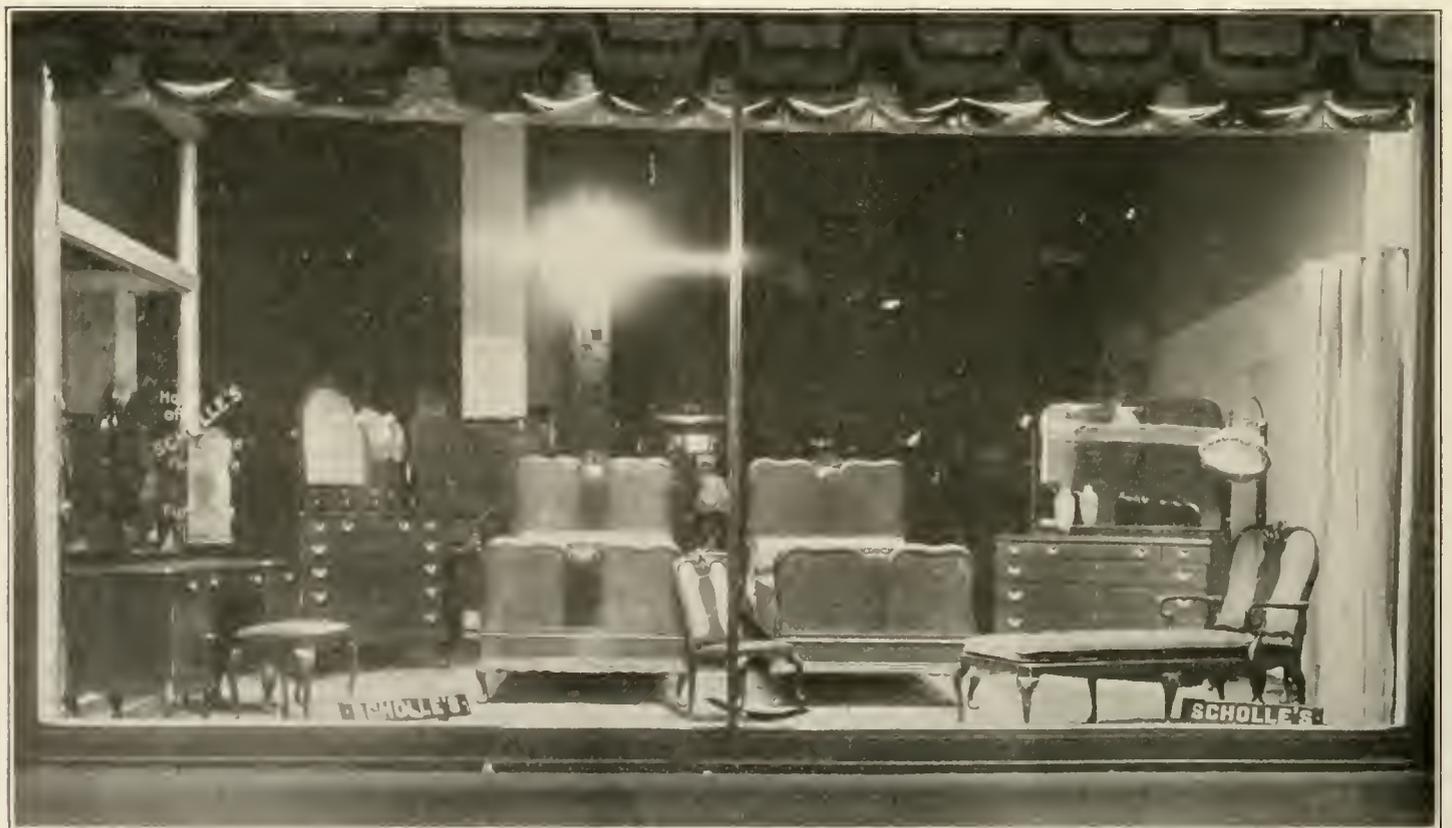

This was set forth in a plaint made recently by a prominent manufacturer who has been identified with the spoke business all his life. He said that the automobile business had ruined the finer spoke trade, which was the manufacture of hickory spokes used in the high-priced buggies and carriages of the older days, and to which the spoke manufacturer looked for his main profits. This change might not seem to make much difference since the automobile calls for a larger quantity than has been lost in the fine carriage and buggy spoke trade, but the spoke man complains that there is no money in the auto spoke trade, that it is handled on the same close margin of the low-grade and cheap buggy spokes and wagon spokes of olden times. He contends further that the same high quality of hickory stock is not insisted upon. The automobile manufacturers are close calculators and shrewd buyers, and because of the large quantity used they insist on narrow margins with a final result that this branch of the spoke business today is very unsatisfactory from a profit yielding standpoint.

Meantime it has replaced that old trade in fine spokes and shafts that made the best profit and has brought home the realization that the spoke men never made enough profit on the lower priced goods. So far as quantity is concerned, the spoke trade is as big today as it ever was, perhaps bigger.

It is a mistake to depend on the highest grade product for all the profits. Every grade and specification of mill products should pay its own fair profit. Then the shifting of scenes from one to another will not so disturb the balances of those engaged in the trade.

SPECIALLY DESIGNED BLACK WALNUT DINING ROOM FURNITURE OF WILLIAM AND MARY PERIOD

QUEEN ANNE BLACK WALNUT BED ROOM SUIT

Walnut Given a Remarkable Boost

The best evidence of the trend of public opinion, expressing favor or disfavor, in which any kind of wood is held in its use in manufactured articles is the attitude of the retail trade. Woods come and go with change of times and styles, as certain woods are best used in a certain period of furniture in high-grade lines, while other woods are best adapted to some period altogether different. Thus with changes in demand for certain periods the woods change with them, and while of course the furniture dealers offer different styles of furniture at all times, they bend their efforts to pushing certain lines which their judgment has told them will be in greatest demand.

Everyone can without great effort remember the old-fashioned walnut pieces which, because of unintelligent methods of finishing and cumbersome design, were relegated to the attic years ago. When the manufacture of furniture as used by the average individual gradually became a matter of artistic taste, these old pieces were decidedly in disfavor and inasmuch as the general impression was that they represented the only possibilities in manufacturing walnut, the wood was not much in use for a considerable period of time up to a few years ago.

However, furniture manufacturers and dealers conceived three or four years ago that walnut properly finished would make up into bedroom, dining room and other furniture that would have the characteristics of beauty possessed by no other wood, as they would be unique in themselves and give a tone of richness peculiar to walnut. Each wood has its own beauties and walnut advocates can justly claim that the rich brown of the modernly finished stock has a peculiar softness that makes an unusual appeal.

Some of the far-sighted retailers have ultimately succeeded in getting manufacturers to make up lines in walnut, and one of the most ardent advocates in modernly finished walnut furniture is the Scholle

Furniture Company of Chicago. The firm handles a high-grade line in all of its stock and has been energetic in advocating the manufacture of walnut periods for several years past. The result has been that it now has an unusually complete line of walnut bedroom and dining room suits, which it has been showing on its floors and which has been given a good deal of prominence during the last few months in its ads and window displays.

Accompanying are shown three walnut furniture displays, two of which on opposite pages show window displays on Wabash avenue. The other shows an extensive display of walnut on the third floor of this company's store, and this represents an especially designed dining room suit that is certainly a beauty.

That shown on this page is all hand work and represents an elaborate dining room suit worked out in the style of Queen Anne. On the opposite page the bedroom suit is also of the Queen Anne period, while the dining room suit is William and Mary.

All of these pieces are elaborately worked up to show the best in walnut, and are certainly striking evidences that walnut can offer something of exceptional beauty and of quality to appeal to the most fastidious taste.

Remember that the mainstay of a saw tooth is its corners—keep them well braced up.

We might argue that the finer the abrasive wheel on the knife-grinder, the better edge can be secured and the less whetting will be required, but sometimes cool grinding is more important than fine-grained work. Also, one can obtain pretty smooth work by light cutting even from a comparatively coarse-grained wheel.

Sometimes doctoring a hot journal will save hammering a contrary saw.

BLACK WALNUT DINING ROOM FURNITURE

Pertinent Legal Findings

Computing Sales Agent's Commission

A contract employing a sales agent guaranteed him \$2,400 a year and one-fourth of the profits derived from his sales by the lumber company which engaged his services. The agreement contained no provision showing the basis upon which it was understood that such profits should be computed, and the company preserved no record showing the cost of producing the lumber sold by him, apart from the cost of manufacturing all the company's lumber. Under this state of facts the supreme court of Oregon holds that the profits are to be ascertained by charging against the proceeds of the lumber sold by the agent a proportionate share of the expense covering the company's entire manufacture and of the \$2,400 guaranteed compensation. (*Lee vs. North Pacific Lumber Company*, 146 Pacific Reporter 131.)

When Contract Must Be In Writing

An agreement to sell timber to be manufactured into certain products is invalid unless evidenced by a writing signed by the party to be bound thereby. There need be no formal instrument, but there must be at least a memorandum showing the essential elements of the contract, including the identity of the parties, the subject of sale, and the price. But an oral acceptance of a written offer constitutes a valid agreement. (*Springfield, Mo., court of appeals, Carter vs. Western Tie & Timber Company*, 170 Southwestern Reporter 445.)

Assumption of Risk by Employee

An employe in a lumber mill assumed the risk of being injured through attempting to push a truck load of lumber over the edge of a rise in a floor, although he did not notice that a plank which was used to make the place even was displaced. (*Arkansas supreme court, Sweeney vs. Malvern Lumber Company*, 172 Southwestern Reporter, 821.)

When Title Passes to Buyer of Lumber

When a quantity of lumber is sold for delivery to the buyer by railroad the question as to when title passes to him is primarily a question of mutual intention as shown by the terms of the contract. Ordinarily, delivery to the railway company will be presumed to pass title to the buyer, but this presumption may be overcome by showing that some act was to be performed by him before acceptance of delivery, such as inspection, measuring, etc. Even after actual delivery by the railway company it may be shown that title did not pass because of rejection of the lumber as not conforming to the contract of sale. (*Kentucky court of appeals, G. I. Frazier Company vs. Owensboro Stave & Barrel Company*, 172 Southwestern Reporter 652.)

Right of Way for Logging Railroad

The mere fact that an owner of land has permitted a lumber company to use a strip of it for the purpose of maintaining a logging railroad along it cannot be construed to give the company a permanent right of way. Unless there has been a grant of a right of way, it must appear that the strip has been occupied by the company under a claim of legal right for a long enough period to give a right of way by adverse possession. (*California district court of appeal, Brandon vs. Umpqua Lumber & Timber Company*, 146 Pacific Reporter 46.)

Validity of Contract of Sale—Storage Charges

When a contract, instead of requiring a seller to deliver a definite quantity of lumber or timber products, provides for delivery of as great a quantity as it is possible to accumulate at a certain place during a given period, there can be no recovery by the buyer for refusal of the seller to make any delivery, since the quantity is left too uncertain, and this is especially so where the quantity which can be accumulated depends upon uncertain contingencies. But where the buyer has not previously repudiated the agreement on this ground, he becomes liable for the agreed price on the seller making a delivery at the contract place. When one agrees to store timber products free of charge he cannot subject the owner to liability for storage charges

until he has given reasonable opportunity for removal of the products after notice that charges will be made. On the other hand, if the owner permits the products to remain after lapse of a reasonable time for removal after being notified that certain charges will be made, he becomes liable therefor, regardless of whether he expressly agrees to pay such charges. (*Alabama supreme court, American Tie & Timber Company vs. Naylor Lumber Co.*, 67 Southern Reporter 246.)

Conclusiveness of Inspector's or Surveyor's Decision

When the parties to a contract for a sale of timber or lumber delegate to a third person the matter of determining quality or quantity, or some other question arising under the agreement, his decision is binding upon both parties, in the absence of fraud or such gross mistake as implies bad faith or a failure to exercise an honest judgment. (*United States circuit court of appeals, eighth circuit; Frisco Lumber Company vs. Hodge*, 218 Federal Reporter 778.)

Adjustment of Dispute Under Millwork Contract

Defendant company gave an order to plaintiff company for the manufacture of doors, sash, transoms, etc., out of "western pine," and plaintiff accepted the order, but manufactured the articles out of spruce. The work was shipped to defendant, but delivery was accepted under protest, with reservation of the right to claim deduction from the agreed price. Plaintiff refused to agree to a deduction, claiming that "western pine" and "spruce" were synonymous. Later, however, it was agreed that the original price be paid, less the deduction, and that defendant's right to a deduction be left to determination by arbitration or litigation. On these facts the Louisiana Supreme Court decided in the case of *Huttig Sash & Door Company vs. Allen Manufacturing Company*, 67 Southern Reporter 340, a suit to recover the unpaid portion of the agreed price, that defendant waived its right to receive the work under protest, by entering into the last agreement mentioned.

When Fire Excuses Delivery of Lumber

Defendant agreed to ship 58,000 feet of No. 1 maple flooring to plaintiff, the contract containing the provision: "All contracts are contingent upon strikes, fires, breakage of machinery and other causes beyond our control." Before any of the flooring had been manufactured or delivered, defendant's mill was destroyed by fire, without fault on defendant's part. Defendant thereupon claimed release from the contract under the provision quoted, and plaintiff sued to recover damages as for breach of the contract to deliver the lumber. The trial court decided that there could be no recovery, and this decision has just been approved by the supreme judicial court of Massachusetts (*New England Concrete Construction Company vs. Shepard & Morse Lumber Company*, 107 Northeastern Reporter 917). The latter court says: "The agreement is not an absolute contract by which the defendant agreed to furnish the flooring to the plaintiff, but was subject to certain conditions, including the condition that the contract was contingent upon fires; that is to say, the defendant was excused from performance in the event of the happening of any of the contingencies set forth in the contract. * * * The effect of this clause was not to extend the time of performance beyond the time limit, but wholly to relieve the defendant from the obligation to furnish the flooring called for by the contract. * * * The mill having been destroyed by fire, the defendant is wholly relieved from performance; at least, in the absence of evidence to show that the fire was the result of its willful and intentional wrong, or that of its servants or agents."

Recovery of Excessive Freight Charges

Suit cannot be maintained in a state court to recover against a railway company on the theory that freight charges collected on interstate shipments of lumber were excessive, if the rates charged conformed to published tariffs, and no order for a refund or reparation has been made by the Interstate Commerce Commission. (*Nebraska Supreme Court, F. A. Foster Lumber Company vs. Union Pacific Railroad Company*, 151 Northwestern Reporter 168.)

The Lumbermen's Round Table

What the Salesman Should Know

There are two things the salesman of any commodity ought to know as much about as possible. One is his own commodity, and the other is the requirements of his customer.

A great many hardwood lumber salesmen fall down at one end or the other, and some at both. Too few salesmen are familiar with manufacturing and handling lumber. A great many of them are located in consuming districts, and seldom get to the mills. They have not learned the characteristics of the lumber they are selling, and hence their talk regarding it, instead of expert characterization, is usually colorless, bromidic repetition of the usual claims.

If every lumberman were to make a point of having his salesman go through his plant, study his lumber on the yard and see just what is being done to insure good material for the user, it would solve a great many problems that are exceedingly difficult under present conditions.

On the other hand, even these salesmen who are close to consumers often fail to grasp the essential features of their lumber requirements. They merely take the announcement of the grades wanted, and quote on them, without stopping to consider whether those grades are best suited to the needs of the customer. He profits most who serves best, and "service" in lumber is certainly indicating the right stock for the purpose. Many consumers are not practical lumbermen, and buy without having really analyzed their own requirements, and the salesman who came along with ability to do this for them would command their interest, attention and respect. And that is the only royal road to business.

It is true that many buyers of lumber are suspicious of the salesman, and do not encourage him to make suggestions, nor to depart from the routine system of quoting on standard grades. But the opportunity to improve over this method is so plain that it ought to be taken hold of.

How to Scare Away Business

A good many people, hardwood lumbermen included, seem to think that the only absolutely certain method of getting an order is to make the price so low that it will be certain to foot the list of quotations. That this is not always the case was indicated by the following statement of a leading lumber buyer recently:

"I have just placed an order for several cars of No. 1 common quartered white oak. I got a number of quotations before ordering. I didn't give the business to the concern which quoted highest, but by the same token I withheld it from the chap who asked less than anybody else for his stock. This happened to be a lumberman who was willing to take \$5 a thousand less than I bought the material for.

"Why didn't I save the \$5? Well, I was afraid of the lumber. I figure that I'll just about get my money's worth, when I buy material for my factory, and I would rather pay a fair price and get good honest value than buy at the bottom of the market and get scrubby stock. And I was pretty certain that was what would be the result.

"It's to the interest of the buyer, as well as the seller, that the latter make money on the business. If he takes an order for less than the intrinsic value of the material, the temptation to cut the quality in accord with the previously cut price is so great as to be almost irresistible. I always dodge the fellows who are quoting 'way under the market, because I have been convinced that I cannot get satisfaction in that way."

"Give a Dog a Bad Name—"

The old adage about the effect of giving a dog a bad name applies also to lumber, and with particular force to the lumber which has been rejected for one reason or another. A salesman recently said that he would rather be given the task of selling three cars of stock in the usual way than moving one car that had been turned down.

"People find out about such matters," he said, "and nearly always smell a mouse if a car of lumber has been rejected. There may be perfectly good reasons for this—misunderstanding of the order, or a special requirement of the customer that the particular lot of

stock shipped did not meet, or simply the fact that the customer had bought the lumber cheaper after having given the order in the first place. There are some concerns which will do a thing of that sort, though most of them have been pretty well spotted.

"The matter of taking care of some special requirement is the hardest factor to dispose of. There is a certain automobile concern which is a large buyer of ash. It specifies tough ash, however, and if the lumber doesn't look tough to its inspectors, you have a big car of ash on your hands in that market. You may have given special pains to the selection of the stock, but your views are not given much consideration. If the ash isn't as tough as it ought to be, according to the opinion of the consumer, good night!

"The only way to avoid having rejected cars is to be absolutely certain that you know what the customer wants, and to put everything into the order. The salesman may understand perfectly what his customer requires, but if he isn't sufficiently specific in sending in the business, there is likely to be a mix-up that will result in a rejected car, with all its attendant troubles. Of course, you will have kicks and rejections, no matter how hard you try, but the prescription I have given will help to avoid a good many of them."

Should the Salesman Settle "Kicks"?

One of the mooted questions in the hardwood lumber business is whether or not the man who sells the lumber should be the one to go back and make an adjustment if this becomes necessary after the stock is delivered. Though this is often done, and is perhaps the rule, there are a good many logical reasons against it.

In the first place, the salesman naturally feels favorable to the customer from whom he has gotten business. When it comes to a settlement, he cannot help thinking about the next order, and trying to make the adjustment as favorable to the customer as the house will stand for. Hence the latter's interest is likely to suffer, because the man who is of the temperament to make a good salesman and at the same time is judicial and cold enough to be a good adjuster or collector is such a rara avis that he ought to be catalogued and put on exhibition.

If the lumberman can possibly do it, he should use different men for this work. He is much more likely to get good results in this way, and he will not be handicapping the work of the salesman by having him mix up in the settlement of complaints, which are likely to cause more or less friction.

One for the Small Millman

One of the most common expressions heard in discussing the lumber business with small hardwood manufacturers is the necessity of getting the most out of the log. This really means, as a matter of fact, getting as many high grade boards, irrespective of thickness, as possible out of every log that is put on the carriage.

It sounds well, and looks impressive to see the sawyer keep cutting and turning constantly with the effort to make as many good thick boards as possible at every operation. But is it really the best possible plan?

In the first place, inch is usually the standard dimension. To cut thick stock when the log will permit will indeed raise the percentage of high-grade lumber produced, but will it not, at the same time, lower the quality of the inch? If the sawyer, every time he sees a clear face, cuts it as thick as he can, and makes inch only when there is nothing else to be done, it's evident that his log-run inch is going to be less desirable lumber than the thick stock. That is to say, his inch is not so valuable, intrinsically, as that of the man who has cut his logs into inch right along, and who, consequently, has all of the best material in that thickness. Getting the most out of the log in the matter of grade does not necessarily mean getting the most money, for it stands to reason that the man who has used the best he has to make inch ought to be able to get more for it than the manufacturer who "robbed the inch" for the sake of piling up some thick high-grade stock. And everybody can realize the greater difficulty of accumulating a stock of thick lumber and selling it than is the case with inch.

The Memorable Memphis Meeting

When George Burgess of the firm of Russe & Burgess, Inc., Memphis, Tenn., took the chair, there were about 325 prominent lumber manufacturers and important officials from the southern railroads in attendance at the harmony conference called by the Southern Hardwood Traffic Association, and taking place at the Hotel Gayoso, Memphis, Tenn., on Wednesday, April 7. Numerical attendance is not necessarily of particular significance at any convention, as ordinarily the social factor has a great deal to do with bringing together the participants. However, in this case there was nothing of a social nature offered as an inducement, as the meeting was purely a business proposition, with a big purpose behind it and a big object before it.

The real idea of those responsible for the meeting and the aims it is hoped will be reached, are described in full in the paper of John W. McClure, summarized in following column. Briefly, the meeting was prompted by a desire to present testimony and exhibits that would convince the railroad interests in the territory affected of the necessity for radical changes in tariff schedules, in order that the very life of the lumber industry, in certain sections of the South, may not be jeopardized.

There perhaps was never a more portentous meeting nor one which, as its proceedings developed, gave promise of more portentous results. It is apparent that one of two conditions must develop in the South in the near future—either, in the absence of definite alterations in tariff schedules, making possible the logging and shipping of certain grades and kinds of lumber, the manufacture of those stocks will necessarily be discontinued altogether, or, if this meeting has the definite result which it is hoped will be effected, conditions will be so altered as surrounding the manufacture of certain southern hardwoods that a profit and not a loss will be realized from lumbering.

The large attendance of representative lumbermen from the southern districts evidenced their realization of the absolute necessity for action. The following list of prominent railroad men present shows that they too feel that there is something wrong with the situation, and are willing to go half way in righting it.

In opening the meeting Mr. Burgess, who was chairman of the temporary committee appointed to put through the plans of the meeting, expressed himself as deploring the lack of friendly contests between shippers and carriers, and outlined developments leading up to the meeting. He introduced John W. McClure, president of the Southern Hardwood Traffic Association, who occupied the chair during the entire session and handled the program in admirable fashion.

The Purpose of the Meeting

J. W. McClure approached the discussion of the relationship which should exist between lumbermen and railroads by saying that formerly the railroads fixed rates on the basis of as much as the traffic would bear. They do not at present announce that policy as a basis for rate fixing; but many persons question very seriously whether they have found a way more scientific or more acceptable to the shippers.

The transportation companies now appear to make a survey of the industrial situation; decide upon what commodities are bringing pretty good returns to the shippers, and the decision is made that a higher rate can safely be laid on those commodities, and if the shipper does not want to stand for the advance, he can pass it along to the consumer, who will pay it.

F. R. GADD, CHICAGO, MEMBER COMMITTEE TO REPRESENT LUMBER IN RAILROAD CONFERENCES WEST OF THE MISSISSIPPI.

R. L. McCLELLAND, CHICAGO, MEMBER COMMITTEE TO REPRESENT LUMBER IN RAILROAD CONFERENCES WEST OF THE MISSISSIPPI.

W. L. WELLFORD, MEMPHIS, MEMBER COMMITTEE TO REPRESENT LUMBER IN RAILROAD CONFERENCES WEST OF THE MISSISSIPPI.

The speaker objected to that method, as being bad for the shipper and also for the railroads. It should suggest itself to a business man that the right policy would be to get more business, haul bigger loads longer distances, and make money from the volume of moving freight rather than from the volume of charge made on small movements. The railroads ought to recognize the fact that they cannot injure the shipper without injuring themselves. They should further recognize the fact that the good will of the shipper is one of the most valuable assets a railroad can have.

Apparently, lumber has been singled out from among other large freight-paying commodities for special rates—not low but high. Yet it furnishes business the year round; cars are loaded heavily and compactly, and it is a desirable commodity to move. It can be loaded in any class of equipment; is not perishable; the average haul is long; and there is a minimum risk in hauling and minimum damage to the equipment.

The law of diminishing returns applies to the relation between rates and revenues. Beyond a certain limit, advances in rates do not mean increased revenue, but on the contrary a decrease. Higher rates mean loss of tonnage. Have the railroads conducted any scientific studies to arrive at a level of rates which will produce the greatest possible volume of tonnage with the greatest possible net returns? We maintain that in connection with gum lumber especially such a balance would be found in rates much lower than present levels. The policy of increasing rates on forest products if carried to its conclusion will work as much harm on the railroads as on the lumbermen. An increased rate, by decreasing revenue as we have shown, will create demand for more revenue resulting in still higher rates which will still further reduce revenues.

Co-operation

Earl Palmer of Paducah, Ky., talked on the subject of co-operation. His thoughts as expressed are outlined in the following paragraph:

The central idea of Mr. Palmer's address was that it is now time to pull together instead of flying apart. He was referring to the railroads and the lumbermen in the South. He said that for many years the lumbermen in the territory covered by the Southern Hardwood Traffic Association have been as contentious a body of shippers as could be found anywhere. They have always wanted something, have not been backward in making their desires known, have never, when necessary so to do, hesitated to invoke the assistance of the Interstate Commerce Commission or of the courts to obtain what they believed to be their rights, and usually they have been successful. But now, after viewing the many conflicts of the past, they are in a measure dissatisfied with the methods employed and with

the results attained. A perpetual condition of warfare between themselves and the carriers no longer appeals to them and they believe that the ends sought can be arrived at by the adoption of less wasteful and more modern methods. That is why we are here today; to develop a new idea and make that idea effective.

Individual effort is being submerged in mass activity. There is a steady confluence of interests which, heretofore, have been competitive and conflicting. The lumbermen have learned through years of associated endeavor that mass effort is more efficient than individual effort. They no longer regard their fellows in trade with apprehension and distrust. The question proper for this meeting to consider is, whether a circle of co-operative endeavor may be expanded to include two separate and distinct industries, each of which, however, being complementary and adjunctive to the other. He believes in this instance such expansion is practical and desirable. To the lumbermen the railroads are an absolute necessity; and, in the territory encompassed by the Southern Hardwood Traffic Association, the lumbermen are an absolute necessity to those railroads whose lines traverse that territory, until the wild lands are developed and the agriculturist supersedes the lumberman as a producer of tonnage. Therefore, it is a perfectly logical conclusion that these two industries should co-operate one with the other for the promotion of every object that will lead to mutual benefit.

Pritchard Talks on Gum

Secretary Pritchard of the Gum Lumber Manufacturers' Association, Memphis, presented some facts and figures which dealt with the stumpage and with the transportation problem. He pointed out the difference between stiffling the industry by high freight rates and developing it by moderate rates and by other means of encouragement. The latter policy would bring more revenue to the railroads and more lumber to the operators; because, as the speaker stated, less than twenty-five per cent of the gum stand can be manufactured at a profit under existing conditions. If freight rates and transportation facilities could be made such as to enable the operator to cut and market all the gum on his land, the result shown in the following statement of possibilities would follow:

Fifty billion feet of standing gum timber, allowing 20 per cent for waste, would produce forty billion feet of lumber.

Forty billion feet of lumber, allowing 15,000 feet per car, equals 2,666,666 carloads.

2,666,666 cars at an average haul of 20c per cwt. equals \$240,000,000.

Twenty billion feet manufactured under present conditions, being 40 per cent of the total stand, equals 1,333,333 cars.

1,333,333 cars at an average haul of 20c (\$99 per car) equals \$126,000,000.

Possibility for increased revenue, 1,333,333 cars, or \$126,000,000.

GEO. D. BURGESS, MEMPHIS, CHAIRMAN COMMITTEE ON ARRANGEMENTS.

F. B. ROBERTSON, MEMPHIS, MEMBER COMMITTEE ON ARRANGEMENTS.

FRANK F. FEE, DERMOTT, ARK., MEMBER COMMITTEE ON ARRANGEMENTS.

POSSIBILITIES SHOWN.

These figures reveal the possibilities of the gum industry and it would seem that the railroads and lumbermen have a mutual interest in developing it. Furthermore, the utilization of this great natural resource means much toward the development and prosperity of these southern state. If made a profitable business, it will furnish capital for developing the cut-over lands for cultivation. Development of the gum lumber tonnage does not measure all the benefit which this industry offers to the railroads, for it will increase the demand for all the necessities of an increased population which will furnish a "back haul" to the railroads.

The object of the Gum Lumber Manufacturers' Association is to study all the conditions surrounding the industry and to disseminate such information as will promote its welfare. An advertising campaign is one feature of its work. The satisfactory results obtained thus far leave no doubt that if the association receives the proper support of the railroads and gum manufacturers, a profitable market can be created.

Another point which should be kept in mind is that if conditions are not brought about whereby all the gum stumpage may be utilized along with the other stand of hardwoods, it will be to a great extent wasted in developing these lands for cultivation, and in clearing these lands there is a period of from three to five years, during which time the lands are unproductive of tonnage either from lumber or farm products.

Logging Cost and Manufacturing Conditions

The paper and exhibits prepared by W. B. Burke, vice-president and general manager of the Lamb-Fish Lumber Company, Charleston, Miss., was by far the most valuable as offering tangible evidence of the necessity for favorable action by the railroads. It occupies a space by itself as a special article, together with reproductions of all the exhibits, on pages 26-26C.

The Effect of Competitive Materials on Lumber

C. E. Brower, of Memphis, gave some valuable arguments in his paper under the above caption. It was devoted particularly to the relationship between railroad freight rates and the campaign for the substitution of other materials for lumber. The nub of the argument was based on the fact that railroads usually charge the same rates for high and low grades of lumber. The high grades being more valuable are able to pay the rates and pass through the markets to the ultimate consumer; but the low grades cannot pay the rates and leave any profit. Consequently the low grades, in many cases, cannot be handled. The stuff that would cut into stock of that class is left in the woods, or if it reaches the sawmill it gets no farther, and is either consumed as fuel under the boilers or is disposed of in some other way that produces little profit. The result at the other

end is that substitutes often push in where cheap lumber could have been used if at hand.

The cry so often heard, particularly from exploiters of substitutes, that the forest resources of the county are on the verge of exhaustion, is a false cry, the speaker declared. What is needed is a way to get the cheap grades to market. The railroads could well afford to give rates that will move this stuff. The increased business would more than make good the shrinkage of revenue due to lowering the rate on that class of lumber.

The manufacturers of lumber from a number of species have carried on campaigns of advertising and have acquainted the public with the merits of these woods; but the opportunities for increased business are greatly restricted because of freight rates which shut much of the wood out of market.

The instance of eastern oak's competition on the Pacific coast with Japanese oak is cited as an example of what an excessive rate may do in the way of killing the business for an American wood and giving it to a foreign competitor. For a time after Japanese oak began to arrive on the western coast, the eastern oak was able to compete with it. The railroad rate for the eastern oak at that time was seventy-five cents; but the railroads thought they saw an opportunity to increase their revenues on this article and they raised the rate to eighty-five cents. The advance killed the business in eastern oak and gave the market to its competitor from Asia. The railroads not only did not increase their revenue on that item, but they lost the business, and also caused the eastern oak shippers to lose theirs.

The morning session was concluded by an interesting oratorical triumph, presented by Joseph Norwood, editor of the *Magnolia Gazette* of Magnolia, Miss. Mr. Norwood's theme was the changing attitude displayed by the shippers and travelers towards the railroads, and the changing attitude in the other direction also. When Mr. Norwood, who is state senator for Mississippi, concluded, there was no doubt in the minds of anybody that Magnolia surely must be some town.

The meeting then adjourned for a rather elaborate luncheon, served in the main dining room, which was given over to the lumbermen for this occasion, the Memphis lumbermen being hosts.

AFTERNOON SESSION

F. R. Gadd, vice-president of the Wisconsin Lumber Company of Chicago, opened the afternoon session with his paper entitled "Equalization of West Side Rates." The following is a summary of what he said:

The history of rates and rate making in the South, both east and west of the Mississippi, shows that the charges are not based on the length of the haul, but are fixed arbitrarily or they are based on erroneous claims. In these arrangements, the district west of the Mississippi gets the worst of the deal, and there is no reason why such should be the case. The principal market for the hardwood lumber of the Southwest is in Illinois,

Indiana, Michigan, and Ohio. The quality of timber is quite different west of the Mississippi from what grows east, and the log-run value of lumber is less, and it is not able to pay a higher rate in order to get to market.

In the district west of the river, owing to the fact that only choice lumber can be sent to market, the size of the logs that can be cut is determined by the freight rate. If the rate is too high a great deal of the timber is left on the land.

The utilization of the Southern hardwood forests, under the present adjustment of rates, is extremely wasteful. It is evident that a great reduction should be made in the rates which are charged for hardwood lumber from that region. The market which by great effort has been established for somewhat inferior hardwoods of this section, is being lost to substitutes like steel and fiber. The hardwood forest resources are being squandered. The largest and finest timber is being culled out in the effort to put on the market a product which can afford to pay the excessive freight costs to market.

No showing has ever been made by carriers that hardwood lumber is not paying its just share of the cost of operation, and they have never so much as presented a statement showing the proportion of the total tonnage of their lines supplied by hardwoods. The great problem before the carriers and lumber manufacturers today is to provide an increasing territory of distribution to take care of the rapidly increasing output of low grade lumber. A majority of the mills are closed down because they are not able to find a market for their low grade output.

Chairman McClure then introduced State Senator H. H. Casteel of Jackson, Miss., who told in a striking way of his own observations of the result of inadequate values for gum lumber, resulting in deadening thousands of acres of gum all over the state. He deplored the conditions which made necessary the farming of poor soil while the rich bottoms of the delta remained covered because the timber cannot be cut at a profit.

Competition Lumber in Remanufacturing

F. B. Ackley of the Heywood Bros. & Wakefield Company, Chicago, read a paper on the competition met by southern hardwoods with other woods in the manufacture of chairs and tables. He said that the consumer appears to be overlooked too often. In the manufacture of chairs, for instance, the cuttings are small and can be got out of lumber that is not suitable for stock which requires long cuttings; but the freight rate is the same on all grades, and if it is excessive, it prevents the use of low grades for chairs. The factory cannot afford to pay a high rate on material that goes into the woodpile.

The Forest Conservation Commission is trying to teach the people to use as low a grade of lumber as is consistent with their manufactured product, and nearly all factories that keep a cost system are doing this. Freight is the big item in figuring costs. For that reason most consumers of lumber in factories, who are far from the source of supply, are gradually working into a higher grade of manufactured products, which materially reduces the quantity of output.

A short time ago nearly all the oak lumber manufactured into lumber around Chicago came from Wisconsin, Indiana, and other nearby points, which took low freight rates, and low grades could be used. Much of the cheaper furniture is now made nearer the saw mills, and this will be more and more so if the freight rates are materially advanced. The people who manufacture a real high grade article will not be so much affected, because a higher proportion of this cost is in the workmanship; but articles where the cost is chiefly in the material will be seriously affected.

Relation of Cooperage to the Railroads

Walter L. Wellford, of the Chicawasaw Cooperage Company of Memphis, Tenn., addressed the meeting on the relation of the cooperage industry to the railroads. He regretted that heretofore the coopers had not been very successful in getting in close touch with the railroads, but was encouraged to believe that a better understanding was at hand. He complained of excessive rates, and said whereas rates on other commodities are being raised five percent, the rates on forest products have been advanced from ten to forty percent, and it is an absolute impossibility for the industry to bear the extra burden.

The profits in the cooperage business have never been large and in the past two years have wholly disappeared. An increase in the price of barrels always means a reduction in the quantity used, and the railroads will find that an advance in rates will be at the expense of the tonnage.

Previous to twenty years ago fully 90 percent of the slack cooperage staves, heading, and hoops, were made north of the Ohio river, while today over fifty percent are made south of the Ohio. In some respects the woods north of the Ohio are superior to those south. They are lighter in weight, and the staves stain and decay less. Both of these qualities are advantages in favor of the northern woods. The slack barrel market is largely in the North. It is easy to see that the southern manufacturer is at a decided disadvantage. If the southern railroads are going to raise their rates on southern cooperage they will decrease their tonnage more than they can make good by an advance in rates.

The tight stave industry has not in recent years used any wood in the South except oak, but the use of gum is now advocated, and the price at which the gum barrel will have to be sold will not permit of an increase in rates.

Railroad Men Give Sincere Expression to Desire for Co-operation

Chairman McClure concluded the speeches by asking the railroad men present for some expression from them on the subject before the meeting. The following spoke: Frank B. Bowes, Chicago, Ill., vice-president of the Illinois Central; W. B. Biddle, St. Louis, Mo., Receiver for the Frisco System; Henry E. Farrell, St. Louis, Mo., vice-president of the Cotton Belt; A. R. Smith, Louisville, Ky., third vice-president of the Louisville & Nashville; C. E. Perkins, St. Louis, Mo., freight traffic manager of the St. Louis, Iron Mountain & Southern; N. B. Helm, Shreveport, La., vice-president of the Louisiana Railway & Navigation Company; H. W. Morrison, Little Rock, Ark., assistant freight traffic manager of the Chicago, Rock Island & Pacific; E. H. Shaw, Atlanta, Ga., assistant freight traffic manager of the Southern Railway, and Charles Barham, Nashville, Tenn., general freight agent of the Nashville, Chattanooga & St. Louis.

The unanimous sentiment was heartily in accord with the spirit of the meeting. The railroad men themselves made the tentative suggestion to get together a committee to get to the bottom of the matter. They explained the difficulty of the railroad man's position, explaining that all are actuated by a genuine desire merely to return a fair profit to stockholders.

The earnest endorsement from the railroad side of any feasible plan to eliminate correspondence and litigation by conference was the most significant thought of the whole meeting, and something will surely result from it.

Definite Plans Launched

At the request of the chairman, J. E. Stark of Memphis acknowledged the gratifying expression from the railroad. He offered the motion that some definite plan be started by the appointment of a committee of three shippers of forest products from east of the river and three from west to meet with a committee of the same representation from the railroads.

The motion was seconded by Frank B. Bowes and carried.

S. B. Anderson, speaking in behalf of the association and Memphis lumbermen, thanked the railroad men for coming. In summarizing the purpose of the meeting he said that all the lumbermen want is for the railroads to help them (the lumbermen) to create more tonnage for the carriers by making it possible to cut and ship timber that now is of no value to anybody.

The meeting then adjourned.

COMMITTEES APPOINTED

The governing board of the Southern Hardwood Traffic Association met on Thursday, and the officers appointed the following committee to represent lumber in railroad conferences east of the river: John W. McClure, S. B. Anderson, Anderson-Tully Company, Memphis; W. B. Burke, Lamb-Fish Lumber Company, Charleston, Miss.; west of the river: F. R. Gadd, Wisconsin Lumber Company, Chicago; R. L. McClelland, Paepcke Leicht Lumber Company, Chicago; Walker L. Wellford of the Chicawasaw Cooperage Company, Memphis, Tenn. Mr. McClure was elected chairman by the committee which represents every factor of raw material from hardwood forests. The railroads will have their similar committee selected in a few days.

Illustrated Talk on Red Gum

Editor's Note

The following is an address delivered by W. B. Burke, vice-president and general manager of the Lamb-Fish Lumber Company, Charleston, Miss., at the conference of lumbermen and railroad officials, held at the Hotel Gayoso, Memphis, Tenn., April 7.

In the earlier days of the hardwood lumber industry, when timberland was abundant and relatively cheap, lumbering was largely a business of speculation in stumpage and the rise in the value of timber often made up the bulk of the profits. Under such conditions not so much attention was paid to the distribution of the manufactured product. At that time timber was located close to the main lines of the railroads and rivers, and could be logged and manufactured at a low cost. Meanwhile the supply of available timber has become greatly reduced, and that remaining is now a considerable distance from the milling points, necessitating a higher freight rate on the raw material, or the construction of logging railroads at additional expense. The business of handling has also become large and complicated, and the costs of labor, supplies and other factors have gone up rapidly. The result is that, deprived of the support of cheap stumpage and cheap transportation on raw materials, the lumber companies have been obliged, during the last few years, to operate on a narrow margin of profit. To secure any profit at all is now more and more plainly a matter of management, of manufacture and especially of distribution, including selling and transportation.

I will treat on only the question of manufacture as relating to costs and production of gum lumber. The Interstate Commerce Commission has, in several recent decisions, not seen fit to give consideration to industrial conditions as a factor in determining what was a reasonable rate. I believe the carriers will look at this from a different angle, and for that reason these charts have been prepared.

We have heard a good deal about the increased uses of red gum, and probably many who read about red gum being used in a big hotel for interior finish, think that the entire product of the red gum log, or a large proportion from it, is used for this purpose. The wood that is used for interior finish or for furniture or cabinet wood is the clear heartwood, or what is known in the lumber trade as fas red gum. Only a small percentage of this grade is obtained from the choicest trees.

GOVERNMENT ESTIMATE OF STANDING TIMBER IN THE THREE STATES

The government estimate of standing gum timber in the three southern states of Arkansas, Louisiana and Mississippi is 28,000,000,000 feet, or enough to make in round figures 1,860,000 cars of lumber; but under present conditions of market and freight rates we can manufacture only 22 per cent of this timber and realize cost of production.

CHART NO. ONE

With reference to Chart No. 1 it will be noted that on an average acre of southern hardwood timberland are to be found 19 trees, containing 5,100 feet, all of which is merchantable, except possibly 405 feet. This chart shows number of trees and of each size ordinarily found, of which one tree is in excess of 36 inches in diameter; the only one that can be utilized under present conditions. The others must be left standing or destroyed in the event the land is put under cultivation. Three of these trees, ranging from 20 to 25 inches, will produce 2,008 feet of lumber. I have shown here the exact size. This timber would be considered, in any other hardwood section, as exceptionally fine and we would place a good value on it if it consisted of oak, elm, hickory or any other hardwood. The third group consists of sizes ranging from 16 to 19 inches. There are to be found six trees. These trees will ordinarily produce 1,554 feet of lumber. The fourth group contains nine trees, which vary from 12 to 15 inches. In the northern hardwoods, maple, beech and other woods of this size are considered merchantable and many operators cut nothing larger. With us, we can never hope to remove this small timber from our forests, but we do believe that freight rates should be adjusted so as to enable us to utilize all trees over 16 inches.

CHART NO. TWO

By referring to Chart No. 2, at the top is a cross sectional view reproduced from an actual log, showing the manner in which it is cut; grades produced, which are represented by different colors, shown in key underneath. You will note from logs 26 inches and up in diameter we obtain only 20 per cent fas red gum, and 9 per cent box

**CHART SHOWING NUMBER OF GUM TREES OF DIFFERENT SIZES ON ONE ACRE HARDWOOD LAND IN SOUTHERN STATES.
AUTHORITY: BUREAU OF FORESTRY BULLETIN No.58.**

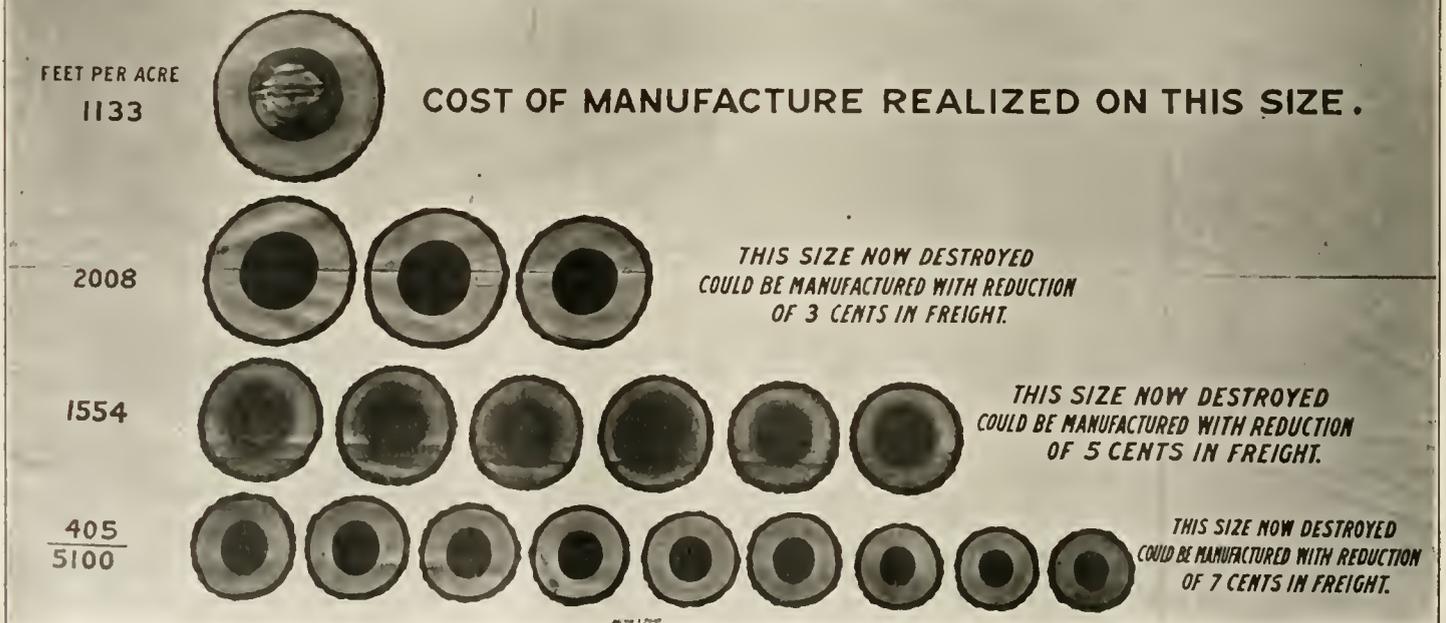

CHART No. 1.

wood. These are the only two grades which today bring more than cost of manufacture. The log run value of lumber produced in timber of this size is \$15.77, or but 5 cents per thousand feet over the cost of manufacture. In other woods, the manufacturer of red gum lumber goes into the woods and selects 22 per cent of his very best trees—gum trees that have taken hundreds of years to grow—leaving the other 78 per cent in the woods. He brings the 22 per cent to the mill, manufactures it into lumber and sells 61 per cent of this 22 per cent for less than it cost him to make it. The middle chart explains in detail log run values. At the bottom is a chart showing tonnage and revenue that the carriers may reasonably expect if timber of this size is converted into lumber and shipped under existing freight rates. For fear some of those present may not be able to see this chart will read the figures, which are: 6,262,300,000 feet, amounting to 417,500 cars, producing revenue amounting to \$41,750,000. I wish to impress upon you that if only these logs of the most choice quality are manufactured, 3,967 feet of gum timber per acre will be destroyed.

CHART No. THREE

Chart No. 3 represents a cross sectional view of a 20-inch log. This is the minimum size log of this group. The maximum size is hardly distinguishable from a log shown in Chart No. 2. From logs of these sizes we obtain only 5 per cent fas red gum and 6 per cent box boards, leaving a balance of 89 per cent to be sold at less than cost to manufacture. The log run value for timber of this size is \$13.48 per thousand feet, or \$2.24 less than cost of production. You will note the large proportion of low-grade lumber from this size, for all of which market is in the central states, such as Illinois, Indiana, Michigan and Ohio, where large quantities are used for box making, crating and other purposes to which low-grade woods are put. A reduction in rates of 3 cents per 100 pounds would place mills in the three southern states of Arkansas, Louisiana and Mississippi where they could cut their timber down to 19 inches. And under this rate adjustment, railroads would secure 17,648,300,000 feet of lumber to haul, making 1,176,400 cars, and producing in round figures one hundred million dollars in revenue, which would be \$58,244,000 more than they would receive if lumbermen were compelled to leave this timber in the woods, or destroy it if land were placed under cultivation. With a reduction of 3 cents in freight rates an average of 1,959 feet per acre would still be left, as it would be unprofitable to manufacture it on this adjustment.

CHART No. FOUR

Chart No. 4 covers sizes from 16 to 19 inches. Cross section at top is reproduced from a 16 inch log, the smallest size of this group. These logs do not produce any of the upper grades, such as fas red gum or box boards. No part of this log is suitable for interior or cabinet work. Its product is used almost entirely in the manufacture of boxes and crating. It would require a reduction of 5 cents in present freight rates before it would be possible for these sizes to be cut and cost of production realized from sale of their products. With a reduction of 5 cents per 100 pounds, 4,695 feet of gum timber per acre could be utilized, which would leave but 405 feet per acre in the woods. This timber would produce 26,187,800,000 feet, making 1,745,800 cars, and producing a revenue of \$130,935,000 in freight, or \$89,185,000 more revenue than the railroads can now hope to expect under present adjustment.

CHART No. FIVE

My idea in submitting the chart No. 5 is to show exactly what a 12-inch log is and how it compares with a log 26 inches in diameter. The percentage of waste in a 12-inch log is greater in proportion than the larger sizes, and nothing but low-grade lumber can be derived from it. As previously stated, in the northern hardwoods, on account of lower cost of logging, and many other advantages, especially low rates to consuming markets, which are in many cases less than half what we are required to pay on gum timber of this size if it consisted of maple or beech, would possess a stumpage value. With us it has no worth, and, to a farmer clearing up land, is a serious impediment. If there were any possibility that our rates would be made so as to enable greater publicity being given gum lumber, and there were any prospects for the future of this wood, timber of this size would be preserved and in time become merchantable.

RANGE OF SELLING PRICES

Chart No. 6 gives a detailed history of log run values, oak, gum and a mixture of oak and gum, proportions being 50 per cent of each wood. This covers a period of five years, commencing January 1, 1910, and ending with December 31, 1914. In arriving at log run value, we have figured the product of the oak log from 18 inches and up in diameter and the gum from 24 inches and up in diameter. Had we used figures on gum from 18 inches and up in diameter, the same as on oak, the log run values of the gum lumber would be about \$1 per thousand less. The cost figures as shown here represent only items entering into expense of manufacturing, selling, etc., and do not

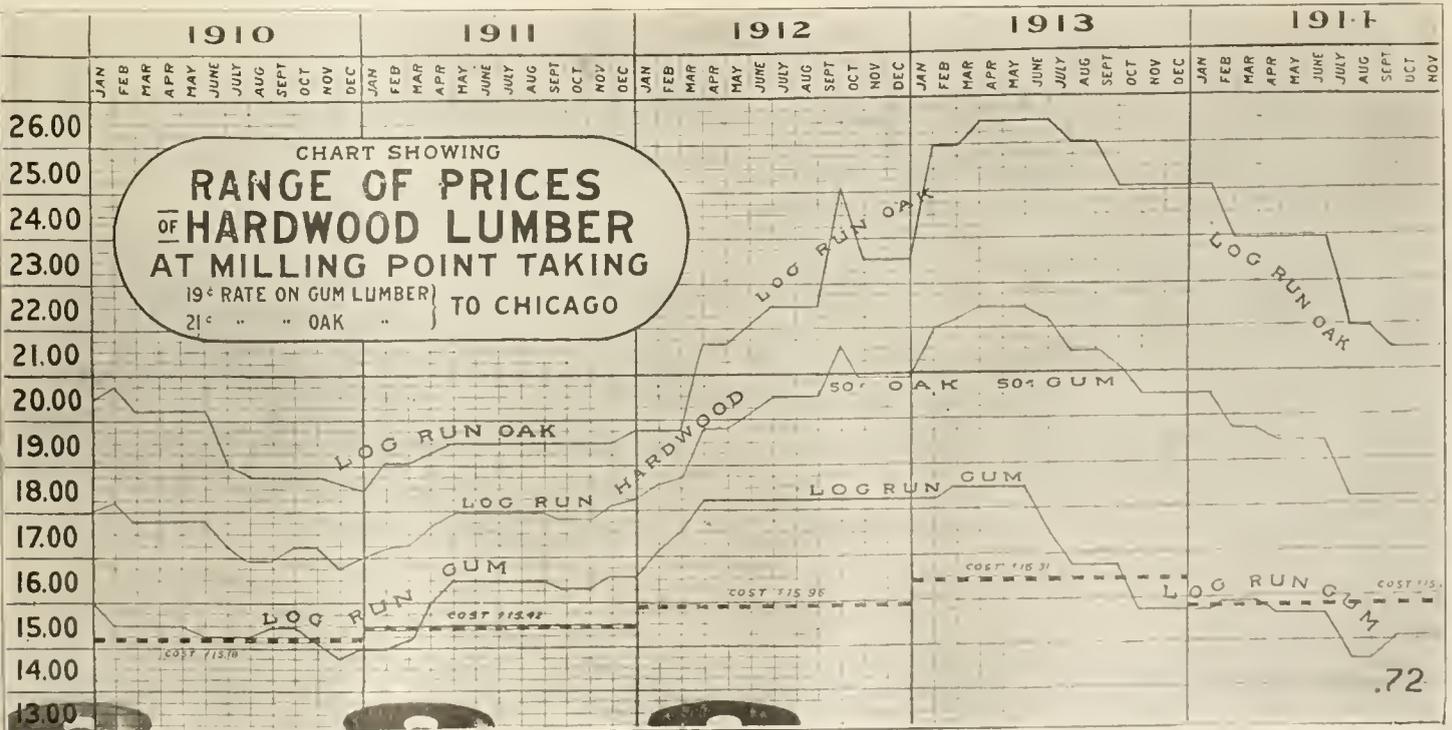

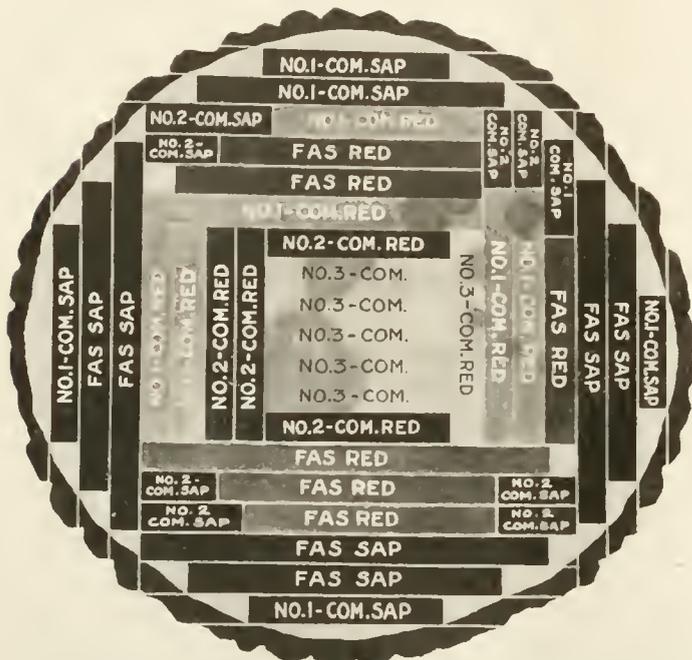

CHART No. 6.

include interest on bonds, taxes on timberlands or depreciation of plant. If these items were taken into consideration the cost would be increased from two to three dollars per thousand feet.

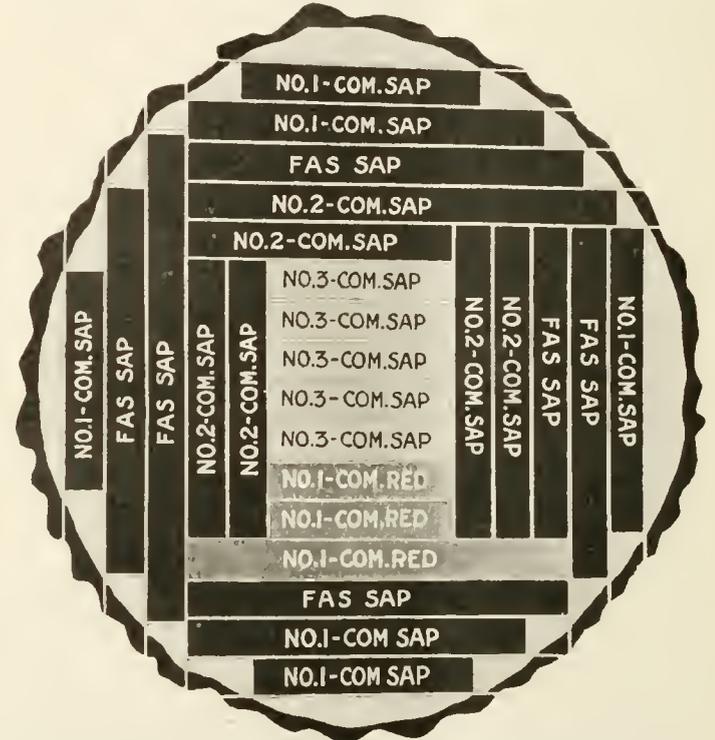

It will be noted from the lines showing range of prices that at no time during the past five years, except during a short period during the latter part of 1912 and early part of 1913, has there been a reasonable margin of profit in the manufacture of hardwood lumber. It was not a natural trade condition that brought about the prices prevailing during the high periods. Overflows and heavy rains during the spring of 1912 and 1913 curtailed supply by reason of inability to do logging. Immense quantities were damaged by the floods, and this combination brought about a shortage in supply, creating a slightly higher market, although demands increased to no material extent. With usual production prices during these periods, I am satisfied would have been more nearly on a level with those of 1911 or 1914.

Prices were on a decline during the spring of 1911, but everyone

was hopeful for a resumption of business and mills were operated at their capacity. When the war came on the export trade was shut off, and domestic prices declined rapidly. The majority of the mills closed down during the latter part of 1914. Realizing that it would be impossible to secure a supply of logs during the winter months, logs were put in during the dry season last fall, anticipating the European situation would clear up, and hoping that export trade would be re-established. It was necessary to manufacture this timber during the winter months, but as fast as the logs are being cut up, mills are again closing down, and when the present supply is exhausted, they will close down for good; or, until the rate situation is adjusted or the domestic market advances and demands increase more than we have any reason to hope for from the present outlook. All of the larger mills have heavy stocks on their yards.

CHART No. 3.

Sixty-two per cent, or 3,144 feet, of gum timber per acre of this size and larger could be manufactured with reduction of 3 cents in freight rates, and but 1,959 feet per acre would be destroyed.

	Feet	Cars	Freight
Arkansas	7,201,300,000	480,100	\$40,808,500.00
Louisiana	5,642,000,000	376,000	31,960,000.00
Mississippi	4,805,000,000	320,300	27,225,500.00
	17,648,300,000	1,176,400	\$99,994,000.00
	Additional Revenue for Railroads		\$58,244,000.00

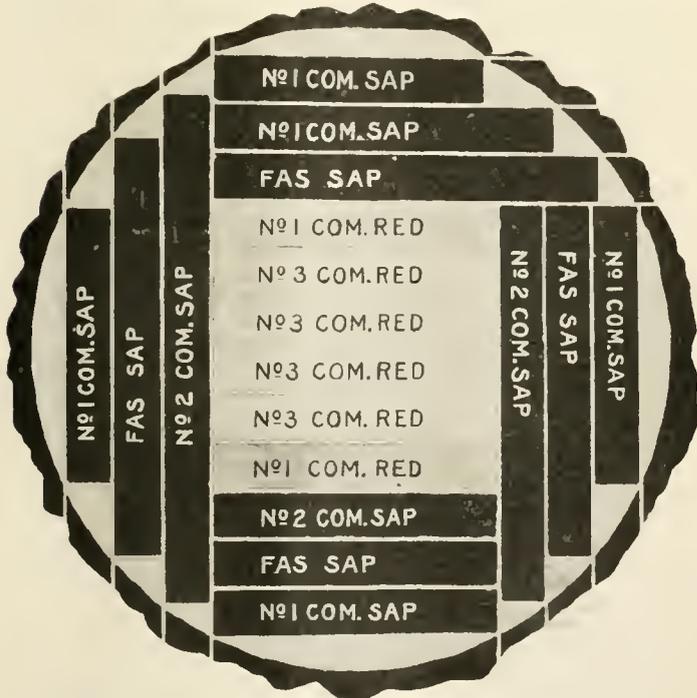

Many have utilized all of their yard room. Movement of lumber now amounts to practically nothing, and there is now practically two years out awaiting a market. Much of this is of low grade. The problem of the manufacturer now is to place these low grades in the consuming markets of the central states in competition with substitutes and northern hardwoods. He cannot do it with the present rate adjustment. Chart No. 6 clearly shows there has been no money in the hardwood business for five years. I do not believe that the carriers expect us to develop tonnage for them at a loss to ourselves. Even though we have done this in the past, sound business judgment will not permit a continuance of this practice. We believe rates upon which gum has been transported during the past ten years are reasonably compensatory. Of that fact we feel certain, and I doubt if any of our railroad friends will question this statement. The reductions we are recommending to you will be offset by increased tonnage, and it is my understanding that volume in transportation makes the profits. Chart No. 6 shows that we cannot get any profit

from gum at present rates. We believe the carriers can derive a profit from its transportation at lower rates. We are willing to continue producing gum if the carriers will join in the burden. Otherwise, we will be compelled to cease manufacturing gum, and lose value of the stumpage and time and money spent in former years in trying to establish a trade for this wood.

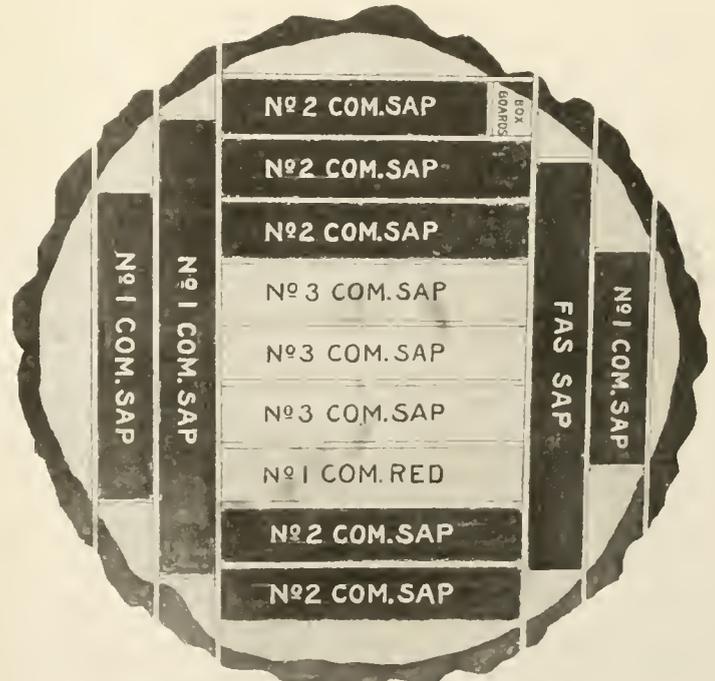

The manufacturer of wood products who is not keenly alive to the offerings of new machinery and appliances to further his business is likely to overlook something that will leave him in a rut and falling behind the procession.

Considerable trade may be developed under the flag right at home as well as by following it into foreign lands.

Many a man has learned from experience that it is much easier to make money out of a sawmill on paper than when selling the product.

CHART No. 5.

A careful analysis of what may be cut from small timber will assist the landowner in handling one of the vexatious problems that confront him; but the more knowledge of what such timber is capable of producing is only part of the main problem. A market must be found for this material before it can be regarded as an asset, and the practical part of the problem lies in that direction and one of the first steps to be taken is to revise freight rates to such an extent that the lumber cut from small logs will not be debarred from going to market.

Interesting Traffic Developments

An order reopening for argument the matter of the investigation and suspension of advances in rates on hardwood and other kinds of lumber and manufactures thereof from points in Louisiana and Arkansas to Memphis and St. Louis and other points, has been issued by the Interstate Commerce Commission. Additional arguments will be heard April 14.

The following dates have been set for hearings: April 19, at Cairo before Examiner Horton, Southern Lumber Company versus the Big Four; at St. Louis, April 24 before Examiner Horton, Chicago Lumber and Coal Company versus Morgan's Louisiana & Texas; at St. Louis, April 24 before Examiner Horton, Ozark Co-op-erage Company versus Yazoo & Mississippi Valley.

A petition of carriers to establish an eleven cent rate from Rhineland, Wis., to Iron River, Mich., via Penline, Wis., without observing the long and short haul clause, was denied by the commission.

Foreign weight certificates are not regarded as important evidence by the commission, as is shown in a decision last week in the case of the E. Sondheimer Company versus the St. Louis, Iron Mountain & Southern. A car of lumber was shipped from Rayville, La., to Naples, Italy, via New Orleans. The car was weighed in the United States and again at Naples. There was a variance of 13,000 pounds in favor of the Naples weighing. The lumber company claimed an error in the American weight. The commission held that the Naples weight certificate was not sufficient evidence on which to claim over-charge.

The case of the Berthold & Jennings Lumber Company versus the Alabama Central has been dismissed by the commission. It was held that the case embodied the same principles as that of the Meeds Lumber Company versus the Alabama Central.

Oral argument in Washington in the case of G. B. Merrill & Brother versus the Illinois Central, which was set for April 15, has been cancelled.

Twenty-six and one-half cents is a reasonable rate on yellow pine from Arkansas producing points to Sioux City, according to a brief submitted by the lumberman in the matter of rates, which is pending before the commission. The present rate of twenty-eight cents is attacked as unreasonable and unjustly discriminatory.

An order by the commission suspends until July 27 proposed advances on lumber from Michigan points to Middle Western destinations.

Reparation was awarded to the Kern Company of New Orleans in its case against the Louisville & Nashville. The commission found that the rate on staves in earloads from Evergreen, Ala., to Gulfport, Miss., is unreasonable to the extent that it exceeds 11½ cents.

Reparation has been awarded the McLain Hardwood Company in its case against the Illinois Central because the rate charged was based on minimum weights applicable to cars longer than 36 feet.

In the case of the National Pole Company of Minnesota, Michigan and Illinois, versus the Minnesota & International Railway, the commission has decided that it will dismiss the complaint of refusal by the defendant to permit an employe of the complainants to have complete access to the defendant's yards and yard office at North Bemidji, Minn., for the purpose of witnessing weighing operation. Much importance is attached to this case, owing to the number of similar requests known to be pending.

Important complaints have been filed with the commission as follows:

Standard Lumber Company of Birmingham versus the Atlanta and West Point Railway. The lumber company asks reparation for damages while awaiting delivery of a loaded car. This is in addition to demurrage. The delay in placing the car was the fault of the company, it is alleged.

The Waddell-Williams Lumber Company of Rhoda, La., has attacked the rate on tupelo gum to Port Arthur, Tex. A 14 cent rate is being applied from Rhoda. Nine cents is held to be a reasonable rate by the lumber company. Reparation amounting to \$2,783.23 is involved.

Wm. H. Sheets of New Orleans, claims that excessive rates are being charged on piles and logs from Mississippi to Louisiana points.

The Warren Stave Company of Warren, Ark., has asked that the commission relieve it of onerous switching arrangements which are being enforced by the St. Louis, Iron Mountain & Southern.

The Bowie Lumber Company of Bowie, La., claims that Morgan's Louisiana & Texas Railroad and Steamship Company is enforcing unfair transit privileges at Bowie.

Another Hearing Ordered

Word has been received from Washington that investigation and Suspension Docket 184 has been reopened for a rehearing as a result of arguments presented by the attorneys for the Southern Hardwood Traffic Association. The case covers the lines west of the Mississippi, and will be reopened for hearing with Docket 520, which covers January advances in territory south of the Ohio and east of the Mississippi rivers. The hearing is set for April 14 at Washington, D. C. Walker & Walker are attorneys for the lumber association.

A Maple With Roots in the Crown

It is a fact not generally known that when a tree is injured inside the bark it may form roots which penetrate the dead tissue. Such roots have been observed in a tree at a height of thirty feet from the ground. Recently the writer saw a large maple with one of the top branches split off at the crotch. It was evident that the original split was not recent, for the crevice to the depth of eighteen inches was completely filled with a flattened mass of fibrous roots which had grown out of the sound tissue above. Water trickling down the branches had run into the crack, carrying dust and bits of bark, and these, together with the decaying wood, were furnishing some nourishment and water to the tree top.

Other instances have been observed in street trees where a fungus had entered the wood through a root or a knothole and caused decay, and had stimulated the growth of roots which later ramified all parts of the rotting wood. Sometimes these roots extend downwards until some of them finally reach and enter the soil. As long as the bark remains in place they are hidden from view, but sooner or later the bark falls or is torn off and the roots are visible. Probably a great many people have seen them without being aware of their nature nor realizing that they were witnessing the anomaly of tree literally feeding upon itself.

The explanation of these roots seems simple enough. It is a matter of common observation that many trees, not only hardwoods but conifers, can be reproduced by cuttings. If a living shoot is cut off and placed in moist earth or sand it will form a callus around the wound and from this callus roots develop. The conditions under which roots are formed in a living tree are practically identical. There is injury to the growing tissue, and to repair it callus is formed. Since this is in a moist and dark place with decaying vegetable matter forming humus, it is not strange that roots should develop.

While the writer has seen such roots only in maples and elm, European foresters report their occurrence in beech, linden (basswood), mountain ash, willow, poplar, pine, fir, juniper and larch.

S. J. R.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter.

B 892—Who Should Pay?

HARDWOOD RECORD is in receipt of the following letter from a prominent wholesale hardwood firm which requests that the letter be published in order that opinions of other hardwood dealers may be given as to who is responsible in the case in question. HARDWOOD RECORD will consider it a favor on the part of any hardwood dealers who are in position to give any opinion based on their experiences or the experience of others.—EDITOR.

_____, N. Y., March 31.—Editor HARDWOOD RECORD: We would like through your paper to ask the opinion of some of the other hardwood dealers in regard to the following controversy over a car of lumber. We do not want our names published, and will refer to the different ones involved in the following way:

"A" represents wholesale hardwood lumbermen.

"B" represents consumer of hardwood lumber.

"1" represents "A's" yard inspector.

"2" represents consumer's inspector.

"3" represents national inspector in that district.

"4" represents chief inspector.

"A" shipped a car of No. 2 common containing 20,444 feet—inspected by "1."

"B" on arrival had it inspected by "2" and found—18,953 feet No. 2 common and 2,413 feet No. 3 common.

"A" objected to the findings, as they were not by a National inspector.

"B," not being a member of the National association, suggested that "A" call for a National inspection, and if there were an excess of four per cent No. 3 common "A" was to pay inspection fees and remove from "B's" premises any No. 3 common found. On the other hand, if the No. 3 common were less than four per cent of the total invoiced, "B" was to pay the inspection fees and accept the whole invoice as No. 2 common.

No. 3 inspected the stock and reported as follows:

184 feet No. 1 common

19,542 feet No. 2 common

66 feet $\frac{3}{4}$ "

735 feet No. 3 common

This was less than four per cent of No. 3 common, but "B" was not satisfied with it and called for the chief inspector.

No. 2 (chief inspector) reported as follows:

1,047 feet No. 1 common

17,830 feet No. 2 common

1,137 feet No. 3 common

188 feet $\frac{3}{4}$ "

The original invoice was nearly \$600.

Inspector No. 2 made \$10.23 less in money value.

No. 3, National inspector, made \$1.06 more than original invoice in money value.

No. 4, chief inspector, made \$0.24 more than original invoice in money value,—but No. 4 made more than four per cent of No. 3 common. This, of course, is offset in value by the amount of No. 1 common found.

"B" insists, however, that as No. 4, the chief inspector, found more than four per cent of No. 3 common, it is up to "A" to pay all of the inspection fees, both on the No. 3 and No. 4 inspections and also the two handlings of the car. "B" is willing to settle on the original invoice of the lumber.

WHO should pay these inspection fees, and the handling charges?

B 893—Wants to Buy $\frac{1}{4}$ -inch Sawed Hard Maple

HARDWOOD RECORD was in receipt of a telephone call from a large piano concern in Chicago last week requesting information as to source of supply for $\frac{1}{4}$ " quarter-sawed hard maple. This inquirer was supplied with a few names. Others who might be interested and happen to have this unusual stock on hand can get the necessary information by writing HARDWOOD RECORD.—EDITOR.

B 894—Wants to Buy Basswood Wood Wool

Toledo, O., March 25.—Editor HARDWOOD RECORD: We would be pleased to have you furnish the names of two or three reliable concerns who manufacture wood wool from basswood.

Anybody interested in this inquiry can have the correspondent's name upon application to this office.—EDITOR.

B 895—In the Market for Bending Oak

Depauw, Ind., March 24.—Editor HARDWOOD RECORD: We are in the market for oak bending stock suitable for wagon rims and would be pleased if you would put us in touch with parties that have this class of material to offer.

HARDWOOD RECORD would appreciate correspondence from anybody in position to supply this class of material.—EDITOR.

B 896—Wants to Connect with Firm to Take Large Cypress Cut

Ft. Wayne, Ind., March 25.—Editor HARDWOOD RECORD: Could you put us in touch with some good concern that would be interested in buying 1,000,000 or 2,000,000 feet of cypress lumber on grades, and advancing us say \$10.00 to \$11.00 per M. as the lumber is sawed, balance to be paid when lumber is shipped?

We have about 10,000,000 feet of cypress on our land at _____, Ark., also have the sawmill and tram road facilities for this work, and if you would give us any information along this line would appreciate it very much.

The writer of this letter is a well-rated concern in position to take care of its side of any agreement in first-class shape. Any one interested in this kind of a purchase should probably find it to advantage to go into the matter more fully.—EDITOR.

B 897—Wants to Buy $\frac{1}{4}$ End-Dried White Maple

Baltimore, Md., April 1.—Editor HARDWOOD RECORD: We would like to know the concerns, at least a number of them, who manufacture and handle end-dried white maple, 4 1/4 stock.

This is apparently a good concern in Baltimore and could offer a fine chance for making a sale of this character of stock.—EDITOR.

B 898—Wants to Buy Black Walnut Suitable for Making Gunstocks for Export

The following letter has been forwarded this office by a southern hardwood manufacturer who does not manufacture walnut:

New York, N. Y., March 18.—Kindly advise us whether you are in a position to name us prices for black walnut lumber suitable for making into gunstocks for export. If so, please quote lowest prices for the suitable black walnut lumber 2", 2 1/4" and 3" thick, in carload lots, and also for the black walnut logs in carload lots, suitable for the same purpose.

Please name your prices delivered at New Orleans, La.; Newport News, Va., and New York, N. Y., stating how soon after receipt of order you could ship say a carload of the lumber and a carload of the logs.

Interested parties can have the necessary information by addressing HARDWOOD RECORD.—EDITOR.

Clubs and Associations

St. Louis Lumbermen Will Form New Organization

The Lumbermen's Club of St. Louis held a regular business meeting and banquet at the Mercantile Club Tuesday night, March 30. The real object of the meeting was to consider the organization of a lumber association, similar to the Lumbermen's Association of Chicago. The idea was to promote the general welfare of the lumber and allied industry in St. Louis and the near-by territory.

Some two hundred members of the club and guests were present at the meeting, among them several lumbermen from out of town.

There was a banquet at 6:30 and the business meeting followed. The business meeting was called to order by E. C. Robinson, president of the club, who called on W. E. Barus to act as toastmaster. Among those who made speeches were G. J. Pope, president of the Lumbermen's Association of Chicago; Herman H. Hettler, vice-president, and E. E. Hooper, secretary of the same organization. They explained the objects and workings of the Chicago organization.

When the speeches had been finished a resolution was offered by Thos. W. Fry, which was carried, that each line of the lumber industry represented at the meeting name two representatives to meet and confer on the advisability of forming the organization suggested.

E. C. Robinson, president of the club, was named as chairman of the committee, and the others named were:

YELLOW PINE MANUFACTURERS: Thos. C. Whitmarsh, W. T. Ferguson Lumber Company; C. A. Antrim, Antrim Lumber Company.

PINE YARDS: Julius Seidel, Julius Seidel Lumber Company; R. E. Gruner, Phil. Gruner & Bros. Lumber Company.

HEADWOOD YARDS AND WHOLESALERS: Chas. E. Thomas, Thomas & Proetz Lumber Company; T. W. Fry, C. F. Luchtmann Hardwood Lumber Company.

PLANING MILLS: Chas. Thunor, Chas. Thunor Planing Mill Company; E. T. Bradbury, Riddle-Rehbein Manufacturing Company.

YELLOW PINE WHOLESALERS: C. M. Jennings, Berthold & Jennings Lumber Company; Geo. C. Hogg.

FURNITURE AND CHAIR FACTORIES: H. A. Vornbrock, Holtgrewe-Vornbrock Furniture Company; H. S. Tuttle, manager St. Louis Furniture Board of Trade.

BOX MANUFACTURERS: W. F. Goessling, W. F. Goessling Box Company; L. K. Loy, Loy-Lange Box Company.

These committees are to meet, report back the decision of the meeting to their organizations and then make a final report to the Lumbermen's Club.

A meeting of this committee was called for Friday afternoon, April 2, at the rooms of the Lumbermen's Club.

A resolution was then passed that it was the sense of those present that an organization following the plans outlined be formed.

A resolution of thanks was then extended to Messrs. Pope, Hettler and Hooper for coming to St. Louis and starting the organization off right.

After J. R. Moorehead, Kansas City, secretary of the Southwestern Lumbermen's Association, had told a couple of good stories and said that there should be a vigorous campaign started to put the public right on the lumber situation, the meeting adjourned.

The Annual Golf Tournament

The Lumbermen's Golf Association of Chicago has set June 8 as the date for the annual tournament. It will be held on the grounds of the Beverly Country Club, at West Eighty-seventh street and South Western avenue, Chicago. The committees having charge of the arrangements are at work and much interest is manifested in the coming event. It is confidently expected that it will surpass the similar tournaments held in past years by the golf association, which have always been successful.

Philadelphia Exchange Holds Monthly Meeting

The April meeting of the Philadelphia Lumbermen's Exchange was held April 1. The attendance was large owing to the fact that nominations for directors to serve the ensuing year were made. However, the directors will not be elected until the annual meeting on April 8. Those nominated for directors are: John I. Coulbourn of Coulbourn Brothers; Joseph Hyde of Geissel & Richardson; and Watson Malone of Edwin Malone & Son. The directors whose terms expire on the date of the annual meeting are: George A. Howes, Amos Y. Leshner of Charles F. Felin & Co., Inc.; and John E. Lloyd of the William M. Lloyd Company.

The committee appointed at the March meeting to look into the workmen's compensation law, now before the state legislature, and to communicate with Governor Brumbaugh on the subject, submitted a majority and minority report, the exchange adopting the majority report.

The majority report was submitted by Samuel Roberts of the Grater-Body Company, Norristown, and William C. MacBride of the Haney-White Company, this city. S. Ashton Souder of Edmund A. Souder & Co. presented the minority report. The changes suggested in the two reports were of technical nature. The committee was given a vote of thanks for its careful study of the matter.

S. Ashton Souder, William T. Betts and Owen M. Bruner were appointed a committee to draw up a letter of protest to be sent to Governor Brumbaugh in regard to House Bill No. 295, known as the "Graas-back," or "Toothless Housing Bill." The exchange believes the provisions of this bill to be detrimental to the best interests of the city, affecting unfavorably as they do the good health and morals of the citizens.

Eugene W. Fry of the Henrice Lumber Company, chairman of a committee which attended a joint meeting of trade bodies in the Bourse on March 15 to consider "reasonable railroad legislation," reported that another meeting would be held April 15. He asked that a new committee be appointed as two of the members on the existing committee felt they were not conversant enough with the subject to properly represent the exchange. Robert B. Rayner of Rayner & Parker; Robert G. Kay and Charles M. Chesnut of the Yellow Pine Company were requested to attend the next meeting.

New York Lumbermen Plan New Club

The question of again organizing the lumber trade of New York in a lumbermen's club has been reopened. The Lord's Court building, William street, has made an attractive offer of space with restaurant and other privileges, that has made the lumbermen sit up and take notice. A committee composed of Van W. Tyler, E. F. Perry and an agent for the building, is now canvassing the trade in an endeavor to ascertain what the sentiment is and how many are agreeable to the proposition. The success of such a plan depends on the regular patronage of the members, and unless assurances are forthcoming that this will be attained the scheme will be abandoned.

Memphis Club Holds Semi-Monthly Meeting

The regular semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso, Saturday, March 27, with seventy-seven members and visitors present. C. G. Kader presided. The usual luncheon was served.

It was decided at this meeting that the club would entertain all of the railroad officials and lumbermen who attend the conference to be held here April 7 under the auspices of the Southern Hardwood Traffic Association. This entertainment will be in the form of a luncheon which will be served in the main dining room of the Hotel Gayoso. It is expected that there will be between 300 and 500 guests and the luncheon promises to be one of the most elaborate ever tendered by this organization. All arrangements have been perfected and the members of the club are looking forward to this occasion with unusual pleasure.

The following resolutions out of respect to the late J. H. Baird, editor and publisher of the *Southern Lumberman* at Nashville, were unanimously adopted:

RESOLVED:—That the recent distressing death of James H. Baird has deprived the lumber industry of one of its ablest champions, the lumber press of a gifted and fearless leader, and the individual members of this organization of a warm and noble friend;

That we desire to convey to his family and associates our profound grief at his untimely death and our deepest sympathy in their irreparable loss.

W. E. Hyde of the Hyde Lumber Company, South Bend, Ind., and the Desha Lumber Company, Lake Providence, La., was elected to active membership.

It was also decided at this meeting that another dinner dance should be given under the auspices of the club at the Hotel Chisca April 9. These informal affairs have proven a source of very great pleasure to all the members of the club and this accounts for the fact that they are being given with increasing frequency. All arrangements are in the hands of the entertainment committee, which has always shown itself thoroughly capable.

Paving Engineer Appointed

F. P. Hamilton of Houston, Tex., has been appointed paving engineer of the Southern Pine Association, and assumes his duties on the first of the month. Mr. Hamilton is a native of Mississippi, thirty-eight years of age, and a graduate of Washington and Lee University. After his graduation he became assistant engineer, in charge of paving at Jackson, Miss., and later looking after paving for steam and street railways in and about Jackson. He possesses an extensive knowledge of the uses of concrete, which is so essential in the making of the proper base for wood block paving. For the past five years he has been with the Gulfport Creosoting Company of Gulfport, Miss., and the Creosote Wood Block Paving Company of New Orleans in charge of creosote wood block paving and construction.

He is a member of the American Association of Civil Engineers, and also of the American Wood Preservers' Association, being a member of the committee on paving of the latter association.

Southern Traffic Association Issues Annual Report

The annual report of the Southern Hardwood Traffic Association for the twelve months ending January 1, 1915, is now off the press and ready for distribution to the members of that body and to others who are sufficiently interested to make application for copies thereof. This report was compiled by J. H. Townshend, secretary and general manager, and in addition to giving an interesting tabulation of receipts, expenditures and other features, it contains a full statement of the aims and objects of this organization.

The association is stronger and more active today than at any time since it was organized. It is dealing with traffic problems in a large way and is safeguarding the interests of its members in every possible manner. Even now, before it has completed two full years' work, it has arranged a conference with the traffic officials of the leading roads in the South for the specific purpose of bringing the railroad men and the lumbermen into such close relationship that rates on lumber may be adjusted without constant friction and without appeal to the Interstate Commerce Commission. This is the biggest thing it has ever undertaken, and the officials believe that if they accomplish what they have in view the results will more than justify all the effort put forth by that organization since it was launched.

J. H. Townshend is a traffic expert of the first order, and he is ably assisted by Leroy Halyard, who is far from a novice in rate matters.

Cincinnati Club Nominates New Officers

So well did the regular nominating committee of the Cincinnati Lumbermen's Club do its work in picking representative and able business men in the lumber line for places on the ticket, that there will be no competitive election at the annual ballot casting of the organization this year. When the regular list of candidates was announced the ticket was endorsed unanimously by the gentlemen delegated to name an opposing ticket. J. A. Bolser, who has acted in the capacity of secretary of the club for some time, was urged to again be a candidate, but refused this honor on the ground that another should be given the opportunity of serving the club.

The ticket named follows:

PRESIDENT: P. Dwight Hinckley of the Dwight Hinckley Lumber Company.

FIRST VICE-PRESIDENT: S. W. Richey of Richey, Halsted & Quick.

SECOND VICE-PRESIDENT: J. S. Zoller of the Talbert-Zoller Lumber and Veneer Company.

TREASURER: J. Watt Graham of the Graham Lumber Company, Ltd.

SECRETARY: W. S. Sterrett of the M. B. Farrin Lumber Company.

Other business of importance taken up at the meeting April 5 was a long discussion of the proposition to merge with the Cincinnati Chamber of Commerce, which invitation was extended to the Lumbermen's Club at the March meeting. The project had its several backers and opponents, and in the end the committee in charge of the subject was instructed to change and amend the club's constitution and by-laws to the extent of merging with the Chamber of Commerce. At the May meeting the amended constitution will be read, discussed and a vote taken on the merger question.

Hardwood Sales Report

The Hardwood Manufacturers' Association of the United States, with offices in Cincinnati, has just inaugurated a new system for distribution of a monthly report of actual sales made by its members. The members of the association report to the secretary each week the actual sales made in that period. The reports show the date of sale, kind of lumber, amount, thickness, grade, widths, lengths, condition of stock, delivered price, point of delivery and rate of freight to destination.

The consuming territory is divided into accurately defined zones. For illustration, the Chicago territory comprises territory surrounding the city of Chicago, which takes practically the same rates of freight from

the producing district, and instead of specifying on the report that is sent to the members the name of the town in which the stock was sold, it will simply show "delivered in Chicago territory" and rate of freight given.

The other territories or zones for the present are as follows: Boston, New York, Buffalo, Philadelphia, Pittsburg, Trenton, N. J.; Dover, Del.; Baltimore, Md.; Washington, D. C.; Richmond, Roanoke, Va.; Wheeling, W. Va.; Raleigh, N. C.; Columbus, S. C.; Knoxville, Tenn.; Chattanooga, Tenn.; Atlanta, Ga.; Jacksonville, Fla.; Birmingham, Ala.; Gulf territory; Cincinnati, Portsmouth, Columbus, Ohio; Toronto, Ontario; Detroit, Indianapolis, E. St. Louis, Louisville, Ky.; Evansville, Ind.; Cairo, St. Louis, Kansas City, Mo.; Hannibal, Mo.; Des Moines, Iowa; Omaha, Topeka, Denver, Winnipeg, Minneapolis, Milwaukee, Pacific coast territory, Salt Lake territory and Dakota.

The report shows the state from which the stock was shipped. Under this arrangement the shipper of lumber can form a good idea by looking at the report whether or not the prices given were obtained by his immediate competitors or whether it was shipped from a distant territory.

Reports made to the association by members are held in strict confidence, and individual information received is not divulged.

The form furnished the members for the purpose of reporting their sales is a simple one and does not burden the sales department in filling it out. A few minutes each day is all that is necessary to record the day's sales. These blanks are mailed to the association secretary's office every Saturday. This in most cases is delivered in Cincinnati on Monday morning and immediately the work of picking out and summarizing the various woods is begun and simplified to such an extent that the report should be received from the printer and mailed to the membership very early in the month. This information will be for the benefit of members only and will prove a valuable service.

With the Trade

Enters Wholesale Hardwood Field

Emil Thoman, for over fifteen years general manager for Bennett & Witte, has branched out into the wholesale hardwood business for himself. Mr. Thoman's is the latest advent into the Cincinnati hardwood field. Perhaps there is none in Cincinnati who is so well versed in the hardwood business as Mr. Thoman, and his numerous friends in the trade predict a successful career for him. Mr. Thoman opened offices in the Mitchell building this week, after enjoying a two months' rest since severing connection with Bennett & Witte.

Wrong Cut Used

In the March 25 issue *HARDWOOD RECORD* published an account of the annual meeting of the Buffalo Lumber Exchange, stating that W. P. Betts was elected president, and carried photographs of the officers. Through an error the cut of W. T. Betts of Philadelphia, of the same firm, was carried in place of that of W. P. Betts.

Big Addition to Bay City Woodworking Plant

The Kneeland-Cooper Company has been incorporated at Bay City, Mich., for the erection of a planing mill and hardwood flooring plant. The plant will employ from 150 to 200 men and will be operated the year round. The company has been incorporated with a paid-up capital stock of \$150,

000. Work on the plant will begin immediately.

The articles of incorporation were completed and forwarded to the secretary of the state at Lansing on March 22, and the incorporation has been consummated since that date.

C. A. Bigelow is president of the organization, D. M. Kneeland vice-president and James Cooper of Saginaw secretary. The president and vice-president are already heavily interested in Bay City through the Kneeland-Bigelow Company and the Kneeland, Lunden & Bigelow Company, both of which operate large sawmills in that city. Mr. Cooper has been a member of the firm of Briggs & Cooper, wholesale lumber dealers, Saginaw, Mich., for a number of years, and the business of that firm will be absorbed by the new company.

The plant will be constructed on the river front between Thirteenth and Seventeenth streets on the site of the old N. D. Bradley & Sons mill, which property was purchased by the Kneeland-Bigelow Company some time ago. It will adjoin the Kneeland-Bigelow plant on the north. It is expected the plant will be in operation by July 1.

The plans will include the construction of dry kilns of extra large capacity for the preparation of the finer grades of lumber used in furniture manufacture and other special work.

The company will handle the large output of the Kneeland-Bigelow Company and Kneeland, Lunden & Bigelow Company's mills and will be of first water in every particular.

Company Suffers Loss by Fire

On March 30 fire, which originated in the engine room, did about \$10,000 damage to the plant of the Arkansas Handle Company at Little Rock, Ark. The fire broke out between ten o'clock and midnight and spread rapidly. When the fire department of Little Rock reached the scene practically the entire plant was enveloped with flames and considerable damage had been done in the stock room. By reason of the excellent work of the firemen a portion of the plant, including the offices, was saved from severe damage. The loss was partially covered by insurance, and will be rebuilt at once.

This plant was erected about fourteen months ago and has had a prosperous career. The officers of the company are: A. G. Walker, president; E. E. Reedy, secretary and treasurer, and J. J. Reedy, general manager.

Nashville, Ark., Firm Plans Large Operations

The Allen Box & Lumber Company, which was recently organized under the laws of Arkansas, has purchased the hardwood holdings of the Grayson-Nashville Lumber Company, Nashville, Ark. The tract consists of about 15,000 acres, on which it is estimated that there are fully 70,000,000 feet of timber. A considerable percentage of this is oak. The hardwood mill formerly operated by the Grayson-Nashville Lumber Company has also been taken over. It is a circular mill, but has a band resaw. There are also a modern box plant, planing mill and box factory included in the transfer. The purchasing firm expects to operate on quite a large scale, estimating its annual cut at something like 9,000,000 feet.

Takes Over Brenner Plant

The Salisbury branch of the Ferd Brenner Lumber Company is to be taken over by the R. W. Walker Lumber Company, according to a recent report. The company has just been incorporated by R. W. Walker, who has been manager at the Salisbury branch of the Brenner interests.

New Virginia Plant to be Erected

It is reported that the Lester Lumber Company, Figsboro, Va., has acquired a tract of land at Martinsville, Va., on which will be erected a

C. A. BIGELOW, PRESIDENT KNEELAND-COOPER COMPANY, BAY CITY, MICH.

D. M. KNEELAND, VICE-PRESIDENT KNEELAND-COOPER COMPANY, BAY CITY, MICH.

JAMES COOPER, SAGINAW, SECRETARY KNEELAND-COOPER COMPANY.

sawmill, planing mill and interior finish plant for the manufacture of rough lumber, interior finish, plow handles, dimension stock, bent wood, novelties and tobacco hogheads. George T. Lester of the Lester Lumber Company planned the construction of the plant which when complete will involve an expenditure of some \$50,000, and which will probably be in operation about the beginning of 1916. When this is completed the company's plant at Figsboro will be removed to Martinsville.

Apparently Well-Adapted to Its Work

The cost of laying trackage ordinarily prohibits the use of logging railroads in working over tracts of timber that are not extensive. The cost of motor power and loading trucks is ordinarily inconsequential as compared with the cost of actually putting down the tracks, building trestles, digging cuts, grading roads, etc. It would seem that an apparatus that is being put on the market by a Pennsylvania company should go quite a little way toward solving this problem in connection with those tracks where the use of standard or even a narrow gauge equipment is not at all feasible.

The cut that accompanies this story illustrates the trucks and trackage with which the small operator could handle his lumber taken out of his woods economically and effectively. This is manufactured by the Orenstein-Arthur Koppel Company, Koppel, Pa., which firm furnishes portable tracks made up in fifteen-foot sections and mounted on steel ties so that comparatively no grading is required and light capacity cars suitable for operation on sixteen thirty pound rails are furnished, the capacity ranging from five to ten tons, which can be hauled by either horses or light locomotives.

The interesting point about the idea is that the initial cost of laying such track is very small and there is practically no depreciation as the track can be taken up in complete sections and shifted from one place to another immediately without damage.

The cars furnished for use with this track are of the lightest construction, as will be seen from the illustration, but the condition of strength, of course, is taken into consideration throughout.

When not loaded the two trucks are coupled together, but when loaded with logs they can be placed at any distance apart to conform with the length of the logs.

Hardwood Record takes pleasure in giving a little publicity to this idea as it appears it should solve a problem that has confronted owners of small timber tracts worth developing, and would suggest that they get in touch with the Orenstein-Arthur Koppel Company and get more complete description.

Lumbermen's Underwriting Alliance

The Lumbermen's Underwriting Alliance, Kansas City, Mo., has moved its offices from suite 1101 R. A. Long building to suite 1118 same building, offices recently vacated by the Dierks Lumber & Coal Company.

The Dierks company moved out on account of the necessity for larger quarters and these offices gave to the Lumbermen's Underwriting Alliance the necessary additional room which has been demanded by its increased business.

U. S. Epperson, attorney and manager for the Alliance, writes from the West where he has been for some time that he is entirely recovered from a painful affection of the right ear.

Keith Lumber Company Changes Location

The Keith Lumber Company, which has been located at Fourteenth and Wood streets, Chicago, for the past twenty-one years, has just moved its entire yard, plant and office to Lavin near Twenty-second street. The Baltimore & Ohio Railroad Company secures the old yard for storage and railway coaches.

The new yard of the Keith company extends on both sides of Lavin street from the river, and has excellent switching facilities, giving connections with

all of the roads going out of the city. The company has erected a fine new office building finished up in red gum, the purpose being to give visualized advertisement of the excellent finishing qualities of that wood.

In 1870 W. S. Keith organized the Keith business, which was operated under his name up to 1890. When it was originally started the company maintained north and south side yards, but these were consolidated in 1894.

F. E. Bartelme is now president of the company and J. M. Riel, secretary and treasurer. Mr. Bartelme has direct charge of the domestic department, while Mr. Riel devotes his attention mainly to the foreign woods.

The Keith company has been well known for the diversified and high-class character of stock it carries, as it is usually in a position to figure on almost any kind of wood, either foreign or domestic. It has gained an enviable reputation in all of its transactions, and its new quarters will unquestionably enable it to give even better service than in the past.

A Northern Michigan Logging Operation

The Richardson & Avery Company of Racine, Mich., which was organized some months ago, is at work on its tract of 42,000 acres of hemlock and hardwood located north of the Duluth, South Shore & Atlantic Railway in Chippewa county, Mich. The corporation was organized to operate this tract. The timber is owned by Sewell L. Avery of Chicago, Waldo A. Avery of Detroit and the E. Richardson Company of Saginaw, Mich. They own all the stock in the new concern. The officers are L. M. Richardson, Saginaw, president; S. L. Avery, Chicago, vice-president; W. A. Avery, Detroit, treasurer, and H. C. Richardson, Saginaw, secretary. The company was forced to commence operations on account of a fire which caused serious damage to the east end of the tract last summer. It has been logging the burned timber during the past winter and will complete it this summer. It has built a sawmill in the new town of Racine, which is located on the D. S. S. & A. railway about twenty miles west of Sault Ste. Marie. The principal equipment of the mill is a single Garland band saw and a Mershon resaw. It expects to cut and manufacture about 15,000,000 feet this year. In future years the cut will depend entirely on market conditions. There are built and in operation twelve miles of logging railroad, to which will be added about five miles this year.

Leaves Licking River Lumber Company

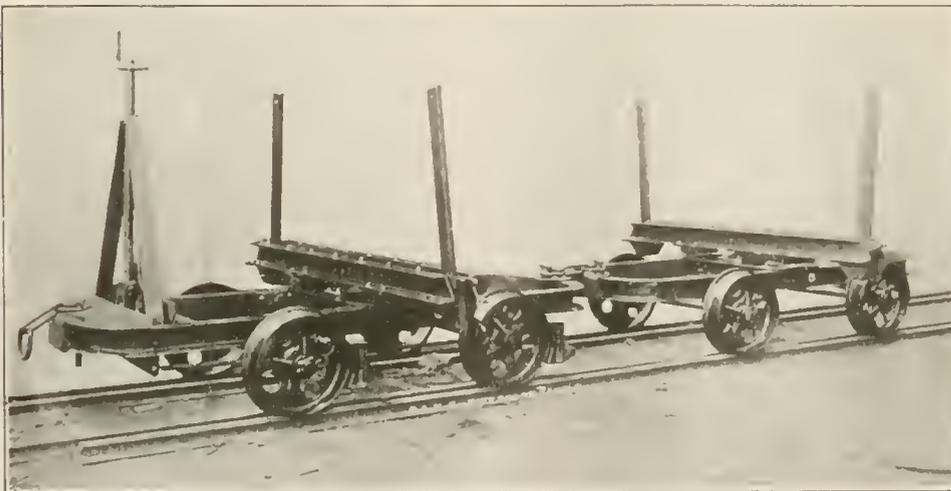

J. D. Kindig, who has been manager of one of the departments of the Licking River Lumber Company of South Bend, Ind., for several years, has recently become associated with the Huff-Stickler Lumber Company, which will continue the wholesaling business with offices in the Dean building, South Bend.

Mr. Kindig has been closely associated with the hardwood consuming trade, and will handle that end of the business. Mr. Huff and Mr. Stickler will give their attention to the yard trade in Indiana and Michigan.

James E. Stark to Control Memphis Veneer and Lumber Company

James E. Stark of James E. Stark & Co., Memphis, Tenn., has just acquired control of the Memphis Veneer and Lumber Company, also of that city. Final details of the transaction were consummated a few days ago. The deal involves a big stock of mahogany timber which is on the yard and under contract involving some \$750,000, including Honduras and South American stock, and also the sawmill and veneer plant at Memphis. It is stated that the sum of about a million dollars is involved in the transaction. The capital stock of the Memphis Veneer and Lumber Company is \$250,000.

Mr. Stark has been actively interested in the hardwood industry in Memphis for a good

LOG TRUCKS AND PORTABLE TRACK, MADE BY THE ORENSTEIN-ARTHUR KOPPEL COMPANY, KOPPEL, PA.

J. E. STARK, WHO RECENTLY SECURED CONTROL OF MEMPHIS VENEER & LUMBER COMPANY.

many years. At the time the Memphis Veneer and Lumber Company started he acquired an interest in it, which, however, has not been a majority interest until the time this new deal was put through. He bought the total stock of J. S. Houston, which gives him control of the company.

Mell Appointed Pharmacognosist

It is announced that C. D. Mell has been appointed pharmacognosist in the Bureau of Chemistry, his duties being the inspection of crude drugs entered through the custom houses at New York, Boston, Philadelphia, and Baltimore. Readers of *HARDWOOD RECORD* know Mr. Mell through valuable articles contributed by him to its columns, especially on the subject of South American woods and black walnut. He was formerly assistant dendrologist in the Forest Service. The articles on black walnut, under the joint authorship of C. D. Mell and George B. Sudworth, which appeared exclusively in *HARDWOOD RECORD*, contained the most complete description of that wood ever published anywhere.

Allis-Chalmers' Sawmill Man Dies

The Allis-Chalmers Manufacturing Company of Milwaukee, Wis., announces that on March 29 Frank W. Greenleaf died after an illness of three weeks. He contracted grippe which developed into bronchial pneumonia, which was fatal.

Mr. Greenleaf was connected with the sawmill department of the Allis-Chalmers company as assistant manager for thirty-two years. He is survived by a widow and one son, W. F. Greenleaf, who is connected with the engine department of the company.

Death of a Well-Known Lumberman

John Stewart, aged eighty-nine years, and a native of New Brunswick, died recently in Kane county, Ill., at the home of his daughter, Mrs. Eliza Watson. Mr. Stewart was suddenly taken ill while in Los Angeles, Cal., and was taken to his home in Illinois by his son-in-law, John Alexander. He entered the lumber business as a laborer on a sawmill at Wausau, Wis., about 1852, invested his earnings in timberland, and at the time of his death was rated a millionaire.

Prominent Saw Manufacturer Dies

William Disston, wealthy clubman and manufacturer and a member of one of Philadelphia's oldest and wealthiest families, died suddenly at his country home in Lancasterville, Montgomery county, Pa., on the evening of April 5. Mr. Disston's death followed an illness of more than a year's duration. On January 13 last, at the German hospital, he was operated on for gall stones, and since that time has suffered several relapses. He recently left the hospital and went to his country home to recuperate. He gradually improved until shortly before his death, when he suffered a severe relapse. Previous to his confinement at the hospital before his operation he had taken a trip for health to Florida, but was forced to return to this city. Mr. Disston was fifty-six years of age.

Mr. Disston was vice-president of Henry Disston & Sons, Inc., Philadelphia, and was executive head of the vast saw works at Tacony. He was also vice-president of the Henry Disston & Sons File Company, and a director of various banking and trust companies.

He took an active part in social and club life, despite his many manufacturing activities and responsibilities. At one time he was president of the Whitmarsh Valley Country Club. He was a director of the Union League and a member of the Raquet Huntingdon Valley Country, Philadelphia Cricket, Philadelphia Country and Corinthian Yacht clubs.

William Disston was born in Philadelphia, June 24, 1849. His father, Henry Disston, a native of England, came to the United States in the year of 1840 and settled in Philadelphia. On the maternal side Mr. Disston is descended from Swedish ancestors, the family having been established in Philadelphia since 1630.

After receiving his education at the Episcopal Academy of this city, Mr. Disston entered his father's saw manufactory and spent seven years in the various departments, thereby gaining a thorough knowledge of every branch of the business with the object of fitting himself to continue in association with his brothers, the work of developing and expanding the enterprise which had been so successfully launched by his father.

Mr. Disston is survived by a widow, one daughter and one son, and a brother, Jacob S. Disston.

Northern Wood Products Company Organized

The Northern Wood Products Company has just been organized under the laws of the state of Wisconsin at Merrill. It has purchased the plant and business of the Lee Handle & Dowel Company, which has been engaged in the manufacture of broom handles. C. R. Lee of Lincoln, Nebr., is president; H. B. White of Spencer, Ind., vice-president, and W. A. Thomas of Merrill, secretary and treasurer.

West African Mahogany on British Market

In the course of their annual report reviewing the mahogany trade of Liverpool in 1914, Edward Chaloner & Co., of that city, state that the imports of African mahogany during the twelve months totaled 32,751,329 feet, compared with 33,232,939 feet in 1913. Considering that the total importation of all varieties received at Liverpool during the year was 34,613,791 feet, it will be seen that West Africa supplies almost all the mahogany imported into Great Britain. The imports from Mexico and other American countries seem to have fallen to a very low place in British trade.

Pertinent Information

The Chicago Strike Situation

The strike situation in Chicago, so far as it concerns the building trades, has not yet gotten out of control, and the workers for peace are busy, and not much discouraged. The plasterers who went on a strike through sympathy for the lathers who are locked out, refused to spread plaster on lath that had been nailed by non-union men. On Thursday the officials of the plasterers union were served with an ultimatum by the employing plasterers. At a conference of the officials of the two organizations the union was given twenty-four hours to return the men to work or a lockout would be ordered.

The lockout ultimatum moved the union officials visibly and they immediately asked for more time to put the question before the members of the locals. The contractors granted them until April 13. At that time if the plasterers do not return to work a lockout will be ordered and the work of the union men done by other men the contractors will employ.

Remarkable Revival in Black Walnut

A list of large buildings of recent construction that have been finished with black walnut shows a remarkable revival for that wood. Furniture makers have lost no time in following the fashion. The new William Penn hotel at Pittsburgh is finished with black walnut, and the furniture is walnut throughout. The new Hotel Statler in Detroit is also furnished in American walnut. The Cleveland *Leader* building is trimmed in walnut exclusively. The Marshall Field men's building in Chicago is, as is well known, finished throughout in this wood. A considerable portion of the new home office building of the Northwestern Mutual Life Insurance Company in Milwaukee is finished in it also, while much of the furniture is of the same material. The first floor and dining-room furniture of the Baltimore hotel, Kansas City, are of American walnut. Many other buildings have been handled in the same way, demonstrating that in view of the wide use of the wood as an interior trim, it is logical that much of the furniture of current manufacture should be of that material. Hotel buildings especially have been finished with walnut, and in this case walnut furniture has been used throughout. Furniture manufacturers and dealers who are interested in the hotel field have been watching these developments, which have used American walnut, and they have emphasized the fact that this wood has won a big place in building and furniture making in a comparatively short time.

Statement of Ownership and Management

Agreeable to the act of Congress of August 24, 1912, requiring publishers of periodicals to file with the postmaster-general and the postmaster in the office at which such publication is entered, a sworn statement setting forth the names and postoffice addresses of editors and managing editor, publisher, business manager and owners, and in addition the stockholders, if the publication is owned by a corporation, and also the names of known bondholders, mortgagees or other security holders, and that such sworn statement shall be published in such newspaper or other publication, the following statement is herewith printed:

HARDWOOD RECORD is published semi-monthly at Chicago, Ill.

The names and postoffice addresses of the editors are as follows:

Editors: E. H. Defebaugh, 537 South Dearborn street, Chicago, Ill.;

E. W. Meeker, 537 South Dearborn street, Chicago, Ill.

E. W. Meeker, Managing Editor, Chicago, Ill.

Hu Maxwell, Technical Editor, 927 Asbury avenue, Evanston, Ill.

Business Managers: E. H. Defebaugh, E. W. Meeker.

Publisher: The Hardwood Company, 537 South Dearborn street, Chicago, Ill.

Owners: The Hardwood Company, 537 South Dearborn street, Chicago, Ill.; E. H. Defebaugh, 537 South Dearborn street, Chicago, Ill.; Estate H. H. Gibson, 537 South Dearborn street, Chicago, Ill.

There are no known bondholders, mortgagees and other security holders holding any bonds, mortgages or other securities of this company.

E. H. DEFEBAUGH, Editor.

Sworn to and subscribed before me this twenty-second day of March, 1915.

J. S. PENNINGTON, Notary Public.

My commission expires October 24, 1916.

Eastern National Forest Resources

The merchantable timber required by the federal government in the purchase of land for national forests in the White mountains of New Hampshire and the southern Appalachians amounts to more than a billion board feet, worth upward of \$3,000,000 on the stump, according to an appraisement by the Forest Service. In addition, there is an enormous quantity of inaccessible and widely scattered timber which can not be considered marketable until regional developments and improvements place it within reach.

Plans for cutting some of this timber in accordance with scientific forestry methods already have been prepared and in a few localities operations have been started. In some places it has been found necessary to remove mature trees in order to give the young growth a chance.

This work is being done largely by local residents, who have bought the stumpage and are converting it into lumber. The construction of roads and trails is making more and more timber accessible to lumber operators, but the principle use of these improvements at present is for local communication, fire protection, and to open up the wild land for recreation use. A secondary influence of the improvements is to increase the value of the land and to make the timber on it more accessible and valuable to operators.

A great deal of the forest land within the purchase areas was cut over or culled before the government acquired it. Nearly all of this class of land, however, is covered now with young growth and even the abandoned farm acreage, which forms about two per cent of the whole, is slowly reverting to forest.

Of mature timber which could be placed on the market at once, the eastern national forests contain a total of about 1,100,000,000 board feet, which includes all the common eastern hardwoods, together with much spruce, a good deal of hemlock, and some pine. The land, including the timber, has been bought at an average price of a little more than \$5 an acre. More than 5,000,000 acres of this land will eventually be acquired for national forests in the East, if the recommendation made by the National Forest Reservation Commission in its last annual report is carried out.

Cut and Sales for February

R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, has compiled the following summary of cut and sales of lumber in February: Cut February, 1914, 530,800,000 feet; cut February, 1915, 446,800,000 feet; decrease 84,000,000 feet, or 15.8 per cent. Shipments February, 1914, 514,000,000 feet; shipments February, 1915, 439,600,000 feet; decrease 74,400,000 feet, or 14.5 per cent. Cut February, 1914, 530,800,000 feet; shipments February, 1914, 514,000,000 feet; cut more than shipped 16,800,000 feet or 3.3 per cent. Cut February, 1915, 446,800,000 feet; shipments February, 1915, 439,600,000 feet; cut more than shipped 7,200,000 feet or 16.4 per cent.

West Coast Lumber Mills

Under date of March 22, 1915, the West Coast Manufacturers' Association reported the status of 188 mills, with a ten-hour capacity of 20,286,000 feet. The operating mills numbered 112, and their ten-hour capacity was 13,757,000 feet. Seventy-six mills were idle, and their capacity was 6,529,000 feet. The operating mills were running at ninety per cent of their capacity. It thus appears that fifty-four per cent of the total capacity is being operated.

Pennsylvania's Desolation

An illustrated pamphlet by J. T. Rothrock deals with the desolation of those parts of Pennsylvania which have been stripped of forest by lumbermen and fire and are now lapsing into deserts which threaten to become as sterile as those of China's mountains where the trees have been removed and the land left bare. Mr. Rothrock, who was formerly commissioner of forestry in Pennsylvania, makes a strong plea for reforesting the bare mountains, and to repopulate them partly by establishing factories there to use the water power now going to waste. About one-seventh of the state is in need of restoration. The pamphlet was printed by Herbert Welsh, 695 Drexel building, Philadelphia.

Valuable Oregon Maple

A survey of Olympian National Forest in the state of Washington has disclosed the existence of unexpected quantities of the broad-leaf maple. Little cutting has ever been done in the area. The wood is of excellent quality, and there are many boards which may be reduced to fine figured veneers. The scarcity of good hardwoods on the Pacific coast adds importance to this discovery.

A Sawmill on Wheels

A manufacturer of automobiles recently gave an exhibition in New Orleans of the versatility of his machine by using it as motor power to operate a small portable sawmill. The auto hauled the mill about the streets, stopping occasionally, propping one wheel off the ground, putting a belt on it and using it to drive the saw while doing light work.

Cigar Box Wood Shortage

The first pinch in shortage of wood in Germany on account of the blockade is said to be in cigar box lumber. Heretofore the cigar boxes in that country were made of Spanish cedar from the West Indies, Mexico and Central America, and a species of very light mahogany called okume from the west coast of Africa. The manufacturers of cigar boxes in Germany are substituting beech and other German woods for cigar boxes.

Lumber Rates Suspended

Advances in the rates on lumber and other forest products in carloads from points in Michigan to various points in Ohio and Indiana, and from certain points in Wisconsin to points in Michigan and other states, proposed by the Ann Arbor and other railroads, have been suspended by the Interstate Commerce Commission from March 28 until July 27. The present rate from Marinette, Wis., to Toledo, O., is 10½ cents per 100 pounds; the proposed rate is 13 cents per 100 pounds. The present rate to Durand, Mich., is 10½ cents, and the proposed rate is 11 cents.

Timber-Preserving Plant Wanted

A trading company in India has informed an American consular officer that it desires to be placed in touch with American firm specializing in

the manufacture and installation of plants for the treatment of timber such as railway ties. The company states that it is considering establishing a plant for the treatment of not less than 100,000 broad-gauge ties per annum. No particular process of treatment has yet been decided upon, and the company wishes to receive suggestions from American firms manufacturing plants for preserving timber. Correspondence may be in English. Persons who desire to obtain the address of the company should write to the Bureau of Foreign and Domestic Commerce, Washington, D. C., quoting the index number 16,280.

Wants to Stay by Wood

A retail lumber dealer in Iowa writes to R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, as follows:

I am having quite a little call recently for corrugated galvanized roofing. We have never handled it and I do not want to handle it. I want to stay by the wood if I possibly can. There are several farmers planning on building barns, and on using the sheet iron for siding instead of stock boards. I have had no experience with the iron at all, and know of no argument that I could use in discouraging its use. I thought that possibly you could help me out a little as to how to talk a fellow out of the corrugated iron notion. I would like to have a good reasonable proposition to put up to show that wood is better than iron. Any help that you can give me will be appreciated.

This is only one of the many subjects upon which the lumber manufacturers should be prepared to furnish information to their customers. Who will supply it?

Famous Jones Letter

R. H. Jones of the G. W. Jones Lumber Company, Appleton, Wis., has gotten out some mighty clever letters in the last few months, tending to increase the general interest of the hardwood purchasing trade in stocks offered by that concern. One which has just recently come in is of a particularly clever character and HARDWOOD RECORD takes pleasure in printing it in full. It shows what can be done in a little-out-of-the-ordinary-way to work up interest in one's products.

APPLETON, Wis., March 25, 1915.

HARDWOOD RECORD, Chicago, Ill.

Gentlemen: Have you ever been in Prairie du Chien, Wis.? When I used to buy lumber on the road, I'd stop there occasionally to spend a Sunday with old Charley Hoffschmidt, proprietor of the Depot hotel, the most unique and philosophical old German it's been my pleasure to know.

He sure was some character—Old Charley was—whose second greatest weakness was cards. "Schmcer" was the game,—you know, just like "Seven Up," High, Low, Jack and the Game, only you bid on your hand. Well, one night about fifteen years ago, when he was deep in this cut-throat game and almost in sight of the money, Emil, the combination clerk, bartender, porter and barn-boy, rushed in with—"Charley! Charley! The barn's on fire!" Charley, who was dealing, never stopped, never looked up. "Vell,—iss der horses out?" "YES!"—"Hub!—Vell,—iss der bus out?" "YES!" Charley, YES!" The old man picked up his cards, and after looking 'em over carefully,—"Hub!—Vell, I—guess—I bid three times!"

Today almost one-half of the world is on fire, but WE are OUT! Not only are we out, but we're in mighty good shape, too. Steel mills putting on more men every day; railroads placing big orders; building permits going up in jumps; banks have plenty of money; less men out of employment than any time for the last six months; and best of all, A HUNDRED MILLION PEOPLE WITH CONFIDENCE IN THEMSELVES AND IN THEIR COUNTRY!

Yes, sir! The horses are out and the bus is out! Now it's up to us to SIT TIGHT, BID OUR HAND, and PLAY THE GAME. As the Old Cattleman used to say, "Life ain't in holdin' a good hand, but in playin' a pore hand well!"

Now here's a stock sheet I've made out, with a list of as fine a bunch of northern and southern hardwoods as ever felt a saw. Look it over, then let me know what items you can use.

Let me help you to KEEP THE GAME GOING!

Yours sincerely,

G. W. JONES LUMBER COMPANY,

R. H. JONES,

Our Chicago man, Ruth, has his office at 327 Railway Exchange Bldg., why don't you call him up—Harrison 2902?

The Land of Beech Trees

The present war has brought into notice the Austrian province Bukowina. The Austrian defenders and Russian invaders have pushed each other back and forth across it many times in the past half year. The name means "land of beech trees." The word "buk," with its other forms "boc," "buck," "beech," "book," and many other variations in spelling and pronouncing, is one of the most remarkable known. It is said to be the oldest existing word in the world. It has been traced to northern India where the people speaking the Sanskrit language used it for "beech," and "book." It is supposed they cut letters on beech bark, hence they used the same word for the tree and the writing on its bark. The word is still in use in various forms in all northern Europe. Even in far away Iceland "bok" means beech. The Russians change it a little and call it "buk." The name of the country, Bukowina, conforms to the Russian spelling. The English, Germans, Austrians, and Russians all agree on that one word for beech, and it is probably the only word on which all of them agree. The word buckwheat comes from the same source, because the grain of buckwheat is triangular like the nut of the beech. The Greeks and Latins refused to adopt the word; but the Latins translated it, by using the word "liber" (bark) for "book." The Greeks, however, were not willing to adopt or even translate the foreign word, so they called the beech tree "eat," because the nuts were edible. The word used by them was "phegos," which, in its latinized form, "fagus," has come down to us, and botanists use it as the generic name for beech—*Fagus atropuntica* being the botanical name for the common American beech. It has been said that it is easier to conquer nations than to change their language, and the case

of Bukowina seems to carry that out. It is hard to say how many owners it has had since it was first named on account of its beech trees, perhaps in prehistoric times. In spite of its many owners, including the Romans, the Hungarians, and the Turks, it still carries its old name. The Romans called it Dacla, it forming the extreme northeastern part of that province in the period of the Roman empire's greatest extension. It is said that Bukowina and Brazil are the only two countries in the world named for trees, though innumerable islands and small districts are so named.

Japanese Make Violins

One of the interesting developments of the season of readjustment in various lines of industry is the fact that we have been depending largely upon Germany for our violins and that now Japan is striving to capture this trade. One of the consular reports tells of a violin manufacturer in Nagoya, Japan, having booked orders for tens of thousands of violins costing from \$3 to \$8. At the outbreak of the war the importation of these from Germany ceased and the supply has been running short and Japan is getting into the business. The first thought that occurs here is, why not American-made violins?

Hardwood News Notes

← MISCELLANEOUS →

The Giant Furniture Company, High Point, N. C., is reported to be adding considerably to its factory at that point.

The Piedmont Hardwood Manufacturing Company has decided to rebuild its plant at Greenville, N. C., which was recently destroyed by fire.

The Hendersonville Buggy & Wagon Company has been incorporated at Hendersonville, N. C., with a capital stock of \$25,000.

It is reported that the Parsons Lumber Company located at Watha, Pender county, N. C., was destroyed by fire. This involves a mill plant and lumber stored in the yard, workmen's buildings and other structures, and the loss is reported to be about \$20,000. Strenuous efforts effected the saving of other property than that destroyed.

It is reported that fire destroyed the plant, consisting of lumber, mill and dry kilns, of the Beaman Lumber Company at Marion Junction, N. C., the loss being estimated at about \$45,000.

The Spencer Table Company, Marion, Ind., has increased its capital stock from \$75,000 to \$100,000.

At Indianapolis, Ind., the Brewer Monoplex Box Company has been incorporated with a capital stock of \$30,000.

The Fisher Vehicle Woodstock & Lumber Company has been incorporated at Erin, Ark., with a capitalization of \$5,000.

With an authorized capital stock of \$10,000, the Cape Fear Cedar Company has been incorporated at Elizabethtown, N. C.

J. H. Smith of Bradford, Pa., has announced that he will move his lumber and woodworking business from Salamanca, N. Y., to Falconer, N. Y., and has purchased a tract of land on Falconer street adjoining the D. A. V. & P. railroad yards.

With M. M. Martin as president and Duncan Martin, vice-president, both of Memphis; the Southern Furniture Corporation has been incorporated at Birmingham, Ala., with a capital stock of \$100,000.

The James Milliken Hardwood Lumber Company located at Arkadelphia, Ark., has suffered a loss by fire.

The capital stock of the D. Miller Buggy Company, Alton, Ill., has been decreased from \$3,000 to \$1,500.

The Richland Handle Company has been incorporated at Bloomfield, Ind., its capital being \$5,000.

The general offices of William S. Whiting have been moved from Asheville, N. C., to Elizabethtown, Tenn.

The Anchor Saw Mill Company is out of business at Atlanta, Ga.

At Gaylord, Mich., the Saginaw Woods Products Company has changed its style to the Michigan Wood Products Company.

An increase in capital to \$70,000 has been effected by the Carthage Superior Spring Bed Company, Carthage, Mo.

R. E. Edwards has been appointed receiver for the Peru Chair Company, Peru, Ind.

E. C. Dawley is reported to have sold his interest in the Gill-Dawley Lumber Company, Wausau, Wis.

The Frankfort Chair Company has been incorporated at Frankfort, Ky., capital \$26,000.

The F. O. Smith Shipbuilding & Dry Dock Company has been incorporated at Norfolk, Va. Its capital is \$100,000.

It is stated that the Ford Motor Company, Detroit, Mich., will build a factory in Charlotte, N. C., to cost about \$250,000.

The Felge Desk Company, Saginaw, Mich., has filed an involuntary petition in bankruptcy.

The Mechlin Lumber Company has been incorporated under the same name at Mount Vernon, Ala., with a capital of \$20,000.

The David R. Webb Company has been incorporated at Edinburg, Ind., to manufacture veneers, and has \$35,000 capital.

With a capital stock of \$10,000, the S. Roman Flooring Company has been incorporated at Brooklyn, N. Y.

MENTION HARDWOOD RECORD WHEN WRITING

An involuntary petition in bankruptcy has been filed by the Portsmouth Planing Mill, Portsmouth, Va. Alfred P. Thom has been appointed receiver.

← CHICAGO →

H. H. Butts, sales manager of the Park Falls Lumber Company, Park Falls, Wis., was in the city April 7.

R. L. Jurden of Penrod-Jurden & McCowen, Memphis, Tenn., was in the city for a few days last week on one of his frequent business trips North.

L. W. Ford of the Goodlander-Robertson Lumber Company, Memphis, Tenn., was in town last week on business in connection with affairs associated with the National Hardwood Lumber Association.

C. E. Davis of the Mengel Box Company and Richland Parish Lumber Company, Louisville, Ky., was in the city a couple of days last week on a selling trip.

G. W. Sparks of the Des Arc Veneer & Lumber Company, Des Arc, Ark., made a business trip to Chicago a week or so ago.

J. E. Stark of James E. Stark & Co., and the Memphis Veneer & Lumber Company, Memphis, Tenn., was in Chicago last week consummating a deal by which he secured controlling interest in the latter company. He was in conference with J. S. Houston of Chicago.

F. R. Gadd of Chicago was in Memphis this week in attendance at the conference of railroad men and lumber shippers, which took place in Memphis on April 7.

HARDWOOD RECORD is in receipt of the Indiana Arbor and Bird Day Manual compiled by E. A. Gladden, secretary of the Indiana State Board of Forestry. This is a little booklet gotten out each year by the Indiana board, the purpose of which is to increase the interest in trees and birds.

The official report of the annual convention of the Hardwood Manufacturers' Association of the United States, held at Cincinnati on Thursday and Friday, January 28-29, has just come from the press. The report is gotten up in high-class shape and presents the proceedings of the meeting in the ordinary and easily read shape.

← NEW YORK →

The Wayne Lumber Company, wholesaler of hardwoods, has moved to the new South Ferry building, 44 Whitehall street.

Henry Cape, dispenser of hardwoods and hardwood flooring, is leaving 1 Madison avenue after more than fifteen years there for new quarters in the Vanderbilt Concourse Offices, 52 Vanderbilt avenue.

Sam E. Barr is another rover this month of moving. Unlike so many others, he is coming down town, and after May 1 his address will be Hudson Terminal building.

C. B. Von Canon, representing the J. Walter Wright Lumber Company of Mountain City, Tenn., was a recent visitor in New York. He reports a slow, steady improvement in business and says the outlook for the hardwood trade is promising.

← BUFFALO →

The shooting of George B. Montgomery by a British sentry in Bermuda was a great shock to his many friends and business associates here. While the explanation is that it was a stray bullet which hit Mr. Montgomery, the affair looks like a piece of criminal carelessness and entirely uncalled for, as the boat in which the lumberman, his wife and two friends were sailing was entirely outside the prohibited area where the prisoners of war are kept, and no question of trespass was involved. Great delay ensued also in sending an official account of the shooting to this country, owing to British censorship.

Buffalo's building figures for the first quarter of the year are gratifying, as the total of \$1,519,000 runs only \$72,000 below the same period of 1914. Permits so far granted this month indicate that this will be a quite active spring in the building trade.

H. T. Kerr has gone to Michigan for a trip of inspection of his hardwood interests and will look after the shipment of maple and beech from the lower peninsula by lake eastward.

A. J. Chestnut has gone to Norfolk, Va., for a short vacation trip. His lumber company is now manufacturing birch flooring in Canada, finding a fair market in that country and a better one in the United States.

Davenport & Ridley are building a new office at their yard at 1146 Seneca street. The office reports a fair trade in Pennsylvania hardwoods, though trade is not yet active.

T. Sullivan & Co. will bring in some brown ash by lake this season. This wood is in quite good demand and large stocks have been disposed of so far this spring.

The Yeager Lumber Company has been moving quite an amount of maple lately and reports trade in ash and plain oak as fairly good. Cypress is also having a steady trade.

Hugh McLean has been in Memphis for the past week or two, looking after the mill interests of his lumber company. Trade is on about the same basis here as two weeks ago.

J. B. Wall, president of the Buffalo Hardwood Lumber Company, has been in Alabama for two or three weeks, looking after oak shipments. He also spent some time in Tennessee.

Blakeslee, Perrin & Darling report increased firmness in maple lately, in which the demand appears to be increasing. Thick oak has also shown an increased demand.

A. W. Kreinheder has been appointed a receiver for a Buffalo Package Company, a local copage concern, which has indebtedness of over \$79,000, but is reported solvent.

← PHILADELPHIA →

Fire on March 31 damaged the Francis D. Kramer Woodworking Company's plant at 1601 Spring Garden street. The fire is said to have started from a hot bearing in a machine in the wood-turning room.

Mrs. Fannie Edwards Boyd Weltzel died at her home, 3300 North 16th street, March 31. Her husband, Paul R. Weltzel, died February 28. The deceased was the mother of the lumbermen constituting the firm of P. Elmer Weltzel & Co.

President Mehl of the Pennsylvania Lumbermen's Association, has appointed Henry Palmer, W. C. Peirce and C. Frank Williamson a committee to make plans for and take charge of the mid-summer meeting of the association.

J. Frederick Martin, secretary of the Haganir Lumber Company, Pennsylvania building, is being congratulated on the arrival of a son in his home. The baby has been named Alfred Simpson Martin. The senior Martin has not decided whether Alfred will be a lawyer or a hardwood man.

The Babcock Lumber Company, through J. H. Haines, Philadelphia manager, reports business as increasing, with prospects favorable for a fine spring trade.

Warren Ross of the Warren Ross Lumber Company, Jamestown, N. Y., called on local lumbermen last week.

F. S. Underhill of Wlster, Underhill & Nixon reports the hardwood trade as increasing and prices a trifle better on certain items. Despite the European war and commercial depression, Mr. Underhill is confident that spring trade will be ahead of last year.

W. H. Wyatt of the Jackson-Wyatt Lumber Company says the outlook is encouraging and he believes the spring of 1915 may set quite a mark for improved business.

← PITTSBURGH →

J. M. Hastings is in Nova Scotia overseeing extensive operations of the Davison Lumber Company of which he is president. This concern has been shipping a large amount of lumber to foreign markets.

The Acorn Lumber Company reports a better feeling among hardwood buyers. Orders are very badly mixed, however.

E. H. Stoner of the West Penn Lumber Company reports a fair trade

with manufacturers and considerable yard business. Prices are weak and the cash buyer has the advantage.

The Kendall Lumber Company is starting its mill at Ligonier, Pa., and also the Thornwood mill. This company is shipping a large amount of lumber to automobile, mining, and manufacturing concerns.

The Breitwieser Lumber Company is doing a fair business in hardwoods but finds the market a waiting one. Frank Smith of this concern recently brought back some good business from the East.

The Aberdeen Lumber Company has been fortunate in getting some fine orders for gum and cottonwood and also for ash to be shipped to foreign nations. These stocks are used in making gunstocks and for the manufacture of stretchers and coffins.

The Federal Lumber Company which recently was organized to take over the business of the C. P. Caughey Lumber Company, is lining up some very nice hardwood trade. President E. E. Gregg has lately added to its force of salesmen, Edward J. Plant and E. R. Bristol.

W. W. Wilson, Jr., formerly president of the Western Lumber Company, a hardwood concern which filed a petition in involuntary bankruptcy recently, now represents Smith, Fassett & Co. of North Tonawanda, N. Y., and is selling fine hardwood stocks here.

← BOSTON →

One of the heaviest lumber failures ever entered in the bankruptcy court for this district is the petition of Fremont B. Chesbrough with liabilities of \$727,176 and assets of \$720,125. The Chesbrough Lumber Company was located in Emerson, Mich., and the largest creditors are in this state.

Wm. A. Webster, Jr., who has been affiliated with the Webster Lumber Company of Watertown and the Blanchard Lumber Company of Boston, has assumed the position of manager of the large retail business of Wm. H. Wood Lumber Company of Cambridgeport.

Activity in local lumber circles is shown by the incorporation of three new concerns: the American Lumber Company at Boston, capital \$25,000, Geo. F. Stocker, president and H. D. McCallum, treasurer; the Pacific Coast Lumber Company, also at Boston, capital \$25,000, F. A. Wyman, president; and the Watertown Lumber Company at Watertown, capital \$25,000, A. E. Noble, president.

← BALTIMORE →

Warren Curtin White, former mayor of Cumberland, Md., and president of the W. C. White Lumber Company of that city, died on March 22 at the Western Maryland hospital following an operation. Mr. White had not been well for some time, and went with his family to Florida several weeks before in the hope of obtaining relief, but was compelled to return. He was born in Pennsylvania, and taught school for a time, afterward going to Kentucky and matriculating in the State University, from which he graduated. He afterward became general manager of the Pennsylvania Coal and Lumber Company of Kentucky, but subsequently located at Oakland, Md., where he engaged in lumbering operations. Twenty-seven years ago he removed to Cumberland, organizing the company which bore his name. He was fifty-six years old. His will shows that he left an estate of about \$300,000, which, with the exception of some small bequests, goes to his widow and four children. If the widow remarries within five years of the time of his death she is to receive \$10,000. The estate is to be divided when the youngest child is twenty-six years old.

William T. Moore, seventy-eight years old, and engaged in shipbuilding at Bethel, Del., for many years, died suddenly March 30 at the home of his son-in-law, William M. Knowles, at Wilmington, Del. He served a term in the Delaware State Senate and was at one time a member of the Sussex county levy court. He was associated in business with John M. C. Moore. His wife and one daughter survive.

The experiment undertaken by the Ryland & Brooks Lumber Company, American building, last December, of engaging more extensively in the hardwood trade than before, has turned out very satisfactorily. The company at the time mentioned made a connection with W. Turner Isaac and his brother, Howard Isaac, both experienced in the hardwood trade, to look after that end of the business, with the result that it has been greatly increased. The Ryland & Brooks company may now be regarded as having become firmly established in the trade, the change being one of the results of conditions incidental to the war and the unsettlement produced thereby. W. Turner Isaac has just returned from a buying trip down South, during which he took up a large quantity of lumber, while Howard Isaac about the same time got back from a selling trip through Pennsylvania and adjacent territory. He reported that business was improving to an appreciable extent.

D. W. Currie, president of The W. J. Diarmid Company, Inc., Fayetteville, Va., was one of the recent visitors in Baltimore. He stated that business seemed to be somewhat better.

R. E. Wood, president of the R. E. Wood Lumber Company, is on a visit to the operation of the company at Fontana, Swain county, N. C.

S. P. Leech, a saw filer, and George H. Sutter, his assistant, lost their lives in a fire which destroyed the hand mill of the United States Spruce Lumber Company at Marion, Va., March 25. The men were in the upper part of the building, and an explosion of smoke and dust caused the flames to spread so rapidly that they had no time to escape. The plant was recently erected at a cost of \$75,000, and was insured for \$430,000.

Perkins Glue Fast Becoming the Standard For All Veneer Work

Manufacturers who use glue for veneer laying and built-up panel work are rapidly realizing the advantages of a glue that does away with the hot, bad-smelling glue room necessary with hide glue and are adopting the modern and efficient

Perkins Vegetable Veneer Glue

because it does away with the cooking process, being applied cold. It is equally as efficient as hide glue and at a saving of no less than 20 per cent over hide glue costs. It gives off no bad odor and may be left open a number of days without souring or in any way affecting its adhesive qualities.

Every shipment is absolutely uniform.
The use of Perkins Glue does away

with blistered work and is affected in no way by climatic changes, thus increasing the advantages of manufacturers, who must ship their goods to hot, cold or damp climates.

Unsolicited testimonials from hundreds in all glue using lines praise its efficiency and economical application.

Write us today for detailed information.

PERKINS GLUE COMPANY

Originators and Patentees

805 J. M. S. Building, SOUTH BEND, IND.

Energetic work on the part of the local fire department prevented the blaze from spreading to some 10,000,000 feet of lumber piled up a short distance away.

◀ COLUMBUS ▶

The Dickelman Lumber and Manufacturing Company of Tiffin has taken over the plants of the Seneca Lumber Company and the Staley Lumber Company and will also erect an addition to the plant in the east end, the former place of business.

The enactment of a state building code which will give Ohio cities the largest measure of home rule was the recommendation to the Ohio General Assembly by the Ohio architects which met in Columbus recently to form the Ohio State Association of Architects. George M. Anderson of Cincinnati was elected president; C. W. Bellow of Columbus, vice-president and Herbert B. Briggs of Cleveland, secretary-treasurer.

J. E. Nutt, a well-known lumberman of Youngstown and secretary and treasurer of the Mahoning Lumber Company of that city died at his late home recently at the age of sixty years.

Fire caused a damage of approximately \$30,000 at the plant of the Robert Hixon Lumber Company at Sylvania, O., recently.

That Ohio shippers are entitled to the same protection against increase of intrastate rates as interstate rates was voiced before the Ohio utilities committee by J. L. Roney of Middletown, president of the Ohio Shipper's Association; D. F. Hurd, traffic manager for the Cleveland Chamber of Commerce; C. M. Vorhees of Columbus, representing the furniture dealers of the state, and others, advocating the Winans senate bill empowering the State Utilities Commission to suspend a rate increase for ten months, a power which the Interstate Commerce Commission has.

The Gotshall Manufacturing Company of Toledo, O., expects to rebuild its hardwood plant, a \$10,000 institution. The building will be larger and an improved sawmill will be a feature of the new concern.

J. R. Kinnard, a lumber broker at Dayton, filed a petition for bankruptcy in the United States district court, stating his debts amounted to \$8,715. There are no assets.

The Lebanon Lumber Company of Lebanon, O., has been incorporated with a capital stock of \$5,000 to deal in lumber and builders' material. The incorporators are Peter Kuntz, Sr., Peter Kuntz, Jr., N. J. Kuntz, F. B. Post, Martin Kuntz and J. A. Payne. F. B. Post of Washington Court House will be manager and he has purchased the Davis lot at the corner of Main and Water street and will soon be ready for business. The new company will handle lumber and a full line of building materials.

The Fellers Barrel & Coopers Company of Toledo has been incorporated with a capital stock of \$10,000 to deal in barrels, boxes and lumber. The incorporators are Frank L. Mulholland, Charles Hartman,

William Blue, John F. Fellers and Sholte M. Douglass.

According to the report of the Columbus building inspector for March, 1915, there were 335 permits issued during the month calling for new structures estimated to cost \$519,200 as compared with 293 permits and a valuation of \$665,995 for March, 1914. Since the first of the year the department has issued 543 permits of a valuation of \$757,650 as compared with 523 permits and a valuation of \$1,060,650 for the corresponding period in 1914.

The Bucyrus Lumber Company, S. S. White, manager, has begun the manufacture of porch furniture and expects to develop the industry until the old Coulter plant can be taken over for a factory.

◀ CINCINNATI ▶

C. Crane & Co. advise sales for March almost normal, being double those of January; that collections have never been better and more cash paid on lumber than at any time in their history. Oak is in good demand; inquiries are strong and people are much more liberal, and purchasers who have been ordering one car are now purchasing two or three.

W. H. Weller, secretary of the Hardwood Manufacturers' Association, brought with him from the South a breath of seasonable weather and a decided optimistic view of the future of the hardwood business. He reports business there slowly picking up, but with a persistence that is gratifying indeed.

Mr. Bonner of the Atlas Lumber and Manufacturing Company now is on an extended trip touching the larger cities of Ohio and Pennsylvania. Mr. West of the same firm recently returned from a business visit to Cleveland and Detroit, where he found the prospects very good in the building line. Locally Mr. West finds a big demand for maple, coming for the most part from the auto people, and good oak is enjoying unusual strength considering present conditions.

Richey, Halsted & Quick report the demand spotty. Low-grade chestnut and No. 1 common poplar are moving quite well, and conditions point to a betterment in the immediate future.

One of the most convincing proofs that the hardwood business is steadily on the upward trend was the deal consummated in Cincinnati early in the week by the Barr-Holaday Lumber Company of Greenfield. The shipment consisted of ten carloads, all coming from the mills at Louise, Miss.

The Ohio Veneer Company is confidently looking forward to a speedy resumption of business upon former active lines. The veneer line is reported to be picking up under the impetus given by a general relaxation in the recent stringent money market. American walnut is going exceptionally good.

A fair outlook, although there appears to be no regular demand on any certain line, is the manner in which J. A. Bolser of Blackburn & Bolser sizes up the market, while professing to see a reaction for the better coming with the fine weather. Mr. Graham of the Graham Lumber Company views the market in the same light, being unable to pick out any particular wood which is showing a decided strength.

C. N. Asher & Co. is another addition to the hardwood lumber colony in Cincinnati. This company opened doors last week and if experience and former able management of like concerns is any criterion, this new firm will find smooth running. Charles N. Asher formerly was salesman for E. R. Spotswood & Son of Lexington, Ky., and in that capacity made many friends in the Cincinnati market. J. M. Logan, another member of the firm, acted previously as manager for the J. M. Logan Lumber Company in Cincinnati.

◀ TOLEDO ▶

Retail and wholesale lumber dealers and their salesmen have banded themselves together in a social organization to be known as the Toledo Lumbermen's Club. The organization will meet at luncheon or dinner once each week and have a good time, as it is believed that such relationships will result in a better business understanding, friends being able to adjust matters of disagreement much better than strangers or mere acquaintances. Officers of the new organization are: President, Charles Barnett; first vice-president, Edward Arnsman; second vice-president, Aaron Kelsey; secretary-treasurer, Clinton Mauk.

The Keasey Pulley Company has removed its plant from Toledo to Fostoria, Ohio. A bonus of \$10,000 was given the concern by the Fostoria Commerce Club.

Walter L. Ross, receiver for the Toledo, St. Louis & Western Railroad Company, insolvent, has asked Federal Judge Killitts for permission to expend \$600,000 for improvements on the road. The money will have to be borrowed on receivers' certificates. New and improved buildings and equipments are included in the desired purchases.

The Booth Column Company reports a much better business than has been enjoyed for some time. Orders are beginning to come in much better, and this applies both to the column and the automobile bumper business. Prospects are good for a fine spring trade.

The Toledo Bending Company reports business a little quiet, but this is the season of the year when such a condition is naturally expected. The factory is running rather light at present and orders are coming slowly. Following the extremely low prices of material, prices have dropped a little.

W. T. Hubbard, who owns one of the largest hardwood concerns in Toledo, has sold the Erie street property, which is now occupied by the offices and yards, to the International Harvester Company, which will erect a five-story building on the site. The new home of the Hubbard concern will be at Western avenue, on the Clover Leaf railroad. The yards will be enlarged and the new location is much more suitable in every way. The concern will remove to the new home about the first of May.

◀ MEMPHIS ▶

W. B. Burke, vice-president and general manager of the Lamb-Fish Lumber Company, Charleston, Miss., is authority for the statement that, in his opinion, a sudden ending of hostilities in Europe will mean the greatest boom in the hardwood lumber industry the South has ever known. He says that many of the lumber companies are operating on full time in anticipation of just such an occurrence and that they are storing up large quantities of finished product in order that they may be ready to promptly fill orders when these begin to come. It is pointed out that Russia and some of the other countries which have been supplying hardwood lumber in competition with American manufacturers and dealers will be practically out of the competition when the war is over, and that the nations which will find it necessary to do a vast amount of rebuilding will have to turn to America. Mr. Burke also believes that the attitude of the railroads will play an important part in the rehabilitation of the hardwood lumber industry in the South. He contends that their viewpoint is entirely wrong and that to aid in the development of the hardwood lumber business of the South they must be brought to fully appreciate the fact that volume of tonnage is just as important a factor in producing revenues as rates themselves. Some of the other members of the trade here have expressed themselves as confident in their belief in extreme activity in southern hardwoods as soon as the present war in Europe is over.

One of the most enjoyable occasions in which lumbermen here have participated in some time was the banquet which was tendered Governor and Mrs. Samuel M. Ralston of Indiana by the Indiana Society of Memphis. This was given at the Hotel Chisca on April 2. John M. Pritchard, president, acted as toastmaster. Readers of the *HARDWOOD RECORD* are doubtless familiar with the fact that the majority of the members of the Indiana Society are identified in one way or another with the hardwood lumber industry of this section. Governor Ralston said that he was extremely sorry that so many business men had found it in their heart to leave the Hoosier state for Memphis, but that, since they were determined to go, he was extremely glad that they had chosen Memphis as their future home. He expressed himself as much pleased with this city because of its hustle and progressiveness. Mrs. Ralston also responded quite happily. She said that she had known

Mr. Pritchard ever since he was quite a small boy and that she had watched his career with unusual interest. She expressed herself as very much pleased with the splendid place he had built for himself here. There were several other speakers, and the occasion proved a quite happy one, indeed, to all who participated therein.

Joe Thompson, sales manager of the Dudley Lumber Company, has just returned from a trip which carried him through the East and Middle West. He says that stocks in the hands of consumers and distributors have been allowed to run down to very small proportions and he believes that, as soon as spring trade opens, there will be a very large amount of lumber going into the sections which he covered on his trip. Among the cities included in the itinerary of

WE WANT WALNUT

If you have Black Walnut Logs 14" and larger in diameter and 8' or longer in length, write us for prices and particulars. We are in the market now for two million feet.

PICKREL WALNUT CO., 4025 Clara Avenue, ST. LOUIS

To the Owner of
Timber Lands

Far sighted owners of timber lands will take advantage of the times, incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. It is certain to come at no distant time. Therefore the wise man will cultivate a closer acquaintance with his holdings and the best method of marketing them. Guessing on the quality and price will only lead to complications and possible failure. Let us prepare the way for you.

Remember, we not only report with absolute accuracy, but assist in selling your property, if desired.

Mr. Thompson were Chicago, Indianapolis, Cleveland, Buffalo, Milwaukee and Cincinnati. For the present, according to Mr. Thompson, most consumers and distributors are buying from hand to mouth, but he believes that the time is close at hand when the demand will be of a much more urgent and decidedly more insistent character.

The demand for red gum appears to be improving somewhat, and reports received at the headquarters of the Gum Lumber Manufacturers' Association indicate that this wood is gradually increasing in popularity. It is finding more favor with architects, and they are not hesitating to recommend it to their clients for interior trim, as well as for other purposes. They have been able to obtain such satisfactory results that the association is looking forward to a great deal of assistance from them in increasing the amount of red gum used. Only recently advices have been received here that the postoffice at Bedford, Va., will be finished in red gum, and that another postoffice at Wytheville, also in Virginia, will be finished in the same material. Most members of the trade here say that they have found a rather decided increase in demand for red gum recently, and this is regarded as an exceptionally encouraging development.

There has been no marked change in weather conditions in this section during the past fortnight. A great deal of rain has fallen, and within this period the ground has been thoroughly covered with snow. The lowlands are still quite wet, and members of the trade here say that they are meeting with considerable difficulty in getting out timber. Log stocks have run down to rather small proportions in some directions, and not a few manufacturers are authority for the statement that the scarcity of timber is beginning to be a somewhat prominent feature. It is pointed out that, owing to the scarcity of logs, much will depend upon weather conditions in the immediate future. Meantime those firms which have enough timber in sight to enable them to do so are operating their plants at full capacity, and it is doubtless true that the amount of lumber being produced is somewhat in excess of what it was even three or four weeks ago.

Building operations are increasing somewhat, and this is accepted as a favorable sign. In fact, it is anticipated that the increased activity in this line at Memphis will be duplicated in other parts of the country and that there will be a decidedly larger demand for hardwood flooring and for interior finish. Some members of the trade are pointing out that there ought to be quite an impetus given to the hardwood lumber business with the opening of spring in the upper half of the United States, and they are looking forward with confidence to such a development. There is more doing in Memphis now than for quite a long while, and reports from quite a number of other centers in the South indicate that there is a gradual return toward normal in the matter of building activity.

< NASHVILLE >

The judiciary committee of the Tennessee State Senate has reported for rejection a workmen's compensation bill that had been presented to the legislature. All manufacturers in Tennessee will be gratified at this action. The problem has been agitated the past two years, and has been considered by a special commission appointed two years ago. The committee reported that this is not an opportune time for the industrial interests of the state to pass the measure.

Henry J. Tidwell and Robert Bruce have perfected plans to install a 60-horsepower sawmill at McEwen, Tenn. The firm has purchased machinery and has also acquired several tracts of timberland.

The lumber firm of Ransom & Frierson at Shelbyville, Tenn., has been dissolved. Burton Frierson has purchased the interest of W. S. Ransom in two lumber mills and will continue the business.

J. J. Stonicker of McEwen, Tenn., has closed a deal at Hohenwald, Tenn., for about 1,000,000 feet of timber, which will be sold to a Nashville firm.

H. H. Self of Dickson, Tenn., has purchased several hundred acres of timberland near Dickson, Tenn., and when business conditions improve contemplates starting a handle factory.

During the season just closed over 25,000 oak crossties have been sold to the Nashville, Chattanooga & St. Louis Railway at McEwen, Tenn.

The Richardson Lumber Company of Florence, Ala., secured a contract for supplying \$16,000 worth of lumber and building material to be used in erecting a new high school building at Columbia, Tenn.

Building permits in Nashville for March amounted to \$188,425, against \$229,180 for the same month last year.

< BRISTOL >

Mills in this section continue to resume operation, especially with the advent of more favorable weather. Several large mills were started last week and it is believed that by May 1 the majority of the mills in this section will be running full time.

The Black Mountain Lumber Company this week resumed operation of its mill at Bluff City, Tenn., eleven miles south of Bristol. The mill has been idle about a year. The company has a large area of timberland and owns its own logging road.

The Atkins Lumber Company has at last started its new band mill at Atkins, Va., and is cutting about 50,000 feet daily. The company recently completed a seventeen-mile line of logging road.

The Graham County Lumber Company last week started its band mill at Judson, N. C. The company has started other mills in that section and is now operating on a large scale. Frank Buell of Bay City, Mich., is general manager and in charge of the operations. The company acquired the Whiting timberlands in Graham county.

O. H. Vial returned this week from western North Carolina. He has purchased a 5,000-acre tract of timber on the Murphy branch of the Southern and contracted the logs to the Graham County Lumber Company. He has already begun logging.

The R. C. Duff Lumber Company, which is operating a band mill at Dufield, Va., has purchased an additional boundary of timberland and will move to it as soon as its present supply is exhausted.

— < ST. LOUIS > —

Building operations in St. Louis for March showed a falling off of about 14 per cent, compared with last year, according to the report of the building commissioner. The estimated value of buildings for which permits were issued in March was \$1,268,878. In March last year the permits amounted to \$1,450,034.

The receipts and shipments of lumber at St. Louis for March were 17,655 cars of lumber received, as against 16,735 cars of lumber received during March last year, a gain of 920 cars. Shipments were 10,565 cars last month, against 11,340 cars during March last year, a decrease of 775 cars.

Maynard C. Johnson, an official of the Gideon-Anderson Lumber & Mercantile Company, of St. Louis, with the plant at Gideon, Mo., died at Cape Girardeau, Mo., where he was taken when he contracted pneumonia. Mr. Johnson formerly lived in St. Louis, but has been residing at Gideon for several years. His wife was the daughter of W. P. Anderson, the president of the company. She died a year ago. Two children, twelve and fourteen years old, survive.

— < LOUISVILLE > —

William Burke of the Burke Golf Company, Newark, O., was a speaker at a recent meeting of the Louisville Hardwood Club. He discussed the features of that business with reference to the use of lumber in the manufacture of sticks. Hickory is used for the shafts, and dogwood and persimmon for the heads. He said that the requirements of the trade are so severe that the lumberman who expects to supply it must study them carefully.

The W. P. Brown & Sons Lumber Company is operating its mill at Frankfort, Ky., but at present is not running at Fayette, Ark. T. M. Brown reports business to be irregular, but looking up somewhat.

The furniture trade is better than it has been, though it is stated that the manufacturers of popular-priced goods are doing better than the makers of high-grade equipment. However, the call for material from this trade has been increasing somewhat, and this is an encouraging development.

The Modern Woodworking Company, 1106 W. Main street, Louisville, has been buying some machinery for its new shop, including a saw, tenoner and sander. Frank Hillerich is superintendent.

W. W. Brown of the Hamilton Manufacturing Company, Two Rivers, Wis., who was in Louisville recently, is a type of the manufacturer of the new school. He was formerly in the lumber business, and understands it thoroughly, and is now devoting all of his time to the purchase of lumber for the Hamilton company, which has a large plant devoted to the manufacture of printers' and dentists' furniture. He believes that lumbermen and consumers could get closer together to their mutual benefit.

The Norman Lumber Company of Louisville has signaled the concentration of its interests in this city by again taking an active part in the work of the Louisville Hardwood Club, of which A. E. Norman, head of the company, was the first president. Now that it is no longer operating a mill in Louisiana, the local yard and interior finish plant will get all of the attention of Mr. Norman. Edwin Norman, his son, who has been ill for some time, is rapidly improving, and it is hoped will soon be well enough to resume active connection with the business.

Oscar Sears, a Lexington, Ky., timberman, has sued the Mowbray & Robinson Company and the Kentucky River Timber & Coal Company to have the former company held the trustee of the latter, or to have it held to have purchased its property under an agreement between Sears and the Mowbray & Robinson Company. The suit has grown out of an option taken by Sears on the property of the Kentucky River Timber & Coal Company for \$25,000, borrowed from the Mowbray & Robinson Company, to whom the option was assigned. They made use of it and bought the property, amounting to about 35,000 acres, and Sears now claims that he was "frozen out" of the deal.

State Forester J. E. Barton is busy making appointments of county wardens to patrol the forests and fight fires and other sources of damage. The various local associations of timber owners, especially in eastern Kentucky, are also active in supporting wardens, and the railroads for the first time have shown interest in the work, and an anxiety to help prevent fires, many of which are declared to have been caused by sparks from locomotives. With the government about ready to establish its forest reserve in eastern Kentucky, interest in the subject on the part of the lumber trade and the public is greater now than it has been for a long time.

BAND MILLS:

Huntington, W. Va. Accoville, W. Va.

president of Penrod-Jurden & McCowen of Memphis, returned from the latter city last week. He said that the organization of the new company is rapidly being completed, and that the management of the lumber and veneer mills at Brasfield and Helena, Ark., respectively, from Memphis is proving to be a convenient arrangement. Ralph Jurden, vice-president and secretary of the company, is permanently located at Memphis, where Mr. McCowen will spend most of his time also.

The veneer and panel trade in this section could stand a good deal of improvement, the demand not having been up to normal of late. This has been due chiefly to slow business with the furniture factories, and also to the fact that when trade is dull many consumers who ordinarily buy their panels ready to use lay their own veneers, as a means of holding their organization together. This of course does not affect the proposition of the consumption of veneers.

The Southern Veneer Manufacturing Company of Louisville has been sued by Mary Loebig, a stockholder, who asks the appointment of a receiver. She alleges that George F. Kretschmer, Sr., and other members of his family have been mismanaging the company, and that she has not been given a voice in its affairs. Excessive expenses are declared to have been incurred. The action was brought in the circuit court, which has not yet passed on the petition.

— < MILWAUKEE > —

The Northwestern Barrel Company of Milwaukee recently sustained a loss of \$15,000 when fire destroyed one of its warehouses, a shop and barn at Menomonee and Erie streets.

The Wilson Manufacturing Company, a woodworking concern of Appleton, Wis., is having plans prepared for the erection of a new two-story factory building 22x60 feet in dimensions, and a boiler house 28x32 feet.

The American Seating Company will erect a large addition to its plant at Manitowoc, Wis., which will add 14,000 square feet of working space.

Milwaukee's new building code, said to be one of the most complete in the country, is ready for distribution. The building commission worked for more than five years preparing it, but it cost the city only \$2,100, as compared with the code of Cleveland, O., which is said to have cost that city \$40,000. The code covers every phase of building construction and maintenance.

The Faust Lumber Company of Antigo, Wis., has amended its articles of incorporation, increasing its capital stock from \$100,000 to \$125,000.

The Wisconsin Seating Company has installed considerable new equipment in its plant at New London, Wis., including two new steel punch presses.

The A. W. Schram Manufacturing Company, a chair manufacturing concern of Oshkosh, Wis., is said to be contemplating removing its plant to some other city. O. J. Lutter, a representative of the company, has been looking over sites at Wausau, Marshfield and Ladysmith. The company expects to erect a four-story building 50x150 feet.

James K. T. Hiles, president of the George H. Hiles Lumber Company of Dexterville, Wis., died on March 21 at the age of seventy years. Mr. Hiles was reputed to be many times a millionaire. He was the oldest son of George Hiles, founder of the company, and had been engaged in the lumber business all his life. His father founded the town of Dexterville, where he settled in 1850. Mr. Hiles is survived by his widow, a daughter, Mrs. Green of Rhode Island, three sons, Samuel T. George, and William, and a brother, Frank, of California.

Herman Bleyer, secretary of the Milwaukee Harbor Commission, has compiled figures which show that although the season of 1914 was one of the slowest on the great lakes since 1893 and that fully sixty per cent of the ships were idle throughout the season, Milwaukee's total tonnage for the year was only 4.4 per cent less than the high water mark reached in 1913. Lumber shipments during the year showed a decrease of 4.3 per cent.

The Kiel Woodenware Company of Glidden, Wis., is now operating its plant at Mellen on a ten-hour schedule. The Foster-Latimer Lumber Company is operating its plant at Mellen on a day and night schedule.

The Conrath Market & Manufacturing Company has been organized at Conrath, Wis., to engage in the manufacture of bolts and similar lines. A large supply of logs is being received. Officers of the company include: President, C. H. Paris; vice-president, N. H. Spooner; secretary and manager, E. J. Rietz.

The Paine Lumber Company of Oshkosh, Wis., operating one of the largest sash and door and veneer plants in the world, is to be reorganized. While the company is solvent, it has been decided to place the concern upon the best possible footing and to do that effectively and thoroughly, steps were taken in the circuit court of Winnebago county on April 3 to have a temporary receivership appointed, thus invoking the sponsorship and protection of the courts while the work of reorganization is in progress. Judge Burnell has appointed A. L. Osborn of Oshkosh, J. A. Kimberly, Jr., of Neenah, and the Wisconsin Trust Company of Milwaukee as receivers of the company and all its property. They will take immediate possession of the company and will continue to manage the business until May 10, or until further order of the court. Mr. Osborn and Mr. Kimberly were ordered to give a bond of \$200,000, which was furnished immediately. George E. Foster of Mellen, Wis., was named as plaintiff in the proceedings. It is stated that the company has assets largely in excess of its liabilities and that every creditor will be paid in full with interest.

The Hardwood Market

< CHICAGO >

The big question of interest to the Chicago trade for the past few weeks has been the possibility of an immense strike that would effectively tie up the entire building industry. Negotiations are still pending which by being in effect have resulted in limiting the actual strike so far, but at one time it seemed as though the entire building trade would be prostrated by a walk-out of practically all lines of trade unionists. Naturally this coming on top of uneven business in such lines not so effected would be creating a catastrophe, but it really seems at this stage as though the trouble has been settled by a mutual spirit of arbitration, or confined to narrow limits.

With this bugaboo out of the way Chicago lumbermen would be justified in feeling very well satisfied with the condition of affairs in the city, as they are getting their share of the hardwood trade with consuming factories and yards. Factory trade is still not brisk by any means, but most of the factories are continuing to buy their quota of stock, and while cut-price offerings in great numbers are still circulated around the city, on the other hand those prone to cutting prices have gotten them down so low as to create suspicion in the minds of buyers who prefer having better stocks at little better prices. On the part of many others there is a continued insistence for more reasonable values. The consequence has been that the buyers have gotten to realize to a considerable degree that extremely low prices and satisfaction in lumber do not go together, and there seems to be a willingness to collaborate in a more reasonable price level.

The yard trade continues to be hesitant about purchasing on account of the threat of building trade unionists, and they have not taken the stock they likely would have taken had this specter not been presented this spring, as usual. However, if the affair is definitely settled within the next week so that there will not be a likelihood of its being brought up again, it is altogether likely the yard trade will take on quite a little in the way of general lines of building lumber.

The box trade in the city is going along in very good shape, with purchases at satisfactory volume, which brings those woods going into box manufacture and also woods used in the manufacture of implements and vehicles in the lead, as is the position in most points throughout the country.

< NEW YORK >

Some improvement is noted in the local lumber market, but with respect to hardwoods it cannot be called highly encouraging. There has been some increase in demand and the inquiry points to a fair amount of trading in prospect. A feature, however, is the continued low prices and generally unsatisfactory trading. It seems that good lumber is still to be had at prices that prevailed months ago when expediency furnished the reason for the low prices made. The only settled point is that values cannot go lower and wholesalers must take whatever encouragement they can out of this fact. The hardwood flooring market is in better shape, but rough lumber is hard to move.

< BUFFALO >

The hardwood trade is improving very slowly and some yards report that their trade is no better than a month ago, but on the whole the volume of business appears to be larger than at that time. The building business is making the largest gain, as is natural at this season, and there is a disposition to break away from the depressed conditions of some months and to engage in operations on a larger scale. Industrial plants of all kinds, except such as are favorably affected by war, are still running below normal. The furniture factories are also feeling the effects of the dullness.

Prices in all hardwoods are rather low and some do not appear to be showing any increased firmness, while in others there has been a gain in strength. Plain oak, maple and birch are among the leading woods at present. Poplar remains very quiet. Low grades in most woods are selling pretty well and a firm price is being maintained. There is a better demand for flooring this month, both in oak, maple and birch, and some stiffening in prices has occurred.

It is expected that a greater quantity of hardwood lumber will be received here by lake this season than last, as wholesalers in several instances are planning for bringing in stock. Prices at the mills are said to be a little more favorable than a year ago, though there has been no particular weakness displayed recently.

< PHILADELPHIA >

With clear and warmer weather now due, local wholesale and retail lumbermen feel optimistic as to the trade of the next four or five months. Textile mills which were shut down are resuming operations. Shipyards are quite active, and many large firms and corporations announce that

in their estimation the industrial depression is a thing of the past. Architects say building work is going to exceed the amount done in any spring in recent years. The March record of the Bureau of Building Inspection is also another encouraging morsel. Building figures for the month recently ended exceeded those of any March in the last four years, despite the fact that no immense operations were started. The large cost of building in March was caused by the construction of two-story and three-story dwellings. The two-story dwellings cost \$2,999,500 and the three-story houses \$789,330, the total for the month being \$5,350,790, against \$5,197,030 in March, 1914. February building work this year cost \$2,574,730, which was \$1,663,925 greater than in the month of January. Leading wholesalers report inquiries as increasing, volume better than the previous two weeks, prices stiffening just a trifle, and collections still inclined to be slow. All things considered, the outlook is regarded as promising.

← PITTSBURGH →

The hardwood business is unsatisfactory at present. Prices are weak and demand is irregular. Business with automobile buyers is better and some trade is being done with the furniture and manufacturing concerns. Railroads are not buying. Stocks at hardwood plants are quite large and many manufacturers are trying to unload.

← BOSTON →

The condition of trade in the local hardwood market is reported generally quiet. The improvement usually occurring in the spring has been relatively slight. The variety of New England manufactures has resulted in a moderate demand over a wide range of stock, but the amount of inquiry and sale is small. Facts gathered from building permits and reports of architects show the largest amount of work being figured for many years, but this has not developed any heavy ordering as yet. There is, however, positive opinion that this factor will have very good effect in building up business. While the use of hardwood in building finish has decreased, the class of buildings included in much of the proposed construction is such that a great deal of hardwood will necessarily be required. The furniture manufacturing industry, which has always consumed a large amount of hardwood, is not only running light, but is changing processes and styles to other woods, built up work and veneer, thus causing a considerable decline in the demand for hardwood. General manufactures, such as machinery, wagons, implements, etc., have also altered construction to a lesser extent, although still requiring a good proportion of their usual supply of hardwood.

There is a noticeable effort on the part of many producers to place stock by representatives visiting or located in this city, but there is little basis to expect that this will enlarge the volume of trade; rather it tends to introduce factors of uncertainty as to credits and values.

← COLUMBUS →

The market for hardwoods in Columbus and central Ohio has been fairly active during the past fortnight when business conditions are considered. Demand on the part of manufacturers has shown an increase, especially in concerns making vehicles and implements. Furniture factories are also buying to a limited extent. Dealers are the best customers as they are preparing for the spring trade. Buying is mostly for immediate delivery, although a percentage of orders call for shipment the latter part of April and even after May 1.

Generally speaking, the price list is fairly well maintained. There is less cutting quotations than was the case a month ago. Dry stocks in the hands of mill owners are not exceptionally large, and as a result holders are not sacrificing profits to move stocks. Some shading is being done, which is always the case under all market conditions.

Shipments are coming out promptly from every section of the hardwood producing region. No trouble is experienced from lack of transportation facilities. Indications are fairly bright for active building operations in many cities and towns in central Ohio. Already quite a few contracts have been awarded for office buildings, fraternal homes and apartments. There will also be quite a few dwellings constructed.

Retailers' stocks are rather light for the season of the year. Some of the dealers are not inclined to increase them because of the uncertainty of business. Others are taking a chance and increasing stocks.

Quartered and plain oak is fairly strong and the same is true of basswood. Chestnut is selling well, especially sound wormy. Ash is quiet. Poplar is in fair demand and other hardwoods are unchanged.

← BALTIMORE →

The lumber trade situation continues to show improvement. Interest in the offerings is reported to be on the increase among the yardmen and other buyers, and the movement has assumed larger proportions by degrees, with every prospect that the demand will continue to widen, with corresponding gains in strength as far as values are concerned. No one particular direction can be pointed to as offering evidence of special expansion, the quickening of the demand applying about equally to all. For a long time the range of prices was very wide; in fact, the quotations seemed to have no definite basis at all, sellers taking what they

could get. From this point the trade has gotten away a considerable distance and the tendency is steadily toward a further hardening of the prevailing figures. The yards have held off so long that their assortments show marked deficiencies. For a time they made no determined effort to fill out these deficiencies, but of late they are receiving fairly general attention, which proves that the necessity of making the selection more adequate has impressed itself upon the trade. Hence salesmen are more likely to get a hearing, and the number of orders received by the mill men and wholesalers is on the increase, with no positive advance in the quotations, but with prices firmer. This is especially the case with respect to the better grades. Some of the low grade lumber still leaves much to be desired, the offerings being considerably in excess of current needs; but the tenders of the better grades are by no means excessive. From every point comes information that the mills have no large stocks in hand. Good grades of poplar, oak and even chestnut have begun to command figures that afford a margin of profit, and the feeling about the hardwood trade is more hopeful. The one really weak point is the exports, which cannot show any expansion because of the prevailing conditions. With the steamship embargo and with the difficulties in the way of making shipment increased rather than diminished, no pronounced headway can be made. However, the United Kingdom has run low in stocks and is in the market. Such foreign business as the exporters can get is done on a satisfactory basis and under very acceptable conditions, payment being made for shipments when they are started and the consignee assumes all the risk. There are also believed to be indications that the war will be not much longer protracted, and with the restoration of peace will come a very material increase in the foreign movement. Altogether, the hardwood men are in a more hopeful frame of mind than they were not so long ago, and a continuance of the progress toward better conditions is looked for.

◀ CINCINNATI ▶

A slow but steady expansion in the volume of business in the hardwood line has been noted generally throughout the Cincinnati market. The wholesalers, jobbers and dealers express confidence in the future and are sanguine that the worst has been past and matters soon must take a turn for the better.

A late spring, unseasonably chilly throughout March, has retarded movements in hardwood and has had a depressing effect in the building line. However, within the last week or ten days the builders have taken more heart in the outlook and considerable activity is noticed, especially in hardwood flooring. It now appears to be a case of getting out and hustling. The market is opening up and needs only a little pushing.

There still is noticeable a heaviness in the East and southern Michigan, which markets always tend to govern conditions in the Queen City, but despite the rather discouraging outlook from contiguous quarters the local market bears up unusually well.

While the demand continues scattered and spotty, there is a pronounced movement in American walnut and maple, these two constituting the best sellers at present in the Cincinnati market. The latter gets its impetus directly from the unprecedented activity in the automobile manufacturing business. The demand for maple, which is used so extensively in automobile bodies, is reported from various concerns as the heaviest known in some years, and as usual in cases where the demand suddenly settles upon one line, the supply is inadequate. Millmen complain, but their troubles do not come from lack of orders and inquiries; but the supply back of the mills is reported in some cases as being exceedingly low and there is a constant dread of losing business which demands quick delivery.

A rather curious condition of affairs has resulted on account of the heavy sudden movement in walnut and maple. Yellow pine, for which Cincinnati is a considerable market, is practically at a standstill, according to reports from wholesalers specializing in this line, while other lumber which ordinarily does not command so much attention in the local market is setting records for activity. The only explanation of this peculiar condition is the unseasonable weather. Optimistic views now are freely expressed throughout the country on business in general, all lines of endeavor seemingly gathering new strength, so a backward spring appears to be the only object available upon which to lay the blame for a retrograde market in the yellow pine.

Oak for the construction of railroad cars is moving in some quarters with encouraging speed. The railroads with added zest, owing to recent fairly favorable decisions by the Interstate Commerce Commission, are getting into the buying market more freely. Improvements in general appear to be the watchword, and not only is main line construction being planned extensively for the spring and summer, but it is predicted from the volume of inquiries that there will be an increase in the rolling stock of the big trunk lines.

Cypress interests have started out persistently to boom the market and have been met with considerable response. This is directly in line with building operations, the cypress man and the future home builder working to each other's good. Implement and vehicle manufacturers feel the advent of spring and are buying in this quarter.

Cottonwood and gum, principally of low grade, are enjoying a good call from the planing mills and box factories. Poplar gained during the past couple of weeks, but was not in the active list, although giving promise of color later on. Advice received here by dealers in high-grade gum from

AMERICA'S FINEST CABINET WOOD

Consider its good qualities.

It has strength.

Can be brought to a very smooth surface and consequently will take high polish in finishing.

Will not split easily.

Runs strong to wide widths and long lengths.

Is not easily marred or dented.

It can be supplied flat and straight—free of warp and twist.

Has beauty, color, life and character.

Considering its numerous good qualities, it is the lowest priced good hardwood on the market today.

We are the largest producers of Gum in the world.

Have a large and well assorted stock on hand at all times.

Can manufacture special thicknesses on short notice.

the South was optimistic. This line has been rather stagnant, owing to the uncertainty regarding the outcome of the conference of shippers and carriers to be held in Memphis this week, at which the rates of freight on this wood will be taken up.

The steady increase in orders from the sash and door factories is one of the most encouraging events noted recently. The boom in this line within the last two weeks has been marked and gives promise that stock will be moving in large volume by the end of April.

< TOLEDO >

There is no great amount of buying just now, but there are plenty of inquiries which indicate that buying will be good a little later on. Until the spring demand opens in earnest naturally the call will be light. Building operations, however, are listed to be heavy in Toledo and in the surrounding towns, judging from the plans in architects' offices and in work already started. Real estate men declare that residence building will be as heavy in Toledo this year as for the past two or three years, which has been phenomenal. There are many school buildings, large factory additions, investment structures and apartment houses now either under way or to be started in the late spring or early summer. Many houses which have been unsavory of reputation and occupied valuable downtown sites have been condemned and will be torn down. These will be replaced by business structures. The call from automobile and other vehicle concerns and from farm machinery factories is heavy. Furniture factories seem to be operating fairly well. Ash, elm and gum, which are being extensively used in the manufacture of automobiles, are leading the bill in demand here at the present time. Plain oak, which is usually a leader, follows with a demand something below normal for quartered oak. Prices remain unchanged and are being fairly well maintained.

< MEMPHIS >

The hardwood market continues steady, with a slow but sure expansion in the volume of business. There has not been quite so much activity as some members of the trade anticipated with the opening of the spring season, but it is pointed out that the weather has been very unseasonable and of a character to restrict building operations as well as activity in other directions. There is a very good demand for the higher grades of plain oak in red and white, and quartered oak is reported a good seller in all grades. The lower grades of cottonwood and gum are in good request and sap gum moves well, though prices are somewhat disappointing. More demand is noted for the higher grades of red gum, and rather encouraging reports regarding the growing popularity of this material are being received. Ash is a ready seller in all grades, and offerings are comparatively small. Hickory is another good seller. Manufacturers of automobile spokes and wheels have been steady buyers now for some time and they are taking ready care of all offerings at good prices. Cypress sells fairly well. Cottonwood in the higher grades is rather slow, and box boards, too, are proving rather difficult to sell. On the other hand, gum box boards are being readily absorbed, with offerings rather light. There is very little doing in export channels, and not much is expected until the war is over. Then the trade anticipate something approximating a real boom, and some manufacturers are preparing for just such a development where they are able to finance their operations without difficulty.

< NASHVILLE >

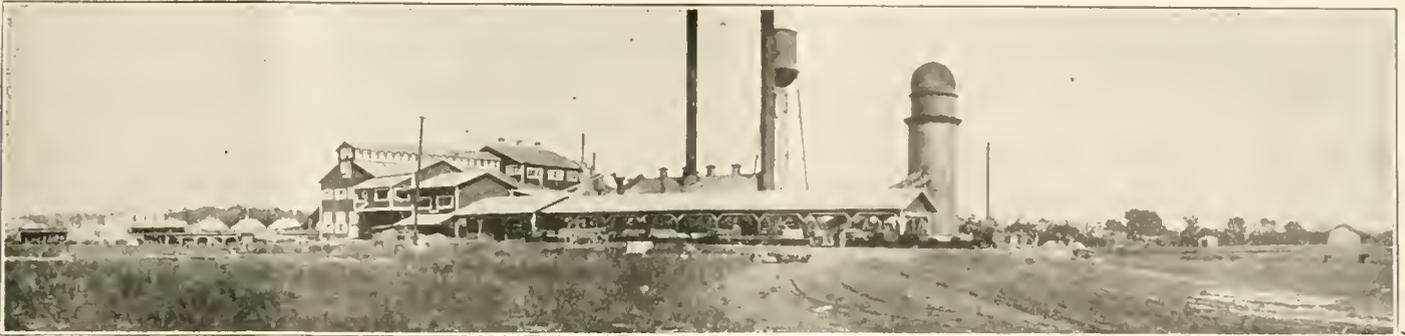

There has been no material change in the hardwood lumber situation in this market the past two weeks. Dealers report some improvement in the tone of trade, with business being handled all the time. They expect further improvement during the later spring and summer months, as it is thought building activities will be of larger volume. Inquiries are more numerous, manufacturers of furniture and agricultural implements showing interest. Prices show no material change, strong firms not believing that anything is to be gained by cutting prices.

< BRISTOL >

Bristol lumbermen profess to see little marked improvement in trade. A tedious slow recovery is said to be perceptible, but it is feared that trade will continue comparatively dull for some time to come. However, the lumbermen generally are optimistic and believe that 1915 will prove a fair business year, although their hopes for it are not so high as they were a few months ago. Prices remain about the same. Most of the mills have resumed or will do so soon, but the manufacturers say that they are starting more on the prospects of improvement than on the strength of the present situation. Many believe that by the time lumber now being cut can be prepared for the market conditions will have improved materially.

< LOUISVILLE >

It is now generally conceded, even by those conservatives who are usually pessimistic if they have an opportunity to be so, that business is better. The fact that consumers worked down to the last stick before ordering more lumber has of course held back the demand longer than would ordinarily have been the case, but as factory men have apparently regained confidence, they are now not only ordering cars for immediate

SEATTLE, WASH., 1009 White Building.

delivery, but are negotiating for the delivery of other stock later on. The condition of the average hardwood concern has been a barren order-book—that is, all of the business handled has been for immediate delivery, with little accumulating for shipment later on. Now that future business is being booked, and consumers are realizing that an upward movement in prices is due, more liberal ordering is sure to follow, and the market will be strengthened at just the points where it has been weakest. This, at least, is the opinion of those closest to the situation and in the best possible condition to judge.

← ST. LOUIS →

The hardwood situation is a little better than it was, but the improvement is rather slow. Wet weather has been quite a handicap to all lumber business, as it has made the country roads impassable and has prevented farmers from coming to the towns for lumber. This has caused country yards to buy sparingly. As soon as the weather conditions improve there will no doubt be an active demand, as stocks are low and liberal buying must be done. Plain red oak is most in demand. Inch stock in first and second grade is particularly sought for. There is not much being done in white oak in the better grade. Gum and cottonwood are fairly good movers. There is a fairly steady demand for cypress, in spite of adverse weather conditions, but it is far from satisfactory. Country yards are not doing much business, owing to the bad roads, which keeps the farmers away from town. Yard owners will not buy until selling can be done.

← MILWAUKEE →

Judging from the figures available at the office of the Milwaukee building inspector, the spring revival in the building field seems to be making itself felt, even at this early date, and lumbermen are confident that this will mean a satisfactory business this season. During the month of March, for the first time in practically a year, the building investment showed a decided gain. There were 420 permits issued for structures to cost \$942,921, as compared with 363 permits and an investment of \$696,183 during the corresponding month a year ago. This represented a gain of \$246,738 and seems to bear out the prediction made by Building Inspector Harper that the building record this year will attain the mark reached in 1913. News from about the state indicates that there will be considerable building carried on in the smaller cities and towns and in the country districts.

The hardwood trade seems to be improving slowly but surely and lumbermen feel that plenty of business will develop later in the season. One of the most favorable signs is the slightly better demand from the local factory trade. The sash and door and general interior finishing concerns are making better inquiries and a good trade from this source is anticipated. Stocks on hand at all these plants have been light for months, as the factory trade has been inclined to buy only enough to satisfy immediate wants. Wholesalers expect a good yard trade a little later on.

Prices are unchanged, although there seems to be a little firmer tone in the market. Birch, maple and basswood are the leaders in northern woods, and reports from some quarters say the available supply of dry stocks in this line is not especially large. Low grade stocks are moving fairly well. Oak seems to be the strongest item in the southern hardwoods.

The logging season is fast drawing to a close in northern Wisconsin. Weather conditions were favorable all winter and news received here would indicate that the hardwood cut was much larger than had been planned earlier in the season.

← GLASGOW →

Conditions in this market continue on much the same lines as previously reported. Buyers still continue the hand-to-mouth policy, and will not buy ahead. Stocks are being slowly reduced, and stock lists published at the end of the month will show a large reduction in most of the items. Values are well maintained, and the tendency is toward a higher level. Shipbuilders are not using much timber because more attention is paid to government work.

Spruce continues to move well into consumption, and high prices are being obtained. Broad deal 11" and up command high prices, there being very few of such in the market. However, shippers would be well advised to work with extreme caution, as there is a talk of the embargo placed on Swedish goods, by Germany, being removed, and should this take place, it will very much affect the American spruce shipments. Hence the shippers will require to be careful that they do not send forward consignments to a falling market.

Just now there is a good inquiry for sailing vessels to carry timber and lumber to the United Kingdom, but a pronounced scarcity of suitable vessels whose owners will accept such charters. Rates quoted are the highest figures heretofore ruling, with a tendency to advance still further. Among the more important arrivals are the S. S. Kassanga, from New Orleans, whose cargo includes the usual assortment of pitch pine lumber, gum and staves, as well as a large quantity of pitch pine decking and a few ash logs. The S. S. Marina, from Baltimore and Newport News, brings oak boards, oak planks and railway scantlog, cottonwood and poplar boards, and several parcels of silver pine. For all lots there is a good demand, and most of the shipment will be cleared on an ex quay basis.

 Cleveland Sixth City

COUNTERFEIT CHECKS

are frequent except where our

Two Piece Geometrical Barter Coin is in use, then imitation isn't possible. Sample if you ask for it. S. D. CHILDS & CO. Chicago

We also make Time Checks, Stencils and Log Hammers.

YOU SHOULD USE THE GIBSON TALLY BOOK

Do YOUR YARDING WITH

Yellow Strand Powersteel. It is economical for logging, because strong, flexible and durable. Even if Yellow Strand Powersteel cost more than most other ropes of the same grade, it would still be cheaper in the end. You'll be glad to know, though, that Yellow Strand costs no more than many other wire ropes that claim to be "just as good." If you want "evidence," just say the word. We can literally swamp you with letters from prominent hardwood lumbermen attesting to the superiority of Yellow Strand Powersteel.

Write us at once. Ask for copy of catalog No. 50.

FREE Our illustrated monthly magazine—**THE YELLOW STRAND**—free for a year to all rope users. Write for it.

veneers AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have speccialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

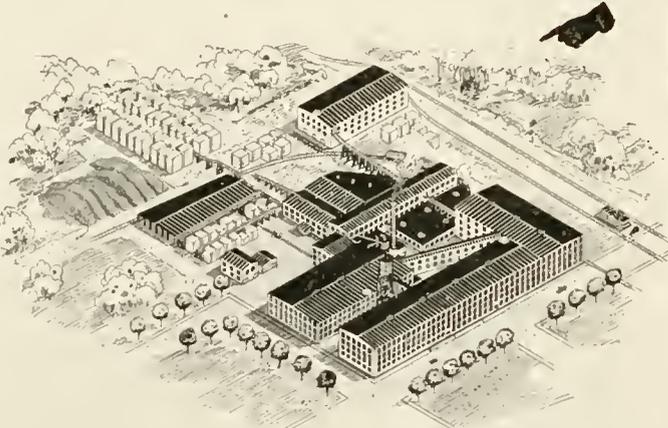

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hldc stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Gentlemen—Our Plant

But what's inside of those walls is what really counts. Everything to provide for service. And the quality idea is instilled in all our force, from the highest to the lowest.

THE GALLOWAY-PEASE KIND

† It is a peculiarity of our timber that, growing beyond the over-flow district, it matures slowly—hence has even texture and is soft and light with uniform color.

† Kiln dries without checking. No honey-combing, and minimum shrinkage.

† Total absence of injurious insects insures sturdy, clean growth.

† Our band mills cut oak only—hence filer and sawyer get best possible results.

What Veneer and Panel Consumers Will Use in 1915

This information is shown in our service of veneer and panel consumers' requirements lists—complete according to 1915 requirements.

The information contained is all first hand and guaranteed to be authentic. It gives all details that you want to know on which to base an intelligent quotation.

It would cost you thousands of dollars and years of work to compile the same information—we know because that is what it cost us. You can have it for 1% of its real cost.

As its best use is while it is fresh and it costs only two cents to write, drop us a line today and let us give you the details.
